Sub: Financial Valuation as per SEBI (Infrastructure Investment Trusts) Regulations, 2014, as amended ("the SEBI InvIT Regulations")

Dear Sir(s)/Madam(s),

I, Mr. S. Sundararaman ("**Registered Valuer**" or "**RV**" or "**I**" or "**My**" or "**Me**") bearing IBBI registration number IBBI/RV/06/2018/10238, have been appointed vide letter dated 12th July 2021 as an independent valuer, as defined as per Regulation 2(zzf) of the SEBI InvIT Regulations, by **Shrem Financial Private Limited** ("**SFPL**" or "**the Investment Manager**") acting as the investment manager for **Shrem InvIT** ("**the Trust**" or "**Shrem InvIT**"), an infrastructure investment trust, registered with the **Securities Exchange Board of India** ("**SEBI**") with effect from 04th February 2021, bearing registration number IN/InvIT/20-21/0017 and **Axis Trustee Services Limited** ("**the Trustee**") acting on behalf of the for the purpose of the financial valuation of the special purpose vehicles (defined below and hereinafter together referred as "**the SPVs**") of Shrem Infrastructure Private Limited ("**the Sponsor**" or "**SISPL**") as per the requirements of the Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014, as amended ("**SEBI InvIT Regulations**"). The SPVs to be valued are proposed to be transferred to the Trust to be created as set out in the SEBI InvIT Regulations, where SFPL is acting as the Investment Manager and SISPL is the Sponsor as per the extant provisions of the SEBI InvIT Regulations.

I am enclosing the Report providing opinion on the fair enterprise value of the SPVs as defined hereinafter on a going concern basis as at 31st March 2021 ("**Valuation Date**").

Enterprise Value ("**EV**") is described as the total value of the equity in a business plus the value of its debt and debt related liabilities, minus any cash or cash equivalents to meet those liabilities. The attached Report details the valuation methodologies used, calculations performed and the conclusion reached with respect to this valuation.

I have relied on explanations and information provided by the Investment Manager. Although, I have reviewed such data for consistency, those are not independently investigated or otherwise verified. My team and I have no present or planned future interest in the Trust, the SPVs or the Investment Manager except to the extent of this appointment as an independent valuer and the fee for this Valuation Report ("**Report**") which is not contingent upon the values reported herein. The valuation analysis should not be construed as investment advice, specifically, I do not express any opinion on the suitability or otherwise of entering into any financial or other transaction with the Trust.

This Report has been prepared solely for the purpose of inclusion as part of the Placement Memorandum ("**PM**") and the Final Placement Memorandum ("**FPM**") and such other documents as may be required in accordance with the independent valuation required as per the SEBI InvIT Regulations.

Strictly Private and Confidential

The SPVs are expected to be acquired by the Trust and are to be valued as per Regulation 21 read with Chapter V of the SEBI InvIT Regulations.

Following Special Purpose Vehicles are proposed to be transferred to the Trust:

Sr. No.	Name of the SPV	Term	Term	Group

24	Suryavanshi Infrastructure Private Limited	SUIPL			

(Hereinafter all the 24 companies mentioned above are together referred to as “the SPVs”)

The analysis must be considered as a whole. Selecting portions of any analysis or the factors that are considered in this Report, without considering all factors and analysis together could create a misleading view of the process underlying the valuation conclusions. The preparation of a valuation is a complex process and is not necessarily susceptible to partial analysis or summary description. Any attempt to do so could lead to undue emphasis on any particular factor or analysis.

The information provided to me by the Investment Manager in relation to the SPVs included but not limited to historical financial statements, forecasts/projections, other statements and assumptions about future matters like forward-looking financial information prepared by the Investment Manager. The forecasts and projections as supplied to me are based upon assumptions about events and circumstances which are yet to occur.

By nature, valuation is based on estimates, however, considering the outbreak of COVID-19 Pandemic and the consequent economic slowdown, the risks and uncertainties relating to the events occurring in the future, the actual figures in future may differ from these estimates and may have an impact on the valuation of the SPVs.

Further, considering the current crisis in relation to COVID-19 in India and across the globe, I have been informed by the Investment Manager, that the forecasts / projections provided for the valuation exercises are prepared after reasonably evaluating and incorporating the impact of outbreak of COVID-19 pandemic as per prevalent conditions as on date.

Strictly Private and Confidential

I have not tested individual assumptions or attempted to substantiate the veracity or integrity of such assumptions in relation to the forward-looking financial information, however, I have made sufficient enquiry to satisfy myself that such information has been prepared on a reasonable basis.

Notwithstanding anything above, I cannot provide any assurance that the forward looking financial information will be representative of the results which will actually be achieved during the cash flow forecast period.

The valuation provided by RV and the valuation conclusion are included herein and the Report complies with the SEBI InvIT Regulations and guidelines, circular or notification issued by the Securities and Exchange Board of India ("**SEBI**") thereunder.

Please note that all comments in the Report must be read in conjunction with the caveats to the Report, which are contained in Section 11 of this Report. This letter, the Report and the summary of valuation included herein can be provided to Trust's advisors and may be made available for the inspection to the public and with the SEBI, the stock exchanges and any other regulatory and supervisory authority, as may be required.

RV draws your attention to the limitation of liability clauses in Section 11 of this Report.

This letter should be read in conjunction with the attached Report.

Yours faithfully,

S. Sundararaman

1.1. **Background**

1.1.1. Shrem Infra Structure Private Limited (“**the Sponsor**” or “**SISPL**”) has floated an infrastructure investment trust under the SEBI InvIT Regulations called “**Shrem InvIT**” (“**Shrem InvIT**” or “**the Trust**”). SISPL is a part of the Shrem Group. The Shrem group was founded in 2010 by Nitán Chhatwal, and has diverse investment management experience in real estate, hospitality, health care, telecommunication and infrastructure sectors.

1.1.2. Shareholding of the Sponsor as on the Valuation Date is as under:

Sr. No.	Particulars	No. of Shares	%
1	Chhatwal Group Trust	7,50,00,000	93.75%
2	Shrem Impex Private Limited	50,00,000	6.25%
	Total	8,00,00,000	100.0%

Source: Investment Manager

1.1.3. Axis Trustee Services limited (“**the Trustee**”) has been appointed as the Trustee of the Shrem InvIT. Shrem Financial Private Limited (“**SFPL**” or “**the Investment Manager**”) has been appointed as the Investment Manager to the Trust by the Trustee and will be responsible to carry out the duties of such person as mentioned under the SEBI InvIT Regulations.

1.1.4. I understand that Shrem InvIT, acting through the Trustee, shall acquire the equity held by the Sponsor or/and other shareholders in its 24 SPVs mentioned in para 1.1.6, indirectly by the acquisition of 100% equity stake in Shrem Infraventure Private Limited, Shrem Roadways Private Limited and Shrem Tollway Private Limited (together, “**the Holding Companies**”), following which units will be issued to the Sponsor and other shareholders by the Trust, which are to be listed on one or more Indian stock exchanges consequent to the proposed private placement of the Trust (“**the Proposed Transaction**”).

1.1.5. In this regard, the Investment Manager intends to undertake an independent valuation of the SPVs (as defined in para 1.1.6) as per the extant provisions of the SEBI InvIT Regulations issued by Securities and Exchange Board of India (“**SEBI**”).

1.1.6. **Financial Assets to be Valued**

The financial assets under consideration are valued at Enterprise Value of the following:

Sr. No.	Name of the SPV
NHAI Hybrid Annuity Model Assets (“NHAI HAM SPVs”)	
1	DBL Lucknow Sultanpur Highways Limited
2	DBL Kalmath Zaraph Highways Limited
3	DBL Yavatmal Wardha Highways Private Limited
4	DBL Tuljapur AUSA Highways Limited
5	DBL Wardha Butibori Highways Private Limited
6	DBL Mahagaon Yavatmal Highways Private Limited
State Annuity and Toll Model (“State ATM SPVs”)	
7	DBL Ashoknagar – Vidisha Tollways Limited
8	DBL Betul – Sarni Tollways Limited
9	DBL Hata – Dargawon Tollways Limited
10	DBL Silwani – Sultanganj Tollways Limited
11	DBL Sitamau– Suwasara Tollways Limited
12	DBL Mundi – Sanawad Tollways Limited
13	DBL Uchera – Nagod Tollways Limited
14	DBL Sardarpur Badnawar Tollways Limited
15	DBL Patan Rehli Tollways Limited
16	DBL Tikamgarh – Nowgaon Tollways Limited

Strictly Private and Confidential

State Annuity Model (“State AM SPVs”)	
17	DBL Nadiad Modasa Tollways Limited
18	DBL Bankhlafata – Dogawa Tollways Limited
19	DBL Jaora – Sailana Tollways Limited
20	DBL Mundargi Harapanahalli Tollways Limited
21	DBL Hassan Periyapatna Tollways Limited
22	DBL Hirekerur Ranibennur Tollways Limited
Toll Model (“Toll SPVs”)	
23	Jalpa Devi Tollways Limited
24	Suryavanshi Infrastructure Private Limited

(Together referred to as “the **SPVs**”)

- 1.1.7. In this regard, the Investment Manager has appointed me, S. Sundararaman (“**Registered Valuer**” or “**RV**” or “**I**” or “**My**” or “**Me**”) bearing IBBI registration number IBBI/RV/06/2018/10238 to undertake fair valuation of the SPVs at the enterprise level as per the extant provisions of the SEBI InvIT Regulations issued by SEBI. Enterprise Value (“**EV**”) is described as the total value of the equity in a business plus the value of its debt and debt related liabilities, minus any cash or cash equivalents to meet those liabilities.
- 1.1.8. I declare that:
- i. I am competent to undertake the financial valuation in terms of the SEBI InvIT Regulations;
 - ii. I am not an associate of the sponsor(s) or investment manager or trustee and I have not less than five years of experience in valuation of infrastructure assets
 - iii. I am independent and have prepared the Report on a fair and unbiased basis;
 - iv. I have valued the SPVs based on the valuation standards as specified / applicable as per SEBI InvIT Regulations.
- 1.1.9. This Report covers all the disclosures required as per the SEBI InvIT Regulations and the Valuation of the SPVs is impartial, true and fair and in compliance with the SEBI InvIT Regulations.

<<This space is intentionally left blank>>

1.2. **Scope of Valuation**

1.2.1. **Valuation Base**

Valuation Base means the indication of the type of value being used in an engagement. In the present case, I have determined the fair value of the SPVs at the enterprise level. Fair Value Bases defined as under:

Fair Value

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the valuation date. It is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction in the principal (or most advantageous) market at the measurement date under current market conditions (i.e. an exit price) regardless of whether that price is directly observable or estimated using another valuation technique. Fair value or Market value is usually synonymous to each other except in certain circumstances where characteristics of an asset translate into a special asset value for the party(ies) involved.

1.2.2. **Valuation Date**

Valuation Date is the specific date at which the value of the assets to be valued gets estimated or measured. Valuation is time specific and can change with the passage of time due to changes in the condition of the asset to be valued. Accordingly, valuation of an asset as at a particular date can be different from other date(s).

The Valuation Date considered for the fair enterprise valuation of the SPVs is 31st March 2021 (“**Valuation Date**”). The attached Report is drawn up by reference to accounting and financial information as on 31st March 2021. The RV is not aware of any other events having occurred since 31st March 2021 till date of this Report which he deems to be significant for his valuation analysis.

For the amount pertaining to the operating working capital, management of the Investment Manager has acknowledged to consider the Audited financial statements as on 31st March 2021 to carry out the valuation of the SPVs.

1.2.3. **Premise of Value**

Premise of Value refers to the conditions and circumstances how an asset is deployed. In the present case, RV has determined the fair enterprise value of the SPVs on a Going Concern Value defined as under:

Going Concern Value

Going Concern value is the value of a business enterprise that is expected to continue to operate in the future. The intangible elements of going concern value result from factors such as having a trained work force, an operational plant, necessary licenses, systems, and procedures in place etc.

<<This space is intentionally left blank>>

1.3. Summary of Valuation

I have assessed the fair enterprise value of each of the SPVs on a stand-alone basis by using the Discounted Cash Flow (“**DCF**”) method under the income approach. Following table summarizes my explanation on the usage or non usage of different valuation methods:

Valuation Approach	Valuation Methodology	Used	Explanation
Cost Approach	Net Asset Value	No	NAV does not capture the future earning potential of the business.
Income Approach	Discounted Cash Flow	Yes	The revenue of all the SPVs, except for the Toll SPVs, is mainly derived from the annuity fees that are typically pre-determined with the relevant government authority and cannot be modified to reflect prevailing circumstances, other than annual adjustments to account for inflation and interest rate changes wherever applicable, as specified in the concession agreements. The Toll SPVs derive almost all of their revenue from their toll-road operations. The Toll SPVs are substantially dependent on the accuracy of the traffic volume forecasts for their respective projects. Accordingly, since all the SPVs are generating income based on pre-determined agreements / mechanism and since the Investment Manager has provided me the financial projections for the balance tenor of the concessions agreements, DCF Method under the income approach has been considered as the appropriate method for the present valuation exercise.
Market Approach	Market Price	No	The equity shares of the SPVs are not listed on any recognized stock exchange in India. Hence, I was unable to apply the market price method.
	Comparable Companies	No	In the absence of any exactly comparable listed companies with characteristics and parameters similar to that of the SPVs, I am unable to consider this method for the current valuation.
	Comparable Transactions	No	In the absence of adequate details about the Comparable Transactions, I was unable to apply the CTM method.

Under the DCF Method, the Free Cash Flow to Firm (“**FCFF**”) has been used for the purpose of valuation of each of the SPVs. In order to arrive at the fair EV of the individual SPVs under the DCF Method, I have relied on audited financial statements as at 31st March 2021 prepared in accordance with the Indian Accounting Standards (Ind AS) and the financial projections of the respective SPVs prepared by the Investment Manager as at the Valuation Date based on their best judgement.

The discount rate considered for the respective SPVs for the purpose of this valuation exercise is based on the Weighted Average Cost of Capital (“**WACC**”) for each of the SPVs. As all the SPVs under considerations have executed projects under the BOT /DBFOT model, the operating rights of the underlying assets shall be transferred after the expiry of the concession period. At the end of the agreed concession period, the operating rights in relation to the roads, the obligation to maintain the road and the right to collect tolls from the vehicles using the road revert to the government entity that granted the concession by the SPVs. Accordingly, terminal period value

Strictly Private and Confidential

i.e. value on account of cash flows to be generated after the expiry of concession period has not been considered.

Based on the methodology and assumptions discussed further, RV has arrived at the fair enterprise value of the SPVs as on the Valuation Date:

Sr. No.	SPVs	Approximate Projection Period (Balance Concession Period)	WACC	Fair Enterprise Value (INR Mn)
1	DLSHL	~ 13 Years 1 Month	7.7%	9,589
2	DKZHL	~ 14 Years 0 Months	7.7%	4,129
3	DYWHL	~ 13 Years 4 Months	7.7%	3,956
4	DTAHL	~ 13 Years 8 Months	7.7%	3,294
5	DWBHL	~ 13 Years 8 Months	7.7%	4,316
6	DMYHL	~ 14 Years 2 Months	7.7%	4,584
7	DAVTL	~ 6 Years 4 Months	8.2%	499
8	DBSTL	~ 7 Years 1 Months	8.2%	1,903
9	DHDTL	~ 8 Years 11 Months	8.2%	714
10	DSSTL	~ 5 Years 0 Months	8.1%	736
11	Sitamau	~ 5 Years 0 Months	8.2%	342
12	DMSTL	~ 5 Years 1 Month	8.2%	714
13	DUNTL	~ 6 Years 1 Month	8.2%	894
14	DSBTL	~ 4 Years 2 Months	8.2%	345
15	DPRTL	~ 9 Years 0 Months	8.2%	2,119
16	DTNTL	~ 7 Years 2 Months	8.2%	988

18	DBDTL	~ 6 Years 0 Months	8.3%	724
19	DJSTL	~ 6 Years 1 Months	8.3%	921
20	DMHTL	~ 5 Years 6 Months	8.2%	1,073
21	DHPTL	~ 5 Years 6 Months	8.2%	1,561
22	DHRTL	~ 5 Years 6 Months	8.3%	1,137
23	JDTL	~ 21 Years 5 Months	9.5%	18,875
24	SUIPL	~ 12 Years 0 Months	9.8%	248
Total				64,889

(Refer Appendix 1 & 2 for the detailed workings)

Further to above considering that present valuation exercise is based on the future financial performance and based on opinions on the future credit risk, cost of debt assumptions, etc., which represent reasonable expectations at a particular point of time, but such information, estimates or opinions are not offered as predictions or as assurances that a particular level of income or profit will be achieved, a particular event will occur or that a particular level of income or profit will be achieved, a particular event will occur or that a particular price will be offered or accepted. Actual results achieved during the period covered by the prospective financial analysis will vary from these estimates and variations may be material. Accordingly, a quantitative sensitivity analysis is considered on the following unobservable inputs:

1. WACC by increasing / decreasing it by 1.0%
2. Expenses by increasing / decreasing it by 20%

1. Fair Enterprise Valuation Range based on WACC parameter (1.0%)

Sr. No.	SPVs	WACC + 1.0%	EV	Base WACC	EV	INR Mn	
						WACC - 1.0%	EV
1	DLSHL	8.7%	9,124	7.7%	9,589	6.7%	10,095

12	DMSTL	695	714	734
13	DUNTL	876	894	913
14	DSBTL	335	345	354
15	DPRTL	2,078	2,119	2,159
16	DTNTL	957	988	1,019
17	DNMTL	1,200	1,230	1,260
18	DBDTL	705	724	742
19	DJSTL	889	921	953
20	DMHTL	980	1,073	1,162
21	DHPTL	1,446	1,561	1,671
22	DHRTL	1,035	1,137	1,232
23	JDTL	18,166	18,875	19,580
24	SUIPL	220	248	277
		61,538	64,889	68,207

The above represents reasonable range of fair enterprise valuation of the SPVs.

<<This space is intentionally left blank>>

2. Procedures adopted for current valuation exercise

- 2.1. I have performed the valuation analysis, to the extent applicable, in accordance with ICAI Valuation Standards 2018 (“**IVS**”) issued by the Institute of Chartered Accountants of India.
- 2.2. In connection with this analysis, I have adopted the following procedures to carry out the valuation analysis:
- 2.2.1. Requested and received financial and qualitative information relating to the SPVs;
 - 2.2.2. Obtained and analyzed data available in public domain, as considered relevant by me;
 - 2.2.3. Discussions with the Investment Manager on:
 - Understanding of the business of the SPVs – business and fundamental factors that affect its earning-generating capacity including strengths, weaknesses, opportunities and threats analysis and historical and expected financial performance;
 - 2.2.4. Undertook industry analysis:
 - Research publicly available market data including economic factors and industry trends that may impact the valuation;
 - Analysis of key trends and valuation multiples of comparable companies/comparable transactions, if any, using proprietary databases subscribed by me;
 - 2.2.5. Analysis of other publicly available information;
 - 2.2.6. Selection of valuation approach and valuation methodology/(ies), in accordance with IVS, as considered appropriate and relevant by me;
 - 2.2.7. Determination of fair EV of the SPVs.

<<This space is intentionally left blank>>

3. Overview of Sponsor, InvIT and SPVs

Sponsor / Shrem Infra Structure Private Limited (SISPL)

- 3.1. SISPL is a part of the Shrem group. The Shrem group was founded in 2010 by Nitan Chhatwal, and has diverse investment management experience in real estate, hospitality, health care, telecommunication and infrastructure sectors. The Sponsor effectively owns majority of the equity share capital of Shrem Infraventure Private Limited, Shrem Roadways Private Limited and Shrem Tollway Private Limited (together, “the Holding Companies”).

Shareholding of the Sponsor as on the Valuation Date is as under:

Sr. No.	Particulars	No. of Shares	%
1	Chhatwal Group Trust	7,50,00,000	93.75%
2	Shrem Impex Private Limited	50,00,000	6.25%
	Total	8,00,00,000	100.0%

3.2. Holding Companies

Shrem Infraventure Private Limited (“SIPL”)

SIPL currently owns equity stake in the NHAI HAM SPVs as at the Report date. I understand from the Investment Manager that SIPL is acquiring balance equity stake in 6 NHAI HAM SPVs before the completion of the Proposed Transaction (for which approval from NHAI has already been received) as defined in para 1.1.4.

Shareholding of the SIPL as on the Valuation Date is as under:

Sr. No.	Particulars	No. of Shares	%
1	Sponsor/ SISPL	7,090,000	70.90%
2	Chhatwal Group Trust	2,300,000	23.00%
3	RS Infra Advisors and Consultants LLP	600,000	6.00%
4	Nitan Chhatwal	5,000	0.05%
5	Hitesh Chhatwal	5,000	0.05%
	Total	10,000,000	100.0%

I understand that the proposed Shrem InvIT, acting through the Trustee, shall acquire the equity held by the Sponsor or/and other shareholders in SIPL following which units will be issued to the Sponsor and other shareholders by the Trust, which are to be listed on one or more Indian stock exchanges consequent to the proposed private placement of the Trust.

Shrem Roadways Private Limited (“SRPL”)

SRPL currently owns equity stake in 10 State ATM SPVs, 6 State AM SPVs and 1 State Toll SPV (SUIPL) as at the Valuation Date. I understand from the Investment Manager that SRPL has already acquired 74% in 3 out of 4 AM SPVs (As per 3 Karanatak project and 1 Gujrat Project Maximum equity dilution permissible is 74%* during the concession period) and will acquire 74% in balance 1 SPV. For balance 13 SPVs i.e. 2 AM SPVs, 10 State ATM SPVs and 1 state Toll SPV, SRPL has already acquired 100 % equity. As specified above balance equity in 1 of the SPVs shall be acquired before the completion of the Proposed Transaction as defined in para 1.1.4.

Shareholding of the SRPL as on the Valuation Date is as under:

Sr. No.	Particulars	No. of Shares	%
1	Sponsor/ SISPL	93,90,000	93.90%
2	RS Infra Advisors and Consultants LLP	600,000	6.00%
3	Nitan Chhatwal	5,000	0.05%
4	Hitesh Chhatwal	5,000	0.05%
	Total	10,000,000	100.0%

*SRPL holds 100% beneficial ownership in all 17 SRPL SPVs

Strictly Private and Confidential

I understand that the proposed Shrem InvIT, acting through the Trustee, shall acquire the equity held by the Sponsor or/and other shareholders in SRPL following which units will be issued to the Sponsor and other shareholders by the Trust, which are to be listed on one or more Indian stock exchanges consequent to the proposed private placement of the Trust.

Shrem Tollway Private Limited (“STPL”)

STPL currently owns equity stake in JDTL as at the Report date. I understand from the Investment Manager that STPL will be acquiring balance equity stake in JDTL before the completion of the Proposed Transaction as defined in para 1.1.4., for which NHAI approval is already received.

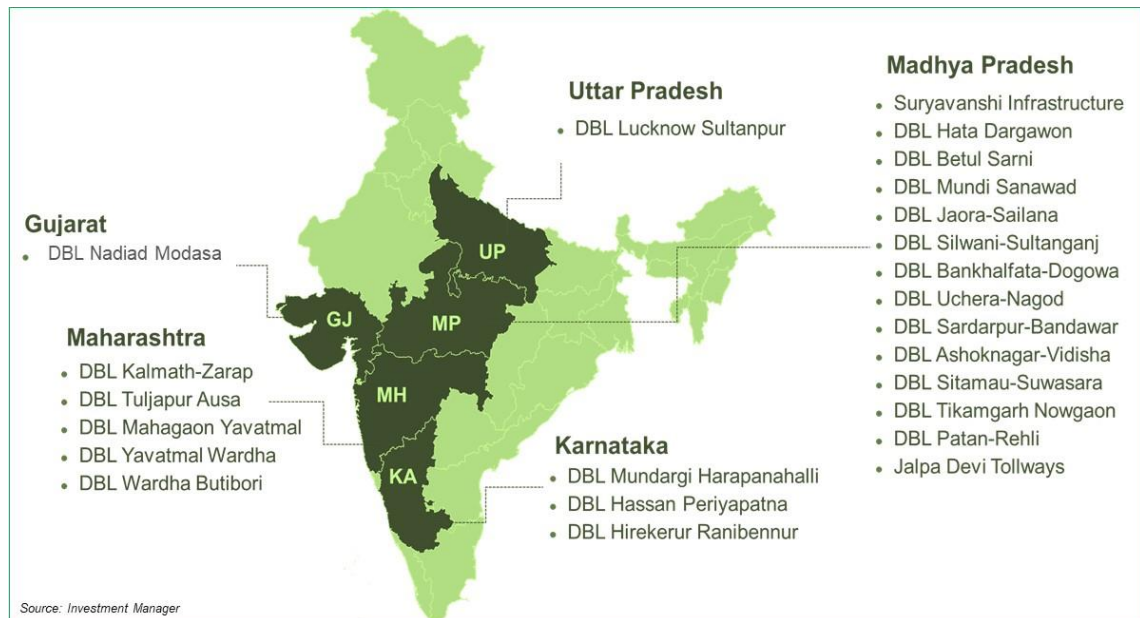

Shareholding of the STPL as on the Valuation Date is as under:

Sr. No.	Particulars	No. of Shares	%
1	Sponsor/ SISPL	552,093	55.21%
2	Shrem Investment Private Limited	287,907	28.79%
3	RS Infra Advisors and Consultants LLP	150,000	15.00%
4	Nitan Chhatwal	5,000	0.05%
5	Hitesh Chhatwal	5,000	0.05%
Total		10,000,000	100.0%

I understand that the proposed Shrem InvIT, acting through the Trustee, shall acquire the equity held by the Sponsor or/and other shareholders in STPL following which units will be issued to the Sponsor and other shareholders by the Trust, which are to be listed on one or more Indian stock exchanges consequent to the proposed private placement of the Trust.

I have been represented by the Investment Manager that there is no change in shareholding pattern of Holding Companies from the Valuation Date till the date of this Report.

3.3. Following is a map of India showing the area covered by the SPVs of the Trust:

Background of the SPVs

3.4. **DBL Lucknow Sultanpur Highways Limited (“DLSHL”)**

3.4.1. Summary of details of DLSHL are as follows:

Parameters	Details
Total Length	666.77 Lane Kms
Nos. of Lanes	4
NH / SH	NH 56 (New NH 731)
State Covered	Uttar Pradesh
Area (Start and End)	Lucknow - Sultanpur
Bid Project Cost	INR 2016 Cr
PPP Model	DBFOT
Project Type	HAM
Concession Granted by	NHAI
COD Date	30 April 2019
Nos. of Annuities	30
Annuity Amount	As per Concession Agreement
Concession Period (CP)	910 days from Appointed date i.e. 08 th May 2017 plus 15 years

Source: Investment Manager

3.4.2. The corridor forms a part of the existing road from 11.500 kilometer to 134.700 kilometer (approximately 127.425 kilometer) on the Lucknow - Sultanpur section of NH 56 (new NH 731).

Sr. No.	Salient Features	As per Site
1	Total Length of the Project Highway	127.425 Km
2	No of Bypass Roads	4 Nos.
3	Flexible Pavement for Main carriageway (2 Lane)	---
4	Slip Roads with 5.5 m Width	14.824 Km
5	Toll Plaza	2 Nos
6	Bus Bays / Bus Shelters	43 Nos .
7	Truck Lay Bays	2 Nos
8	Major Junction	14 Nos.
9	Minor Junctions	110 Nos .
10	Vehicle Underpass	4 Nos.
11	Pedestrian/Cattle Underpass	6 Nos.
12	ROB	1 No
13	Major Bridges	1 No
14	Minor Bridges for Main Carriageway	13 Nos.
15	Box/Slab Culverts	75 Nos.
16	Pipe Culverts	184 Nos.

3.4.3. The shareholding of DLSHL as on Valuation Date is as follows:

Sr. No.	Particulars	No. of Shares	%
1	M/s Dilip Buildcon Limited	10,70,802	51.00%
2	Shrem Infraventure Pvt .Ltd	10,28,709	49.00%
3	Others	100	0.00%
Total		20,99,611	100.00%

I have been represented by the Investment Manager that there is no change in shareholding pattern from the Valuation Date till the date of this Report.

Strictly Private and Confidential

- 3.4.4. Dilip Buildcon Limited (“**DBL/Sub Contractor**”) was the original bidder for the Project SPVs, and was also responsible as the EPC contractor for the construction and development of each of the Projects. Pursuant to a master agreement dated 18th December 2017 and share acquisition agreements dated 26th March 2018, the Shrem group has acquired shareholding in the Project SPVs.
- 3.4.5. The O&M Contract for this project is signed between SPV and its immediate holding company and subsequently immediate holding company has entered into sub contract agreement with DBL whereby DBL will be responsible for discharging all the O&M functions (routine operation and maintenance as well as major maintenance and repairs) required to be discharged under the Concession Agreement.
- 3.4.6. Due to the current scenario of restrictions imposed by the government on account of COVID-19 pandemic, it was not possible to conduct physical site visit for the SPVs. My team had conducted virtual visit to the extent appropriate during the course of this engagement. Refer below for pictures of this SPV

Strictly Private and Confidential

3.5. **DBL Kalmath Zaraph Highways Limited (“DKZHL”)**

3.5.1. Summary of details of DKZHL are as follows:

Parameters	Details
Total Length	267.40 Lane Kms
Nos. of Lanes	4
NH / SH	NH 17 (new NH 66)
State Covered	Maharashtra
Area (Start and End)	Kalmath - Zaraph
Bid Project Cost	INR 914 Cr
PPP Model	DBFOT
Project Type	HAM
Concession Granted by	MoRTH
COD Date	23 March 2020
Nos. of Annuities	30
Annuity Amount	As per Concession Agreement
Concession Period (CP)	730 days from Appointed date i.e. 01 st February 2018 plus 15 years

3.22.3. The shareholding of DJSTL as on Valuation Date is as follows:

Sr. No.	Particulars	No. of Shares	%
1	Shrem Roadways Private Limited	1,99,99,900	100.00%
2	Others	100	0.00%
	Total	2,00,00,000	100.00%

I have been represented by the Investment Manager that there is no change in shareholding pattern from the Valuation Date till the date of this Report.

- 3.22.4. DBL was the original bidder for the Project SPVs, and was also responsible as the EPC contractor for the construction and development of each of the Projects. Pursuant to a term sheet dated 24th August 2017, master agreement dated 18th December 2017 and share acquisition agreements dated 26th March 2018, the Shrem group has acquired shareholding in the Project SPVs.
- 3.22.5. The O&M Contract for this project is signed between SPV and its immediate holding company and subsequently immediate holding company has entered into sub contract agreement with DBL whereby DBL will be responsible for discharging all the O&M functions required to be discharged under the Concession Agreement.

Strictly Private and Confidential

3.22.6. Due to the current scenario of restrictions imposed by the government on account of COVID-19 pandemic, it was not possible to conduct physical site visit for the SPVs. My team had conducted virtual visit to the extent appropriate during the course of this engagement. Refer below for the pictures of the SPV.

5. Overview of the Industry

5.1 Introduction

- 5.1.1 The road infrastructure is an important determinant of economic growth in India and it plays a significant role in the economy's overall development process.
- 5.1.2 Creation and operation of quality road infrastructure continue to be major requirements for enabling overall growth and development of India in a sustained manner.
- 5.1.3 Bridging of existing infrastructure gaps and creating additional facilities to cater to the increasing population are equally important. Apart from providing connectivity in terms of enabling movement of passengers and freight, roads act as force multipliers in the economy.
- 5.1.4 Further, roads play a significant role in times of natural calamities, wars and other such events in terms of timely evacuation of the impacted population, carriage of relief material and other associated movements. Government takes cognisance of this requirement and road infrastructure remains to be a focus area.

5.2 Road Network in India

- 5.2.1 India has the second largest road network in the world, spanning over 5.8 million kms. Over 64.5% of all goods in the country are transported through roads, while 90% of the total passenger traffic uses road network to commute.

Source: IBEF Roads Report, November 2020

- 5.2.2 Out of this around 1.32 lakh km are National Highways (“NHs”). Significantly, NHs constitute around 2 per cent of the total road network in the country but carry about 40% of the road traffic. The density of India’s highway network at 0.66 km of roads per square kilometer of land – is similar to that of the United States (0.65) and much greater than China’s (0.16) or Brazil’s (0.20).

5.3 Government Agencies for Road Development

- 5.3.1 The Ministry of Road Transport & Highway (“**MoRTH**”) is responsible for development of Road Transport and Highways in general and construction & maintenance of National Highways.
- 5.3.2 The National Highways Authority of India (“**NHAI**”) is an autonomous agency of the Government of India, set up in 1988 and is responsible for implementation of National Highways Development Project (“**NHDP**”).
- 5.3.3 The NHDP in the context of NHs is nearing completion- in seven phases. Later, the other highway development programmes like Special Accelerated Road Development Programme for Development of Road Network in North Eastern States (SARDP- NE) and National Highways Interconnectivity Improvement Project (NHIP) were also taken up by MoRTH. Further, Bharatmala Pariyojana is ongoing. For majority of the projects under NHDP and Bharatmala Pariyojana, NHAI is the implementation agency. Other NH related programmes/works are being implemented

Strictly Private and Confidential

through agencies like National Highways Infrastructure Development Corporation Limited (NHIDCL), State Public Works Departments (PWDs), State Road Development Corporations and the Border Road Organizations

- 5.3.4 Roads in the jurisdiction of state governments are under different categories like State Highways (“SHs”) and Major District Roads. They are being developed/ upgraded through State PWDs and State Road Development Corporations. Pradhan Mantri Gramm Sadak Yojana is being implemented for rural roads through the Ministry of Rural Affairs with active participation by state governments. Further, roads within urban areas mostly with PWDs and Urban Local Bodies.
- 5.3.5 State Governments have a significant role to play in developing the SHs, Major District Roads, Other District Roads to ensure the last mile connectivity. States have varying levels of maturity in terms of road infrastructure development due to issues such as inadequate identification and prioritization of projects, funding shortfall, limited institutional capacity to implement projects, etc.

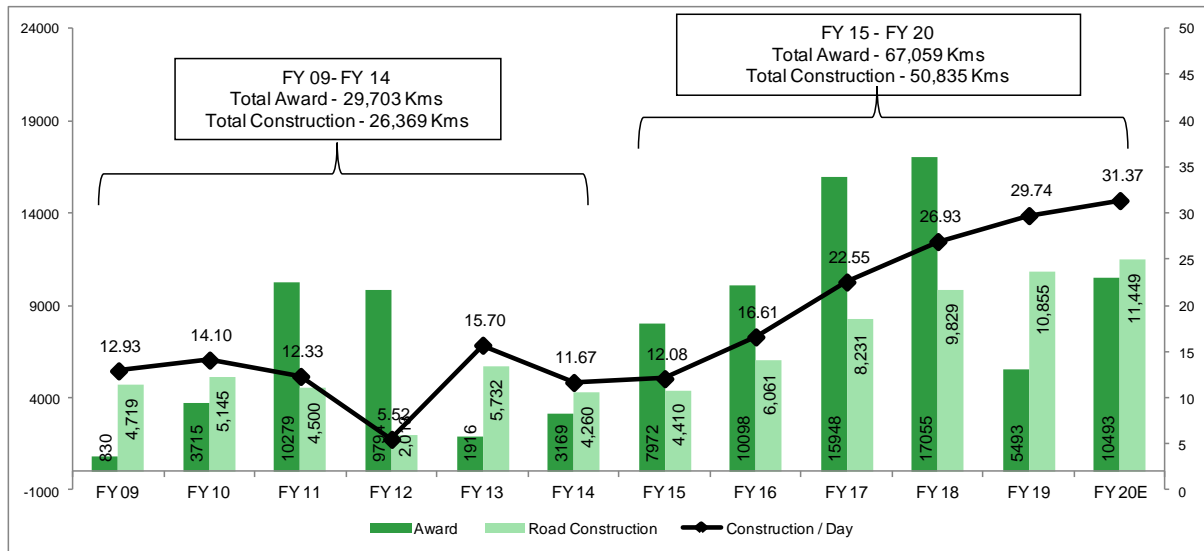

Top 5 states by length of NHs in India (in KM)

5.4 Trend of Road and Highways Construction

- 5.4.1 The length of National Highways awarded has almost doubled in the years FY 15 to FY 18 compared to FY 11 to FY 14. Length of NHs constructed has increased by 70% during the same period. This pace is expected to gain further ground, with the ambitious targets set by the ministry and the implementation of the Bharatmala Pariyojana as MORTH is planning to construct around 65,000 km of national highways at a cost of Rs 5.35 trillion (US\$ 74.15 billion) by 2022.
- 5.4.2 India has become the fastest highway developer in the world with 27 kms of highways built each day and the aim is to increase this target to 40 Kms a day.
- 5.4.3 The NHDP is a project to upgrade, rehabilitate and widen major highways in India to a higher standard. The project was started in 1998 to be implemented in 7 phases.
- 5.4.4 With the launch of Bharatmala project, 10,000 km of highway construction left under NHDP was merged with Phase I of the Bharatmala project.

Details of national highways awarded (by NHAI) and constructed in India (KMs):

5.5 Implementation of important projects and expressways

5.5.1 Bharatmala Pariyojna

Bharatmala Pariyojana is a new umbrella program for the highways sector that focuses on optimizing efficiency of freight and passenger movement across the country by bridging critical infrastructure gaps through effective interventions like development of Economic Corridors, Inter Corridors and Feeder Routes, National Corridor Efficiency Improvement, Border and International connectivity roads, Coastal and Port connectivity roads and Green-field expressway.

The Bharatmala Pariyojana envisages development of about 26,000 km length of Economic Corridors, which along with Golden Quadrilateral (GQ) and North-South and East-West (NS-EW) Corridors are expected to carry majority of the Freight Traffic on roads.

A total length of 34,800 km in road projects have been proposed to be constructed with an estimated outlay of Rs 5.35 trillion (US\$ 74.15 billion) under Bharatmala Pariyojana Phase-I over a five year period (2017-18 to 2021-22). Components under Bharatmala Pariyojana Phase-I are as given below:

Component	Length (Km)	Cost (INR Crore)
Economic corridors development	9,000	1,20,000
Inter-corridor & feeder roads	6,000	80,000
National Corridors Efficiency	5,000	1,00,000
Border & International connectivity	2,000	25,000
Coastal & port connectivity roads	2,000	20,000
Expressways	800	40,000
Sub Total	24,800	3,85,000
Other works - under NHDP	10,000	1,50,000
Total	34,800	5,35,000

Source: Ministry of Road Transport and Highways, Government of India

More than 13,000 km length of roads, at a cost of INR ~3.3 lakh crores, has already been awarded under the Bharatmala Pariyojana project of which 3,800 kms have been constructed. By March 2022, governments of India will be awarding another 8,500 kms and complete an additional 11,000 kms of national highway corridors.

Strictly Private and Confidential

5.5.2 Char Dham Vikas Mahamarg Pariyojna:

This project envisages development of easy access to the four dhams in India – Gangotri, Yamunotri, Kedarnath and Badrinath. Development of this route of 889 km route is expected at an estimated cost of INR 12,000 Crores.

5.5.3 Eastern peripheral and western peripheral expressway

These two projects will connect NH-1 and NH-2 from western and eastern side of Delhi.

5.5.4 Setu Bharatam:

This project aims to replace crossings on NHs with Road Over Bridges and Road Under Bridges. It is projected to construct 174 such structures.

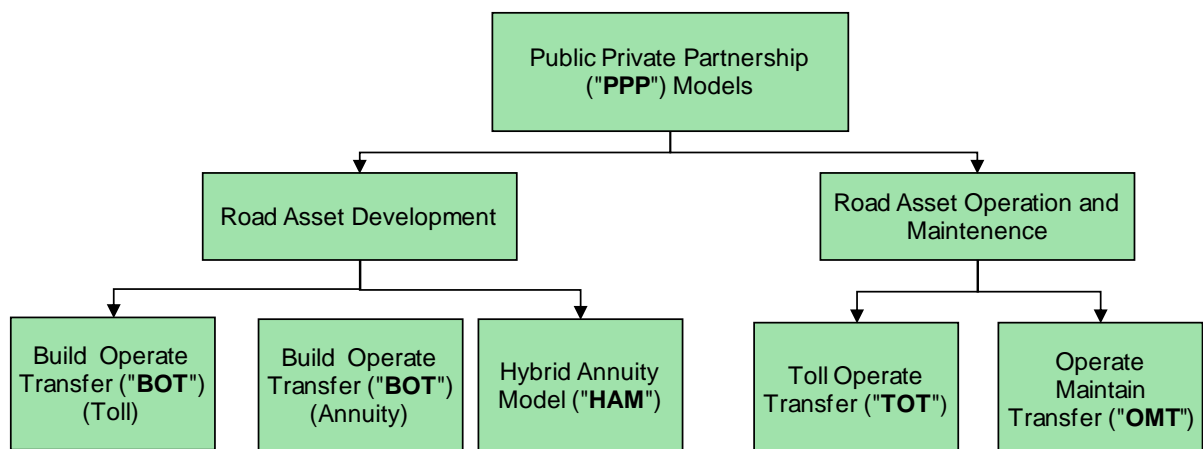

5.5.5 To further augment road infrastructure, more economic corridors are also being planned by Government of India as revealed in Budget 2021-22.

- a. 3,500 km of National Highway works in the state of Tamil Nadu at an investment of INR 1.03 lakh Crores. These include Madurai-Kollam corridor, Chittoor-Thatchur corridor. Construction will start next year.
- b. 1,100 km of National Highway works in the State of Kerala at an investment of INR 65,000 Crores including 600 km section of Mumbai Kanyakumari corridor in Kerala.
- c. 675 km of highway works in the state of West Bengal at a cost of INR 25,000 Crores including upgradation of existing road-Kolkata –Siliguri.
- d. National Highway works of around INR 19,000 Crores are currently in progress in the State of Assam. Further works of more than INR 34,000 Crores covering more than 1300 kms of National Highways will be undertaken in the State in the coming three years.

5.6 Public Private Partnership (“PPP”) Models of road development and maintenance in India

5.6.1 India has a well-developed framework for Public-Private-Partnerships (PPP) in the highway sector. PPP has been a major contributor to the success story of the roads and highway sector in India. With the emergence of private players over the last decade, the road construction market has become fragmented and competitive. Players bidding for projects also vary in terms of size.

5.6.2 PPP modes have been used in India for both development and operation & maintenance of road assets.

5.6.3 **Road Asset Development Models**

- **BOT Toll**

- In a BOT toll project, the concessionaire is responsible for designing, building, financing, operating, maintaining, tolling and transferring the project to the relevant authority at the end of the concession period. The concession period is project specific but is usually for 30 years. In BOT Toll model, the concessionaire earns revenue primarily in the form of toll revenue which in turns depends on the traffic on the road stretch. Toll rates are regulated by the government through rules.

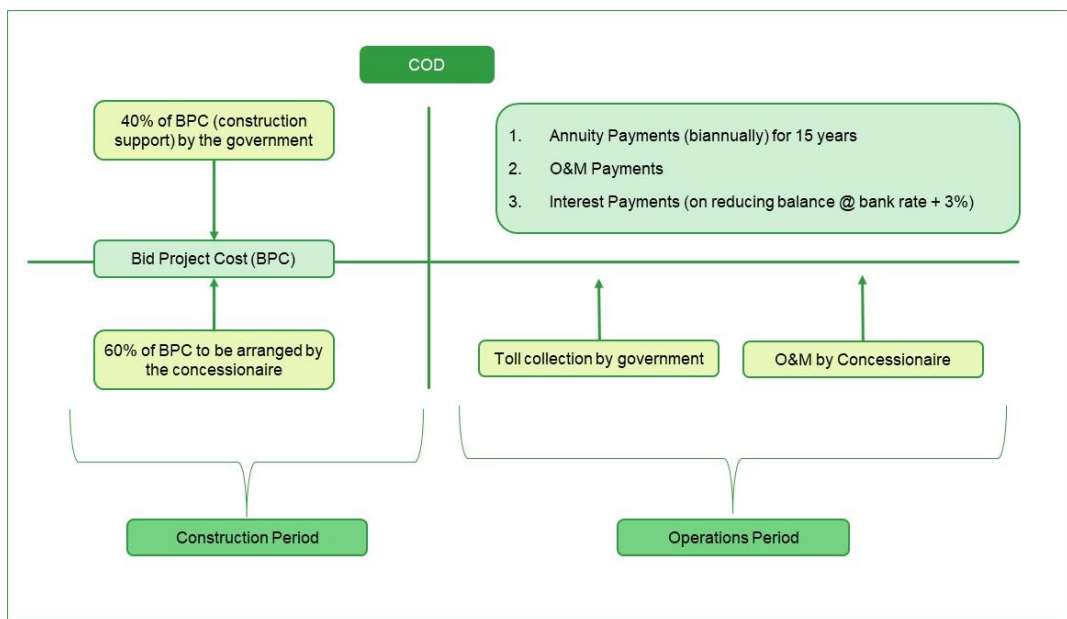

- **BOT Annuity**

- Similar to a BOT Toll projects, in BOT Annuity project, the concessionaire is responsible for designing, building, financing, operating, maintaining, tolling and transferring the project to the relevant authority at the end of the concession period. However, in these projects, the responsibility of tolling on road stretch lies with the government. The concessionaire earns revenue in the form of pre-determined semi-annual annuity payments.

- **HAM**

- Similar to a BOT projects, in HAM project, the concessionaire is responsible for designing, building, financing, operating, maintaining, tolling and transferring the project to the relevant authority at the end of the concession period. However, in these projects, the responsibility of tolling on road stretch lies with the government. The construction period for HAM projects is project specific and a fixed operation period of 15 years.

Key Features of HAM Projects

- The government provides construction support of 40% of the bid project cost adjusted for inflation to concessionaire during the construction period. This grant is provided in five equal tranches of 8% each. The remaining 60% of the bid project cost is to be arranged by the concessionaire during the construction period. The government compensates this balance cost in the form of semi annual payments. In addition to these semi annual payments, the government also pays an interest of reducing balance and operations and maintenance costs to the concessionaire.

Risk Parameters for Road Asset Development Models through PPP

Mode	Financing Risk	Construction Risk	Traffic Risk	O&M Risk
BOT (Toll)	Concessionaire	Concessionaire	Concessionaire	Concessionaire
BOT (Annuity)	Concessionaire	Concessionaire	Government	Concessionaire
HAM	Concessionaire (partly)	Concessionaire	Government	Concessionaire

5.6.4 Road Asset Operation & Maintenance Models

- **TOT**

- In this model, long term tolling rights and O&M responsibilities are assigned to the developer / investor after construction completion. This is done after a few years of successful operation of a project when the traffic on the road stretch has stabilized.
- An upfront fee is paid by the concessionaire to the government for acquiring the tolling rights. Currently, the concession period of a TOT project is 30 years.

- **OMT**

- Under the OMT mode, the concessionaire operates and maintains the road asset for a shorter duration, ranging from four to nine years. The concessionaire acquires the tolling rights in exchange of premium paid to the government authority. The concessionaire is responsible for routine maintenance, periodic maintenance and traffic management.

5.7 Government Investment in the Sector

- 5.7.1 Under Union Budget 2021-22, the Government of India has allocated INR 1,18,101 Crore (US\$ 13.14 billion) for the Ministry of Road Transport and Highways as Gross Budgetary Support.
- 5.7.2 During 2019-23, NHAI is expected to generate Rs. 1 trillion (US\$ 14.30 billion) annually from toll and other sources.
- 5.7.3 NHAI is planning to raise Rs. 40,000 crore (US\$ 5.72 billion) to monetize its highway assets through Infrastructure Investment Trust (InvIT). Five operational roads with an estimated enterprise value of INR 5,000 crores are being transferred to the NHAI InvIT.
- 5.7.4 As on December 2019, 824 projects were recommended for development by PPP Appraisal Committee. Investment of US\$ 31 billion for national highways is expected in PPP by 2020.

5.8 Growth Drivers

5.8.1 Robust Demand :

Growing domestic trade flows have led to rise in commercial vehicles and freight movement; supported by rise in production of commercial vehicles to 752,022 in FY20 which commands stronger road network in India. Higher individual discretionary spending has led to increased spending on two and four wheelers. Road’s traffic share of the total traffic in India has grown from 13.8% to 65% in freight traffic and from 32% to 90% in passenger traffic over 1951–2019.

5.8.2 Increasing Investment :

Huge investment have been made in the sector with total investment increasing more than three times from Rs. 51,914 crore (US\$ 7.43 billion) in 2014-15 to Rs. 158,839 crore (US\$ 22.73 billion) in 2018- 19. Between FY16 and FY21, budget outlay for road transport and highways increased at a robust CAGR of 13.10%. In 2019-20, Rs. 36,691 crore (US\$ 5.24 billion) was allocated to NHAI.

Strictly Private and Confidential

5.8.3 Policy Support :

100% FDI is allowed under automatic route subject to applicable laws and regulations, standardized process for bidding and tolling. Under Union Budget 2020-21, the Government of India has allocated Rs. 19,500 crore (US\$ 2.79 billion) for Pradhan Mantri Gram Sadak Yojana (PMGSY) which is a scheme for development of rural roads in India. Government of India has set up India Infrastructure Finance Company (IIFCL) to provide long-term funding for infrastructure projects.

5.9 Challenges & Issues in the Sector

5.9.1 Land Acquisition Delays & Cost :

- Land acquisition cost has increased more than 30% since 2017, primarily due to enhanced compensation payment requirements as per 'The Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement Act, 2013'.
- Delay in pre-construction activities (such as land acquisition, relocation) affects project timelines. Land acquisition for road projects involves various stages. Each stage involves a number of stakeholders and regulatory bodies. Thus processes consume considerable time.

5.9.2 Regulatory Approvals & Disputes :

- Road development process requires a number of approvals such as environmental clearance, forest clearance, railways clearance, etc. Each of these activities takes considerable time and non-adherence to timelines result in cost overruns due to delays.
- Claims arising out of disputes between the concessionaire/ contractor and the government authorities are also a significant cost which can lead to large liabilities.

5.9.3 Operational Issues :

- Uncertainty of toll revenue collection and variation of collected toll revenue compared to projected levels as Actual traffic is much less than the anticipated traffic.
- Often unforeseen weather conditions require unplanned O&M, over and above the routine and periodic maintenance activities. This results in enhanced O&M expenses. The increase in O&M costs is also affecting the project returns.

5.10 Recent Initiatives by Government

5.10.1 Bhoomi Rashi – Land Acquisition Portal

The ministry has corroborated with the National Informatics Centre, to create Bhoomirashi, a web portal which digitises the cumbersome land acquisition process, and also helps in processing notifications relating to land acquisition online. Processing time, which was earlier two to three months has come down to one to two weeks now.

5.10.2 FASTag – Electronic Toll Collection

Electronic Toll Collection (ETC) system, has been implemented on pan India basis in order to remove bottlenecks and ensure seamless movement of traffic and collection of user fee as per the notified rates, using passive Radio Frequency Identification (RFID) technology. 24 banks (including Public and Private sector banks) have been engaged as issuer banks in order to issue FASTag to road users. As of Jan-2020, collectively banks have issued 135.62 lakh FASTags and with an 30.80 lakhs average daily ETC transactions, the average daily collection through ETC has increased to Rs. 50.88 crore with a penetration of 65% in total fee collection. There are 538

Strictly Private and Confidential

operational National Highways fee plazas out of which 536 plazas are live with ETC infrastructure in all lanes.

5.10.3 Revival of languishing projects

Projects which were languishing for a number of years have been attempted to be revived, with the help of a number of policy measures taken by the government. Some of the policy measures like Premium deferment in stressed projects, extension of concession period for languishing projects to the extent of delay not attributable to concessionaires, One Time Capital Support for physical completion of languishing projects that have achieved at least 50 per cent physical progress, through one time fund infusion by NHAI, subject to adequate due diligence on a case to case basis.

6. Valuation Methodology and Approach

- 6.1. The present valuation exercise is being undertaken in order to derive the fair EV of the SPVs.
- 6.2. The valuation exercise involves selecting a method suitable for the purpose of valuation, by exercise of judgment by the valuers, based on the facts and circumstances as applicable to the business of the company to be valued.
- 6.3. There are three generally accepted approaches to valuation:
 - (a) "Cost" approach
 - (b) "Market" approach
 - (c) "Income" approach

6.4. **Cost Approach**

The cost approach values the underlying assets of the business to determine the business value. This valuation method carries more weight with respect to holding companies than operating companies. Also, cost value approaches are more relevant to the extent that a significant portion of the assets are of a nature that could be liquidated readily if so desired.

Net Asset Value ("NAV") Method

The NAV Method under Cost Approach considers the assets and liabilities, including intangible assets and contingent liabilities. The Net Assets, after reducing the dues to the preference shareholders, if any, represent the value of a company.

The NAV Method is appropriate in a case where the main strength of the business is its asset backing rather than its capacity or potential to earn profits. This valuation approach is also used in cases where the firm is to be liquidated, i.e. it does not meet the "Going Concern" criteria.

As an indicator of the total value of the entity, the NAV method has the disadvantage of only considering the status of the business at one point in time.

Additionally, NAV does not properly take into account the earning capacity of the business or any intangible assets that have no historical cost. In many aspects, NAV represents the minimum benchmark value of an operating business.

6.5. **Market Approach**

Under the Market approach, the valuation is based on the market value of the company in case of listed companies, and comparable companies' trading or transaction multiples for unlisted companies. The Market approach generally reflects the investors' perception about the true worth of the company.

Comparable Companies Multiples ("CCM") Method

The value is determined on the basis of multiples derived from valuations of comparable companies, as manifest in the stock market valuations of listed companies. This valuation is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation. Relevant multiples need to be chosen carefully and adjusted for differences between the circumstances.

Comparable Transactions Multiples ("CTM") Method

Under the CTM Method, the value is determined on the basis of multiples derived from valuations of similar transactions in the industry. Relevant multiples need to be chosen carefully and adjusted for differences between the circumstances. Few of such multiples are EV/Earnings before Interest, Taxes, Depreciation & Amortization ("**EBITDA**") multiple and EV/Revenue multiple.

Market Price Method

Under this method, the market price of an equity share of the company as quoted on a recognized stock exchange is normally considered as the fair value of the equity shares of that company where such quotations are arising from the shares being regularly and freely traded. The market value generally reflects the investors' perception about the true worth of the company.

6.6. **Income Approach**

The income approach is widely used for valuation under "Going Concern" basis. It focuses on the income generated by the company in the past as well as its future earning capability. The Discounted Cash Flow Method under the income approach seeks to arrive at a valuation based on the strength of future cash flows.

DCF Method

Under DCF Method value of a company can be assessed using the FCFF or Free Cash Flow to Equity Method ("FCFE"). Under the DCF method, the business is valued by discounting its free cash flows for the explicit forecast period and the perpetuity value thereafter. The free cash flows represent the cash available for distribution to both, the owners and creditors of the business. The free cash flows in the explicit period and those in perpetuity are discounted by the WACC. The WACC, based on an optimal vis-à-vis actual capital structure, is an appropriate rate of discount to calculate the present value of future cash flows as it considers equity-debt risk by incorporating debt-equity ratio of the firm.

The perpetuity (terminal) value is calculated based on the business' potential for further growth beyond the explicit forecast period. The "Constant Growth Model" is applied, which implies an expected constant level of growth for perpetuity in the cash flows over the last year of the forecast period.

The discounting factor (rate of discounting the future cash flows) reflects not only the time value of money, but also the risk associated with the business' future operations. The EV (aggregate of the present value of explicit period and terminal period cash flows) so derived, is further reduced by the value of debt, if any, (net of cash and cash equivalents) to arrive at value to the owners of the business.

Conclusion on Valuation Approach

- 6.7. It is pertinent to note that the valuation of any company or its assets is inherently imprecise and is subject to certain uncertainties and contingencies, all of which are difficult to predict and are beyond my control. In performing my analysis, I have made numerous assumptions with respect to industry performance and general business and economic conditions, many of which are beyond the control of the SPVs. In addition, this valuation will fluctuate with changes in prevailing market conditions, and prospects, financial and otherwise, of the SPVs, and other factors which generally influence the valuation of companies and their assets.
- 6.8. The goal in selection of valuation approaches and methods for any business is to find out the most appropriate method under particular circumstances on the basis of available information. No one method is suitable in every possible situation. Before selecting the appropriate valuation approach and method, I have considered various factors, inter-alia, the basis and premise of current valuation exercise, purpose of valuation exercise, respective strengths and weaknesses of the possible valuation approach and methods, availability of adequate inputs or information and its reliability and valuation approach and methods considered by the market participants.

Cost Approach

The existing book value of EV of the SPVs comprising of the value of its Net fixed assets, Net intangible assets and working capital based on the audited financial statements as at 31st March 2021 prepared as per Indian Accounting Standards (Ind AS) are as under:

Book EV (INR Mn)	31 st March 2021
DLSHL	8,810
DKZHL	2,920
DYWHL	2,695
DTAHL	2,317

DHRTL	916
JDTL	7,304
SUIPL	224
Total	45,824

In the present case, The SPVs operate and maintain the project facilities in accordance with the terms and conditions under the relevant concession agreement. During the concession period, the SPVs operate and maintain the road asset and earn revenues through annuity fees that are pre-determine or through charges, fees or tolls generated from the asset. The amount of annuity fees are pre-determined and the charges, fees or tolls that they may collect are notified by the relevant government authority, which are usually revised annually as specified in the relevant concessions and toll notifications. In such scenario, the true worth of the business is reflected in its future earning capacity rather than the cost of the project. Accordingly, I have not considered the cost approach for the current valuation exercise.

Market Approach

The present valuation exercise is to undertake fair EV of the SPVs engaged in the road infrastructure projects for a predetermined tenure. Further, the tariff revenue and expenses are very specific to the SPVs depending on the nature of their geographical location, stage of project, terms of profitability. In the absence of any exactly comparable listed companies with characteristics and parameters similar to that of the SPVs, I have not considered CCM method in the present case. In the absence of adequate details about the Comparable Transactions, I was unable to apply the CTM method. Currently, the equity shares of the SPVs are not listed on any recognized stock exchange of India. Hence, I was unable to apply market price method.

Income Approach

Each of the SPVs operates under a BOT or DBFOT concession agreement with the relevant regulatory authorities. Government authorities in India typically award highway infrastructure development projects under BOT concessions, which are characterized by three distinct phases:

1. Build: upon successfully securing a project concession through a competitive bid, a concessionaire secures financing for, and completes construction, of a road;
2. Operate: during the agreed concession period, the concessionaire operates, manages and maintains the road at its own expense and earns revenues by collecting tolls from vehicles using the road; and

Strictly Private and Confidential

3. Transfer: at the end of the agreed concession period, the ownership of the road, the obligation to maintain the road and the right to collect tolls from the vehicles using the road revert to the government entity that granted the concession.

A DBFOT project involves, in addition to the activities required under a BOT project, the provision of engineering design and financing for such project.

Currently, each of the SPVs are completed and are revenue generating SPVs. The revenue of the SPVs is based on tenure, annuity fees, traffic volumes, operations and other factors that are unique to each of the SPVs. The revenue of all the SPVs, except for the Toll SPVs, is mainly derived from the annuity fees and interest income wherever applicable that is defined for a certain period of years under respective Concession Agreement, known as "Concession Period". The annuity fees are typically pre-determined with the relevant government authority and cannot be modified to reflect prevailing circumstances, other than annual adjustments to account for inflation as specified in the concession agreements. The Toll SPVs derive almost all of their revenue from their toll-road operations. Demand for toll roads is primarily dependent on sustained economic development in the regions that they operate in and government policies relating to infrastructure development. The Toll SPVs are substantially dependent on the accuracy of the traffic volume forecasts for their respective projects. The rights in relation to the underlying assets of all the SPVs shall be transferred after the expiry of the Concession Period. Accordingly, since all the SPVs are generating income based on pre-determined agreements / mechanism and since the Investment Manager has provided me with the financial projections of the SPVs for the balance tenor of the concession agreements, DCF Method under the income approach has been considered as the appropriate method for the present valuation exercise.

<< This space is intentionally left blank >>

7. Valuation of the SPVs

- 7.1. I have estimated the fair EV of the SPVs using the DCF Method. While carrying out this engagement, I have relied extensively on the information made available to me by the Investment Manager. I have considered projected financial statement of the SPVs as provided by the Investment Manager.

Valuation

- 7.2. The key assumptions of the projections provided to us by the Investment Manager are:

Key Assumptions:

7.2.1. Revenue cash flows for NHAI Hybrid Annuity Model SPVs (NHAH HAM SPVs)

The Cash flow for the NHAI SPVs can be divided into two segments:

Payment NHAI during the Construction Period:

Each SPV were eligible to receive 40% of the Bid Project Cost, adjusted for the price index multiple, in 5 equal installments during the construction period. I have been represented by the Investment Manager that all the 6 NHAI HAM SPVs have received the agreed portion of the inflation adjusted bid project cost (of 40%) as per the respective concession agreements. Hence, no further cash flow receipts are attributable towards this segment of cash flows.

Payment by NHAI during the Operation Period: Accordingly, the revenue of each of the 6 NHAI HAM SPVs would mainly consists of the following:

- a. **Annuity payments:** The Bid Project Cost remaining, adjusted for the price index multiple, to be paid in pursuance of the respective concession agreements is eligible to be received by the respective SPVs by way of specified biannual installments as mentioned in their respective concession agreement for the balance period of operations.
- b. **Interest:** As per the concession agreements, the SPVs are entitled to receive interest on reducing balance Bid Project Cost equal to Bank Rate as per Reserve Bank of India + 3.00% spread. Such interest is due and payable along with each of the biannual installments as mentioned above.; and
- c. **Operations and Maintenance Revenue:** In lieu of O&M expenses to be incurred by SPV, SPVs are eligible for the O&M cost at each biannual installment date duly adjusted for an appropriate inflation rate.

7.2.2. Revenue cash flows for the State Annuity and Toll Model SPVs (State ATM SPVs)

Under this model, concessionaire is responsible for designing, building, financing, operating, maintaining and transferring the project to the authority at the end of the concession period. The responsibility for tolling is with concessionaire. The concessionaire earns revenue in the following two forms

- a. **Annuity Payments:** The concessionaire earns a pre-determined biannual annuity payment which are made by the government to the concessionaire and are based on the amount or mechanism mentioned in the respective concession agreements;
- b. **Toll Revenue:** In addition to the annuity revenue, each SPV is allowed to levy, demand, collect and appropriate the fees (called as toll fees) from vehicles and persons liable to payment of fees for using their respective road asset. Toll revenues depend on toll receipts, which in turn depend on traffic volumes and toll fees on the toll roads. Based on the representation of the Investment Manager, toll revenue is escalated by 6% per annum throughout the balance project life. The toll revenue is based on the independent third party reports provided to us by the Investment Manager.

7.2.3. Revenue cash flows for the State 100% Annuity Model SPVs (State AM SPVs)

Under this model, concessionaire is responsible for designing, building, financing, operating, maintaining and transferring the project to the authority at the end of the concession period. Under this model, post completion of the road project, the responsibility for tolling is with government. Accordingly, only one mode of revenue is earned by these SPVs that is explained below:

Annuity Payments: The concessionaire earns revenue primarily in form of pre – determined biannual annuity payments which are made by the government to the concessionaire based on the respective concession agreements.

7.2.4. Revenue cash flows for the Toll SPVs:

Under this mode, the Toll SPVs Are responsible for designing, building, financing, operating, maintaining and transferring the project to the authority at the end of the concession period. The responsibility for tolling is with the Toll SPVs. The concessionaire earns revenue primarily in form of toll revenue.

Traffic Volumes

Traffic volumes are directly or indirectly affected by a number of factors, many of which are outside of the control of the Toll SPVs, including: toll fees; fuel prices in India; the frequency of traveler use; the quality, convenience and travel efficiency of alternative routes outside the Toll SPV's network of toll roads; the convenience and extent of a toll road's connections with other parts of the local, state and national highway networks; the availability and cost of alternative means of transportation, including rail networks and air transport; the level of commercial, industrial and residential development in areas served by the Toll SPVs' projects; adverse weather conditions; and seasonal holidays.

Toll Rates

During the concession period, the Toll SPVs operate and maintain the road asset and earn revenues through charges, fees or tolls generated from the asset. The amount of charges, fees or tolls that they may collect are notified by the relevant government authorities, which are usually revised annually as specified in the relevant concessions and toll notifications.

The toll rates for the projected period have been derived in the manner stipulated in the individual concession agreements of the Toll SPVs.

In the present case, the Investment Manager has appointed M/s Ramoll India Private Limited an independent third-party research agency to forecast the traffic volumes and toll revenues for JDTL. As confirmed by the Investment Manager, the traffic volumes and toll revenues for JDTL and other SPVs has been estimated by the traffic consultant after considering overall structure and condition of the projects including analysis of demand and supply and strategic geographical locations of the individual road projects. This was one of the most important input in projecting the toll revenues.

7.2.5. Revenue Sharing with NHAI for JDTL: This is applicable to JDTL only. The target traffic as per RFP of JDTL is deemed to be 27,136 PCUs as on 1st October 2025. Based on the above traffic forecast, the traffic estimated on the project road as the average of the traffic for the three consecutive accounting years (FY25 to FY27) is estimated to be 32,216 PCUs which is higher than the target traffic. As per concession agreement of JDTL, if the Actual Average Traffic shall have fallen short of or exceeded the target traffic by more than 2.5 percent, then there will be an increase or reduction in concession period. Based on the concession agreement of JDTL, if the traffic in PCUs at target date is higher than the target traffic, then for every 1 percent increase, the concession period shall be decreased by 0.75 percent, and no more than 10 per cent of the base concession period. The concession period may, therefore, be subject to a decrease by 2.6 years to 23.4 years. Accordingly the revised concession period arrive at 07 January 2041. In lieu of reduction in concession period, the

concessionaire may opt to pay 25 percent of the realisable fee over the remaining period from 7th January 2041 to NHAI for the balance concession period. As represented to us by the investment manager, JDTL is expected to share 25% of revenue for balance period, and has projected revenue of JDTL on the net of share of revenue basis (i.e. after deducting 25% of revenue to be shared to NHAI). Accordingly, no additional adjustment in relation to share of revenue that belongs to NHAI is required in order to derive the enterprise values of the SPVs.

7.2.6. Operating and Maintenance Expenses:

Since all the SPVs are operational on the Valuation Date, following are the major costs incurred by the SPV:

Operation and Maintenance Costs (Routine) (“O&M Costs”)

These are routine costs incurred every year. These costs are related to normal wear and tear of the road and hence involve repairing the patches damaged mainly due to heavy traffic movement. The primary purpose of these expenses is to maintain the road as per the specifications mentioned in the respective concession agreement.

Major Maintenance and Repairs Costs (“MMR Costs”)

MMR cost is typically incurred once in few years. These expenses are primarily related to the construction or re-laying of the top layer of the road. Accordingly such costs includes considerable amounts of materials and labour.

In the present case, all the SPVs along with its immediate holding company have entered into a sub-contracting agreement with DBL for the operations, maintenance and management of the SPVs’ road projects. As per the sub-contracting agreement, I understand from the Investment Manager that DBL would be inter-alia responsible for the following:

- a. Operation and maintenance of the road assets (or project) in conformity with the specifications and standards mentioned in the O&M sub-contract agreement, O&M agreement and the concession agreement of the respective SPVs.
- b. Collection of toll fees, if any, from the users of the project as per the provisions of the respective concession agreements
- c. Performing all activities, for ensuring timely release of the annuity (wherever applicable) to the concessionaire in accordance with the provisions of the concession agreement, including coordination with the relevant authority, conducting site visits, undertaking requisite tests at the project site, liaisoning with relevant officials, submission of test reports;
- d. Performance and fulfilment of all other obligations of the sub-contractor and matters incidental to it

The operating and maintenance expenses that will be incurred by the sub-contractor i.e. DBL shall include:

- a. Cost of salaries and other compensation to employees of the sub-contractor;
- b. Cost of materials, supplies, utilities and other services,
- c. Premium for sub-contractors insurance,
- d. All profit, all license, royalty and other fees, all taxes, duties, cess and fees due and payable for O&M;
- e. All repairs, replacements, reconstruction, reinstatement, improvement, general and major maintenance costs and
- f. All other expenditure required to be incurred under the applicable laws, applicable permits or the concession agreement in connection with the O&M

The obligation of above mentioned activities including incurring major maintenance is with the sub-contractor. The sub-contractor i.e. DBL is expected to incur at its own cost and expenses to undertake the responsibilities of the operation and maintenance of the project including major maintenance and repairs. In lieu of the above services, the SPVs along with its

Strictly Private and Confidential

immediate holding company shall be responsible to provide payment to the sub-contractor as per the schedule or mechanism agreed as per the individual concession agreements. I have relied on the details provided by the Investment Manager in relation to the routine operating and maintenance expenses as well as the major maintenance and repairs expenses for the projected period.

7.2.7. **Defect Liability Payments:**

As per the respective O&M Agreements between the SPVs, the Holding Companies and DBL, DBL has provided security deposits to the Holding Companies in relation to the expected performance guarantee of the routine O&M and MMR expenses in relation to the SPVs. This security deposit is expected to be paid back to DBL based on its performance of conducting and incurring the routine O&M and MMR activities for the SPVs. Accordingly, the outflows pertaining to the above security deposits have been considered during the projected period.

7.2.8. **Depreciation and Amortization:** The toll collection rights or the financial rights (intangible assets) of the SPVs are being amortized using straight line method. Under this method, the carrying value of the toll collection rights is amortized in the proportion in balance useful life of the concessionaire period

7.2.9. **Capital Expenditure (“Capex”):** As represented by the Investment Manager, regarding the maintenance Capex, the same has already been considered in the Operations & Maintenance expenditure and Major maintenance expenditure for the projected period and regarding the expansion Capex, the SPVs are not expected to incur any capex in the projected period.

7.2.10. **Taxes:** As per the discussions with the Investment Manager, taxes payable by the SPVs for the projected period shall be MAT rates or normal tax rates, whichever is applicable. While projecting the tax numbers, 80-IA benefits under the Income Tax Act, 1961 has been considered whenever applicable to arrive at tax payable by the SPVs.

As per the discussion with the Investment manager the NHAI HAM SPV's are eligible for 80IA considering the letter of allotment was signed before the sunset clause (i.e 31st March 2017).

As per the discussions with the Investment Manager, for JDTL the company wish to continue with old tax regime till FY 32 and avail the benefits of additional depreciation, section 115 JB and section 80IA and thereafter shift to the new tax regime (the base tax rate of 22%) for the current valuation exercise.

7.2.11. **Working Capital:**

The investment manager has provided projected financial information on biannual basis for those SPVs where annuity payments are the material component of the revenue. The biannual period are based on the annuity dates of the respective SPVs. The amount of O&M expenses payable to DBL by the SPVs on the basis of their respective O&M Agreements is also due and payable on the basis of the annuity amount and date on which annuities are received. Hence, for all the SPVs where annuity payments are material component of revenue, there are no receivables and payables estimated to be outstanding at their respective annuity dates during the biannually prepared projected period. Other working capital items outstanding as at the Valuation Date mainly represents the advance income tax, prepaid expenses, etc. that are separately adjusted in the calculation of the enterprise values of the SPVs.

For the Toll SPVs or toll revenues, all the routine expenses are expected to be met by the daily toll collections. Accordingly, I understand the working capital is expected to be stable and is not expected to vary drastically over a period of time. Hence, changes in working capital have been considered as an adjustment for its release or payment in the projected cash flows towards the end of the concession period.

Other Adjustments

Receivable from NHAI and Payable to DBL: I understand from the Investment Manager, certain SPVs had incurred additional amount in relation to the Project Cost which can be

Strictly Private and Confidential

attributed towards change in scope of work or/and change in law (GST Law, etc.). These amount are receivable from NHAI as per the concession agreement and accordingly, are disclosed as receivable from NHAI in the financial statements as at the Valuation Date. We understand from the Investment Manager, the above amount receivable from NHAI is required to be paid to the EPC contractor i.e. DBL once received from NHAI after adjustment with the advance paid to or amount claimed by DBL. I understand, this entire balance will be settled by end of next financial year. Accordingly, the net amount is adjusted and disclosed separately in our calculation of the enterprise value for the NHAI HAM SPVs at present value.

Receivable from State and Payable to DBL: I understand from the Investment Manager, in case of state SPVs – DMHTL, DHPTL and DHRTL, the state authorities had withheld certain portions of the annuities on account of their claim on work to be completed by the respective SPVs. Correspondingly, the SPVs had withheld proportionate amount payable to the O&M Contractor i.e. DBL. As represented to me by the Investment Manager, the withheld annuities are expected to be received by the end of next financial year end. Accordingly, the same is adjusted and disclosed separately in our calculation of the enterprise value for the above mentioned State SPVs at present value.

7.3. Impact of Ongoing Material Litigation on Valuation

As on 31st March 2021, there are ongoing litigations as shown in Appendix 4. As represented by the Investment Manager, the Sponsor would indemnify the Trust and its SPVs against any financial losses suffered or incurred in connection with any pending or threatened claims against the Trust made prior to the transfer of the assets to the Trust, hence no impact has been factored on the valuation of the SPVs.

7.4. Calculation of Weighted Average Cost of Capital for the SPVs

7.4.1. Cost of Equity:

Cost of Equity (CoE) is a discounting factor to calculate the returns expected by the equity holders depending on the perceived level of risk associated with the business and the industry in which the business operates.

For this purpose, I have used the Capital Asset Pricing Model (CAPM), which is a commonly used model to determine the appropriate cost of equity for the SPVs.

$$K(e) = R_f + [ERP * \text{Beta}] + \text{CSRP}$$

Wherein:

K(e) = cost of equity

R_f = risk free rate

ERP = Equity Risk Premium

TARP = Temporary Additional Risk Premium

Beta = a measure of the sensitivity of assets to returns of the overall market

CSRP = Company Specific Risk Premium (In general, an additional company-specific risk premium will be added to the cost of equity calculated pursuant to CAPM).

For valuation exercise, I have arrived at adjusted cost of equity of the SPVs based on the above calculation (Refer Appendix 2).

7.4.2. Risk Free Rate:

I have applied a risk free rate of return of 6.7% on the basis of the zero coupon yield curve as on 31st March 2021 for government securities having a maturity period of 10 years, as quoted on the website of Clearing Corporation of India Limited (“CCIL”).

7.4.3. Equity Risk Premium (“ERP”):

Equity Risk Premium is a measure of premium that investors require for investing in equity markets rather than bond or debt markets. The equity risk premium is estimated based on

consideration of historical realised returns on equity investments over a risk-free rate as represented by 10 year government bonds. Based on the aforementioned, a 7% equity risk premium for India is considered appropriate.

7.4.4. Beta:

Beta is a measure of the sensitivity of a company's stock price to the movements of the overall market index. In the present case, I find it appropriate to consider the beta of companies in similar business/ industry to that of the SPVs for an appropriate period.

For the valuation of the NHAI HAM SPVs, State ATM SPVs and State AM SPVs, I find it appropriate to consider the beta of MEP Infrastructure Developers Ltd. and Sadbhav Engineering Ltd for an appropriate period. The beta so arrived, is further adjusted based on advantageous factors of mentioned SPVs like completion of projects, revenue certainty, past collection trend, lack of execution uncertainty etc. to arrive at the adjusted unlevered beta appropriate to the SPV

I have further unlevered the beta of such companies based on market debt-equity of the respective company using the following formula:

$$\text{Unlevered Beta} = \text{Levered Beta} / [1 + (\text{Debt} / \text{Equity}) * (1-T)]$$

Further I have re-levered it based on debt-equity at 70:30 based on the industry Debt: Equity ratio of annuity based road DBFOT/BOT projects using the following formula:

$$\text{Re-levered Beta} = \text{Unlevered Beta} * [1 + (\text{Debt} / \text{Equity}) * (1-T)]$$

Accordingly, as per above, I have arrived at re-levered betas of the SPVs. (Refer Appendix 2)

For the valuation of the Toll SPVs, I find it appropriate to consider the beta of Ashoka Buildcon Limited and IRB Infrastructure Developers Limited for an appropriate period.

I have further unlevered the beta of such companies based on market debt-equity of the respective company using the following formula:

$$\text{Unlevered Beta} = \text{Levered Beta} / [1 + (\text{Debt} / \text{Equity}) * (1-T)]$$

Further I have re-levered it based on debt-equity at 50:50 based on the industry Debt: Equity ratio of a road toll based BOT/DBFOT projects using the following formula:

$$\text{Re-levered Beta} = \text{Unlevered Beta} * [1 + (\text{Debt} / \text{Equity}) * (1-T)]$$

Accordingly, as per above, I have arrived at re-levered betas of the SPVs. (Refer Appendix 2)

7.4.5. Company Specific Risk Premium (“CSR”):

Discount Rate is the return expected by a market participant from a particular investment and shall reflect not only the time value of money but also the risk inherent in the asset being valued as well as the risk inherent in achieving the future cash flows. In the present case, considering the counter-party risk for certain SPVs, considering the length of the explicit period for the Toll SPVs, and basis my discussion with Investment Manager, I found it appropriate to consider the following CSRs:

Sr. No.	SPVs	CSR
1	DLSHL	0.0%
2	DKZHL	0.0%
3	DYWHL	0.0%
4	DTAHL	0.0%
5	DWBHL	0.0%
6	DMYHL	0.0%
7	DAVTL	0.5%
8	DBSTL	0.5%
9	DHDTL	0.5%
10	DSSTL	0.5%
11	Sitamau	0.5%
12	DMSTL	0.5%
13	DUNTTL	0.5%
14	DSBTL	0.5%

15	DPRTL	0.5%
16	DTNTL	0.5%
17	DNMTL	0.5%
18	DBDTL	0.5%
19	DJSTL	0.5%
20	DMHTL	0.5%
21	DHPTL	0.5%
22	DHRTL	0.5%
23	JDTL	1.0%
24	SUIPL	1.0%

7.4.6. Cost of Debt:

The calculation of Cost of Debt post-tax can be defined as follows:

$$K(d) = K(d) \text{ pre-tax} * (1 - T)$$

Wherein:

K(d) = Cost of debt

T = tax rate as applicable

For valuation exercise, pre-tax cost of debt has been considered on the basis of details representation provided by the Investment Manager.

7.4.7. Weighted Average Cost of Capital (WACC):

The discount rate, or the WACC, is the weighted average of the expected return on equity and the cost of debt. The weight of each factor is determined based on the company’s optimal capital structure.

Formula for calculation of WACC:

$$WACC = [K(d) * Debt / (Debt + Equity)] + [K(e) * (1 - Debt / (Debt + Equity))]$$

Accordingly, as per above, I have arrived the WACC for the explicit period of the SPVs. (Refer Appendix 2 for detailed workings).

7.5. At the end of the agreed concession period, the rights in relation to the underlying assets, its operations, the obligation to maintain the road and the right to collect tolls from the vehicles using the road revert to the government authority that granted the concession by the SPVs. Hence, SPVs are not expected to generate cash flow after the expiry of their respective concession agreements. Accordingly, I found it appropriate not to consider terminal period value, which represents the present value at the end of explicit forecast period of all subsequent cash flows to the end of the life of the asset or into perpetuity if the asset has an indefinite life, in this valuation exercise.

<<This space is intentionally left blank>>

8. Valuation Conclusion

- 8.1. The current valuation has been carried out based on the discussed valuation methodology explained herein earlier. Further, various qualitative factors, the business dynamics and growth potential of the business, having regard to information base, management perceptions, key underlying assumptions and limitations were given due consideration.
- 8.2. I have been represented by the Investment Manager that there is no potential devolvement on account of the contingent liability as of valuation date; hence no impact has been factored in to arrive at fair EV of the SPVs.
- 8.3. Based on the above analysis, the fair EV as on the Valuation Date of the SPVs is as mentioned below:

				INR Mn
Sr. No.	SPVs	Last Date	Approximate Balance Period	Enterprise Value
1	DLSHL	27 April 2034	~ 13 Years 1 Month	9,589
2	DKZHL	19 March 2035	~ 14 Years 0 Months	4,129
3	DYWHL	29 July 2034	~ 13 Years 4 Months	3,956
4	DTAHL	16 November 2034	~ 13 Years 8 Months	3,294
5	DWBHL	18 November 2034	~ 13 Years 8 Months	4,316
6	DMYHL	19 May 2035	~ 14 Years 2 Months	4,584
7	DAVTL	26 July 2027	~ 6 Years 4 Months	499

24	SUIPL	30 March 2033	~ 12 Years 0 Months	248
				64,889

(Refer Appendix 1 for detailed workings)

- 8.4. EV is described as the total value of the equity in a business plus the value of its debt and debt related liabilities, minus any cash or cash equivalents to meet those liabilities.
- 8.5. The fair EV of the SPVs is estimated using DCF method. The valuation requires Investment Manager to make certain assumptions about the model inputs including forecast cash flows, discount rate, and credit risk.
- 8.6. Valuation is based on estimates of future financial performance or opinions, which represent reasonable expectations at a particular point of time, but such information, estimates or opinions are not offered as predictions or as assurances that a particular level of income or profit will be

Strictly Private and Confidential

achieved, a particular event will occur or that a particular price will be offered or accepted. Actual results achieved during the period covered by the prospective financial analysis will vary from these estimates and the variations may be material.

8.7. Accordingly, I have conducted sensitivity analysis on certain model inputs, the results of which are as indicated below:

1. Weighted Average Cost of Capital (WACC) by increasing / decreasing it by 1.0%
2. Expenses by increasing / decreasing it by 20%

1. Fair Enterprise Valuation Range based on WACC parameter (1.0%)

24	SUIPL	220	248	277
		61,538	64,889	68,207

The above represents reasonable range of fair enterprise valuation of the SPVs.

<<This space is intentionally left blank>>

9. Additional Procedures to be complied with in accordance with InvIT regulations

Scope of Work

- 9.1 The Schedule V of the SEBI InvIT Regulations prescribes the minimum set of mandatory disclosures to be made in the valuation report. In this reference, the minimum disclosures in valuation report may include following information as well, so as to provide the investors with the adequate information about the valuation and other aspects of the underlying assets of the InvIT.

The additional set of disclosures, as prescribed under Schedule V of InvIT Regulations, to be made in the valuation report of the SPVs are as follows:

- List of one-time sanctions/approvals which are obtained or pending;
- List of up to date/overdue periodic clearances;
- Statement of assets;
- Estimates of already carried as well as proposed major repairs and improvements along with estimated time of completion;
- Revenue pendencies including local authority taxes associated with InvIT asset and compounding charges, if any;
- On-going material litigations including tax disputes in relation to the assets, if any;
- Vulnerability to natural or induced hazards that may not have been covered in town planning/building control.

Limitations

- 9.2 This Report is based on the information provided by the representatives of the Investment Manager. The exercise has been restricted and kept limited to and based entirely on the documents, records, files, registers and information provided to me. I have not verified the information independently with any other external source.
- 9.3 I have assumed the genuineness of all signatures, the authenticity of all documents submitted to me as original, and the conformity of the copies or extracts submitted to me with that of the original documents.
- 9.4 I have assumed that the documents submitted to me by the representatives of Investment Manager in connection with any particular issue are the only documents related to such issue.
- 9.5 I have reviewed the documents and records from the limited perspective of examining issues noted in the scope of work and I do not express any opinion as to the legal or technical implications of the same.

Analysis of Additional Set of Disclosures for the SPVs

A. List of one-time sanctions/approvals which are obtained or pending:

As informed by the Investment Manager there are no applications for government sanctions/licenses obtained by the SPVs related to the Road for which approval is pending as on 31st March 2021. The list of such sanctions/ approvals obtained by the SPVs till 31st March 2021 is provided in Appendix 3.1 to Appendix 3.24. For 4 SPVs viz. DBL Hassan Periyapatna Tollways Limited, DBL Mundargi Harapanahalli Tollways Limited, DBL Hirekerur Ranibennur Tollways Limited and DBL Kalmath Zarap Highways Limited, I was provided with the supplementary agreements entered with the respective Concessioneing authorities, which stated that all listed approvals therein are in place. It is to be noted that I was not provided with documents to verify these approvals. Also, for few SPVs, I was not provided with any / complete set of documents. However, all the SPVs have received PCOD/COD and the SPVs have also started receiving annuity payments.

Strictly Private and Confidential**B. List of up to date/ overdue periodic clearances:**

The Investment Manager has confirmed that the SPVs are not required to take any periodic clearances and hence there are no up to date/ overdue periodic clearances as on 31 March 2021.

C. Statement of assets included:

The details of assets of the SPVs as at 31st March 2021 are as mentioned below:

Source: Investment Manager

Strictly Private and Confidential

Note 1:

In the present case, all the SPVs have entered into the O&M agreement with its immediate holding company for the operations and maintenance services of the SPVs. The SPVs along with its immediate holding company have entered into a sub-contracting agreement with DBL for the operations, maintenance and management of the SPVs’ road projects. As per the sub-contracting agreement, I understand from the Investment Manager that DBL would be inter-alia responsible for incurring expenses related all repairs, replacements, reconstruction, reinstatement, improvement, general and major maintenance costs and all other expenditure required to be incurred under the applicable laws, applicable permits or the concession agreement in connection with the O&M. Accordingly, the obligation of incurring major maintenance is with the sub-contractor. The sub-contractor i.e. DBL is expected to incur at its own cost and expenses to undertake the responsibilities of the operation and maintenance of the project including major maintenance and repairs.

As represented to us by the Investment Manager, all the SPVs except for DMHTL, DHPTL, DHRTL and JDTL, the amount payable as operating and maintenance (including Major Maintenance) expenses as per the individual schedule of the respective sub-contracting agreement is the only amount payable by the SPVs to the sub-contractor i.e. DBL in relation to the routine O&M costs as well as major maintenance and repairs costs. The amount payable as operating and maintenance expenses as per the individual schedule of the respective sub-contracting agreement have been considered as part of the operating expenses. Accordingly, the costs attributable towards the major maintenance and repairs for all the SPVs except for DMHTL, DHPTL, DHRTL and JDTL is disclosed as Nil.

E. Revenue pendencies including local authority taxes associated with InvIT asset and compounding charges, if any:

Investment Manager has informed me that there are no material dues including local authority taxes (such as Municipal Tax, Property Tax, etc.) pending to be payable to the government authorities with respect to the SPVs (InvIT assets).

F. On-going material litigations including tax disputes in relation to the assets, if any:

As informed by the Investment Manager, the status of arbitration matters and status of tax assessments are updated in Appendix 4A and 4B respectively. I have noted that majority of the cases are filed by the SPVs against various entities:

Particulars	Number of Cases filed by SPVs	Number of Cases filed against SPVs
Litigations	0*	0**
Arbitrations	10	2

**there is 1 case filed by the SPVs, which as confirmed by the Investment Manager is not material. Hence we have not disclosed the same in our Report.*

***there are 4 cases filed against the SPVs, which as confirmed by the Investment Manager are not material. Hence we have not disclosed the same in our Report.*

Investment Manager has informed us that it expects majority of the cases to be settled in favour of the SPVs. Further, Investment Manager has informed us that majority of the cases are having low to medium risk and accordingly no material outflow is expected against the litigations. As represented by the Investment Manager, DBL would indemnify the SPVs against any financial losses suffered or incurred in connection with any pending or threatened claims against the SPVs.

Strictly Private and Confidential

G. Vulnerability to natural or induced hazards that may not have been covered in town planning/
building control:

Investment Manager has confirmed to me that there are no such natural or induced hazards which have not been considered in town planning/ building control.

<<This space is intentionally left blank>

10. Sources of Information

For the purpose of undertaking this valuation exercise, I have relied on the following sources of information provided by the Investment Manager:

- 10.1. Audited financial Statement of the SPVs for year ended 31st March 2018, 31st March 2019 , 31st March 2020 and 31st March 2021;
- 10.2. Projected financial information for the remaining project life for each of the SPVs;
- 10.3. Details of projected Major Maintenance & Repairs (MMR) and Capital Expenditure (Capex);
- 10.4. Traffic Study Projection Report dated 27th January 2020 prepared by M/s Ramoll India Private Limited for JDTL.
- 10.5. Details of brought forward losses and MAT credit (as per Income Tax Act) of the SPVs as at 31st March 2021;
- 10.6. Details of Written Down Value (WDV) (as per Income Tax Act) of assets as at 31st March 2021;
- 10.7. Concession Agreement of each of the SPVs with respective authority;
- 10.8. Operation & Maintenance Subcontract Agreement entered for each of the SPVs with the DBL and respective holding company;
- 10.9. Shareholders acquisition cum Shareholders agreement entered for each of the SPV's with the DBL.
- 10.10. List of licenses / approvals, details of tax litigations, civil proceeding and arbitrations of the SPVs;
- 10.11. Shareholding pattern as on 31st March 2021 of the SPVs, Holding Companies and other entities mentioned in this Report;
- 10.12. Management Representation Letter by the Investment Manager dated 27th July 2021;
- 10.13. Relevant data and information about the SPVs provided to us by the Investment Manager either in written or oral form or in the form of soft copy;
- 10.14. Information provided by leading database sources, market research reports and other published data.

The information provided to me by the Investment Manager in relation to the SPVs included but not limited to historical financial statements, forecasts/projections, other statements and assumptions about future matters like forward-looking financial information prepared by the Investment Manager. The forecasts and projections as supplied to me are based upon assumptions about events and circumstances which are yet to occur.

By nature, valuation is based on estimates, however, considering the outbreak of COVID-19 Pandemic and the consequent economic slowdown, the risks and uncertainties relating to the events occurring in the future, the actual figures in future may differ from these estimates and may have a significant impact on the valuation of the SPVs.

I have not tested individual assumptions or attempted to substantiate the veracity or integrity of such assumptions in relation to the forward-looking financial information, however, I have made sufficient enquiries to satisfy myself that such information has been prepared on a reasonable basis.

Notwithstanding anything above, I cannot provide any assurance that the forward looking financial information will be representative of the results which will actually be achieved during the cash flow forecast period.

Further, considering the current crisis in relation to COVID-19 in India and across the globe, I have been informed by the Investment Manager, that the forecasts / projections provided for the valuation exercises are prepared after reasonably evaluating and incorporating the impact of outbreak of COVID-19 pandemic as per prevalent conditions as on date.

11. Exclusions and Limitations

- 11.1. My Report is subject to the limitations detailed hereinafter. This Report is to be read in totality, and not in parts, in conjunction with the relevant documents referred to herein.
- 11.2. Valuation analysis and results are specific to the purpose of valuation and is not intended to represent value at any time other than the valuation date of 31st March 2021 (“Valuation Date”) mentioned in the Report and as per agreed terms of my engagement. It may not be valid for any other purpose or as at any other date. Also, it may not be valid if done on behalf of any other entity.
- 11.3. This Report, its contents and the results are specific to (i) the purpose of valuation agreed as per the terms of my engagements; (ii) the Valuation Date and (iii) are based on the financial information of the SPVs till 31st March 2021. The Investment Manager has represented that the business activities of the SPVs have been carried out in normal and ordinary course between 31st March 2021 and the Report Date and that no material changes have occurred in the operations and financial position between 31st March 2021 and the Report date.
- 11.4. I have been informed by the Investment Manager that there will be limited impact of the on-going COVID-19 pandemic outbreak on the operations of the SPVs and the projections provided to me are after considering the same.
- 11.5. The scope of my assignment did not involve me performing audit tests for the purpose of expressing an opinion on the fairness or accuracy of any financial or analytical information that was provided and used by me during the course of my work. The assignment did not involve me to conduct the financial or technical feasibility study. I have not done any independent technical valuation or appraisal or due diligence of the assets or liabilities of the SPVs or any of other entity mentioned in this Report and have considered them at the value as disclosed by the SPVs in their regulatory filings or in submissions, oral or written, made to me.
- 11.6. In addition, I do not take any responsibility for any changes in the information used by me to arrive at my conclusion as set out herein which may occur subsequent to the date of my Report or by virtue of fact that the details provided to me are incorrect or inaccurate.
- 11.7. I have assumed and relied upon the truth, accuracy and completeness of the information, data and financial terms provided to me or used by me; I have assumed that the same are not misleading and do not assume or accept any liability or responsibility for any independent verification of such information or any independent technical valuation or appraisal of any of the assets, operations or liabilities of the SPVs or any other entity mentioned in the Report. Nothing has come to my knowledge to indicate that the material provided to me was misstated or incorrect or would not afford reasonable grounds upon which to base my Report.
- 11.8. This Report is intended for the sole use in connection with the purpose as set out above. It can however be relied upon and disclosed in connection with any statutory and regulatory filing in connection with the provision of SEBI InvIT Regulations. However, I will not accept any responsibility to any other party to whom this Report may be shown or who may acquire a copy of the Report, without my written consent.
- 11.9. It is clarified that this Report is not a fairness opinion under any of the stock exchange/ listing regulations. In case of any third party having access to this Report, please note this Report is not a substitute for the third party's own due diligence/ appraisal/ enquiries/ independent advice that the third party should undertake for his purpose.
- 11.10. Further, this Report is necessarily based on financial, economic, monetary, market and other conditions as in effect on, and the information made available to me or used by me up to, the date hereof. Subsequent developments in the aforementioned conditions may affect this Report and the

Strictly Private and Confidential

assumptions made in preparing this Report and I shall not be obliged to update, revise or reaffirm this Report if information provided to me changes.

- 11.11. This Report is based on the information received from the sources as mentioned in Section 9 of this Report and discussions with the Investment Manager. I have assumed that no information has been withheld that could have influenced the purpose of my Report.
- 11.12. Valuation is not a precise science and the conclusions arrived at in many cases may be subjective and dependent on the exercise of individual judgment. There is, therefore, no indisputable single value. I have arrived at an indicative EV based on my analysis. While I have provided an assessment of the value based on an analysis of information available to me and within the scope of my engagement, others may place a different value on this business.
- 11.13. Any discrepancies in any table / appendix between the total and the sums of the amounts listed are due to rounding-off.
- 11.14. Valuation is based on estimates of future financial performance or opinions, which represent reasonable expectations at a particular point of time, but such information, estimates or opinions are not offered as predictions or as assurances that a particular level of income or profit will be achieved, a particular event will occur or that a particular price will be offered or accepted. Actual results achieved during the period covered by the prospective financial analysis will vary from these estimates and the variations may be material.
- 11.15. I do not carry out any validation procedures or due diligence with respect to the information provided/extracted or carry out any verification of the assets or comment on the achievability and reasonableness of the assumptions underlying the financial forecasts, save for satisfying ourselves to the extent possible that they are consistent with other information provided to me in the course of this engagement.
- 11.16. My conclusion assumes that the assets and liabilities of the SPVs, reflected in their respective latest balance sheets remain intact as of the Report date.
- 11.17. Whilst all reasonable care has been taken to ensure that the factual statements in the Report are accurate, neither myself, nor any of my associates, officers or employees shall in any way be liable or responsible either directly or indirectly for the contents stated herein. Accordingly, I make no representation or warranty, express or implied, in respect of the completeness, authenticity or accuracy of such factual statements. I expressly disclaim any and all liabilities, which may arise based upon the information used in this Report. I am not liable to any third party in relation to the issue of this Report.
- 11.18. The scope of my work has been limited both in terms of the areas of the business & operations which I have reviewed and the extent to which I have reviewed them. There may be matters, other than those noted in this Report, which might be relevant in the context of the transaction and which a wider scope might uncover.
- 11.19. For the present valuation exercise, I have also relied on information available in public domain; however the accuracy and timelines of the same has not been independently verified by me.
- 11.20. In the particular circumstances of this case, my liability (in contract or under any statute or otherwise) for any economic loss or damage arising out of or in connection with this engagement, however the loss or damage caused, shall be limited to the amount of fees actually received by me from the Investment Manager, as laid out in the engagement letter for such valuation work.
- 11.21. In rendering this Report, I have not provided any legal, regulatory, tax, accounting or actuarial advice and accordingly I do not assume any responsibility or liability in respect thereof.

Strictly Private and Confidential

- 11.22. This Report does not address the relative merits of investing in InvIT as compared with any other alternative business transaction, or other alternatives, or whether or not such alternatives could be achieved or are available.
- 11.23. I am not an advisor with respect to legal, tax and regulatory matters for the proposed transaction. No investigation of the SPVs' claim to title of assets has been made for the purpose of this Report and the SPVs' claim to such rights have been assumed to be valid. No consideration has been given to liens or encumbrances against the assets, beyond the loans disclosed in the accounts. Therefore, no responsibility is assumed for matters of a legal nature.
- 11.24. I have no present or planned future interest in the Trustee, Investment Manager or the SPVs and the fee for this Report is not contingent upon the values reported herein. My valuation analysis should not be construed as investment advice; specifically, I do not express any opinion on the suitability or otherwise of entering into any financial or other transaction with the Investment Manager or SPVs.
- 11.25. I have submitted the draft valuation report to the Trust and Investment Manager for confirmation of accuracy of the factual data used in my analysis and to prevent any error or inaccuracy in this Report.
- 11.26. **Limitation of Liabilities**
- i. It is agreed that, having regard to the RV's interest in limiting the personal liability and exposure to litigation of its personnel, the Sponsor, the Investment Manager and the Trust will not bring any claim in respect of any damage against any of RV personally.
 - ii. In no circumstances RV shall be responsible for any consequential, special, direct, indirect, punitive or incidental loss, damages or expenses (including loss of profits, data, business, opportunity cost, goodwill or indemnification) in connection with the performance of the services whether such damages are based on breach of contract, tort, strict liability, breach of warranty, negligence, or otherwise, even if the Investment Manager had contemplated and communicated to RV the likelihood of such damages. Any decision to act upon the deliverables (including this Report) is to be made by the Investment Manager and no communication by RV should be treated as an invitation or inducement to engage the Investment Manager to act upon the deliverable(s).
 - iii. It is clarified that the Investment Manager will be solely responsible for any delays, additional costs, or other liabilities caused by or associated with any deficiencies in their responsibilities, misrepresentations, incorrect and incomplete information including information provided to determine the assumptions.
 - iv. RV will not be liable if any loss arises due to the provision of false, misleading or incomplete information or documentation by the Investment Manager.
- 11.27. **Limitation on account of COVID-19 and Uncertainty in Valuation**
- v. It is important to highlight that the COVID-19 pandemic has created uncertainty in valuation. The mitigation in the spread of COVID-19 and commencement of vaccination process has led to relaxation of restrictions and consequent opening up of the economy. However, the second wave and consequent lockdown in many parts of the country continues to impact the economy and consequent business recovery. Accordingly, the impact assessment of COVID-19 is a continuing process given the uncertainties associated with its nature and durations.
 - vi. I have been informed by the Investment Manager, that the forecasts / projections provided for the valuation exercises are prepared after reasonably evaluating and incorporating the impact of outbreak of COVID-19 pandemic as per prevalent conditions as on date. The estimates and judgement made by the Investment Manager, could vary on future

Strictly Private and Confidential

developments, including, among other things, any new information concerning the impact created by the COVID-19 pandemic on the economy and consequent effect on the business and on the customer's ability to make the payment. The Investment Manager continues to monitor any material changes to future economic conditions, which will be given effect, where relevant, in the respective future period.

- vii. Accordingly, I would recommend a degree of caution to the values arrived under current circumstances. Further, this Report is necessarily based on financial, economic, monetary, market and other conditions as in effect on, and the information made available to me or used by me up to, the date hereof. Subsequent developments in the aforementioned conditions may affect this Report and the assumptions made in preparing this Report and I shall not be obliged to update, revise or reaffirm this Report if information provided to me changes.

Yours faithfully,

S. Sundararaman

Appendix 2.1 – Weighted Average Cost of Capital of the NHAI HAM SPVs as on 31st March 2021

Particulars	DLSHL	DKZHL	DYWHL	DTAHL	DWBHL	DMYHL	Remarks
Risk Free Rate (Rf)	6.7%	6.7%	6.7%	6.7%	6.7%	6.7%	Risk Free Rate has been considered based on zero coupon yield curve as at 31st March 2021 of Government Securities having maturity period of 10 years, as quoted on CCIL's website
Equity Risk Premium (ERP)	7.0%	7.0%	7.0%	7.0%	7.0%	7.0%	Based on historical realized returns on equity investments over a risk free rate represented by 10 years government bonds, a 7% equity risk premium is considered appropriate for India
Beta (relevered)	0.48	0.48	0.48	0.49	0.48	0.48	Beta has been considered based on the beta of companies operating in the similar kind of business in India
Base Cost of Equity (Ke)	10.1%	10.1%	10.1%	10.1%	10.1%	10.1%	Base Ke = Rf + (ERP+TARP) * β
Company Specific Risk Premium (CSRP)	0.0%	0.0%	0.0%	0.0%	0.0%	0.0%	Based on SPV specific risk(s)
Adjusted Cost of Equity (Ke)	10.1%	10.1%	10.1%	10.1%	10.1%	10.1%	Adjusted Ke = Rf + (ERP) * β + CSRP
Pre-tax Cost of Debt (Kd)	8.0%	8.0%	8.0%	8.0%	8.0%	8.0%	As represented by the Investment Manager
Tax rate of SPV	16.8%	16.4%	16.5%	15.9%	16.5%	16.4%	Tax Rate Applicable to SPVs is considered
Post-tax Cost of Debt	6.7%	6.7%	6.7%	6.7%	6.7%	6.7%	Post-tax Kd = Pre-tax Kd * (1-Tax rate)
Debt / (Debt + Equity)	70.0%	70.0%	70.0%	70.0%	70.0%	70.0%	Debt : Equity ratio computed as [D/(D+E)] is considered as 70%
WACC	7.7%	7.7%	7.7%	7.7%	7.7%	7.7%	WACC = [Ke * (1 - D/(D+E))] + [Kd * (1-t) * D/(D+E)]

Appendix 3.20 – DMHTL: Summary of approval and licences (1/3)

I have been provided with the supplementary agreement entered with the Governor of Karnataka, which stated that all listed approvals therein are in place. It is to be noted that I was provided with only few documents (like NOC from Tehsildar and NOC from Gram Panchayat for installation of crusher plant) to verify this permit status. However, SPV has received PCOD/COD and has also started receiving annuity payments.

Sr. No.	Approvals	Permit Status	Management Comments
1	Permission for new quarries from Department of Mines and Geology, State Pollution Control Board, land conversion from State Revenue Department and District Administration. If mining area comes under forest land, permission from State Forest Department	Conditionally fulfilled	Concessionaire has identified 2 quarries for the project, i.e. (i) Devanagere district (government quarry); (ii) Koyilagaratti (private quarry). Permission from Department of Mines & Geology, PCB and land conversion permission for development of quarry is pending with the District Commissioner. NOC from the Village Panchayat have been received. Conditionally, accepted based on submission of all applicable permits to KRDCCL before carrying out quarrying operations.
2	Permission of Village Panchayat and Pollution Control Board for and installation of crushers	Conditionally fulfilled	Concessionaire is installing new crushers at Devanagere district and Koyilagaratti. PCB Permission for operation & establishment of crusher is pending. Supporting documents for crushers includes: NOC from Village Panchayat. Conditionally accepted based on submission of all applicable permits to KRDCCL before carrying out crushing operations.
3	License for use of explosive from the office of Explosives controller	Conditionally Fulfilled	Valid license to possess explosives, transport explosives and carry out blasting operations is pending. According to the concessionaire, application can be made after the approval of quarry license. Conditionally accepted based on submission of all applicable permits to KRDCCL before using explosives.
4	Permission for drawing water from bore well / pond / river from Village Panchayat / Irrigation Department as applicable	Conditionally Fulfilled	Permission for drawing water from bore well from Village Panchayat and agreement with private land owner to supply the water from his own borewell is pending. Conditionally fulfilled subject to submission of such permits to KRDCCL before drawing of water from any bore well/ pond for the project.
5	License for Inspector of factories or other competent authority for setting up Batching Plant	Conditionally Fulfilled	Permission from Village Panchayat and PCB have been received. Permission from Dept of Factory and Boiler is pending. Conditionally fulfilled subject to submission of such permits to KRDCCL before the operations of Batching Plants.
6	Consent for Establishment and Operation of Asphalt Plant, WMM Plant and Concrete Batching Plant from State Pollution Control Board	Conditionally Fulfilled	Permission from Village Panchayat and PCB for establishment of Asphalt plant, WMM Plant and Concrete Batching Plant have been received. PCB permission for establishment of Asphalt plant, WMM Plant and Concrete Batching Plant is pending. Conditionally fulfilled subject to submission of Village Panchayat permission to KRDCCL before the operations of Asphalt plant and WMM plant.

Appendix 3.20 – DMHTL: Summary of approval and licences (2/3)

Sr. No.	Approvals	Permit Status	Management Comments
7	<u>Borrow Earth</u>		
	i) Permission required from Village Panchayat and owner of the land in case of private land;	Conditionally Fulfilled	Permission from Village Panchayat & Private land owner is pending. Alternatively, concessionaire has applied for permission to tahsildar for sand quarry from the nearby canal area. Conditionally accepted; subject to submission of applicable permits before using the borrow area.
	ii) Permission from Local Municipalities and Development Authorities;	Fulfilled	Concessionaire has obtained permission from Taluk Executive Magistrate, Received from Office of Tahsildar, Arakalgud Taluk. Accepted based on rationale provided by concessionaire, but subject to periodic verification by IE.
8	Permission of State Forest Department for cutting of trees, if any	Fulfilled	Accepted; The same is responsibility of Authority subject to provision of clause 11.4 of CA.
9	<u>Ministry of Finance / RBI</u>		
	i) Approval for foreign investment and foreign loans, if required;	Fulfilled	Concessionaire has represented that there is no foreign investment in this project and no foreign currency loans are proposed at this stage. In view of this no approval has been sought from RBI as none is required at this stage. We will seek approval of RBI if at all an external commercial borrowing is proposed in the future. Conditionally accepted, based on the rationale provided by the concessionaire. However, concessionaire shall have the responsibility of informing Authority and IE, and submitting required permits if foreign investments /foreign currency loan is proposed at any stage during concession period.
	ii) Approval for import of equipment and machinery for construction and operation, if required;	Fulfilled	Concessionaire has represented that separate request for specific approval shall be obtained as and when machinery is actually purchased. Accepted; subject to periodic verification of the same by IE.
	iii) Exemption of Excise Duty on construction materials, if required;	Fulfilled	The concessionaire has requested for exemption of Excise duty . Conditionally Accepted, subject to verification and certification of quantities & legitimacy by IE in due course.
10	<u>Department of Telecommunication</u>		
	i) Permission / clearance for setting up of wireless system, if required;	Fulfilled	Concessionaire has represented that they don't propose to use wireless system. Hence, permission & clearance is not required. Accepted based on rationale provided by concessionaire. However, concessionaire shall have the sole responsibility of informing the Authority and submitting such permits if such systems are envisaged at any stage during concession period.
	ii) Clearance / permission for the use of optical fibre cables of Department of Telecommunication, if required;	Fulfilled	Concessionaire has represented that they don't propose to use optical fibre cables. Hence, permission & clearance is not required. Accepted based on rationale provided by concessionaire. However, concessionaire shall have the sole responsibility of informing the Authority and submitting such permits if such systems are envisaged at any stage during concession period.

8	Permission of State Forest Department for cutting of trees, if any	Fulfilled	Accepted; The same is responsibility of Authority subject to provision of clause 11.4 of CA.
9	<u>Ministry of Finance / RBI</u>		
	i) Approval for foreign investment and foreign loans, if required;	Fulfilled	Concessionaire has represented that there is no foreign investment in this project and no foreign currency loans are proposed at this stage. In view of this no approval has been sought from RBI as none is required at this stage. We will seek approval of RBI if at all an external commercial borrowing is proposed in the future. Conditionally accepted, based on the rationale provided by the concessionaire. However, concessionaire shall have the responsibility of informing Authority and IE, and submitting required permits if foreign investments /foreign currency loan is proposed at any stage during concession period.
	ii) Approval for import of equipment and machinery for construction and operation, if required;	Fulfilled	Concessionaire has represented that separate request for specific approval shall be obtained as and when machinery is actually purchased. Accepted; subject to periodic verification of the same by IE.
	iii) Exemption of Excise Duty on construction materials, if required;	Fulfilled	The concessionaire has requested for exemption of Excise duty . Conditionally Accepted, subject to verification and certification of quantities & legitimacy by IE in due course.
10	<u>Department of Telecommunication</u>		
	i) Permission / clearance for setting up of wireless system, if required;	Fulfilled	Concessionaire has represented that they don't propose to use wireless system. Hence, permission & clearance is not required. Accepted based on rationale provided by concessionaire. However, concessionaire shall have the sole responsibility of informing the Authority and submitting such permits if such systems are envisaged at any stage during concession period.
	ii) Clearance / permission for the use of optical fibre cables of Department of Telecommunication, if required;	Fulfilled	Concessionaire has represented that they don't propose to use optical fibre cables. Hence, permission & clearance is not required. Accepted based on rationale provided by concessionaire. However, concessionaire shall have the sole responsibility of informing the Authority and submitting such permits if such systems are envisaged at any stage during concession period.

Appendix 3.22 – DHRTL: Summary of approval and licences (1/3)

I have been provided with the supplementary agreement entered with the Governor of Karnataka, which stated that all listed approvals therein are in place. It is to be noted that I was provided with only few documents (like NOC from Tehsildar, NOC from Gram Panchayat for installation of crusher plant, permission from KSPCB for construction of temporary camp and shed) to verify this permit status. However, SPV has received PCOD/COD and has also started receiving annuity payments.

Sr. No.	Approvals	Permit Status	Comments
1	Permission for new quarries from Department of Mines and Geology, State Pollution Control Board, land conversion from State Revenue Department and District Administration. If mining area comes under forest land, permission from State Forest Department	Conditionally fulfilled	Concessionaire has identified 3 quarries for the project, i.e. (i) Hirebudihal (government quarry); (ii) Hamsabhavi (private quarry); (iii) Kusagar (private quarry). Permission from Department of Mines & Geology and land conversion permission for development of quarry is pending with the District Commissioner. NOC from the Village Panchayat have been received, permission from PCB haveri has been received for Hamsabhavi quarry. Conditionally, accepted based on submission of all applicable permits to KRDCCL before carrying out quarrying operations.
2	Permission of Village Panchayat and Pollution Control Board for and installation of crushers	Conditionally fulfilled	Concessionaire is installing new crusher and a mobile crusher near Hamsabhavi. Permission from PCB is pending. Supporting documents for crusher 1 & 2 includes: NOC from Village Panchayat. Conditionally accepted based on submission of all applicable permits to KRDCCL before carrying out crushing operations.
3	License for use of explosive from the office of Explosives controller	Conditionally Fulfilled	Valid license to possess explosives, transport explosives and carry out blasting operations is pending. Conditionally accepted based on submission of all applicable permits to KRDCCL before using explosives.
4	Permission for drawing water from bore well / pond / river from Village Panchayat / Irrigation Department as applicable	Fulfilled	Agreement with private land owner to supply the water from his own borewell is received.
5	License for Inspector of factories or other competent authority for setting up Batching Plant	Conditionally Fulfilled	Permission from PCB and Village Panchayat is received. Permission from Dept of Factory and Boiler is pending. Conditionally fulfilled subject to submission of such permits to KRDCCL before the operations of Batching Plants.
6	Consent for Establishment and Operation of Asphalt Plant, WMM Plant and Concrete Batching Plant from State Pollution Control Board	Fulfilled	Permission from PCB and Village Panchayat for establishment and operations of Asphalt plant, WMM Plant and Concrete Batching Plant have been received.

10	DBL Wardha Butibori Highways Private Limited	National Highway Authority of India	Mediator/Conciliator	<p>Background of the case: Notice of Dispute under Clause 38.1 of the concession agreement dated 09.06.2017 and request to initiate the Conciliation procedure in accordance with the procedure laid down under Clause 38.2 claims due to Delay in execution of concession agreement and declaration of appointed date, failure of Authority to provide encumbrance free ROW, Pyament of Annuity, Bonus and Milestone payments as per revised bid Project .</p> <p>Current Status: DBL under process to decide next course of action</p>	75
11	DBL Sitamau-Suwasara Tollways Ltd	Madhya Pradesh Road Development Corporation	District & Sessions Court Bhopal	<p>Background of the case: The Claimant submitted its claim for the loss of revenue due to shifting of Toll Plaza from KM 19+600 to KM 4+500 KM and another claim on account of cost of construction of new Toll Plaza at the location KM 4+500KM. With regard to Claim 1, the Respondent submitted that the claim is overvalued and is not maintainable because the Respondent never stopped toll collection at KM 4+500.The issues in the Arbitration were as follows: 1) Whether the Claimant is entitled to decide the location of Toll Plaza as per Concession Agreement? 2) & 3) Whether the shifting of Toll Plaza, as envisaged by the Claimant, is permissible as per the provisions of Concession Agreement ? and whether the Claimant is entitled to shift the Toll Plaza from KM 4+500 to KM 19+600? In the light of the above issues, the Award by Arbitrators was issued on 20 March 2015 wherein the Arbitrator concluded that the claims submitted by the Claimant are baseless, on wrong assumptions, not supported by any conclusive documents and against the provisions of Concession Agreement and hence, all the claims are rejected except the avoidable expenditure incurred by the Claimant to some extent for construction of two Toll Plazas instead of one. Also, the Arbitrators allowed the Claimant to collect Toll for an extended period of 180 days over and above the period to which he is already entitled to collect but no clarified that no annuity shall be payable on account of extension in the period of Toll Collection. The Claimant not satisfied with the decision of the Arbitration filed an appeal to challenge the award in District Court on 17 June.2015.</p> <p>Current Status: The matter is currently pending and the next hearing date is 17 March 2021.</p>	48
12	Madhya Pradesh Road Development Corporation	DBL Sitamau-Suwasara Tollways Ltd	District & Sessions Court Bhopal	<p>Background of the case: With regards to the above mentioned stand taken by the Arbitrators wherein the Respondent (i.e. DBL Sitamau-Suwasara Tollways Ltd.) is entitled for compensation of cost of construction of new Toll and also for collection of Toll for the extended period of 180 days was challenged by the Petitioner (i.e. Madhya Pradesh Road Development Corporation) by an application. The Petitioner said that once the Learned Arbitral Tribunal accepted that the Respondent had no right to shift the Plaza then the cost of construction expanded by the Respondent became illegal and hence right to get compensation of illegal act is against the law of the land and public policy of India. Also the Petitioner said that as per the Concession Agreement, the extension of toll collection period can be provided only in case of any force majeure subsist and by which the Concessionaire is unable to collect the fee which is not the case in this plea. Hence award for extension of 180 days is against the provisions of Concession Agreement. Therefore, the Petitioner prayed that the portion of the award by which period of toll is extended by 180 days is liable to be quashed with cost throughout.</p> <p>Current Status: The matter is currently pending and the next hearing date is 17 March 2021.</p>	Non - Quantifiable

CHAPTER 1. INTRODUCTION

1.1 General

DBL LUCKNOW-SULTHANPUR HIGHWAYS LTD., (herein after referred to as the “**Concessionaire**”), had augmented the existing two-lane road Section of NH 361 from Lucknow to Sulthanpur in the state of Uttar Pradesh, in accordance with the provisions of the Concession Agreement (**CA**) executed with **National Highways Authority of India** (herein after referred to as the “**Authority**”) on 24.10.2016.

Project road starts at Km. 11+500 located near Lucknow and ends at Km. 134+700 near Sulthanpur on NH-56. The design length of the Project is 127.425 Km. The Project Highway passes through the urban stretches of Khuradi Bazar, Gangaganj, Haidergarh, Jagadeeshpur and Islamganj located along the Project Corridor. Project location map is provided at **Figure 1.1**.

Figure 1.1: Project Locations Map

SHREM INFRAVENTURE PRIVATE LIMITED (SIPL) acquired DBL LUCKNOW-SULTHANPUR HIGHWAYS LTD vide agreement dated 26/03/2018.

SHREM FINANCIAL PVT. LTD (SFPL). appointed RUKY Projects Pvt. Ltd. as consultant for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the annuity payments received and future schedule of annuity payments.

1.2 The Project Data

Table 1.1: Project Data

S. No.	Particulars	Details
1	Name of the project	Four Lanning of Lucknow-Sultanpur section of NH-56(New NH-731) from Km. 11+500 (Design Chainage Km. 11+500) to Km. 134+700 (Design Chainage Km. 138+925) (Total Length-127.425 Kms.) in the State of Uttar Pradesh under NHDP, Phase –IV on Hybrid Annuity Mode.
2	Road Type	National Highway
3	Name of the Authority	National Highways Authority of India
4	Name of the Concessionaire	DBL Lucknow-Sulthanpur Highways Ltd.,
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Date of LOA	09.08.2016
7	Date of Agreement	24.10.2016
8	Design Length as per Schedule B of CA	127.425 Kms.
9	Project Lane Configuration	Four Lane
10	EPC Cost	1780 Cr.
11	Bid Project Cost	2016
12	Nature of contract	Hybrid Annuity Mode
13	Toll collected by	Authority
14	Operation Period	15 years from the Commercial Operation Date (COD)
15	Appointed date	08.05.2017
16	Concession End Date	29.04.2034
17	Construction Period	910 days from the Appointed Date
18	Schedule Completion Date	04.11.2019
19	Date of issuance of Provisional Certificate (COD)	30.04.2019
20	Bonus on early completion	Applicable as per Cl.23.5 of the CA
21	Date of issuance of Completion Certificate	03.07.2019
22	Annuity Amount	As per Clause 23.6 of the CA
23	Total Number of Annuities payable after COD	30 Nos.
24	First Annuity Payment Date	30.10.2019
25	Total Number of Annuity Payments received as on date.	3 No.

1.3 Scope of Consultancy Services

The scope of work includes providing Technical Due Diligence of the Project Highway and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout out road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per Schedule B and Schedule C of Concession Agreement (CA) including Change of scope are listed in the following Table 2.1.

Table 2.1: Salient Features

S. No.	Particulars	As per CA	As per COS	As per Site
1	Total Length of the Project Highway	127.425 Kms.	---	127.425 Kms.
2	Total Length of Main Carriageway with Rigid Pavement	121.105 Kms.	6.32 Kms.	127.425 Kms.
3	Total Length of Main Carriageway with Flexible Pavement	6.320 Kms.	-6.320 Kms.	---
4	Total length of Service Roads	---	---	---
5	Total length of Slip Roads	14.824 Kms.	---	14.824 Kms.
6	Toll Plazas	2 Nos.	---	2 Nos.
7	Bus Bays with Bus Shelters	43 Nos.	---	43 Nos.
8	Truck Lay Bays	2 Nos.	---	2 Nos.
9	Major Junctions	18 Nos.	---	20 Nos.*
10	Minor Junctions	109 Nos.	---	110 Nos.*
11	ROBs	1 No.	---	1 No.
12	Vehicular underpasses	4 Nos.	---	4 Nos.
13	Pedestrian underpasses	6 Nos.	---	6 Nos.
14	Major Bridges	1 No.	---	1 No.
15	Minor Bridges	13 Nos.	---	13 Nos.
16	Hume Pipe Culverts	182 Nos.	---	184 Nos.*
17	Box / Slab Culverts	77 Nos.	---	75 Nos.*

*As per site requirement, 2 Major junctions and 1 minor junction is developed.

As per site requirement, 2 additional pipe culverts are constructed and 2 Slab culverts are not constructed as per site condition.

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Section Schedule, shown below as per Schedule B of CA during the Construction.

Figure 2.1: TCS-1 4-lane road without service road including foot path drain and utility duct

Figure 2.2: TCS-1A 4-lane road without service road including foot path drain and utility duct concentric widening

Figure 2.3: TCS-2 4-lane road with rigid pavement both side

Figure 2.19: Pictorial Diagram of TCS Lengths.

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from the Carriageway, side drains are constructed along the main carriage way on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are constructed in open and rural areas.

2.4 Service Roads

Service Roads and Slip Roads are provided as per the provisions of Schedule B of the Concession Agreement. The details are provided below.

Table 2.4: List of Slip Road locations

S. No.	From (Km.)	To (Km.)	Side	Length (Kms.)
1	43+0400	44+3400	Both Sides	2.600
2	85+7000	86+5000	Both Sides	1.600
3	93+6800	94+1600	Both Sides	0.960
4	96+8200	97+4200	Both Sides	1.200
5	99+5000	99+9670	Both Sides	0.934
6	107+8800	108+4800	Both Sides	1.200
7	111+5600	112+2600	Both Sides	1.400
8	118+8200	119+6150	Both Sides	1.590
9	119+8750	120+4200	Both Sides	1.090
10	121+4800	122+1000	Both Sides	1.240
11	132+6000	133+1050	Both Sides	1.010
Total				14.824

2.5 Bypass/Realignment

As per the provisions of Schedule B of the Concession Agreement Realignment is provided at the following locations.

Table 2.5: Realignment/Bypass stretches

S. No.	From (Km.)	To (Km.)	Length (Kms.)	Remarks

2.7 Grade Separated Structures and underpasses

As per the provisions of Schedule B of the Concession Agreement 6 Nos. of Pedestrian Underpass, and 4 Nos. of Vehicular Underpass structures are provided in the Project Corridor. Details are provided in Chapter 4.

2.8 Road Over Bridge (ROB)

One ROB is provided in the project road at Km. 43+740 as per provisions of Schedule B of CA.

2.9 Carriageway Details

Summary of Carriageway Details is given below:

Table 2.8: Summary of Carriageway Details

S. No.	Description	Flexible (Kms.)	Rigid (Kms.)
1	Slip Roads	14.824	---
2	4 Lane Paved shoulder	---	127.425
3	Total Length of the Project	14.824	127.425
TYPE OF ALIGNMENT			
4	Widening	---	87.012
5	Realignment/New	---	33.001
6	Flyover/VUP/PUP approaches	---	7.412
7	Cutting Section	---	
8	Total Length of the Project	--	127.425

2.10 Summary of Structures

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.9: Summary of Structures

S. No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts	ROB	Underpasses
1	Retained						
2	Widening		5	72	40		
3	Reconstruction			66	12		
4	New	1	8	44	25	1	VUP – 4 Nos. PUP – 6 Nos.
5	Improvement						
	Total	1	13	182	77	1	10

2.11 Toll Plazas

- Two toll Plazas are provided on the project road at Km. 50+900 and Km.123+490, which comprises of 16 lanes.
- The width of each toll lane is provided 3.2 m, except for the lane for over dimensioned vehicles, where it is 4.5 m.
- Between each toll lane of the toll plaza, traffic islands are constructed to accommodate tollbooth.
- Protective barriers of reinforced concrete and traffic impact attenuators are placed in the front of each island to prevent out of control approaching vehicles crashing into the tollbooth.
- The canopy is provided for weather protection to toll operators, drivers and facilities. The canopy is designed aesthetically pleasing with cylindrical support columns located at traffic island so that there is no restriction on visibility and traffic movement.
- Total 15 Nos. toll booths are provided in toll plaza.
- Toll Plaza is updated to ETC Lane system as per the Change of Scope Order issued to the Concessionaire.
- List of tolling equipment provided at site is furnished in the Detailed Report.

2.12 Bus bays/Bus shelters

As per provisions of Schedule C of CA bus shelters are provided at 21 locations. Details are provided below.

Table 2.10: List of Bus bays/Bus shelters

LHS			RHS		
S. No.	Name of Habitations	Location	S. No.	Name of Habitations	Location

2.13 Other Project Facilities Provided as per Schedule C of CA

- Roadside furniture: Sign Boards Kilometer stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 84-2014.
- Traffic safety devices: W Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of CA.
- Landscaping: Provided at Toll Plaza location and being maintained
- Tree Plantation: Median plantation and Avenue plantation on both sides of the Project Corridor is provided all along the way and is being maintained.
- Medical Aid Post: Provided at Toll Plaza location and is operational
- Highway Lighting: Highway lighting is provided at Toll Plaza, Bus bays and Truck Lay byes and is functional.

Starting Point of Project

Bus Stop at Km. 37+860

Truck Lay Bye at Km. 37+200

Truck lay at Km. 37+200

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections provided below

3.2 Road Inventory

Inventory of the project road was carried out physically and the same is summarized in the following Table 3.1. Few representative photographs are presented below.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain rolling Terrain
2	Land Use	Agriculture and forest
3	Four lane length	127.425 Kms.
4	Earthen shoulder	1.0 m to 1.5m Width on site
5	Junctions	130 Nos.
6	Toll Plazas	At Km. 50+900 and Km. 123+490
7	Sign boards	Sign boards are provided as per Highway requirements
8	Road Markings	Lane markings are provided as per Highway requirement
9	Bus Bays /shelters	43 Nos.
10	Highway Lighting	Provided as per requirement
11	Avenue plantation	Provided

3.3 Pavement Condition Survey

The survey on general pavement condition was primarily undertaken by means of slow drive- over survey, and supplemented with measurements wherever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition

As per the provisions of Schedule B, the Concessionaire has constructed the Main Carriageway with Rigid Pavement and Service & Slip Roads with Flexible Pavement. Pavement Design submitted by the Concessionaire was reviewed and found in accordance with the provisions of IRC:37 and IRC 58. Design parameters are provided below. CBR considered for Flexible Pavement was 13% and Effective CBR for

Rigid pavement was 7%. Based on CBR values, axle loads and Traffic the crust designed is satisfactory. The crust details are given below.

Table 3.2: For Rigid pavement –Main carriage way

S. No.	Layer	Thickness
1	PQC	300 mm
2	DLC	150 mm
3	GSB	150 mm
4	Sub Grade	500 mm

Table 3.3: Flexible Pavement-Service Roads

S. No.	Layer	Thickness
1	BC	40 mm
2	DBM	65 mm
3	WMM	250 mm
4	GSB	260 mm
5	Sub Grade	500 mm

- Based on the review on Designs submitted by the Concessionaire, the above crust is safe for project.

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP-19. The summary of Pavement condition is given below.

Table 3.4: Pavement Condition Summary

From (Km.)	To (Km.)	Length (Kms.)	Condition
11+500	134+700	127.425	Good

Km. 35+300

Km. 41+000

Km. 50+800

Km. 87+700

Km. 111+400

Figure 3.1: Representative Photos of Pavement Condition.

CHAPTER 4. INVENTORY AND CONDITION OF STRUCTURES

4.1 General Assessment and Condition of the structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990

4.2 Inventory of Structures

The details of Structures along this project road are listed below.

Table 4.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	01 Nos.
2	Minor Bridge	13 Nos.
3	Pipe culverts	184 Nos.
4	Slab/Box Culverts	75 Nos.
5	ROB	01 Nos.
6	Underpasses	10 Nos.

For Major bridge the Superstructure is of PSC I Girder with RCC circular type Piers and wall type Abutments resting on open foundation. For Minor bridges, the superstructure is RCC solid slab and the substructures are of PCC conventional wall type supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 1**. The culverts observed along the project road are mainly of two types viz. Pipe culverts and RCC slab/box culverts. Condition of most of the culverts is fair. Detailed inventory and condition survey of culverts are given in **ANNEXURE 2**.

4.3 Details of Major Bridges

The total length of the Major bridge at Km. 31+569 is 79.50 m both on LHS and RHS side. The superstructure is of PSC I girder with RCC circular type Piers and wall type Abutments resting on open foundations both for LHS and RHS. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip Seal type. RCC crash barrier has been provided on both sides of the deck.

Table 4.2: List of Major Bridge

S. No.	Chainage (Km.)	Side	Span (m)	Total Length of Bridge (m)
1	31+569	LHS	3 x 26.5	79.5
		RHS	3 x 26.5	79.5

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, cleaning of drainage spouts and cleaning of strip seal expansion joints are to be carried out.

Km. 31+569

Km. 31+569

Km. 31+569

Km. 31+569

Figure 4.1: Representative photos of Major Bridge

4.4 Road Over Bridge (ROB):

There is one ROB in the project stretch with 77.5m both on LHS and RHS side. The superstructure is of composite girder with RCC rectangular piers and wall type abutments both for LHS and RHS. For approach spans the superstructure is of RCC girder type. Expansion joints are of Strip Seal type. RCC crash barrier has been provided on both sides of the deck.

Table 4.3: Details of ROB

S. No.	Chainage (Km.)	Side	Span (m)	Total Length of Bridge (m)
1	43+750	LHS	1 x 47.5 + 2 X 15.0	77.50
		RHS	1 x 47.5 + 2 X 15.0	77.50

The condition of the superstructure and substructure is good.

ROB Km. 43+750

ROB Km. 43+750

Figure 4.2: Representative photos of ROB

4.5 Details of Minor Bridges

There are 13 minor bridges in the project stretch. The type of superstructure for minor bridges is RCC solid slab or RCC/PSC girder supported on RCC/PCC wall type Abutment or Pier resting on open foundations. Some are RCC box type minor bridges. Expansion joints are buried type/strip seal type and bearings are of tar paper/ elastomeric bearings. RCC crash barriers are provided on all structures.

Table 4.4: Inventory of Minor Bridges

S. No.	Design Chainage Km.	Location	Span (No. X m)	Total Length of Bridge (m)	Description
1.	17+305	LHS	4 x 13.2	52.8	The superstructure is of RCC girder supported on conventional RCC wall type piers and abutments resting on open foundations. Buried/Strip seal type expansion joints.
		RHS	1 x 52.8	52.8	The superstructure is of composite steel girder supported on conventional RCC wall type abutments resting on open foundations. Buried/Strip seal type expansion joints.
2.	45+586	LHS	1 x 26.3	26.3	The superstructure is of PSC girder supported on conventional RCC wall type piers and abutments resting on open foundations. Buried/Strip seal type expansion joints.
		RHS	1 x 26.3	26.3	The superstructure is voided slab supported on conventional RCC wall type abutments resting on open foundations. Buried/Strip seal type expansion joints.
3.	53+620	LHS	3 x 3.40	10.2	It is RCC box type minor bridge with bituminous wearing coat.
		RHS	3 x 3.40	10.2	It is RCC box type minor bridge with bituminous wearing coat.

S. No.	Design Chainage Km.	Location	Span (No. X m)	Total Length of Bridge (m)	Description
4.	56+347	LHS	3 x 5.6	16.8	It is RCC box type minor bridge with bituminous wearing coat.
		RHS	3 x 5.6	16.8	It is RCC box type minor bridge with bituminous wearing coat.
5.	65+597	LHS	3 x 4.6	13.8	It is RCC box type minor bridge with bituminous wearing coat.
		RHS	3 x 4.6	13.8	It is RCC box type minor bridge with bituminous wearing coat.
6.	70+199	LHS	3 x 3.8	11.4	It is RCC box type minor bridge with bituminous wearing coat.
		RHS	3 x 3.8	11.4	It is RCC box type minor bridge with bituminous wearing coat.
7.	82+315	LHS	3 x 6.0	18.0	It is RCC box type minor bridge with bituminous wearing coat.
		RHS	3 x 6.0	18.0	It is RCC box type minor bridge with bituminous wearing coat.
8.	83+356	LHS	3 x 8.5	25.5	It is RCC box type minor bridge with bituminous wearing coat.
		RHS	3 x 8.5	25.5	It is RCC box type minor bridge with bituminous wearing coat.
9.	92+945	LHS	2 x 16	32.0	The superstructure is RCC solid slab supported on conventional RCC wall type piers/abutments resting on open foundations. Buried/Strip seal type expansion joints.
		LHS	2 x 16	32.0	The superstructure is RCC solid slab supported on conventional RCC wall type piers/abutments resting on open foundations. Buried/Strip seal type expansion joints.
10.	103+772	RHS	2 x 24	48.0	The superstructure is of PSC/RCC girder supported on conventional RCC wall type piers and abutments resting on open foundations. Buried/Strip seal type expansion joints.
		LHS	2 x 24	48.0	The superstructure is of PSC/RCC girder supported on conventional RCC wall type abutments resting on open foundations. Buried/Strip seal type expansion joints.
11	107+607	RHS	1 x 32	32.0	The superstructure is of PSC girder supported on conventional RCC wall type piers and abutments resting on open foundations. Buried/Strip seal type expansion joints.
		LHS	1 x 32	32.0	The superstructure is of PSC girder

S. No.	Design Chainage Km.	Location	Span (No. X m)	Total Length of Bridge (m)	Description
					supported on conventional RCC wall type abutments resting on open foundations. Buried/Strip seal type expansion joints.
12	112+518	RHS	1 x 32	32.0	The superstructure is of PSC girder supported on conventional RCC wall type abutments resting on open foundations. Buried/Strip seal type expansion joints.
		LHS	1 x 32	32.0	The superstructure is of PSC girder supported on conventional RCC wall type abutments resting on open foundations. Buried/Strip seal type expansion joints.
13	129+590	RHS	4 x 2.8	11.2	It is RCC box type minor bridge with bituminous wearing coat.
		LHS	4 x 2.8	11.2	It is RCC box type minor bridge with bituminous wearing coat.

Km. 56+347

Km. 107+607

4.7 Details of Culverts:

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 2**.

4.7.1. Slab/Box Culverts

There are 75 Nos. of Slab/Box culvert in the project stretch. The details of the culverts are as given below.

Table 4.6: List of Slab/Box Culverts

Figure 4.7: Representative photos of Pipe Culverts

4.7.4. Condition of the Pipe Culverts

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

The culverts are in fair condition and can be retained in the present condition with following repairs/rehabilitation measures.

- Chocked culverts must be cleared.
- Debris and garbage near outside the vents must be removed.

CHAPTER 5. REVIEW OF PAVEMENT DESIGN

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design

The Pavement Design shall be carried out in accordance with Indian Roads Congress guide lines. The pavement is designed in accordance with IRC: 58 -2015 “Guidelines for the Design of Plain Jointed Rigid Pavements for Highways”, IRC: SP:84-2014, IRC:15-2011 “Construction Concrete Road (FOURTH REVISION)” and relevant clauses of schedule B of the EPC agreement. Pavement crust thickness for main carriageway as per pavement design report summarized below.

Table 5.1: Rigid Pavement Design for Main carriageway

Description	Design/Adopted Parameters
CBR of sub grade	6 %
Two-way commercial traffic volume per day	3522
Design life in years	30
Pavement Quality Concrete (PQC) – (mm)	300
Dry Lean Concrete (DLC) – (mm)	150
Drainage Layer (GSB) - (mm)	150
Diameter of Dowel Bar (mm)	32
Length of Dowel Bar (mm)	500
Spacing of Dowel Bars (mm)	300
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	520

As per schedule D, (Annexure-I), clause 2, pavements for Slip road/Service road shall be flexible pavement and designed as per provision of design manual IRC: SP: 84:2014. The design traffic in case of service road shall be ten million standard axles as per Cl:5.5.5 of IRC: SP: 84:2014. The crust composition shall be designed in accordance with the IRC:37, “Guidelines for the Design of Flexible Pavements”.

Table 5.2: Flexible Pavement for service road

S. No.	Description/ Pavement layer	Design/Adopted Parameters
1	Sub Grade CBR (%)	6 %
2	Design Life (Years)	15 years
3	Design Traffic (MSA)	10 MSA
4	Surface course (BC)	40 mm
5	Binder course (DBM)	65 mm
6	Base course (WMM)	250 mm
7	Sub Base course (GSB)	260 mm

The Pavement crust has been designed according to IRC specification and found in order, the adopted/ Constructed pavement layer thickness is adequately provided than actual/ designed thickness.

5.3 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC for service roads. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement (service roads) – Next Periodic Renewal Proposed on or before 2027 and 2034.

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction. (As per IRC 58-2015).

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 6.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety

6.2 Road Safety Audit

During the site visit, it is observed that all safety items are provided as shown in the following Table 6.2.

Table 6.2: Safety Items

S. No.	Item Description		Status	Condition
Road Furniture				
1	Sign Boards	Chevron Signs	Available as per site requirement	Good
		Village sign boards	Available as per site requirement	Good
		Information Boards	Available as per site requirement	Good
		Other Sign Boards	Available as per site requirement	Good
		Gantry Sign Boards	Available as per site requirement	Good
2	Road Marking	Studs & Lane marking	Available as per site requirement	Good
3	Metal Beam Crash Barriers	At High embankments & Bridge Approaches	Available as per site requirement	Good
4	Median kerb	Along the Project Highway	Provided as per IRC SP:84-2014	Good
5	Road studs & Solar Blinkers	Along the Project Highway	Provided as per IRC SP:84-2014	Good

This Project Section is part of an important corridor. It is the Concessionaire's duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

The Concessionaire is maintaining the safety features in good condition from time to time in accordance with the provisions of Schedule K of the Concession Agreement.

Km. 17+300

Km. 20+300

Km. 41+450

Km. 54+100

Km. 55+900

Km. 81+600

Figure 6.1: Representative photos during road safety audit

6.3 Conclusion

Safety arrangements made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is highly necessary during the maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There are two toll Plazas on the project road at Km. 50+900 and Km. 123+490. The width of each toll lane is provided 3.2 m, except for the lane for over dimensioned vehicles, where it is 4.5 m. between each toll lane of the toll plaza, traffic islands is constructed to accommodate tollbooth. Protective barriers of reinforced concrete and traffic impact attenuators is placed at the front of each island to prevent out of control approaching vehicles crashing into the toll booth. The canopy is provided for weather protection to toll operators, drivers and facilities. The canopy is designed aesthetically pleasing with cylindrical support columns located at traffic island so that there is no restriction on visibility and traffic movement. Total 15 Nos. toll booths are provided in toll plaza.

Toll Plaza is updated to ETC Lane system as per the Change of Scope Order issued to the Concessionaire.

7.2 Tolling Equipment and Control Room Equipment

List of equipment provided at toll plaza and control room is enclosed at **ANNEXURE 9**.

7.3 Vehicles

The list of vehicles, which were observed at site, for operation of Highway and Toll Plaza are presented below.

Table 7.1: List of Vehicles

S. No.	Vehicle Type	Toll Plaza
1	Patrol Vehicle	2 No
2	Ambulance	2 No.

Toll Plaza Km. 50+900

Toll Building Km. 50+900

Toll Plaza Km. 123+490

Toll Building Km. 123+490

CHAPTER 8. SCHEDULE OF ANNUITY PAYMENTS

8.1 Hybrid Annuity Model (HAM)

Hybrid annuity model is the PPP model in which Authority makes payment of 40% of the Bid Project cost during construction period based on progress milestones set forth in Concession Agreement. Payment of the balance 60% of the Bid Project Cost is made in form of bi-annual annuities with interest during the operational phase of concession.

Table 8.1: Schedule of Payment Milestones

S. No.	Payment Milestone No	Criteria for releasing the Payment
1	I	On Achievement of 20% of Physical Progress
2	II	On Achievement of 40% of Physical Progress
3	III	On Achievement of 60% of Physical Progress
4	IV	On Achievement of 75% of Physical Progress
5	V	On Achievement of 90% of Physical Progress

During the Operation Period following payment components are payable.

- Annuity Payment as per the Annuity Payment Schedule provided in 23.6.3 of the Concession Agreement.
- Interest to be paid on the balance of completion cost at an interest rate equal to the applicable Bank Rate Plus 3%.
- O&M Payment as a lump sum amount as per Clause 23.7.1 of the Concession Agreement.

8.2 Schedule of Annuity Payments

Details of Annuity payments are as below.

Table 8.2: Schedule of Annuity Payments

S. No.	Following the COD	Percentage of Completion Cost remaining	Annuity Due date	Annuity Paid Date
1	Annuity No 1	2.10%	27.10.2019	07-Nov-19
2	Annuity No 2	2.17%	27.04.2020	01-May-20
3	Annuity No 3	2.24%	27.10.2020	04-Nov-20
4	Annuity No 4	2.31%		
5	Annuity No 5	2.38%

29	Annuity No 29	4.75%		
30	Annuity No 30	4.75%		

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of CA, the Concessionaire will operate and maintain the Project roads by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual Inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz. pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

9.3 Operations

9.3.1. Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- i. Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- ii. carrying out preventive and periodic maintenance of the Project road;
- iii. undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- iv. Undertaking major maintenance such as resurfacing of pavements, repairs to structures.
- v. Functioning of the lighting system;

- vi. Functioning of the Patrolling System
- vii. Functioning of rescue and medical aid services
- viii. Ambulance as and when required
- ix. Functioning of the Project Facilities
 - x. Administrative, Operational and Maintenance Base Camp
 - xi. Truck Lay byes
 - xii. Pickup Bus stops / Bus Bays
- xiii. protection of the environment and provision of equipment and materials
- xiv. Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- xv. complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plazas

There are two lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the Escrow Account. In case of ETC system, Toll collection is connected with Network system and directly deposited into the Escrow account.

9.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

9.5.1. Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence does not require any immediate or preventive interventions.

9.5.2. Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

9.5.3. Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly.

Table 9.1: Schedule and status of for Periodic Maintenance

Description	Schedule of Major Maintenance	Status of Major Maintenance
1 st Periodic Maintenance	2027	Planned to execute
2 nd Periodic Maintenance	2034	Planned to execute

9.5.4. Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include.

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.6 Review of Test Reports

9.6.1. Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

As per Schedule K of the CA, Roughness value shall not exceed 2750 mm in a Km. Based on the review of documents, it was noticed that no NCRs were issued pertinent to riding quality

9.7 O&M Payments

In accordance with Cl.23.7.1, O&M expenses shall be borne by Concessionaire, a lumpsum financial support in the form of bi annual payments shall be due and payable by Authority.

9.8 O&M Forecast

The O&M costs were estimated based on various parameters of CA, and design reports The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 3**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance	Incidental maintenance	Periodic / Major maintenance	Operational Cost	Total cost per year
2019	3.549	2.792		4.85	11.19
2020	3.656	2.876		4.99	11.52
2021	3.765	2.962		5.14	11.87
2022	3.878	3.051		5.30	12.23
2023	3.994	3.142		5.46	12.59
2024	4.114	3.237		5.62	12.97
2025	4.238	3.334		5.79	13.36
2026	4.365	3.434	34.45	5.96	48.21
2027	4.496	3.537		6.14	14.17
2028	4.631	3.643		6.33	14.60
2029	4.770	3.752		6.52	15.04
2030	4.913	3.865		6.71	15.49
2031	5.060	3.981		6.91	15.95
2032	5.212	4.100	39.58	7.12	56.01
2033	5.368	4.223		7.33	16.92
2034	5.529	4.350		7.55	17.43
2035	0.452	0.356		0.62	1.43
Total	71.990	56.631	74.03	98.35	301.00

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 General: Scope of Work (Article 2)

Article 2 of the CA provides the scope of work, which includes the following.

- Operation and Maintenance of the Project Highway on the Site set forth in Schedule A and as specified in Schedule B together with provision of Project Facilities as specified in Schedule C, and in conformity with the Specifications and Standards set forth in Schedule D;
- collection of Fee from the Users of the Project; subject and in accordance with the provisions of the Concession Agreement;
- performance and fulfillment of all other obligations of the Contractor in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Contractor under this Agreement

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 4**.

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfill its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the Concession Agreement

10.5 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 30 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 30% of the Total Project Cost.

10.6 Tests (Clause 13.3)

For determining that the Project, conforms to the specifications, the Independent Engineer shall require the Concessionaire (Concessionaire shall in turn require the Contractor) to carry out, or cause to be carried out, tests specified by it in accordance with Good Industry Practice. One half of the costs incurred on such tests, and to the extent certified by the Independent Engineer as reasonable, shall be reimbursed by the Authority to the Concessionaire.

10.7 Provisional Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA. A copy of PCOD is enclosed at **ANNEXURE 5**.

10.8 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire. A copy of CC attached at **ANNEXURE 6**.

10.9 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of scope proposals that were initiated during construction period and consented by the HAI are provided in **ANNEXURE 8**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents

- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements.
- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (The “**Maintenance Requirements**”).

10.13 Maintenance Manual (Clause 17.3)

No later than 90 (ninety) days prior to the Scheduled Two Lanning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 2% (two percent) of the performance security, and
- 0.1% (zero decimal one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety

Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Payment of Bid Project Cost (Article 23)

The Authority agrees to pay 40% of the Bid Project Cost in five installments against the achievement of Project Milestones specified in Clause 23.4 of the Concession Agreement and the amount shall be adjusted with Price index.

Remaining balance completion cost shall be paid as per the % of balance completion cost biannually from the date of COD. Percentage of amounts payable for each Annuity is specified in 23.6.3 of the Concession Agreement.

10.18 Change in Law (Article 35)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 Details of Insurance:

As per clause 26.1 of the CA, the Concessionaire shall affect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks. Copy of insurances are enclosed at **ANNEXURE 7**.

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Property covered
			From	To	
Employees Compensation Insurance	HDFC ERGO General Insurance Co Ltd	4203786194200000	3.11.2020	2.11.2021	All categories of Employees of the Contractor & sub-contractor engaged in the Project
Civil Engineering Completed Risk Policy	National Insurance Co Ltd	32130044190001996	27.3.2020	26.3.2021	Road and structures, Toll Bldg., Road furniture etc.
Electronic Equipment Insurance Policy	The Oriental Insurance Co Ltd	171200/44/2021/64	12.11.2020	11.11.2021	Four Lanning of Lucknow sulthanpur Road

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The Pavement condition for the overall project is good. RCC drains are constructed in Built up locations and earthen drains in rural locations which facilitates, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are being cleared during regular maintenance period.

12.4 Project Facilities

Two Toll Plazas are constructed one at Km.50+900 and another is at Km. 123+490. Both Toll Plazas are operational. Toll Plazas are operated by ETC Toll collection system and connected by network system monitored in administrative building. Bus bays and truck Lay byes are in fair condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained well. Highway lighting is provided at toll plaza, bus bay and truck lay bye locations and the same is found functional.

12.5 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 73-2007. The condition of sign boards & other road appurtenances like metal beam crash barriers is fair.

12.6 Maintenance

- Routine maintenance is being carried out by O&M contractor effectively, based on documents reviewed, time to time observations made by client/Authority are being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance was carried recently and next MM is scheduled in the year 2027 and 2034.

12.7 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

Annexure 1: Condition of Bridges

S. No.	Chainage (Km.)	Type of Structure	Sub structure	Super structure	Wearing coat	Bearings	Quadrant Pitching	Toe wall	Aprons

Annexure 3: Operation & Maintenance cost

Routine Maintenance cost for 1 year

Item	Frequency	Unit	No	Frequency per year	Quantity	Rate (Rs.)	Amount (Rs.)	Remarks
General Cleaning in Carriageway & Shoulders Rural area	Monthly	Km.	93.992	12	4	350	15,79,066	04 nos of Labour
General Cleaning in Carriageway & Shoulders Urban area	Twice in a month	Km.	32.28	24	4	350	10,84,608	04 nos of Labour
Watering in Median Plants	Once in Week	Km.	126.272	52	1	1939	1,27,31,753	01 nos of Labour
Watering in Avenue plants	Once in Week	Km.	93.992	52	94	1939	94,77,025	
Median Maintenance (Grass cutting and plant trimming)	Once in Month	Km.	93.992	12	12	21000	2,52,000	02 nos of Labour - 2 x 350 = 700 x 30 = 2,52,000
ROW Cleaning	Half yearly	Km.	88.3904	2	10	350	6,18,733	10 Nos of labour per KM (70% of the Project length)
Cleaning of Culverts	Half yearly	Nos.	260	2	3	650	10,14,000	3 nos of Labour along with JCB or Excavator
Road Furniture Cleaning	Quarterly	Km.	126.272	4	2	350	3,53,562	02 nos of Labour
Maintenance of Bus shelters	Monthly	Nos.	43	12	2	350	3,61,200	2 nos/ Bus shelter/month
General Cleaning in Building & Facilities	Daily	Nos.	4	12	60	350	10,08,000	02 nos of Labour for 30 days
Bridges	Half yearly	Nos.	14	2	4	350	39,200	04 nos of Labour for removal of vegetation/Structure
Carriageway Maintenance (Pot Holes etc)	Yearly	Sqm.	15	1	550	124	10,23,000	2.5% of CW area

Item	Frequency	Unit	No	Frequency per year	Quantity	Rate (Rs.)	Amount (Rs.)	Remarks
								considered 22.0x1000x2.5%
Total							2,95,42,147	
EQUIPMENT SUPPLY								
TRUCK TIPPER 6-8 CUM CAPACITY	Monthly	Nos.		12	2	400000	8,00,000	(2000000 is the cost of vehicle, considering 20% Rental per year) including maintenance
Water Tanker Cap 12 KL for Median	Monthly	Nos.	126.272	12	0	440000	-	(2200000 is the cost of vehicle, considering 20% Rental per year) including maintenance
Tractor Mounted Water Tanker Cap 6 KL for RoW	Monthly	Nos.		12		160000	-	(800000 is the cost of vehicle, considering 20% Rental per year) including maintenance
Mechanical Sweeper	Monthly	Nos.		12	2	250000	5,00,000	(2500000 is the cost of vehicle, considering 20% Rental per year) including maintenance
Grass cutter	Monthly	Nos.	126.272	12	6	12000	75,763	(12000/year)

Item	Frequency	Unit	No	Frequency per year	Quantity	Rate (Rs.)	Amount (Rs.)	Remarks
Manhoise/ Skyscraper	Monthly	Nos.		12	1	400000	4,00,000	(2000000 is the cost of vehicle, considering 20% Rental per year) including maintenance
Bikes	Monthly	Nos.	126.272	12	8	2500	2,52,544	15 Km/Bike/Month
Building Maintenance	Yearly			12	1	25000	3,00,000	25000/ month
Toll plaza AMC	Yearly	Nos.		12	1	100000	12,00,000	100000/month
Total							35,28,307	

Patrolling vehicle	Monthly	Nos.	12		3	300000	900000	(1500000 is the cost of vehicle, considering 20% Rental per year) including maintenance
Ambulance	Monthly	Nos.	12		2	240000	480000	(1200000 is the cost of vehicle, considering 20% Rental per year) including maintenance (1 Ambulance/toll plaza)
Tow away trucks and Crane	Monthly	Nos.	12		2	400000	800000	(2000000 is the cost of vehicle, considering 20%

Project: Four Lanning of Lucknow-Sultanpur section of NH-56 from Km. 11+500 to Km. 134+700 in the State of Uttar Pradesh under NHDP, Phase –IV on Hybrid Annuity Mode.

**TECHNICAL
DUE DILIGENCE REPORT**

Item	Frequency	Unit	No	Frequency per year	Quantity	Rate (Rs.)	Amount (Rs.)	Remarks
								Rental per year) including maintenance
Consumables for Medical Aid Post and Ambulance	Monthly	Nos.	12		2	5000	120000	5000 Per month for per set (Per set - Per toll plaza)
Consumables for Route Patrolling & Crane	Monthly	Nos.	12		2	5000	120000	5000 Per month for per set (Per set - Per toll plaza)
							24,20,000	
Routine Maintenance Cost							3,54,90,455	

Incidental cost for 1 year (1st Cycle)

Item		Unit	No	Frequency	Quantity	Rate	Amount	Remarks
Road marking	Half yearly	Sqm.	1	1	371	516	1,91,436	33 % of Total Project length on B/S for 1 year
Carriageway Maintenance (Pot Holes etc)	Yearly	Sqm.	1	1	66	168	11,088	2% of Flexible Pavement (changed quantities to only Service road portion)
Maintenance of Earthen Shoulder	Half yearly	Cum.	1	3	3788	225	25,56,900	10% of total Shoulder length throughout the project
Sign Board	Quarterly	Ls.	1	4	1	200000	8,00,000	5 % of Total sign boards per year (Lumpsum of 200000)
MBCB	Monthly	RMT.			3124	2400	74,97,600	3% of Total qty per year - (considered 2400 for km per month)
Mile Stone (KM Stone/ HM Stone / ROW stone etc.)	Quarterly	Nos.	126.27	4	32	2250	2,88,000	5 % of total stones per year (unable to understand the backup)
ROW Fencing (If available)	Quarterly	Km.		4			-	10 % of total ROW fencing per year
Kerb	Yearly	Km.	126.27	1	5051	250	12,62,750	2 % of total Kerbings per year
Electrical Poles	Yearly	Nos.	4136	1	124	55000	68,20,000	3 % of total poles per year
Replacement of Rigid pavement Panels	Yearly	Ls.	1	1	2046.00	4000	81,84,000	Considered 0.3% of the total volume in O & M period per year
Providing Reinforced cement concrete crash barrier at the edges of the bridge structures constructed with M-40 grade concrete with HYS-D-Fe 500 TMT reinforcement concrete per Rmt conforming to IRC:21 and fixing with dowel bars 16 mm dia to old concrete using epoxy grout as per drawing and Technical Specifications and as directed by the Engineer.	Yearly	RMT.	2574		77	3985	3,06,845	3% of Length replacement in every 5 years
Total amount for 1 Year							2,79,18,619	

Operational Expenses

S.NO.	PARTICULARS	Amount
1	Man Power	₹ 1,21,20,000
2	Fuel for Generator & Vehicles	₹ 1,93,44,000
3	Electricity	₹ 1,12,20,000
4	Stationary	₹ 1,00,000
5	Replacement of Electrical Fixtures	₹ 50,99,982
6	Refurbishment of Toll Plaza Equipment	₹ 6,00,000
	Total Amount	₹ 4,84,83,982

Summary of Major Maintenance

Description	Due date	Base cost	Esc Period	Escalation Rate per Year	Cost of MMR on due date @ 3% Escalation	In crores
Date of Estimation	01-06-2019

Sub: 4-Laning of Lucknow-Sultanpur section of NH-56 from km 11.500 (design chainage km 11.500) to km 134.700 (design chainage km 138.925) in the State of Uttar Pradesh under NHDP Phase-IV on hybrid annuity mode-**Letter of Award (LOA)**.

Ref: Request For Proposal submitted on 13.05.2016.

Dear Sir,

This is to notify that based on your bid submitted for the project of "4-Laning of Lucknow-Sultanpur section of NH-56 from km 11.500 (design chainage km 11.500) to km 134.700 (design chainage" and offer a Bid Price consisting of Bid Project Cost of Rs 2016.0 crores (Rupees two thousand sixteen crore only) and First Year O&M Cost of Rs 5.0 crore (Rs five crore only) is hereby accepted by NHA and declaring you as the "Selected bidder" as per the provisions of Clause 1.2.6 of RFP.

2. In accordance with the Clause 3.8.4 of the RFP, you are requested to sign the duplicate copy of the LoA and return the same as your acknowledgment within 7 (Seven) days of receipt of LoA. Thereafter, pursuant to Clause 1.3 of RFP, you are required to execute the Concession Agreement within 45 days from issue of LOA.

3. You shall promote and incorporate the Concessionaire as a limited liability company under the Companies Act 2013, as the entity which shall undertake and perform the obligations and exercise the rights of the Bidder under the LOA, including the obligation to enter into this Concession Agreement pursuant to the LOA for executing the Project. The Concessionaire shall, for the performance of its obligations hereunder during the Construction Period, provide to the Authority no later than 30 (thirty) days from the date of this agreement, an irrevocable and unconditional guarantee from a Bank for a sum equivalent to Rs 100.80 crores (Rupees one hundred crore eighty lakh) in the form set forth in Schedule-F (the "Performance Security").

Dear Sir,

In continuation of our letter no. 878 dated 30.04.2019 through which provisional completion certificate alongwith Punch list "A" and "B" was issued under clause 14.3 of the CA with a time limit of completion of Punch list items within 90 days of the date of issue of provisional certificate.

After completion of the Punch list "A" item, a request was made by you for issuance of final completion certificate vide your letter referred above in sl. no 2. However, vide our letter no. 937 dated 26.06.2019, we have brought in your knowledge about some incomplete works which were in progress but not considered as completed. Finally after attending those works, you have again requested for issuance of final completion certificate vide your letter no. 455 dated 27.06.2019.

Your submission was examined and after a joint inspection of site by PD NHAI PIU, concessionaire representatives and undersigned, it is found that all pending works of Punch list "A" have been completed. The justification provided by you for not fixing the guard rail in the gap portion was also found to be true and accordingly the authority has been informed. As far as the item of Punch list "B" are concerned, the land/hindrance has not been cleared as on date and therefore the reason of non-completion is solely attributable to the authority.

However, the length of 360 M of work in 2-lane configuration shall be mentioned in the completion certificate and you have to take up and finish the same as and when the land issue is resolved.

In this connection, our Chief Project Coordinator from Head Office has also inspected the site from 30.06.2019 to 01.07.2019 and has found that the project is fit for entry into the commercial operation and has given his consent for issuance of completion certificate. The concurrence of RO UP(E.) conveyed to IE by PD NHAI PIU Lucknow on 03.07.2019 vide letter no. 859 dated 02.07.2019 for issuance of completion certificate. As such, we are issuing the completion certificate with effect from 3rd July'2019 in the form set forth in schedule-J of the concession agreement.

However, certain works as stated below which are pending at your level need to be submitted to us for our scrutiny and onward action.

- 1) The O&M manual has not been finalized due to delay on your part. Please submit the relevant detail and take approval.
- 2) At certain locations, flexible pavement has been done or likely to be done as per Punch list "B" in place of rigid pavement and therefore you need to submit the proposal for reduction in scope of the project under Article 15.6 of the concession agreement. The locations are as under:
 - i) Km. 11+500 to km. 11+580 (Both Side)- 80 M flexible pavement followed in place of rigid pavement.
 - ii) Km. 79+060 to 79+100 (Both side)- 40 M railway crossing involved as such section of rigid pavement cannot be followed.
 - iii) Km. 54+840 to 54+890 (Both side) - 50 M deduction shall be made from the COS already processed for replacement of flexible pavement with rigid pavement.
- 3) Inventory of the project highway is required to be submitted taking into consideration all the movable and immovable items.

HDFC ERGO General Insurance Company Limited

November 06, 2020

DILIP BUILDCON LIMITED

PLOT NO. 5, GOVIND NARAYAN SINGH GATE,
CHUNA BHATTI, BHOPAL,
BHOPAL,
MADHYA PRADESH, 462016.

Dear Customer,

Sub: Employees Compensation Insurance Policy No: 3114203786194200000

We thank you for having preferred us for your *Insurance* requirements. We at HDFC ERGO General Insurance believe "*Insurance*" as not only to be an assurance to indemnify in the event of unfortunate circumstances, but one that signifies protection and support, which you can count on when you need it most.

The *Insurance Policy* enclosed herewith is a written agreement providing confirmation of our responsibility towards you that puts insurance coverage into effect against stipulated perils.

Please note that the policy has been issued based on the information contained in the proposal form and / or documents received from you or your representative / broker.

Name of the Intermediary : GLOBAL INSURANCE BROKERS PVT LTD

Intermediary Code : 200113159601

Where the proposal form is not received, information obtained from you or your representative /broker, whether orally or otherwise, is captured in the policy document.

If you wish to contact us in reference to your existing policy and /or other general insurance solutions offered by us, you may write to our correspondence address as mentioned below. Alternatively, you may visit our website www.hdfcergo.com. To enable us to serve you better, you are requested to quote your Policy Number in all correspondences.

Thanking you once again for choosing HDFC ERGO General Insurance Company Limited and looking forward to many more years of association.

Yours sincerely,

Authorised Signatory

CHAPTER 1. INTRODUCTION

1.1 General

DBL Kalmath Zarap Highways Limited (herein after referred to as “**Concessionaire**”) had augmented the existing two lane road “Kalmath-Zarap section of NH-17(New NH-66) in the State of Maharashtra, in accordance with the provisions of the Concession Agreement executed with National Highways Authority of India (herein after referred to as “**Authority**”) on 9th February, 2017 on Design, Build, Operate and Transfer (DBOT) on Hybrid Annuity Mode (HAM).

The Project Highway starts at Km. 406+030 (Near Kalmath) and ends at Km 450+170 (Near Zarap) on NH-17 (New NH-66). Project is 4 lane and is awarded under Hybrid Annuity Mode. It passes through settlements namely Sindhudurg, Kalmath, and Zarap. Project location map is provided at **Figure 1-1**.

Figure 1.1: Project Location Map

SHREM INFRAVENTURE PRIVATE LIMITED (SIPL) acquired DBL KALMATH ZARAP HIGHWAYS PRIVATE LIMITED vide agreement dated 26.03.2018.

SHREM FINANCIAL PRIVATE LIMITED (SFPL) appointed RUKY Projects Pvt. Ltd. as consultant for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the annuity payments received and future schedule of annuity payments.

1.2 The Project Data

Table 1.1: Project Data

S. No.	Particulars	Details
1	Name of the project	Rehabilitation and upgradation of NH-66 (Erstwhile NH-17) from Km. 406+030 to Km. 450+170 (Kalmath to Zarap Section) to Four lane with paved shoulder in the State of Maharashtra under NHDP-IV on Hybrid Annuity Mode.
2	Road Type	National Highway
3	Name of the Authority	National Highways Authority of India
4	Name of the Concessionaire	DBL Kalmath Zarap Highways Limited
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Date of LOA	25.11.2016
7	Date of Agreement	09.02.2017
8	Design Length as per Schedule B of CA	43.905 Km
9	Project Lane Configuration	Four Lane
10	Bid Project Cost	Rs. 914 Cr
11	EPC Cost	Rs. 698 .09 Cr
12	Nature of contract	DBFOT (Hybrid Annuity)
13	Toll collected by	The Authority
14	Concession End Date	22.03.2035
15	Concession Period	15 Years from COD
16	Appointed date	01.02.2018

S. No.	Particulars	Details
17	Construction Period	730 days from the Appointed Date+285 days EOT
18	Schedule Completion Date	01.02.2020
19	Date of issuance of Provisional Certificate (COD)	23.03.2020
20	Bonus on early completion	Applicable as per Cl.23.5 of CA
21	Date of issuance of Completion Certificate	---
22	Annuity Amount	As per Cl.23.4 and Cl.23.6.3 of CA
23	Total Number of Annuities payable after COD	30 Nos.
24	First Annuity Payment Date	23.09.2020
25	Total Number of Annuity Payments received as on January 2021	1 No.

1.3 Scope of Consultancy Services

The scope of work includes providing Technical Due Diligence of the Project Highway and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O & M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per schedule B and Schedule C of Concession Agreement (CA) including Change of scope are listed in the following Table 2-1.

Table 2.1: Salient Features

S. No.	Particulars	As per CA	As per COS	As per Site
1	Total Length of Main Carriageway with Rigid Pavement	29.197 Kms.	---	33.560 Kms.
2	Total Length of Main Carriageway with Flexible Pavement (Considering both sides)	14.708 Kms.		10.345 Kms.
3	Total length of Service Roads	23.938 Kms.	---	23.938 Kms.
4	Total length of Slip Roads	---	---	---
5	Toll Plazas	1 No.	---	1 No.
6	Bus Bays with Bus Shelters	46 Nos.	---	43Nos. Completed and 3 Nos. Construction Pending
7	Truck Lay Bays	1 Nos.	---	1 No.
8	Major Junctions	5 Nos.	---	5 Nos.
9	Minor Junctions	61 Nos.	---	61 Nos.
10	Vehicular underpasses	7 Nos.	-2 Nos.	5 Nos.
11	Light Vehicular underpasses	3Nos.	2 Nos.	5 Nos.
12	Pedestrian underpasses	---	1 No.	1 No.
13	Subways	---	1 No.	1 No.
14	Flyovers	1 No.	---	1 No.
15	Major Bridges	4 Nos.	3 Nos.	7Nos.
16	Minor Bridges	8Nos.	1 Nos.	9 Nos.
17	Hume Pipe Culverts	101 Nos.	29 Nos.	*127 Nos.
18	Slab/Box Culverts	19 Nos.	---	19 Nos.

* As per site condition Total 127 Nos. of pipe culverts constructed.

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Section Schedule, shown below as per Schedule B of CA during the Construction.

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from the Carriageway, RCC side drains are constructed along the main carriage way on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are constructed in open and rural areas.

2.4 Service Roads

Service Roads and Slip Roads are provided as per the provisions of Schedule B of the Concession Agreement. The details are provided below.

Table 2.3: List of Service Road locations

S. No.	Design Chainage (Km.)		Length (m)	Side	Service Road Width (m)	Linear Length of Service Road (m)
	From	To				
1	237+728	238+320	592	Both Side	5.5	1184
2	238+320	239+580	1260	Both Side	9.0	2520

					Total	23938

2.5 Bypass/Realignment

As per the provisions of Schedule B of the Concession Agreement Realignment is provided at the following locations.

Table 2.4: Realignment stretches

S.No.	From (Km.)	To (Km.)	Length (m)
1	245+740	245+890	150
2	247+060	247+200	140
3	248+560	248+700	140
4	250+890	251+050	160
5	265+110	265+185	75
6	265+227	265+590	363
Total			1028

2.6 Intersections

Locations of Major Intersections and Minor junctions are provided in Schedule B of the Concession Agreement. Details are given below.

Table 2.5: List of Major Junctions

2.7 Grade Separated Structures and underpasses

As per the provisions of Schedule B of the Concession Agreement 3 nos. of Light Vehicular Underpass, 1 flyover and 7 nos. of Vehicular Underpass structures are provided in the Project Corridor. Details are provided in **Chapter 4**.

2.8 Road Over Bridge (ROB)

ROB is not proposed in the project road as per provisions of Schedule B of CA.

2.9 Carriageway Details

Summary of Carriageway Details is given below:

Table 2.7: Summary of Carriageway Details

S. No.	Description	Flexible (Kms.)	Rigid (Kms.)
1	4 Lane Paved shoulder		43.905
2	Service Roads	23.938	
3	Total Length	23.938	43.905
TYPE OF ALIGNMENT			
4	Widening	---	29.615
5	Realignment	---	1.028
6	Flyover approaches	---	13.262
7	Total Length of the Project	---	43.905

2.10 Summary of Structures

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.8: Summary of Structures

S.No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts	Underpasses /Fly over/Sudway
1	Retained				2	
2	Widening		2			
3	Reconstruction			94	15	
4	New	4	6	7	2	VUP - 5 LVUP - 5 PUP - 1 FLYOVER - 1 SUBWAY - 1
5	Improvement					
	Total	4	8	101	19	13

2.11 Toll Plazas

- One toll Plaza is provided on the project road at Km. 250+407, which comprises of eight lanes.
- The width of each toll lane is provided 3.2 m, except for the lane for over dimensioned vehicles, where it is 4.5 m.
- Between each toll lane of the toll plaza, traffic islands are constructed to accommodate tollbooth.
- Protective barriers of reinforced concrete and traffic impact attenuators are placed in the front of each island to prevent out of control approaching vehicles crashing into the tollbooth.
- The canopy is provided for weather protection to toll operators, drivers and facilities. The canopy is designed aesthetically pleasing with cylindrical support columns located at traffic island so that there is no restriction on visibility and traffic movement.
- Total 7 Nos. toll booths are provided in toll plaza.
- Toll Plaza is updated to ETC Lane system as per the Change of Scope Order issued to the Concessionaire.
- List of tolling equipment provided at site is furnished in Toll Plaza & HTMS Chapter.

2.12 Bus bays/Bus shelters

As per provisions of Schedule C of CA bus shelters are provided at 46 locations. Details are provided below.

Table 2.9: List of Bus shelters

S. No.	Design Chainage (Km.)	Side	S. No.	Design Chainage (Km.)	Side
1	238+340	LHS	24	264+015	RHS
2	238+385	RHS	25	267+020	LHS

46	281+040	RHS

2.13 Other Project Facilities Provided as per Schedule C of CA

- Roadside furniture: Sign Boards Kilometer stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 84-2014.
- Traffic safety devices: W Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of CA.
- Landscaping: Provided at Toll Plaza location and being maintained
- Tree Plantation: Median plantation and Avenue plantation on both sides of the Project Corridor is provided all along the way and is being maintained.
- Medical Aid Post: Provided at Toll Plaza location and is operational
- Highway Lighting: Highway lighting is provided at Toll Plaza, Bus bays and Truck Lay byes and is functional.

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections provided below

3.2 Road Inventory

Inventory of the project road was carried out physically and the same is summarized in the following Table 3-1. Few representative photographs are presented below.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain rolling Terrain
2	Land Use	Agriculture and forest
3	Four lane length	43.905 km
4	Earthen shoulder	1.0 m to 1.5m Width on site
5	Junctions	66 Nos.
6	Toll Plazas	At Km. 250+407
7	Sign boards	Sign boards are provided as per Highway requirements
8	Road Markings	Lane markings are provided as per Highway requirement
9	Bus Bays /shelters	43 Nos.
10	Highway Lighting	Provided as per requirement
11	Avenue plantation	Provided

3.3 Pavement Condition

Pavement condition survey was carried out on the project road based on observations supplemented by simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement Condition Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.

Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.
------	--

Assessment of the condition of Pavement surface is a key component of infrastructure asset management. The information used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey

The survey on general pavement condition was primarily undertaken by means of slow drive- over survey, and supplemented with measurements wherever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition

As per the provisions of Schedule B, the Concessionaire has constructed the Main Carriageway with Rigid Pavement and Service & Slip Roads with Flexible Pavement. Pavement Design submitted by the Concessionaire was reviewed and found in accordance with the provisions of IRC:37 and IRC 58. Design parameters are provided below. CBR considered for Flexible Pavement was 13% and Effective CBR for Rigid pavement was 7%. Based on CBR values, axle loads and Traffic the crust designed is satisfactory. The crust details are given below.

Table 3.3: For Rigid pavement –Main carriage way

1	PQC	320mm
2	DLC	150mm
3	GSB	150mm
4	Sub Grade	500mm

Table 3.4: For Flexible pavement –Main carriage way

1	BC	50 mm
2	DBM	100 mm
3	WMM	250 mm
4	GSB	200 mm
5	Sub Grade	500 mm

Table 3.5: Flexible Pavement-Service Roads

1	BC	40mm
2	DBM	60mm
3	WMM	250mm
4	GSB	200mm
5	Sub Grade	500mm

Based on the review on Designs submitted by the Concessionaire, the above crust is safe for project. Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP-19 and is given in **ANNEXURE 1**. The summary of Pavement condition is given below.

Table 3.6: Pavement condition summary

From (Km.)	To (Km.)	Length (Kms.)	Condition
237+655	281+560	43.905	Good

Figure 3.1: Representative Photos of Pavement Condition.

CHAPTER 4. INVENTORY AND CONDITION OF STRUCTURES

4.1 General Assessment and Condition of the structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guidelines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

The structures along the project highway are listed below.

Table 4.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	07 Nos.
2	Minor Bridge	09 Nos.
3	Underpasses/flyovers	13 Nos.
4	Pipe culverts	127 Nos.
5	Slab/Box Culverts	19 Nos.

The Super Structure of the Major Bridge is of RCC Girders/ RCC Solid slabs resting on RCC wall type piers and abutments with open foundation. The superstructure of Minor bridges is of RCC solid slab/RCC Girder and the substructures are of PCC/RCC conventional wall type supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Structural condition of most of the culverts is fair except in few locations. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges

The total length of the Major bridge at Km. 237+688 is 73.2m with 4 spans. The superstructure consists of RCC I Girder. Each Pier and Abutment is regular RCC wall type abutment. Open foundations have been constructed for all piers and abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC railings have been provided on both sides of the deck.

The total length of the Major bridge at Km. 239+992 is 63.0m with 4 spans. The superstructure consists of PSC I Girder. Each Pier and Abutment is regular RCC wall type abutment. Open foundations have been constructed for all piers and abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC railings have been provided on both sides of the deck.

The total length of the Major bridge at Km. 251+655 is 84.0m with 4 spans. The superstructure consists of RCC I Girder. Each pier and whereas abutment is regular RCC wall type/circular abutment. Open foundations have been constructed for all piers and abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC railings have been provided on both sides of the deck.

The total length of the Major bridge at Km. 260+921 is 70.0m with 5 spans. The superstructure consists of RCC solid slab. Each pier and whereas abutment is regular RCC wall type abutment. Open foundations have

been constructed for all piers and abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC Crash barrier have been provided on both sides of the deck.

The total length of the Major bridge at Km. 265+205 is 62.0m with 2 spans. The superstructure consists of PSC I Girder. Each Pier and Abutment is regular RCC wall type abutment. Open foundations have been constructed for all Piers and Abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC railings have been provided on both sides of the deck.

The total length of the Major bridge at Km. 269+595 is 75.0m with 3 spans. The superstructure consists of PSC I Girder. Each Pier and Abutment is regular RCC wall type abutment. Open foundations have been constructed for all Piers and Abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC railings have been provided on both sides of the deck.

The total length of the Major bridge at Km. 270+258 is 120.0m with 4 spans. The superstructure consists of PSC I Girder. Each Pier and Abutment is regular RCC wall type abutment. Open foundations have been constructed for all Piers and Abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC railings have been provided on both sides of the deck.

Table 4.2: List of Major Bridges

S. No.	Chainage (Km.)	Span (m)	Total Length of Bridge (m)
1	237+688	2x21.8+2x14.8	73.2
2	239+992	4 x 31.50	63
3	251+655	4x21.00	84
4	260+921	5 X 14.00	70
5	265+205	2x31.00	62
6	269+595	3 x 25.00	75
7	270+258	4 x 30.00	120

The condition of the Superstructure and Substructure is good. Certain Minor maintenance operations such as quadrant pitching, reflector plates, cleaning of drainage spouts and strip seal expansion joints are to be carried out.

4.4 Details of Minor Bridges

The details of Minor bridges in the project stretch are listed below. The type of superstructure for Minor bridges is RCC solid slab/RCC Box type and the Substructure is PCC/RCC conventional wall type supported on open foundations. Expansion joints are buried type/Strip seal and bearings are Tar paper and elastomeric bearings. RCC Railing/ crash barriers are provided on all structures.

Table 4.3: Inventory of Minor Bridges

S. No.	Chainage (Km.)	Span (m)	Total Length of Bridge (m)	Description
1	242+952	2 x 10.50	10.5	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
2	244+207	3 x 7.00	21.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
3	248+442	3 x 7.00	21.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
4	253+857	3 x 7.00	21.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
5	258+109	1 x 8.00	8.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
6	258+728	1 x 8.00	8.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
7	270+42	1 x 7.00	7.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
8	273+576	3 x 7.00	21.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
9	275+219	1 x 10.00	10.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.

4.5 Details of Underpass

The details of Underpasses in the project stretch are listed below. The type of superstructure for underpass/Flyover is RCC/PSC I Girder/RCC Box type and the substructure is PCC/RCC conventional wall type supported on open foundations. Expansion joints are buried type/Strip seal and bearings are tarpaper and elastomeric bearings. RCC crash barriers are provided on all structures.

Table 4.4: Inventory of Underpass/Flyovers

S. No.	Chainage (Km.)	Type	Span (m.)	Total Length of Bridge (m)	Description
1	238+062	LVUP	1 x 10.00	10	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
2	238+230	PUP	1 x 7.00	7	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
3	238+950	FLYOVER	21x28.6+	1260	It has PSC/RCC I Girder and PSC Box Girder structure. It

S. No.	Chainage (Km.)	Type	Span (m.)	Total Length of Bridge (m)	Description
			20x29+2x40		has RCC crash barrier, bituminous wearing coat, Strip seal expansion joints.
4	253+090	VUP	1 x 20	20	It has RCC I Girder. It has RCC crash barrier, bituminous wearing coat, Strip seal expansion joints.
5	257+122	VUP	1 x 15	15	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
6	258+645	VUP	1 x 20	20	It has RCC I Girder. It has RCC crash barrier, bituminous wearing coat, Strip seal expansion joints.
7	264+210	VUP	1 x 15	15	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
8	266+515	LVUP	1 x 15	15	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
9	270+098	LVUP	1 x 8.00	8	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
10	270+600	VUP	1 x 15	15	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
11	271+740	SUBWAY	1 x 7.00	7	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
12	276+018	LVUP	1 x 15	15	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
13	279+378	LVUP	1 x 15	15	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.

4.6 Details of Culverts:

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.6.1. Slab/Box Culverts

The details of slab/Box culverts in the project stretch are listed below.

Table 4.5: List of Slab/Box Culverts

S. No.	Chainage (Km.)	Span (m)	Vent Size (m)
1	237+847	1 x 6.00	4.0
2	238+310	1 x 2.50	2.1
3	239+366	1 X 3.0	3.6
4	240+133	1 x 2.00	1.9
5	240+393	1 x 4.00	3.8
6	242+456	1 x 6.00	1.15
7	243+163	1 x 2.00	1.5
8	250+914	1 x 4.00	1.5
9	253+663	1 x 5.30	3.6
10	256+138	1 x 2.00	1.9
11	262+380	1 x 5.00	1.15
12	263+095	1 x 4.50	1.5
13	265+512	1 x 2.00	2.0
14	266+810	1 x 4.50	1.9
15	268+137	1 x 4.50	3.8
16	269+735	1 x 4.00	1.15
17	269+835	1 x 3.00	1.5
18	274+664	1 x 4.50	2.0
19	279+621	1 x 3.00	2.1

4.6.2. Condition of the Slab/Box Culverts:

The general condition of above Box/slab culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works.

4.6.3. General Description of the Pipe Culverts

There are 127 Nos. of pipe culverts in the project stretch. The details of the culverts are as given below.

Table 4.6: List of Pipe Culverts

S. No.	Chainage (Km.)	Type of Structure	No. of Rows X Dia (m)	S. No.	Chainage (Km.)	Type of Structure	No. of Rows X Dia (m)
1	238+081	HPC	1 x 1.20	64	260+744	HPC	1 x 0.9
2	239+015	HPC	2 x 1.20	65	261+262	HPC	1 x 1.20
3	239+478	HPC	1 x 1.20	66	261+621	HPC	1 x 1.20
4	239+749	HPC	1 x 1.20	67	261+694	HPC	1 x 1.20
5	239+857	HPC	1 x 1.20	68	261+745	HPC	1 x 1.20
6	240+494	HPC	1 x 1.20	69	261+996	HPC	1 x 1.20

62	260+647	HPC	1 x 0.9
63	260+685	HPC	1 x 0.9

S. No.	Chainage (Km.)	Type of Structure	No. of Rows X Dia (m)
109	275+006	HPC	1 x 1.20
110	275+440	HPC	1 x 1.20
111	275+719	HPC	1 x 1.20
112	276+138	HPC	1 x 1.20
113	276+566	HPC	1 x 1.20
114	276+752	HPC	1 x 1.20
115	276+976	HPC	1 x 1.20
116	277+489	HPC	1 x 1.20
117	277+792	HPC	1 x 1.20
118	278+050	HPC	1 x 1.20
119	278+173	HPC	1 x 1.20
120	278+500	HPC	1 x 1.20
121	278+692	HPC	1 x 1.20
122	279+097	HPC	2 x 1.20
123	279+197	HPC	1 x 1.20
124	279+928	HPC	1 x 1.20
125	280+501	HPC	4 x 1.20
126	281+296	HPC	1 x 1.20
127	281+648	HPC	1 x 1.20

4.6.4. Condition of the Pipe Culverts

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

The culverts are in fair condition and can be retained in the present condition with following repairs/rehabilitation measures.

- Chocked culverts must be cleared.
- Debris and garbage near outside the vents must be removed.

CHAPTER 5. REVIEW OF PAVEMENT DESIGN

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design

The Pavement Design shall be carried out in accordance with Indian Roads Congress guidelines. The pavement is designed in accordance with IRC: 58-2015 “Guidelines for the Design of Plain Jointed Rigid Pavements for Highways”, IRC: SP 84-2014, IRC: 15-2011 “Construction Concrete Road (FOURTH REVISION)” and relevant clauses of schedule B of the EPC agreement. Pavement crust thickness for main carriageway as per pavement design report summarized below.

Table 5.1: Rigid Pavement Design for Main carriageway

Description	Design/Adopted Parameters
CBR of sub grade	8 %
Two-way commercial traffic volume per day	1777
Design life in years	30
Pavement Quality Concrete (PQC) – (mm)	320
Dry Lean Concrete (DLC) – (mm)	150
Drainage Layer (GSB) - (mm)	150
Diameter of Dowel Bar (mm)	36
Length of Dowel Bar (mm)	500
Spacing of Dowel Bars (mm)	300
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	490

As per schedule D, (Annexure-I), clause 2, pavements for Slip road/Service road shall be flexible pavement and designed as per provision of design manual IRC: SP: 84:2014. The design traffic in case of service road shall be ten million standard axles as per Cl:5.5.5 of IRC: SP: 84:2014. The crust composition shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”.

Table 5.2: Flexible Pavement for service road

S. No.	Description/ Pavement layer	Design/Adopted Parameters
1	Sub Grade CBR (%)	8 %
2	Design Life (Years)	20 years
3	Design Traffic (MSA)	10 MSA
4	Surface course (BC)	40mm
5	Binder course (DBM)	60 mm
6	Base course (WMM)	250 mm
7	Sub Base course (GSB)	200 mm

The Pavement crust has been designed according to IRC specification and found in order, the adopted/constructed pavement layer thickness is adequately provided than actual/designed thickness.

5.3 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC for service roads. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Next Periodic Renewal proposed on or before 2027 and 2033.

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction. (As per IRC 58-2015).

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 6.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC: 103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety

6.2 Existing Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table 6-2.

Table 6.2: Safety Items

S. No.	Item Description		Status	Condition
Road Furniture				
1	Sign Boards	Chevron Signs	Available as per site requirement	Good
		Village sign boards	Available as per site requirement	Good
		Information Boards	Available as per site requirement	Good
		Other Sign Boards	Available as per site requirement	Good
		Gantry Sign Boards	Available as per site requirement	Good
2	Road Marking	Studs & Lane marking	Available as per site requirement	Good
3	Metal Beam Crash Barriers	At High embankments & Bridge Approaches	Available as per site requirement	Good
4	Median kerb	Along the Project Highway	Provided as per IRC SP:84-2014	Good
5	Road studs & Solar Blinkers	Along the Project Highway	Provided as per IRC SP:84-2014	Good

This Project Section is part of an important corridor. It is the Concessionaire's duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

The Concessionaire is maintaining the safety features in good condition from time to time in accordance with the provisions of Schedule K of the Concession Agreement.

6.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is required during the maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General:

There is one toll Plaza on the project road at Km. 250+407. The width of each toll lane is provided 3.2 m, except for the lane for over dimensioned vehicles, where it is 4.5 m. between each toll lane of the toll plaza, traffic islands is constructed to accommodate tollbooth. Protective barriers of reinforced concrete and traffic impact attenuators is placed at the front of each island to prevent out of control approaching vehicles crashing into the toll booth. The canopy is provided for weather protection to toll operators, drivers and facilities. The canopy is designed aesthetically pleasing with cylindrical support columns located at traffic island so that there is no restriction on visibility and traffic movement. Total 7 Nos. toll booths are provided in toll plaza. Toll Plaza is updated to ETC Lane system as per the Change of Scope Order issued to the Concessionaire.

7.2 Tolling Equipment and Control Room Equipment

List of equipment provided at toll plaza and control room is given below.

Table 7.1: List of Equipment at Toll Plaza and Control Room

S. No.	Description	Qty
1	LC WITH INDUSTRIAL PC SMPS & ACCESSORIES	6
2	AVC SENSORS INCLUDING (TMS & HTMS)	10
3	LANE EXIT BARRIER WITH LOOPS & DETECTOR	8
4	OVERHEAD LANE STATUS LIGHT (OHLS)	10
5	TRAFFIC LIGHT (TMS & HTMS)	8
6	INCIDENT CAPTURE CAMERA (TMS & HTMS)	10
7	LICENSE PLATE IMAGE CAPTURE CAMERA	10
8	LUGS, CONDUITS, CONNECTORS AND SEALANT	1
9	ELECTRONICS ENCLOSURE (TMS & HTMS)	10
10	10 KVA ONLINE UPS WITH 30 MINS BACKUP	2
11	CABLING/NETWORKING FOR LANE (TMS & HTMS)	1
12	OPERATOR MONITOR (TMS & HTMS)	8
13	THERMAL RECEIPT PRINTER (TMS & HTMS)	8
14	MANUAL BOOTH CONTROLLER (TMS & HTMS)	8

S. No.	Description	Qty
15	INTERCOM SLAVE UNIT (TMS & HTMS)	8
16	BARCODE READER (TMS & HTMS)	8
17	CASHUP PC (TMS & HTMS)	8
18	AUDIT, POS, LSDU, REPORTS, WIM PC (TMS)	1
19	POS PRINTER - THERMAL (TMS & HTMS)	1
20	INTERCOM MASTER UNIT - 20 CHANNEL (TMS)	1
21	6 KVA ONLINE UPS WITH 30 MINS BACKUP	1
22	CABLING/NETWORKING FOR LANE (TMS & HTMS)	1

34	RFID ETC TRANSCEIVER WITH ACCESSORIES	2
35	TRAFFIC LIGHT (TMS & HTMS)	4
36	LANE EXIT BARRIER WITH LOOPS & DETECTOR	6
37	POS ETC RFID READER (TMS & HTMS)	2
38	LIGHT CURTAIN (OPTICAL SEPARATOR)	1
39	LC WITH INDUSTRIAL PC SMPS & ACCESSORIES	6
40	RFID TAG (TMS)	4

S. No.	Description	Qty
41	MSWIM 3 MTR (TMS & HTMS)	5
42	MSWIM 3.5 MTR (TMS & HTMS)	8
43	USER FARE DISPLAY 2- LINES,12-CHARACTER	2
44	PLAZA SOFTWARE (TMS & HTMS)	10
45	PLAZA SOFTWARE (TMS & HTMS)	1

7.3 Vehicles

The vehicles required for the operation of the highway as per requirement under the contract and observed at site are presented in the below Table.

Table 7.2: List of Vehicles

S. No.	Vehicle Type	Toll Plaza
1	Patrol Vehicle	1 No
2	Ambulance	1 No.

CHAPTER 8. SCHEDULE OF ANNUITY PAYMENTS

8.1 Hybrid Annuity Model (HAM)

Hybrid annuity model is the PPP model which allows the payment of 40% of the Project cost during construction period based on progress milestones set forth by Authority to Concessionaire and Payment of balance 60% to the Concessionaire Biannually with the Interest during the balance concession period.

8.2 Payment during Construction

As per the provisions of Article 23 of the Concession Agreement, 40% of the Bid Project Cost adjusted with Price Index in accordance with Clause 23.2.3 of the CA, shall be paid during the Construction Period. Amount payable during construction period shall be paid in five equal installments upon achieving the following Project Milestones.

Table 8.1: Schedule of Payment Milestones

S. No.	Payment Milestone No	Criteria for releasing the Payment
1	I	On Achievement of 20% of Physical Progress
2	II	On Achievement of 40% of Physical Progress
3	III	On Achievement of 60% of Physical Progress
4	IV	On Achievement of 75% of Physical Progress
5	V	On Achievement of 90% of Physical Progress

During the Operation Period, remaining 60% of the balance Completion Cost shall be paid in 30 Annuities each Annuity payable biannually. Each Annuity amount shall be based on the percentages of the balance Completion Cost mentioned in 23.6.3 of the Concession Agreement. During the Operation Period following payment components are payable.

- Annuity Payment as per the Annuity Payment Schedule provided in 23.6.3 of the Concession Agreement.
- As per clause 23.6.4 of CA, Interest shall be due and payable on reducing balance of completion cost at an interest rate equal to the applicable Bank Rate Plus 3%
- O & M Payment as a lump sum amount as per Clause 23.7.1 of the Concession Agreement.

Details of Annuity payments are as below.

Table 8.2: Schedule of Annuity Payments

Annuity No.	% of Completion Cost remaining to be paid on COD	Annuity due Date	Annuity paid Date
1	2.10%	19/09/2020	12-Oct-20
2	2.17%	19/03/2021	--

Annuity No.	% of Completion Cost remaining to be paid on COD	Annuity due Date	Annuity paid Date
3	2.24%	19/09/2021	--
4	2.31%	19/03/2022	--
5	2.38%	19/09/2022	--
6	2.45%	19/03/2023	--
7	2.52%	19/09/2023	--
8	2.60%	19/03/2024	--

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of CA, the Concessionaire will operate and maintain the Project roads by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual Inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz. pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

9.3 Operations

9.3.1. Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- i. Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- ii. Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.
- iii. Carrying out preventive maintenance of the Project road;
- iv. Taking-up routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- v. Taking-up major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- vi. Maintenance of the lighting system to be functional;

- vii. Functioning of the Patrolling System
- viii. Functioning of rescue and medical aid services
- ix. Ambulance as and when required
- x. Functioning of the Project Facilities
- xi. Administrative, Operational and Maintenance Base Camp
- xii. Truck Lay byes
- xiii. Pickup Bus stops / Bus Bays
- xiv. Protection of the environment and provision of equipment and materials therefor;
- xv. Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- xvi. Complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plazas

There are two lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the Escrow Account. In case of ETC system, Toll collection is connected with Network system and directly deposited into the Escrow account.

9.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

9.5.1. Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence does not require any immediate or preventive interventions.

9.5.2. Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

9.5.3. Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road. The details of periodic maintenance schedule are given below.

Table 9.1: Schedule and status of for Periodic Maintenance

Description	Schedule of Major Maintenance	Status of Major Maintenance
1 st Periodic Maintenance	2027	Planned to execute
2 nd Periodic Maintenance	2033	Planned to execute

9.5.4. Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sandstorms, hurricanes, cyclones, earthquakes or landslides that shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction
- c. Construction of Diversions
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.6 Review of Test Reports

9.6.1. Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

As per Schedule K of CA, if any stretch exceeds 2750mm in a KM, the stretch shall be rectified. however, the independent Engineer has not issued any NCRS in this Regard

9.7 O & M Forecast

The O & M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 4**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance	Incidental maintenance	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	1.565	2.056		4.48	8.10
2021	1.612	2.118		4.61	8.34
2022	1.660	2.181		4.75	8.59
2023	1.710	2.247		4.89	8.85
2024	1.762	2.314		5.04	9.12
2025	1.814	2.384		5.19	9.39
2026	1.869	2.455		5.35	9.67
2027	1.925	2.529	31.64	5.51	41.60
2028	1.983	2.605		5.67	10.26
2029	2.042	2.683		5.84	10.57
2030	2.103	2.763		6.02	10.89
2031	2.166	2.846		6.20	11.21
2032	2.231	2.932		6.39	11.55
2033	2.298	3.020	41.92	6.58	53.82
2034	2.367	3.110		6.77	12.25
2035	2.378	3.124		6.81	12.31
Total	31.488	41.367	73.56	90.11	236.52

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 General: Scope of Work (Article 2)

Article 2 of the CA provides the scope of work, which includes the following.

- Operation and Maintenance of the Project Highway on the Site set forth in Schedule A and as specified in Schedule B together with provision of Project Facilities as specified in Schedule C, and in conformity with the Specifications and Standards set forth in Schedule D;
- collection of Fee from the Users of the Project; subject and in accordance with the provisions of the Concession Agreement;
- performance and fulfillment of all other obligations of the Contractor in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Contractor under this Agreement

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 5**.

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfill its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the Concession Agreement

10.5 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 30 days from the date of the Agreement,

- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 30% of the Total Project Cost.

10.6 Tests (Clause 13.3)

For determining that the Project, conforms to the Maintenance Requirements, the Independent Engineer shall require the Concessionaire (Concessionaire shall in turn require the Contractor) to carry out, or cause to be carried out, tests specified by it in accordance with Good Industry Practice. One half of the costs incurred on such tests, and to the extent certified by the Independent Engineer as reasonable, shall be reimbursed by the Authority to the Concessionaire

10.7 Provisional Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA. Provisional Completion Certificate given in **ANNEXURE 6**.

10.8 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire.

10.9 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of scope proposals that were initiated during construction period and consented by the NHA are provided in **Annexure 8**.

10.11 O & M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Taking-up routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Taking up major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment

- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (The “**Maintenance Requirements**”).

10.13 Maintenance Manual (Clause 17.3)

No later than 90 (ninety) days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 2% (two percent) of the performance security, and
- 0.1% (zero decimal one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Payment of Bid Project Cost (Article 23)

The Authority agrees to pay 40% of the Bid Project Cost in five installments against the achievement of Project Milestones specified in Clause 23.4 of the Concession Agreement and the amount shall be adjusted with Price index.

Remaining balance completion cost shall be paid as per the % of balance completion cost biannually from the date of COD. Percentage of amounts payable for each Annuity is specified in 23.6.3 of the Concession Agreement.

10.18 Change in Law (Article 35)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 Details of Insurance:

As per clause 26.1 of the CA, the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Insurance copies are provided in **ANNEXURE 7**. Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Property covered
			From	To	
Electronic Equipment Insurance	The Oriental Insurance Company Limited	171200/44/2021/38	08.09.2020	07.09.2021	Electronic equipment provided for Road and Bridges stretch connection
Employees Compensation Insurance	HDFC ERGO General Insurance Co Ltd	3114203370239300000	24.03.2020	23.03.2021	All categories of Employees of the Contractor & sub-contractor engaged in the Project
Standard Fire & Special Perils Policy	The Oriental Insurance Co Ltd	171200/11/2021/408	05.10.2020	04.10.2021	Toll Plaza Building, and its assets & Toll Booths, Equipment, Road furniture, Fixtures, Electrical poles etc.
Fire Industrial All Risk Policy	The Oriental Insurance Co Ltd	171200/11/2021/407	05.10.2020	04.10.2021	Operation and maintenance of Roads, Bridges etc.

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The Pavement condition for the overall project is good. RCC drains are constructed in Built up locations and earthen drains in rural locations which facilitates, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are being cleared during regular maintenance period.

12.4 Project Facilities

Toll Plaza is constructed at Km. 250+407 and is operational. Toll Plaza is operated by ETC Toll collection system and connected by network system monitored in administrative building. Bus bays and truck lay byes are in fair condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained well. Highway lighting is provided at toll plaza, bus bay and truck lay bye locations and the same is found functional.

12.5 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 84-2014. The condition of signboards & other road appurtenances like metal beam crash barriers is fair.

12.6 Maintenance

- Routine maintenance is being carried out by O & M contractor effectively, based on documents reviewed, time-to-time observations made by client/Authority are being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance is scheduled in the year 2027.

12.7 Epilogue:

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

Annexure 1: Pavement Condition

Condition: G=Good, F=Fair, P=Poor & VP=Very poor Rutting: M=Moderate & S=Severe Drain: LD=Lined open Drain, ULD=Unlined Drain, CD=Covered Drain, NO=No drain, PF=Partial Function, F= Functional

Abstract Summary of Major/Periodic Maintenance

Description	Due Date	Base Cost (Rs)	Esc period	Escalation rate per year	Cost of MMR on due date @ 3% escalation	Rs In crores
Date of Estimation	23-MAY-20					
1st major maintenance - Highway	22-MAY-27	2439,28,938	7.00	3.0%	2951,54,015	29.52
1st major maintenance - Structures	22-MAY-27	175,59,171	7.00	3.0%	212,46,597	2.12
2nd major maintenance - Highways	22-MAY-32	2882,00,203	12.00	3.0%	3919,52,277	39.20
2nd major maintenance - Structures	22-MAY-32	200,22,024	12.00	3.0%	272,29,953	2.72
				Total	₹ 7355,82,842	73.56

Major Maintenance BOQ

BoQ Item No.	DESCRIPTION	Unit	Qty	RATE	AMOUNT Rs.	Qty	RATE	AMOUNT Rs.
	Chapter 4. Pavement (Asphalt & Concrete)							
1	Providing and applying tack coat with Rapid Setting Bitumen Emulsion using emulsion pressure distributor on the prepared bituminous/granular surface cleaned with mechanical broom, Ref. to Technical specification 503.			-			-	
(a)	On Bituminous surface @ 2.0 kg to 3.0 kg/10 sqm.	Sqm.	4,11,559.00	14	57,61,826	4,11,559.00	14	57,61,826
2	Providing and laying bituminous concrete using a batch type Hot Mix Plant using crushed aggregates of size (table 500-17), premixed with VG Grade Bitumen and filler, transporting the hot mix to work site, laying with a hydrostatic paver finisher with sensor control to the required grade, level and alignment, rolling with smooth wheeled, vibratory and tandem rollers, Pneumatic Tyre Rollers to achieve the desired compaction as per Technical specification clause No. 507 and mix design conforming the IRC -111 and IRC 37.	Cum.	16,462.36	7,682.00	12,64,63,850	28,650.52	7,682.00	22,00,93,295
3	Repair of joint Grooves with Epoxy Mortar Repair of spalled joint grooves of contraction joints, longitudinal joints and expansion joints in concrete pavements using epoxy mortar or epoxy concrete)	MTRS.	40,838.35	250	1,02,09,588	40,838.35	250	1,02,09,588
4	Texturing of Rigid pavement (considering 50% for 7 years)	Sqm.	87,511.50	130	1,13,76,495	87,511.50	130	1,13,76,495
5	Earthen shoulder @ service roads	Cum.	7,285.40	250	18,21,350	7,285.40	250	18,21,350

Project: Rehabilitation and upgradation of NH-66 (Erstwhile NH-17) from Km. 406+030 to Km. 450+170 (Kalmath to Zarap Section) to Four lane with paved shoulder in the State of Maharashtra under NHDP-IV on Hybrid Annuity Mode.

Annexure 5: Letter of Award

**GOVERNMENT OF INDIA
MINISTRY OF ROAD TRANSPORT & HIGHWAYS**

Transport Bhawan,
1, Parliament Street,
New Delhi-110 001

No. RW/NH-37015/26/2016/NHDP-IVA

Dated 25th November, 2016

To

M/s Dilip Buildcon Limited,
[Kind Attn: Sh. Kundan Kumar Das, AGM Business Development],
Plot No. 5, Inside Govind Narayan Singh Gate,
Chura Bhatti, Kolar Road, Bhopal -462 016, email: dk@dilipbuildcon.co.in

Subject: Rehabilitation and up-gradation of NH-66 (erstwhile NH-17) from Km 406/030 to Km 450/170 [Kalmath to Zarap section] to four-lane with paved shoulder in the state of Maharashtra under NHDP-IV on Hybrid Annuity Mode.

Reference: Tender Notice no. RW/NH-37015/26/2016/NHDP-IV dated 02.09.2016 [Tender ID-28016]

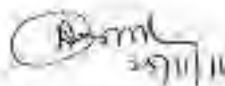

This is to notify that your bid dated 17.10.2016 for execution of the work for "Rehabilitation and up-gradation of NH-66 (erstwhile NH-17) from Km 406/030 to Km 450/170 [Kalmath to Zarap section] to four lane with paved shoulder in the state of Maharashtra under NHDP-IV on Hybrid Annuity Mode" for the "Bid Project Cost of Rs. 914,00,00,000/- (Rupees Nine Hundred Fourteen Crores only)" and "First Year O&M Cost of Rs. 3,00,00,000/- (Rupees Three Crores only)" is hereby accepted by the Ministry of Road Transport & Highways declaring you as the "Selected bidder" as per the provisions of Clause 1.2.6 of RFP. Accordingly, this Letter of Award (the LoA) is being issued, in duplicate, to you.

2. Accordingly, you are requested to ensure the followings within stipulated time.

(i) You shall sign and return the duplicate copy of the LOA in acknowledgement thereof, within 7 (seven) days of the receipt of the LOA as per clause 3.8.4 of RFP. A copy of the same may be endorsed to Chief Engineer (NH), PWD Maharashtra, Navi Mumbai.

(ii) You shall promote and incorporate the Concessionaire as a limited liability company under the Companies Act 2013, as the entity which shall undertake and perform the obligations and exercise the rights of the Bidder under the LOA, including the obligation to enter into this Concession Agreement pursuant to the LOA for undertaking the Project.

(iii) The Concessionaire has to join in the said request of the selected bidder/Consortium to the Authority to accept it as the entity which shall undertake and perform the obligations and exercise the rights of the selected bidder/Consortium including the obligation to enter into this Concession Agreement pursuant to the LOA. The Concessionaire has to further represent to the effect that it has been promoted by the selected bidder/Consortium for the purposes hereof and has delivered to the Authority a legal opinion with respect to the authority of the Concessionaire to enter into this Concession Agreement and the enforceability of the provisions thereof.

(iv) The Concessionaire shall execute the Concession Agreement with Chief Engineer (NH), PWD Maharashtra within **45 (Forty five) days** of the date of issue of LOA in pursuant to clause 1.3 of RFP; and

(v) The Concessionaire shall, for the performance of its obligations hereunder during the Construction Period, provide to the Authority no later than **30 (Thirty) days** from the date of this agreement, an irrevocable and unconditional guarantee from a Bank for a sum equivalent to **5% (Five per cent) of the Bid Project Cost (Rs. 45.70 crores (Rupees Forty Five Crores and Seventy Lakhs only))** in the form set forth in Schedule-F (the "Performance Security").

3. You are required to comply with all the terms and conditions set forth in the RFP documents and subsequent addendum/corrigendum issued. In case of any delay/default on your part, you shall be liable for action as stated in the RFP Document.

(A.K. Nagpal)
Chief Engineer (NHDP-IVA)

Copy to:

1. PPS to Secretary (RT&H)
2. PPS to ADG-I, MoRT&H, New Delhi
3. CE (P-6), MoRT&H, New Delhi
4. Principal Secretary to Govt. of Maharashtra, Public Works Department, Mumbai
5. Chief Engineer (NH), PWD Maharashtra, Kankar Bhawan, Mumbai for further necessary action as per para 2 above.
6. Regional Officer, MoRT&H, Mumbai
7. Finance Wing

Annexure 6: Provisional Certificate

Schedule-J

“PROVISIONAL CERTIFICATE”

1. We, Artefact Projects Ltd. acting as Independent Engineer, under and in accordance with the Concession Agreement dated 09.02.2017 (the “Agreement”), for development and operation of Four-Laning of the Kalmath to Zarap Section of National Highway No. 17 ((New NH-66) from Km. 406.030 to Km. 450.170 Design Ch. Km. 237.655 to Km. 281.560) Project (the “Project Highway”) on design , build, operate and transfer (the “DBOT Annuity or Hybrid Annuity”) basis through M/s. DBL Kalmath Zarap Highways Limited, hereby certify that the tests specified in Article 14 and Schedule-I of the Concession Agreement have been undertaken for the partial Project / section of **40.108 Km** (from Design Ch. Km. 239.580 to Km. 251.400, Km. 251.610 to Km. 265.245, Km. 265.545 to Km. 271.270 and Km. 272.630 to Km. 281.560) of the Project to determine compliance thereof with the provisions of the Agreement.
2. Construction Works forming part of the Project/section of the Project that were found to be incomplete and/or deficient have been specified in the Punch List appended hereto, and the Concessionaire has agreed and accepted that it shall complete and all such works in the time and manner set forth in the Agreement. Some of the incomplete works have been delayed as a result of reasons attributable to the Authority or due to Force Majeure and the Provisional Certificate cannot be withheld on this account. We are satisfied that having regard to the nature and extent of such incomplete works, it would not be prudent to withhold commercial operation of the Project/section of **40.108 Km** (from Design Ch. Km. 239.580 to Km. 251.400, Km. 251.610 to Km. 265.245, Km. 265.545 to Km. 271.270 and Km. 272.630 to Km. 281.560) of the Project, pending completion thereof.
3. In view of the foregoing, We are satisfied that the partial Project/section of **40.108 Km** of the Project can be safely and reliably placed in commercial service of the Users thereof, and in terms of the Agreement, the Project/section of the Project is hereby provisionally declared fit for entry into commercial operation on this the **23rd** day of March 2020.

CHAPTER 1. INTRODUCTION

1.1 General

DBL YAVATMAL WARDHA HIGHWAYS PRIVATE LIMITED (herein after referred to as the “Concessionaire”) had augmented the existing two lanes road “Yavatmal Wardha section of NH361 in the State of Maharashtra, in accordance with the provisions of the Concession Agreement executed with National Highways Authority of India (herein after referred to as the “Authority”) on 9th June, 2017 on Design, Build, Operate and Transfer (DBOT) on Hybrid Annuity Mode (HAM).

The Project Highway starts at Km. 400+575 (Near Yavatmal) and ends at Km. 465+500 (Near Wardha) on NH 361. It passes through settlements namely kamatwada, Galamgaon, Sirpur, Bhidi and Selsura. Project location map is provided at Figure 1.1.

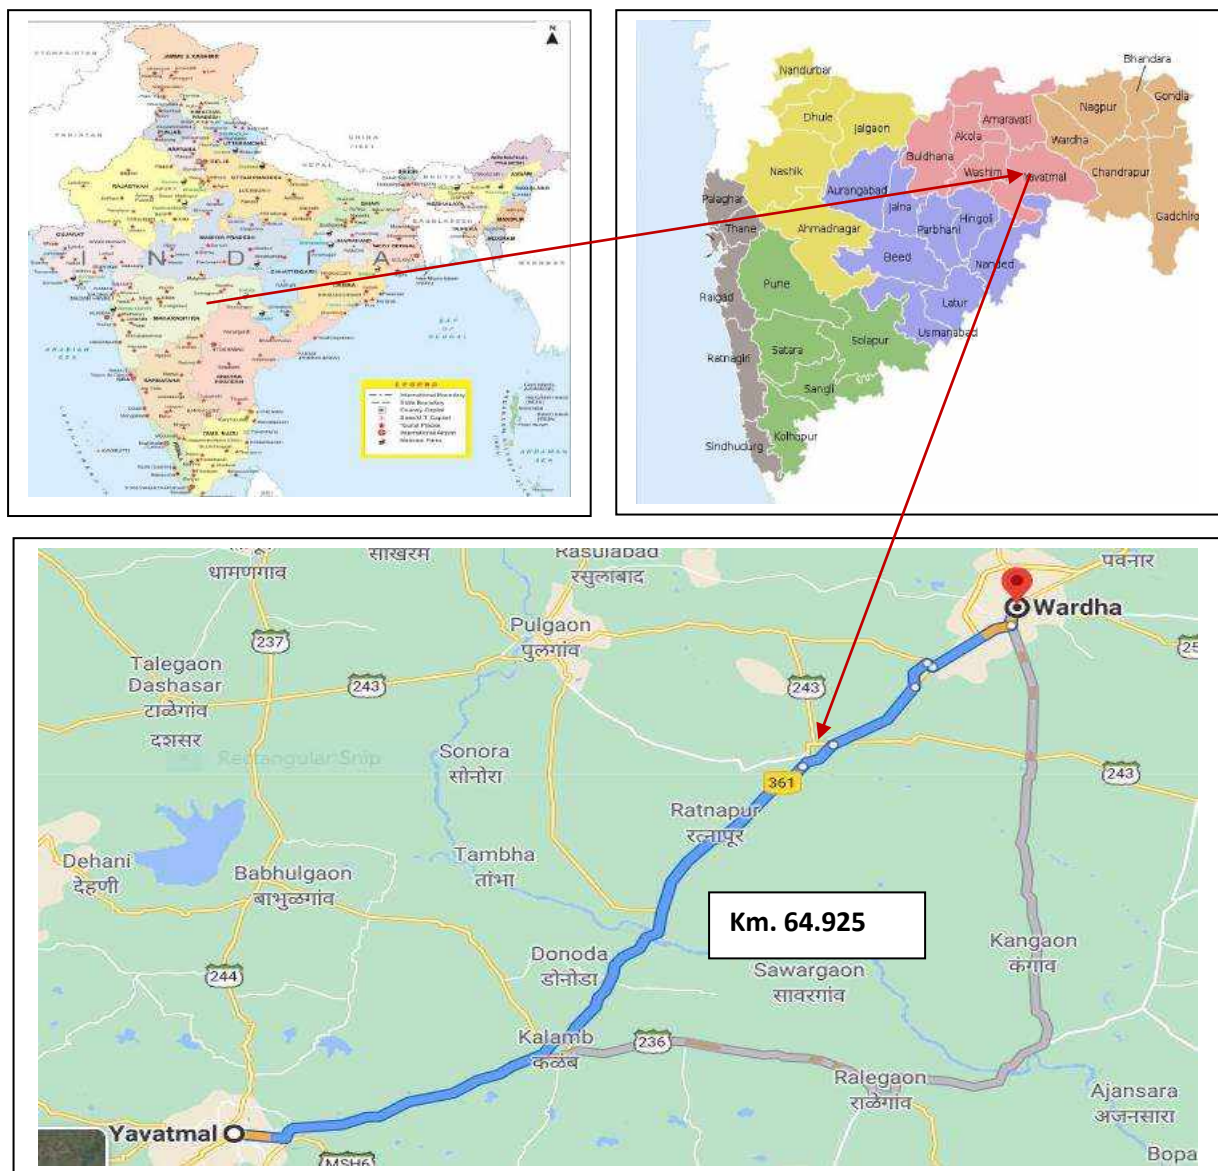

Figure 1-1: Project Location Map

SHREM INFRAVENTURE PRIVATE LIMITED (SRPL) acquired DBL YAVATMAL WARDHA HIGHWAYS PRIVATE LIMITED vide agreement dated 26.03.2018

SHREM FINANCIAL PRIVATE LTD (SFPL) appointed RUKY PROJECTS PVT LTD as consultant for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the annuity payments received and future schedule of annuity payments.

1.2 The Project Data

Table 1-1: Project Data

S No.	Particulars	Details
1	Name of the project	Four Laning of Yavatmal-Wardha Section of NH-361 From Km. 400+575 to Km.465.500 (Design Length Km. 64+925) in the State of Maharashtra on Hybrid Annuity Mode
2	Road Type	National Highway
3	Name of the Authority	National Highways Authority of India
4	Name of the Concessionaire	DBL YAVATMAL WARDHA HIGHWAYS PRIVATE LIMITED
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Date of LOA	28.03.2017
7	Date of Agreement	09.06.2017
8	Design Length as per Schedule B of CA	64.925 Km
9	Project Lane Configuration	Four Lane
10	Bid Project Cost	1046.28Cr
11	EPC Cost	756.17 Cr
12	Nature of contract	Hybrid Annuity Mode
13	Toll collected by	The Authority
14	Concession Period	15 years from the Commercial Operation Date (COD)
15	Appointed date	05.02.2018
16	Concession End Date	01.08.2034
17	Construction Period	910 days from the Appointed Date
18	Schedule Completion Date	02.08.2020
19	Bonus on early completion	Applicable as per Cl.23.5 of CA
20	Date of issuance of Provisional Certificate (COD)	02.08.2019
21	Date of issuance of Completion Certificate	---
22	Annuity Amount (every six months)	As per Cl.23.4 & Cl.23.6.3 of CA
23	Total Number of Annuities payable	30 Nos.
24	First Annuity Payment Date	02.02.2020
25	Total Number of Annuity Payments received as on date.	2 No.

1.3 Scope of Consultancy Services

The scope of work includes providing Technical Due Diligence of the Project Highway and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout out road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per schedule B and Schedule C of Concession Agreement (CA) including Change of scope are listed in the following Table 2-1.

Table 2-1: Salient Features

S. No.	Particulars	As per CA	As per COS	As per Site
1	Total Length of the Project Highway	64.925 Kms.	---	64.925 Kms.
2	Widening	47.115 Kms.	---	47.115 Kms.
3	New Alignmnet including bypass	6.995 Kms.	---	6.995 Kms.
4	Approaches to undepasses	10.815 Kms.	---	10.815 Kms.
5	No of Bypass Roads	2 Nos.	---	2 Nos.
6	Service Roads with 7.5 m Width	9.490 Kms.	---	9.490 Kms.
7	Slip Roads with 5.5 m Width	13.470 Kms.	---	13.470 Kms.
8	Toll Plaza	1 No.	---	1 No.
9	Bus Bays / Bus Shelters	32 Nos.	---	32 Nos.
10	Truck Lay Bays	1 No.	---	1 No.
11	Rest Area	1 No.	---	1 No.
12	Major Junction	3 Nos.	---	3 Nos.
13	Minor Junctions	26 Nos.	---	26 Nos.
14	Vehicle Underpass	3 Nos.	---	3 Nos.
15	Light Vehicle Underpass	6 Nos.	---	6 Nos.
16	Pedestrian Underpass	2 Nos.	---	2 Nos.
17	Cattle Underpass	1 No.	---	1 No.
18	Vehicle Overpass	1 No. with 4 Lane Width	Reduced to 2 Lane width	1 No. with 2 Lane Width
19	Flyover	2 Nos.	---	2 Nos.
20	Major Bridges	3 Nos.	---	3 Nos.
21	Minor Bridges for Main Carriageway	30 Nos.	---	30 Nos.
22	Box/Slab Culverts	31 Nos.	+1 No.	32 No.
23	Pipe Culverts	83 Nos.	---	83 Nos.

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Section Schedule, shown below as per Schedule B of CA during the Construction.

Figure 2-1: (TCS-1) 4-Laning By Concentric Widening With 4.0m Raised Median

Figure 2-2: (TCS-2) Built-Up Section-Plain /Rolling Terrain With Service Roads

Figure 2-3: (TCS-3) 4-Laning By Eccentric Widening (LHS) With 4.0m Raised Median

Figure 2-15: Pictorial Diagram of TCS Lengths.

2.3 Road Side Drainage

To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from road side community on the Carriageway, RCC side drains are constructed along the main carriage way on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.

The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are constructed in open and rural areas.

2.4 Service Roads

Service Roads and Slip Roads are provided as per the provisions of Schedule B of the Concession Agreement. The details are provided below.

Table 2-3: List of Service Road locations

S. No.	Design Chainage		Length (m)	Carriageway Width (m)
	From (Km.)	To (Km.)		
1	400+575	400+630	55	7.5
2	409+860	410+470	610	7.5
3	433+220	433+860	640	7.5
4	438+400	439+340	940	7.5
5	440+300	441+000	700	7.5
6	445+600	446+580	980	7.5
7	461+900	462+720	820	7.5
	Total length		4745	

Table 2-4: List of Slip Road locations

S. No.	Design Chainage		Length (m)	Carriageway width(m)
	From (Km.)	To (Km.)		
1	427+800	428+650	850	5.5

12	444+740	445+180	440
13	462+550	462+820	270
	Total Length		5740

2.6 Intersections

Tentative locations of 3 Major junctions and 26 Minor junctions are provided in Schedule B of the Concession Agreement. However, one Major Jn. At Km. 405+400 was not developed due to site condition. Details are given below.

Table 2-6: List of Major Junctions

S. No.	Design Chainage (Km.)	Type of Junction	Remarks
1	405+400	+Junction	Not Developed
2	410+700	T-Junction	
3	427+800	T-Junction	

Table 2-7: List of Minor Junctions

S. No.	Design Chainage (Km.)	Type of Junction	Side	Remarks
1	400+600	Y-Junction	To Korisin Pump	
2	400+730	Y-Junction	To Banzara city

23	446+880	Y-Junction	To Fathepur	
24	451+715	X-Junction		
			To BT Road	
25	454+280	Y- Junction	To Isapur	
26	456+000	Y-Junction	To Andelgao	

2.7 Grade Separated Structures and underpasses

As per the provisions of Schedule B of the Concession Agreement 2nos. of Pedestrian Underpass, 1 cattle underpass, 6 nos. of Light Vehicular Underpass, 1No. Over Pass with four lane width, 2 flyovers and 3 nos. of Vehicular Underpass structures are provided in the Project Corridor. Details are provided in **Chapter 4**.

2.8 Road Over Bridge (ROB)

ROB is not proposed in the project road as per provisions of Schedule B of CA.

2.9 Pavement Details

Summary of Pavement Details is given below:

Table 2-8: Summary of Pavement Details

S. No.	Description	Flexible (Kms.)	Rigid (Kms.)
1	2 Lane with Earthen shoulder	---	---
2	2 Lane with Paved shoulder	---	---
3	4 Lane Rigid Pavement	---	64.925
4	Total Length of the Project	---	64.925

S. No.	Description	Flexible (Kms.)	Rigid (Kms.)
TYPE OF ALIGNMENT			
5	Widening	---	47.115
6	Realignment	---	6.995
7	Flyover approaches	---	10.815
8	Total Length of the Project	---	64.925

2.10 Summary of Structures

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2-9: Summary of Structures

S. No.	Description	Major Bridges	Minor Bridges	Pipe Culverts	Box/Slab Culverts
1	Retained				
2	Widening	3	16	20	7
3	Reconstruction		7	26	15
4	New		7	37	9
5	Improvement				
	Total	3	30	83	31

2.11 Toll Plazas

One toll Plaza is provided on the project road at Km. 443+180, which comprises of 8 lanes.

- The width of each toll lane is provided 3.2 m, except for the lane for over dimensional vehicles, where it is 4.5 m.
- Between each toll lane of the toll plaza, traffic islands are constructed to accommodate tollbooth.
- Protective barriers of reinforced concrete and traffic impact attenuators are placed in the front of each island to prevent out of control approaching vehicles crashing into the tollbooth.
- The canopy is provided for weather protection to toll operators, drivers and facilities. The canopy is designed aesthetically pleasing with cylindrical support columns located at traffic island so that there is no restriction on visibility and traffic movement.
- Total 7 Nos. toll booths are provided in toll plaza.
- Toll Plaza is updated to ETC Lane system as per the Change of Scope Order issued to the Concessionaire.
- List of tolling equipment provided at site is furnished in the Detailed Report.

Figure 2-16: Toll Plaza at Km. 443+000

2.12 Bus bays/Bus shelters

As per provisions of Schedule C of CA, Bus shelters are provided at 32 locations. Details are provided below.

Table 2-10: List of Bus bays/Bus shelters

S. No.	Design Chainage (Km.)	Side
1	405.100	LHS
2	405.650	RHS
3	409.600	LHS
4	410.200	RHS
5	414.850	LHS
6	415.150	RHS
7	422.300	LHS
8	422.700	RHS
9	424.550	LHS
10	424.800	RHS
11	427.550	RHS
12	427.600	LHS
13	428.900	LHS
14	429.950	RHS

17	434.950	LHS
18	435.250	RHS
19	438.850	LHS
20	438.900	RHS
21	440.800	RHS
22	440.820	LHS
23	446.150	LHS
24	446.200	RHS
25	449.500	RHS

S. No.	Design Chainage (Km.)	Side
26	449.520	LHS
27	454.350	RHS
28	454.400	LHS
29	458.000	LHS
30	458.100	RHS
31	462.100	RHS
32	462.650	LHS

2.13 Other Project Facilities Provided as per Schedule C of CA

- Roadside furniture: Sign Boards Kilometer stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 84-2014.
- Traffic safety devices: W Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of CA.
- Landscaping: Provided at Toll Plaza location and being maintained
- Tree Plantation: Median plantation and Avenue plantation on both sides of the Project Corridor is provided all along the way and is being maintained.
- Medical Aid Post: Provided at Toll Plaza location and is operational.
- Highway Lighting: Highway lighting is provided at Toll Plaza, Bus bays and Truck Lay byes and is functional.

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections provided below

3.2 Road Inventory

Inventory of the project road was carried out physically and the same is summarized in the following Table 3-1. Few representative photographs are presented below.

Table 3-1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain rolling Terrain
2	Land Use	Agriculture and forest
3	Four lane length	64.925 Kms.
4	Earthen shoulder	1.0 m to 1.5m Width on site
5	Junctions	28 Nos.
6	Toll Plazas	At Km. 443+180
7	Sign boards	Sign boards are provided as per Highway requirements
8	Road Markings	Lane markings are provided as per Highway requirement
9	Bus Bays /shelters	32 Nos.
10	Highway Lighting	Provided as per requirement
11	Avenue plantation	Provided

Figure 3-1: Existing Road Features

3.3 Pavement Condition

Pavement condition survey was carried out on the project road based on visual observations. The criteria adopted for the classification of condition of the pavement is as per of IRC 83-2018.

Table 3-2: Pavement condition summary

From (Km.)	To (Km.)	Length (Kms.)	Condition
400+575	465+500	64.925	Good

Figure 3-2: Representative Photos of Pavement Condition.

CHAPTER 4. INVENTORY AND CONDITION OF STRUCTURES

4.1 General Assessment and Condition of the structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

There are 03 Nos Major Bridge, 30 Nos Minor Bridges, 13 Nos Underpasses, 02 Nos Flyovers, 76 Nos Pipe culverts and 39 Nos Slab/ Box culverts are there along this project road.

Table 4-1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	03
2	Minor Bridge	30
3	Underpasses	12
4	Flyovers	02
5	Pipe culverts	83
6	Slab/Box Culverts	32
7	Vehicle Overpasses 2-Lane width	1

For Major bridges, Superstructure is of RCC/PSC Girder/Solid slab resting on RCC wall type piers and abutments with open foundation. For Minor bridges, the Superstructure is of RCC solid slab/RCC Girder and the substructures are of PCC/RCC conventional wall type supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 1**. The culverts observed along the project road are mainly of two types Viz. pipe culverts and RCC slab/box culverts. Structural condition of most of the culverts is fair except in few locations. Detailed inventory and condition survey of culverts are given in **ANNEXURE 2**.

4.3 Details of Major Bridges

The total length of the major bridge at Km. 439+813 is 270.0m with 8 spans. The superstructure consists of PSC/RCC Girder. Each Pier and Abutment has regular RCC wall/circular type. Open foundations have been constructed for all Piers and Abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC railings have been provided on both sides of the deck.

The total length of the major bridge at Km. 456+162 is 80.0m with 5 spans. The superstructure consists of RCC Girder/RCC solid slab. Each Pier and Abutment is regular RCC wall type. Open foundations have been constructed for all Piers and Abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC Crash barrier have been provided on both sides of the deck.

The total length of the Major bridge at Km 462+906 is 100.0m with 5 spans. The superstructure consists of RCC Girder/RCC solid slab. Each Pier and Abutment has regular RCC wall/circular type. Open foundations have been constructed for all Piers and Abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC railings have been provided on both sides of the deck.

Table 4-2: List of Major Bridge

S. No.	Chainage (Km.)	Span	Total Length of Bridge (m)
1	439+813	7 x 36.00 + 1 x 18.00	270.0
2	456+162	3 x 20.00 + 2 x 10.00	80.0
3	462+906	5x20.0	100.0

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, Clearance of drainage spouts are to be carried out.

Figure 4-1: Overall view of the Major Bridge at Km. 438+813

4.4 Details of Minor Bridges

There are 30 minor bridges in the project stretch. The type of superstructure for minor bridges is RCC solid slab, RCC Box type & RCC Girder type and the substructure is PCC/RCC conventional wall/circular type supported on open foundations. Expansion joints are buried type/Strip seal and bearings are tar paper and elastomeric bearings. RCC crash barriers are provided for most of the structures.

Table 4-3: Inventory of Minor Bridges

S. No.	Chainage (Km.)	Span	Total Length of Bridge (m)	Description
1	402+112	1 x 19.21	19.21	Minor Bridge Consists of RCC Girder structure. Other feature includes RCC Railing/crash barrier, bituminous wearing coat, Strip seal expansion joints.

S. No.	Chainage (Km.)	Span	Total Length of Bridge (m)	Description
2	404+995	1 x 9.20	9.2	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
3	405+519	2x 5.50	11	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
4	408+564	1 x 6.80	6.8	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
5	417+884	2 x 5.25	10.5	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
6	419+702	3 x 6.90	20.7	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
7	420+998	4 x 7.70	30.8	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
8	424+213	2 x 8.00	16	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
9	429+371	4 x 11.625	46.5	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
10	433+858	2 x 13.0	26	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
11	436+290	4x8.2	32.8	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
12	440+455	3x6.0	18	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
13	441+756	2 x 5.00	10	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
14	442+772	3x4.5	13.5	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
15	444+842	3 x 7.35	22.05	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.
16	445+373	1 x 6.282+ 1 X 6.706 + 1x 6.282	19.27	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.

30	463+126	1x6.2	6.2	Minor Bridge Consists of RCC Box structure. Other feature includes RCC crash barrier/Railing, bituminous wearing coat.

The condition of the superstructure and substructure of Minor Bridges is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, Clearance of drainage spouts, Vent clearance etc. are to be carried out.

Figure 4-2: Representative photos of Minor Bridges.

4.5 Details of Underpass

There are 12 Underpasses, 1 Vehicle Overpass and 2 Flyovers in the project stretch. The type of superstructure for underpass/Flyover is PSCI Girder/RCC Box type and the substructure is PCC/RCC conventional wall type supported on open foundations. Expansion joints are buried type/Strip seal and bearings are tar paper and elastomeric bearings. RCC crash barriers are provided on all structures.

Table 4-4: Inventory of Under pass/Vehicle Overpass/Flyovers

S. No.	Chainage (Km.)	Type of Structure	Span	Total Length of Bridge (m)	Description
1	428+123	Flyover	1 x 30.00	30	Structure consists of PSC I Girder type. Other feature includes RCC crash barrier, bituminous wearing coat, Strip seal expansion joints.
2	459+124	Flyover	2 x 41.80	83.6	Structure consists of PSC I Girder type. Other feature includes RCC crash barrier, bituminous wearing coat, Strip seal expansion joints.

4.6 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found good. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 2**.

4.6.1. Slab/Box Culverts

There are 32Nos. of slab/Box culvert in the project stretch. The details of the culverts are as given below.

Table 4-5: List of Slab/Box Culverts

S. No.	Chainage (Km.)	Span (m)	Vent Size (m)
1	410+532	1 x 5.00	1.6
2	412+074	1 x 4.00	2.5
3	416+042	1 x 4.00	4.1
4	416+119	1 x 7.00	1.5
5	417+014	1 x 4.00	1.5
6	417+074	1 x 4.00	2.5
7	417+220	1 x 4.00	3.4
8	418+221	1 x 5.00	5
9	421+428	1 x 4.50	2.5

25	448+604	1 x 2.40	1.5
26	451+095	1 x 2.80	2.5
27	451+498	1 x 2.00	3.4
28	452+639	1 x 4.122	2.8
29	452+898	1 x 5.80	3.7
30	459+315	1 x 5.00	4.6
31	463+819	1 x 4.00	3.1
32	464+815	1 x 3.50	2.3

4.6.2. Condition of the Slab/Box Culverts:

The general condition of above Box/slab culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

Figure 4-3: Representative photos of Slab Culverts

4.6.3. General Description of the Pipe Culverts

There are 83 Nos. of pipe culverts in the project stretch. The details of the culverts are as given below.

Table 4-6: List of Pipe Culverts

S. No.	Chainage (Km.)	No. of Rows X Dia (m.)	S. No.	Chainage (Km.)	No. of Rows X Dia (m.)
1	400+940	1 x 1.20	44	425+575	2 x 0.90

43	424+950	1 x 1.20			

4.6.4. Condition of the Pipe Culverts

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

Figure 4-4: Representative photos of Pipe Culverts

The culverts are in good condition and can be retained in the present condition with following repairs/rehabilitation measures before on set of monsoon.

- Chocked culverts must be cleared.
- Debris and garbage near outside the vents must be removed.
- Slope protection works to be repaired / provided.

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, pavement condition and CA provisions.

5.2 Pavement design crust thickness

The Pavement Design shall be carried out in accordance with Indian Roads Congress guide lines. The pavement is designed in accordance with IRC: 58 -2015 “Guidelines for the Design of Plain Jointed Rigid Pavements for highways”, IRC: SP 84-2014, IRC: 15-2011 “Construction Concrete Road (FOURTH REVISION)” and relevant clauses of schedule B of the EPC agreement. Pavement crust thickness for main carriageway as per pavement design report summarized below.

Table 5-1: Rigid Pavement Design for Main carriageway

Description	Design/Adopted Parameters
CBR of sub grade	6 %
Two-way commercial traffic volume per day	1717
Design life in years	30
Pavement Quality Concrete (PQC) – (mm)	260
Dry Lean Concrete (DLC) – (mm)	150
Drainage Layer (GSB) - (mm)	150
Diameter of Dowel Bar (mm)	36
Length of Dowel Bar (mm)	450
Spacing of Dowel Bars (mm)	300
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	580

As per schedule D, (Annexure-I), clause 2, pavements for Slip road/Service road shall be flexible pavement and designed as per provision of design manual IRC: SP: 84:2014. The design traffic in case of service road shall be ten million standard axles as per Cl:5.5.5 of IRC: SP: 84:2014. The crust composition shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”.

Table 5-2: Flexible Pavement for service road

S. No	Description/ Pavement layer	Design/Adopted Parameters
1	Sub Grade CBR (%)	9 %
2	Design Life (Years)	15 years for non-bituminous
3	Design Traffic (MSA)	10 MSA
4	Surface course (BC)	40mm
5	Binder course (DBM)	50 mm
6	Base course (WMM)	250 mm
7	Sub Base course (GSB)	200 mm

The Pavement crust has been designed according to IRC specification and found in order, the adopted/ Constructed pavement layer thickness is adequately provided than actual/ designed thickness.

5.3 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC for service roads. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement– Next Proposed overlay on or before 2027

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction. (As per IRC 58-2015).

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special publication SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 6-1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety Audit

6.2 Existing Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following Table 6-2.

Table 6-2: Safety Items

S. No.	Item Description	Status	Condition	
Road Furniture				
1	Sign Boards	Chevron Signs	Available as per site requirement	Good
		Village sign boards	Available as per site requirement	Good

S. No.	Item Description	Status	Condition
		Information Boards	Available as per site requirement Good
		Other Sign Boards	Available as per site requirement Good
		Gantry Sign Boards	Available as per site requirement Good
2	Road Marking	Studs & Lane marking	Available as per site requirement Good
3	Metal Beam Crash Barriers	At High embankments & Bridge Approaches	Available as per site requirement Good
4	Median kerb	Along the Project Highway	Provided as per IRC SP:84-2014 Good
5	Road studs & Solar Blinkers	Along the Project Highway	Provided as per IRC SP:84-2014 Good

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

The Concessionaire is maintaining the safety features in good condition from time to time in accordance with the provisions of Schedule K of the Concession Agreement.

Km.430+810

Km.441+600

Km.441+850

Figure 6-1: Representative photos during road safety audit

6.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is highly necessary, during the maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There is one toll Plaza on the project road at Km. 443+180. The width of each toll lane is provided 3.2 m, except for the lane for over dimensional vehicles, where it is 4.5 m. between each toll lane of the toll plaza, traffic islands is constructed to accommodate tollbooth. Protective barriers of reinforced concrete and traffic impact attenuators is placed in front of each island to safeguard Toll booth from crashing by Vehicles approaching out of control. The canopy is provided for weather protection to toll operators, drivers and facilities. The canopy is designed aesthetically pleasing with cylindrical support columns located at traffic island so that there is no restriction on visibility and traffic movement. Total 7 Nos. toll booths are provided in toll plaza.

Toll Plaza is updated to ETC Lane system as per the Change of Scope Order issued to the Concessionaire.

7.2 Tolling Equipment and Control Room Equipment

List of equipment provided at toll plaza and control room is given below.

Table 7-1: List of Equipment at Toll Plaza and Control Room

S. No.	Particulars	Quantity
1	Toll plaza Building	1
2	Toll Booths	7
3	Electrical Room	1
4	Generator Room	
5	Generators	1
6	ETC RFID Transverse near pay axis mounted on canopy	12
7	Electronic Enclosure	8
8	Lane Controller with industrial PC	8
9	AVC including sensor loop detector	10
10	Used fare display with mounting pole	10
11	Automatic Barrier Gate	8
12	Overhead Lane Status	10
13	Customized Industrial Grade Keyboard	8
14	Thermal receipt Printer	8
15	Barcode Reader with Stand	8
16	Violation light & alarm (on Existing Pole) and Foot switch in Booth	1
17	Booth CCTV camera with Voice Recording	10
18	Intercom slave Unit in booth	8
19	Medium speed weight in Motion	10

S. No.	Particulars	Quantity
	Control Room	
1.	Plaza Servers in Hot standby Configuration	1
2.	Static Weight Bridge	2
3.	Network Printer	1
4.	8 port Network switches (Layer 1)	12
5.	28 Port Network Switch (Layer 2)	2
6.	Internet router for Connection to the CCH	1
7.	UPS system as require for Complete Hybrid ETC Toll Plaza System	3
8.	55" LED Display for CCTV Monitoring	1
9.	Network Video Recorder (NVR) for CCTV recording	1
10.	CCTV Cameras for plaza building surveillance (server from, control room, Cash Up Room Admin)	5
11.	Intercom Master Unit in Control room-10 Channel (For<=8 Lanes)	1

7.3 Vehicles

Few vehicles are required for operation of the highway as per IRC and as per Contract document of the project. The list of vehicles provided at Toll Plaza is given below.

Table 7-2: List of Vehicles

S. No.	Vehicle Type	Toll Plaza
1	Patrol Vehicle	1 No
2	Ambulance	1 No.

CHAPTER 8. SCHEDULE OF ANNUITY PAYMENTS

8.1 Hybrid Annuity Model (HAM)

Hybrid annuity model is the PPP model in which Authority makes payment of 40% of the Bid Project cost during construction period based on progress milestones set forth in Concession Agreement. Payment of the balance 60% of the Bid Project Cost is made in form of bi-annual annuities with interest during the operational phase of concession.

8.2 Payment during Construction

As per the provisions of Article 23 of the Concession Agreement, 40% of the Bid Project Cost adjusted with Price Index in accordance with Clause 23.2.3 of the CA, shall be paid during the Construction Period. Amount payable during construction period shall be paid in five equal installments upon achieving the following payment Milestones.

Table 8-1: Schedule of Payment Milestones

S. No.	Payment Milestone No	Criteria for releasing the Payment
1	Milestone I	On Achievement of 10% of Physical Progress
2	Milestone II	On Achievement of 30% of Physical Progress
3	Milestone III	On Achievement of 50% of Physical Progress
4	Milestone IV	On Achievement of 75% of Physical Progress
5	Milestone V	On Achievement of 90% of Physical Progress

During the Operation Period, remaining 60% of the balance Completion Cost shall be paid in 30 Annuities each Annuity payable biannually. Each Annuity amount shall be based on the percentages of the balance Completion Cost mentioned in 23.6.3 of the Concession Agreement. During the Operation Period following payment components are payable.

- Annuity Payment as per the Annuity Payment Schedule provided in 23.6.3 of the Concession Agreement.
- Interest on the balance amount to be paid at the rate equal to the applicable Bank Rate Plus 3%
- O&M Payment as a lump sum amount as per Clause 23.7.1 of the Concession Agreement.

8.3 Schedule of Annuity Payments

Details of Annuity payments Schedule are given below.

Table 8-2: Schedule of Annuity Payments

S. No.	Following the COD	Percentage of Completion Cost remaining	Annuity due Date	Annuity paid Date
1	Annuity No 1	2.10%	29.01.2020	20-Feb-20
2	Annuity No 2	2.17%	29.07.2020	17-Aug-20
3	Annuity No 3	2.24%	29.01.2021

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of CA, the Concessionaire will operate and maintain the Project roads by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual Inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz. pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

9.3 Operations

9.3.1. Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- i. Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- ii. Carrying out preventive and periodic maintenance of the Project road;
- iii. undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- iv. Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- v. Functioning of the lighting system;
- vi. Functioning of the Patrolling System

- vii. Functioning of rescue and medical aid services
- viii. Ambulance as and when required
- ix. Functioning of the Project Facilities
- x. Administrative, Operational and Maintenance Base Camp
- xi. Truck Lay byes
- xii. Pickup Bus stops / Bus Bays
- xiii. protection of the environment and provision of equipment and materials therefore;
- xiv. Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- xv. complying with Safety Requirements in accordance with Article 18.

9.4 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

9.4.1. Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence does not require any immediate or preventive interventions.

9.4.2. Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

9.4.3. Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as "functional overlays," as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and

demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road. The details of periodic maintenance schedule are given below.

Table 9-1: Schedule and status of for Periodic Maintenance

Description	Schedule of Major Maintenance	Status of Major Maintenance
1 st Periodic Maintenance	2027	Planned to execute
2 nd Periodic Maintenance	2033	Planned to execute

9.4.4. Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.5 Review of Test Reports

9.5.1. Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

Further it is to be noted that during O&M period, the permissible limit of the test given as 2750 mm/Km. in accordance with Schedule K(a)(ii). Based on the documents reviewed, it is noticed that no NCRs are issued pertinent to riding quality of Project Road.

9.6 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 5**.

Table 9-2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance	Incidental maintenance	Periodic / Major maintenance	Operational Expenses	Total cost per year
	(In crores)	(In crores)			
2020	2.147	3.204		2.53	7.88
2021	2.211	3.300		2.61	8.12
2022	2.278	3.399		2.68	8.36
2023	2.346	3.501		2.77	8.61

Project: Four Laning of Yavatmal to Wardha section of NH-361 from Km.400.575 to Km.465.500(design Length 64.925 Km) in the State of Maharashtra under NHDP Phase IV on Hybrid Annuity Mode.

**TECHNICAL DUE DILIGENCE
REPORT**

Year	Routine maintenance	Incidental maintenance	Periodic / Major maintenance	Operational Expenses	Total cost per year
	(In crores)	(In crores)			
2024	2.416	3.606		2.85	8.87

Total	41.057	61.276	58.5	48.40	209.23

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 General: Scope of Work (Article 2)

Article 2 of the CA provides the scope of work, which includes the following.

- Operation and Maintenance of the Project Highway on the Site set forth in Schedule A and as specified in Schedule B together with provision of Project Facilities as specified in Schedule C, and in conformity with the Specifications and Standards set forth in Schedule D;
- collection of Fee from the Users of the Project; subject and in accordance with the provisions of the Concession Agreement;
- performance and fulfillment of all other obligations of the Contractor in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Contractor under this Agreement

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 4**.

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfill its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the Concession Agreement

10.5 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 30 days from the date of the Agreement,

- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 30% of the Total Project Cost.

10.6 Tests (Clause 13.3)

For determining that the Project, confirms to the Maintenance Requirements, the Independent Engineer shall require the Concessionaire (Concessionaire shall in turn require the Contractor) to carry out, or cause to be carried out, tests specified by it in accordance with Good Industry Practice. One half of the costs incurred on such tests, and to the extent certified by the Independent Engineer as reasonable, shall be reimbursed by the Authority to the Concessionaire

10.7 Provisional Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA.
- A copy of PCOD is enclosed at **ANNEXURE 5**.

10.8 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire.

10.9 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of scope proposals that were initiated during construction period and consented by the HAI are provided in **ANNEXURE 7**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any unauthorized use of the Project road.

- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (The “**Maintenance Requirements**”).

10.13 Maintenance Manual (Clause 17.3)

No later than 90 (ninety) days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 2% (two percent) of the performance security, and
- 0.1% (zero decimal one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Payment of Bid Project Cost (Article 23)

The Authority agrees to pay 40% of the Bid Project Cost in five installments against the achievement of Project Milestones specified in Clause 23.4 of the Concession Agreement and the amount shall be adjusted with Price index.

Remaining balance completion cost shall be paid as per the % of balance completion cost biannually from the date of COD. Percentage of amounts payable for each Annuity is specified in 23.6.3 of the Concession Agreement.

10.18 Change in Law (Article 35)

Increase in costs

If as a result of Change in Law, the Concessionaire suffers an increase in costs or reduction in net after-tax return or other financial burden, the aggregate financial effect of which exceeds the higher of Rs.2.20 Crore(Rupees two crore twenty lakhs) or 2%(two percent) of the total Annuity payments in any Accounting Year, the Concessionaire may so notify the Authority and propose amendment to this Agreement so as to place the Concessionaire in the same financial position as it would have enjoyed had there been no such Change in Law resulting in increased costs, reduction in return or other financial burden as aforesaid. Upon notice by the Concessionaire, the Parties shall meet, as soon as reasonably practicable as but no later than 30 (Thirty) days from the date of notice and either agree on amendments to this Agreement or on any other mutually agreed arrangement.

Reduction in costs

If as a result of Change in Law, the Concessionaire benefits from a reduction in costs or increase in net after-tax return or other financial gains, the aggregate financial effect of which exceeds the higher of Rs.2.20 crore(Rupee two crore twenty Lakhs) or 2% (Two percent) of the total Annuity Payment in any Accounting year, the Authority may so notify the Concessionaire and propose amendments to this Agreement so as to place the Concessionaire in the same financial position as it would have enjoyed had there been no such Change in Law resulting in decreased costs, increase in return or other financial gains as aforesaid. Upon notice by the Authority, the parties shall meet, as soon as reasonably practicable as but no later than 30 (thirty) days from the date of notice and either agree on such amendments to this Agreement or on any other mutually agreed arrangement.

CHAPTER 11.INSURANCE

11.1 Details of Insurance

As per clause 26.1 of the CA, the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks. Copy of insurances are enclosed at **ANNEXURE 6**.

Table 11-1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of Property
			From	To	
Civil Engineering Completed Risk	National Insurance Company Ltd	321300441910 001998	27.3.2020	26.3.2021	Roads & Structures
Electronic Equipment Insurance Policy	Oriental Insurance Company Ltd	171200/44/20 21/43	17.9.2020	16.09.2021	Electronic equipment provided for Road and Bridges stretch connection from Yavatmal to Wardha
Employees Compensation Insurance Policy	HDFC ERGO General Insurance Co Ltd	311420338410 8600000	2.5.2020	1.5.2021	All Categories employees of DBL & Sub-Contractor engaged in DBL

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The Pavement condition for the overall project is good. RCC drains are constructed in Built up locations and earthen drains in rural locations which facilitate, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. Structural defects were not noticed. General condition of Culverts is good. Observed vegetation growth in vent ways of Box and Hume Pipe culverts and they are being cleared during regular maintenance period.

12.4 Project Facilities

One Toll Plaza is constructed one at Km443+180. Bus bays are in fair condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained well. Highway lighting is provided at toll plaza locations and the same is found functional.

12.5 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP: 84-2014. The condition of sign boards & other road appurtenances like metal beam crash barriers is fair.

12.6 Maintenance

- Routine maintenance is being carried out by O&M contractor effectively, based on documents reviewed, time-to-time observations made by client/Authority are being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance was carried recently and next MM is scheduled in the year 2027 and 2033.

12.7 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

Project: Four Laning of Yavatmal to Wardha (Package III) section of NH-361 from Km.400.575 to Km.465.500(design Length 64.925 Km) in the State of Maharashtra under NHDP Phase IV on Hybrid Annuity Mode.

Subject: Four laning of Yavatmal to Wardha (Package III) section of NH-361 from km 400.575 to km 465.500 (design Length 64.925 km) in the State of Maharashtra Under NHDP Phase - IV on Hybrid Annuity Mode -Letter of Award - Reg.

Ref: 1. Your Proposal submitted on 15.02.2017
2. Opening of Financial proposal on 22.03.2017

Sir,

With Reference to NHAI's Request for Proposal for "Four laning of Yavatmal to Wardha (Package III) section of NH-361 from km 400.575 to km 465.500 (design Length 64.925 km) in the State of Maharashtra Under NHDP Phase - IV on Hybrid Annuity Mode" and considering your proposal in this regard submitted on 15.02.2017 vide reference no. (i), NHAI hereby accepts your proposal quoting Bid Project Cost of **Rs. 1043.28 crore (Rupees One Thousands Forty Three Crore Twenty Eight Lakh Only)** and first year O&M cost of **Rs. 3.00 Crore (Rupees Three Crore Only)** as included in Appendix- 1B of your document and declares you as the "Selected Bidder" as per the provisions of RFP Documents.

2. In accordance with the clause 3.8.4 of the RFP document, you are requested to sign the duplicate copy of the LOA and return the same as your acknowledgement within 7 (Seven) days of the receipt of the LOA. Thereafter you are required to execute the concession Agreement within 45 (Forty five) days from the date of issue of LOA as specified in Clause 1.3 of RFP.

3. Further, As per RFP document, you are required to incorporate a Special Purpose Vehicle solely for the purpose of domiciling the project (the "Concessionaire"). The Concessionaire For due and faithful performance of its obligations during the Concession Period shall furnish a Performance Security by way of irrecoverable and unconditional Bank guarantee of **Rs 52.17 Crores (Rupees Fifty Two Crore Seventeen Lakh only)** within a period of the 30 days from the date of signing of the Concession Agreement. Till the time the Concessionaire provides NHAI with the performance Security the Bid Security shall remain in full Force and Effect (refer Clause 4.1.2 and Clause of Article 9 of RFP).

4. You are required to comply with all the terms and conditions set forth in the RFP Documents. In case of any default on your part, you shall be liable for action as stated in the Bid Documents.

Total 4-lane length (km)					64.925
4-lane length (km) for Pre-COD					64.425

4. As per NHAI Policy circular dated 21.12.2015, the Independent Engineer vide letter no. 6655; dtd: 10.07.2019, has submitted proposal for concurrence for issuance of Provisional Completion Certificate under clause 14.3 of the Concession Agreement.
5. In this regard, the RO-Raipur, further vide letter no 1132; dtd: 25.07.2019 has issued requisite concurrence with instructions to Independent Engineer to assure followings before issuance of provisional certification:
- The following item of List-C shall be completed before issuance of PCOD:
 - Flyover at Km 459+182 is opened for traffic at both levels.
 - Bridge at Km. 439+883 including rehabilitation of existing 2-lane Bridge.
 - Metal Beam Crash Barrier.
 - New Jersey Crash Barrier.
 - Casting of curbs including painting.
 - Finishing work around Toll Booths.
 - Road Marking and sign Boards.
 - Maintain the smooth movement and traffic in the section Km. 406+750 to Km. 407+250, especially at Km. 409+981.
6. Further, Concessionaire vide letter no. 519; dtd: 29.07.2019, has confirmed compliance of above mentioned works and requested to issuance of provisional completion certificate in pursuant to article 14 of CA. In this continuation, the Independent Engineer has inspected project highway and all pending works have been completed satisfactory by the Concessionaire.
7. In view of above, the Independent Engineer is of opinion that the Concessionaire is now eligible for issuance of provisional completion certification in pursuant to article 14 of CA. Hence, the Independent Engineer is herewith issue **Provisional Completion Certificate** (enclosed in **Appendix-I**) in pursuant to clause 14.3 of the Concession Agreement along with followings:
- The Project Highway has been constructed as per scope defined under Schedule B & C, in conformity with the technical specifications and standards set forth in Schedule-D of the Concession Agreement. The detailed summary against each item of the Schedule B & C is shown in **Annexure-I**. The List of minor outstanding works of Pre-COD section (forming "PUNCH LIST-A") is attached as **Appendix-II**. As per clause 14.4.1 of the Concession Agreement, the works in PUNCH LIST-A have to be completed by the Concessionaire within 90 days of issuance of Provisional Certificate. Also, the list outstanding works for section not considered in Pre-COD, is annexed as LIST-B of **Appendix-II**.

- b. The Concessionaire has carried out successfully all tests in accordance with clause 2 of schedule-I & clause 14.1 of the CA in presence of Independent Engineer and the representative of Authority. The Concessionaire vide letter no: DBL/YWHPL/IE/2019/504; dtd:30.06.2019, has submitted test reports as annexed in Annexure-II (a), Annexure-II (b), Annexure-II (c), Annexure-II (d), Annexure-II (e).
- c. The Environmental Audit as per the provisions of clause 2.9 of Schedule-I, has been conducted by Environmental Expert and they have found that Concessionaire has complied with the Applicable Law and Permits and the same conforms to Good Industry Practice. The Concessionaire vide letter no: DBL/YWHPL/IE/2019/505; dtd: 30.06.2019, has submitted Environmental Audit Report which annexed as Annexure-II (f).
- d. In the event of non-appointment of Safety Consultant by the Authority as per Schedule-L of CA, the Concessionaire has carryout Safety Audit through MANIT-Bhopal after recommendation of the Independent Engineer for meeting obligations of CA. The Final Safety Audit report is enclosed as Annexure-II (g) and all recommendations of Safety Consultant have been successfully completed.
- e. The Independent Engineer has issued total 18 nos. of Non-Conformance Reports during the construction period and the Concessionaire has been satisfactorily complied and rectified all deficiencies highlighted in NCRs issued by the Independent Engineer. Accordingly, all NCRs were closed by the Independent Engineer. Copy of all NCRs with summary is annexed as Annexure-V.
- f. The Concessionaire has achieved Project Mile Stone-I, II & III well in advance before schedule date in accordance with Schedule-G of CA. (Refer Annexure-III).
- g. The Concessionaire has submitted the consolidated Change of Scope proposal for works completed / under progress / to be taken up and all COS proposals were reviewed by the Independent Engineer as per Article-16 of the Concession Agreement. The summary & Status of COS proposals with all correspondences are enclosed as Annexure-IV.
- h. The Concessionaire has mobilised incident management vehicles i.e. Ambulance, Patrolling Vehicle & Crane at toll plaza. It is pertinent to mention herein that the Concessionaire has undertaken to mobilised incident management vehicle as per NHAI policy circular no. 12.19; dtd: 20.03.2018 within period of 90 days.
- i. The Concessionaire has applied for electrical connections at all such locations where work is in progress by the Electricity Department. However, Concessionaire has undertaken for lightening at completed section through DG set. (refer Annexure-VI)
- j. It is pertinent to mention herein that the Concessionaire has undertaken to ensure followings till & at time of handing over toll plaza to toll operation agency (to be appointed by NHAI):
- To calibrate Static Weigh Bridge (SWB) & Medium Speed Weigh in Motion (MS WIM) by Weight & Measurement Department.
 - To keeping watch and ward of equipment and system installed at the Toll Plazas. To conduct all requisite tests as per NHAI Policy/Guidelines, once it introduced by the Authority.
- k. As per clause 17.3.1 of the Concession Agreement, the Concessionaire vide letter no: DBL/YWHPL/IE/2019/506.; dtd: 30.06.2019 has submitted Maintenance Manual which has been reviewed by IE. (Refer Annexure-VII)
- l. After issuance of Provisional Certificate, the Concessionaire shall ensure followings with immediate effect:
- As per clause 17.1.2 of the Concession Agreement "The Concessionaire shall remove promptly from the Project Highway all surplus construction machinery and material, waste materials (including hazardous materials and waste water), rubbish and other debris (including without limitation, accident debris) and keep the Project Highway in a clean, tidy and orderly condition and in conformity with Applicable Laws, Applicable Permits and Good Industry Practice. For Avoidance of doubt, it is agreed that the debris and material excavated shall be carried to and deposited

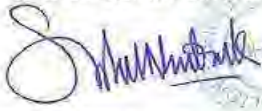

- at a place to be decide in consultation with Authority/Independent Engineer”
- ii. In pursuant to Article-17 of the Concession Agreement, the Concessionaire, during the O&M Period, shall operate and maintain the project highway in accordance with Concession Agreement, applicable laws and applicable permits, and confirm to specification & standards and good industry practices.
 - iii. In pursuant to clause 10.5 of the Concession Agreement, “The Concessionaire, during Concession Period, shall protect the site from any and all occupations, encroachment or Encumbrance and shall not place or create nor permit any Contractor or other person claiming through or under the Concessionaire to place or create any Encumbrance or security interest over all or any part of the site or project assets or on any rights of the Concessionaire therein or under this Agreement, save and except as otherwise expressly set forth in the Concession Agreement.”
 - iv. As per clause 17.16 of the Concession Agreement, “The Concessionaire shall not undertake or permit any form of commercial advertising, display or hoarding at any place on the site.
 - v. All obligations pertaining to operation & maintenance of the project highway as per relevant provisions of the Concession Agreement.

Therefore, in the view of the above and as per the provisions of clause 14.3 of the Concession Agreement, the Independent Engineer herewith issue Provisional Completion Certificate to the Concessionaire in the format annexed as Appendix-I.

This is being forwarded for your kind perusal and necessary action.

Thanking You,
Yours sincerely,
For & On Behalf of M/s Lion Engineering Consultants,

(Sushil Nimbark)
Sr. Chief General Manager (Tech/BD) cum Authorized Representative

LION ENGINEERING CONSULTANTS
"Contributing in Building the Infrastructure of the Nation"

PROVISIONAL CERTIFICATE

1. I, Sushil Nimabrk, M/S Lion Engineering Consultants, acting as Independent Engineer under and in accordance with the Concession Agreement dated 9th June 2017, for development and operation of the Project Four Laning of Yavatmal to Wardha (Package III) section of NH-361 From KM 400+575 to KM 465+500 (Design Length 64.925 Km) in the state of Maharashtra under NHDP Phase-IV on Hybrid Annuity Mode on design, build, operate and transfer (the "Hybrid Annuity") basis through *DBL Yavatmal Wardha Highways Private Limited*, hereby certify that the Tests specified in Article 14 and Schedule-I of the Agreement have been undertaken for the section from Km. 400+575 to Km. 406+750 and Km. 407+250 to Km. 465+500 of the Project to determine compliance thereof with the provisions of the Agreement.
2. Construction Works forming part of the section from Km. 400+575 to Km. 465+500 of the project that were found to be incomplete and/or deficient have been specified in the Punch list appended hereto, and the Concessionaire has agreed and accepted that it shall complete and/or rectify all such works in the time and manner set forth in the Agreement. Some of the incomplete works have been delayed as a result of reasons attributable to Authority or due to Force Majeure and the Provisional Certificate cannot be withheld on this account. Though the remaining incomplete works have been delayed as a result of reasons attributable to the Concessionaire, I am satisfied that having regard to the nature and extent of such incomplete works, it would not be prudent to withhold commercial operation of the section Km. 400+575 to Km. 406+750 and Km. 407+250 to Km. 465+500 of the project, pending completion thereof.
3. In view of the foregoing I am satisfied that the Section Km. 400+575 to Km. 406+750 and Km. 407+250 to Km. 465+500 of the Project can be safely and reliably placed in commercial service of the users thereof, and in terms of the Agreement, the section of the Project Highway is hereby provisionally declared fit for entry into operation on this the 02 day of August 2019

Figure 2.9: Pictorial Diagram of TCS Lengths

2.3 Road Side Drainage

- To facilitate quick disposal of water from the Carriageway and to avoid accumulation of drainage from the Carriageway, RCC side drains are constructed along the main carriage way on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are in open and rural areas.

2.4 Service Roads (Ref.4.8 of Schedule B)

Service Roads and Slip Roads are provided as per the provisions of Schedule B of the Concession Agreement. The details are provided below.

Table 2.3: Service road/ Slip Roads as per Schedule-B of CA

S. No	From (Km)	To (Km)	Side	Length (km)	Village Name
1	0+000	1+180	Both	1.180	Tuljapur
2	5+560	6+410	Both	0.850	Kakramba
3	11+690	11+940	Both	0.250	Khandala
4	16+030	16+620	Both	0.590	Takwiki
5	20+660	21+810	Both	1.150	Karajkeda
6	29+150	30+280	Both	1.130	Ujjaini
7	33+510	34+130	Both	0.620	Ashiv
8	41+630	42+630	Both	1.000	Belkund
9	44+630	45+470	Both	0.840	Sindala
10	48+680	49+110	Both	0.430	Sivilli Mode

S. No	From (Km)	To (Km)	Side	Length (km)	Village Name
11	50+100	51+025	Both	0.925	Borphal
12	54+850	55+310	Both	0.460	Ausa
13			Total	9.425	Total=2x9.425=18.850
Tuljapur Bypass					
14	10+060	10+540		0.480	Slip Road(Approach to VUP
			Total		0.480x2=0.960

2.5 Bypass/Realignment

Following are bypass / realignments proposed on the project road as per provisions of Schedule B of CA.

Table 2.4: Bypass/Realignment as per Schedule B of CA

S. No.	From (Km)	To (Km)	Length (km)	Remarks
1	0.000	11.593	11.593	Bypass
1	25.340	25.570	0.230	Re-alignment
2	26.190	26.560	0.370	Re-alignment
3	54.910	55.170	0.260	Re-alignment

2.6 Intersections

As per provisions of Schedule B of CA, 8 Major Junctions and 46 Minor Junctions are provided. However, total 49 Nos. of Minor Junctions are developed as per site requirement. Details are given below.

Table 2.5: List of Major and Minor Intersections
Major Intersections

S. No.	Design Chainage (Km.)	Type of Junction	Side	Leads to	Remarks	Schedule Chainage
Main Highway						
1	0+000	T-Junction	LHS	Osmanabad & Solapur		0+000
2	21+152	X-Junction	Both	Osmanabad & Lohara		21+160
3	28+025	T-Junction	LHS	Osmanabad		28+070
4	41+033	T-Junction	LHS	To Sugar factory		41+090
5	55+810	T-Junction	RHS	Jawli		55+835
Tuljapur Bypass						
6	0+450	T-Junction		Tuljapur Bypass start point		0+450
7	8+370	T-Junction	Both	Tuljapur/Ausa		8+370
8	11+592	T-Junction		Tuljapur Bypass end point		11+593

Minor Intersections

S. No.	Design Chainage (Km)	Type of Junction	Side	Lead to	As per Schedule (Km.)
1	0+100	X -Junction	Left Right	To Tuljapur Bitumen Road	0+100
2	0+153	T -Junction	Right	To Bus Depo	0+168
3	0.300	T -Junction	Right	To Tuljapur	0+300
4	0.320	Staggered	Right	To Hangar gao	0+320
5	0.565	T -Junction	Right	To Mud Road	0+565
6	0.645	T -Junction	Right	To Agriculture market	0+645
7	2.458	X- Junction	Left Right	To Taduvala To Lake	2+458
8	2+950	X -Junction	Left Right	To Bavi To Malumbra	-
9	3+692	X- Junction	Left Right	To Taduvala To Hangar gao	3+700
10	4+824	T-Junction	Left	To Morda	4+825
11	5+810	Staggered	Right Left	To Lohara To Morda	5+845
12	5+916	T-Junction	Left	To Kakaramba	5+910
13	6+100	T-Junction	Left	To Kakaramba	6+028
14	9+014	T-Junction	Left	To Crusher	9+018
15	10+020	X-Junction	Right	To Wadagao	10+036
16	11+059	X-Junction	Left Right	To Field To Wadagao	11+066
17	11.350	T-Junction	Left	To Crusher	11+350
18	11+802	X-Junction	Left Right	To Khandala To Jawalgao	11+812
19	12+133	Y-Junction	Right	To Karla	12+118
20	17+132	X-Junction	Left Right	To Takwiki To Tormba	17+130
21	21.389	Y-Junction	Right	To Karechkea	21+389
22	22+343	Y-Junction	Left	To Hogao	22+330
23	22+919	T-Junction	Right	To Chotta Karachkers	22+910
24	24+056	X-Junction	Right	To Arni	24+042
25	25.636	T-Junction	Left	To Bandari	25+636
26	25+882	T-Junction	Left	To Bandari	25+900
27	27+870	Y-Junction	Right	To Kokashpur	27+900
28	29+751	X -Junction	Left Right	To Murud To Kamalpur	-
29	31+378	X -Junction	Left Right	To Field To Field	-
30	33+811	Y-Junction	Right	To Ashiv	33+850

S. No.	Design Chainage (Km)	Type of Junction	Side	Lead to	As per Schedule (Km.)
31	34+530	Y-Junction	Right	To Vangji	34+550
32	36+368	X-Junction	Left Right	To Kajoli chincholi To hincholi	36+400
33	38+326	T-Junction	Right	To Thausi	38+365
34	38+733	X-Junction	Left Right	To Taka To Hipper Gaon	38+788
35	40+143	staggered	Left Right	To Belkund To Fields	40+200
36	40.624	Y-Junction	Left	To Taka	40+624
37	42+016	T-Junction	Right	To Police stn (Mud)	42+238
38	43+064	X-Junction	Left Right	To Gulukeda To Bilagundu	43+118
39	44+692	Y-Junction	Left	To Sindah Thanda	44+743
40	44+894	Y-Junction	Left	To school	44+935
41	45+203	X-Junction	Left Right	To Elluri To Sindala	45+252
42	45+350	Y-Junction	Left	To Sindalavadi	45+345
43	45+445	Y-Junction	Left	To Sindala	45+486
44	47+552	T-Junction	Right	To Sindala	47+589
45	48+873	T-Junction	Left	To Osmanabad	-
46	50+524	T-Junction	Left	To Vill	50+550
47	50+735	Y-Junction	Left	Borphal	50+785
48	53+755	Staggered	Right Left	To Ujjini To Ausa	53+753
49	55+072	X-Junction	Left Right	To Ausa To Nagar Soga	55+110

2.7 Grade Separated Structures and underpasses

As per the provisions of Schedule B of the Concession Agreement 3 nos. of Pedestrian Underpass, 3 nos. of Light Vehicular Underpass and 4 nos. of Vehicular Underpass structures are provided in the Project Corridor. Details are provided in **Chapter 4**.

2.8 Road Over Bridge (ROB)

ROB is not proposed in the project road as per provisions of Schedule B of CA.

2.9 Carriageway and Pavement Details

Summary of Pavement Details is given below:

Table 2.6: Carriageway and Pavement Details

S. No.	Description	Flexible (km.)	Rigid (km.)
1	Service Roads	18.85	
2	Slip Roads	0.96	
3	4 Lane with Paved shoulder		67.428
4	Total Length	19.81	67.428
TYPE OF ALIGNMENT			
5	Widening		50.9
6	Realignment		11.153
7	Cutting		0.56
8	Approaches to Underpass		4.815
9	Total Length of the Project		67.428

2.10 Summary of Structures

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.7: Summary of Structures

S No	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts	Under Passes/Overpasses
1	Retained					
2	Widening		11	29	1	
3	Reconstruction		4	27	7	
4	New		4	16	10	11
5	Improvement					
	Total	--	19	72	17	11

2.11 Toll Plazas

- There is one toll Plaza on the project road at Km. 35+200
- Toll Plaza comprises of each side of 3 Normal lanes one Extra widening lane and one Bike lane.
- The width of each toll lane is provided 3.2 m, except for the lane for over dimensioned vehicles, where it is 4.5 m.
- Between each toll lane of the toll plaza, traffic islands are constructed to accommodate tollbooth.
- Protective barriers of reinforced concrete and traffic impact attenuators are placed in the front of each island to prevent out of control approaching vehicles crashing into the tollbooth.
- The canopy is provided for weather protection to toll operators, drivers and facilities. The canopy is designed aesthetically pleasing with cylindrical support columns located at traffic island so that there is no restriction on visibility and traffic movement.
- Total 7 Nos. toll booths are provided in toll plaza.
 - Toll Plaza is updated to ETC Lane system as per the Change of Scope Order issued to the Concessionaire.
 - List of tolling equipment provided at site is furnished in the Detailed Report.

2.12 Bus bays/shelters/Truck lay bye

As per provisions of Schedule C of CA bus bays/shelters are provided at 34 locations and 1 also 1 Truck lay bye. Details are provided below.

Table 2.8: Summary of Bus bays/Bus shelters/Truck lay bye

S. No.	Design Chainage (Km.)	Side	Name of the Village
Bus bays/ Bus shelter			
1	4+590	LHS	Dineshwar Nagar
2	4+960	RHS	Dineshwar Nagar
3	5+750	LHS	Kakramba
4	6+050	RHS	Kakramba
5	12+400	LHS	Khandala
6	12+440	RHS	Khandala
7	16+280	RHS	Takwiki
8	16+430	LHS	Takwiki
9	21+580	RHS	Karajkheda
10	21+680	LHS	Karajkheda
11	24+310	RHS	Arni
12	24+350	LHS	Arni
13	25+200	RHS	Bhandari
14	25+210	LHS	Bhandari
15	29+300	RHS	Ujani
16	29+350	LHS	Ujani
17	33+620	RHS	Ashiv Village
18	33+680	RHS	Ashiv Village
19	36+140	LHS	Kojoli Chincholi
20	36+620	RHS	Chincholi
21	38+070	RHS	Thavasi Thanda
22	38+470	LHS	Thavasi Thanda
23	42+350	LHS	Belkund Village
24	42+350	RHS	Belkund Village
25	45+100	LHS	Sindala Village
26	45+110	RHS	Sindala Village
27	50+730	RHS	Bhorphal
28	51+200	LHS	Bhorphal
29	1+630	LHS	Sindphal

S. No.	Design Chainage (Km.)	Side	Name of the Village
Bus bays/ Bus shelter			
34	10+700	RHS	Dhakta Tuljapur
Truck Lay bye			
1	6+900	RHS	Kakramba

Km. 6+900 (Bypass) Truck lay bye

Km. 38+470 Bus bay

Figure 2.10: Representative photos of Truck lay bye & Bus bay

2.13 Other Project Facilities Provided as per Schedule C of CA

- Roadside furniture: Sign Boards, Kilometer stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 84-2014.
- Traffic safety devices: W Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of CA.
- Landscaping: Provided at Toll Plaza location and being maintained
- Tree Plantation: Median plantation and Avenue plantation on both sides of the Project Corridor is provided all along the way and is being maintained.
- Medical Aid Post: Provided at Toll Plaza location and is operational
- Highway Lighting: Highway lighting is provided at Toll Plaza, Bus bays and Truck Lay bays and is functional.

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections provided below

3.2 Road Inventory

Inventory of the project road was carried out physically and the same is summarized in the following table. Few representative photographs are presented below.

Table 3.1 Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain rolling Terrain
2	Land Use	Agriculture and forest
3	Four lane length	67.428 km
4	Earthen shoulder	1.0 m to 1.5m Width on site
5	Junctions	57 Nos.
6	Toll Plazas	At Km.35+200
7	Sign boards	Sign boards are provided as per Highway requirements
8	Road Markings	Lane markings are provided as per Highway requirement
9	Bus Bays /shelters	34 Nos.
10	Highway Lighting	Provided as per requirement
11	Avenue plantation	Provided

Km. 12+400

Km. 43+200

Km. 43+200

Km. 54+200

Figure 3.1: Photographs of the Road Project

3.3 Pavement Condition

Pavement condition survey was carried out on the project road based on visual observations. The criteria adopted for the classification of condition of the pavement is as per of IRC 83-2018.

Table 3.2: Pavement condition summary

From (km.)	To (km.)	Length (kms)	Condition
0+000	55+835	67.428	Good
0+000	11+593

Km.38+200

Km. 48+400

Figure 3.2: Representative Photos of Pavement Condition.

CHAPTER 4. INVENTORY AND CONDITION OF STRUCTURES

4.1 General Assessment and Condition of the structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guidelines provided in IRC SP: 52-1999 & IRC SP: 35-1990

4.2 Inventory of Structures

The details of structures along this project road are listed below.

Table 4.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	-
2	Minor Bridge	20 Nos.
3	Underpasses	11 Nos.
4	Pipe culverts	72 Nos.
5	Slab/Box Culverts	17 Nos..

The minor bridges of superstructure are RCC solid slab/RCC Box type and the substructures are of PCC/RCC conventional wall type supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 1**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Structural condition of most of the culverts is fair. Detailed inventory and condition survey of culverts are given in **ANNEXURE 2**.

4.3 Details of Minor Bridges

The details of minor bridges in the project stretch are listed below. The type of superstructure for minor bridges is RCC solid slab/RCC Box type and the substructure is PCC/RCC conventional wall type supported on open foundations. Expansion joints are buried type/Strip seal and bearings are tar paper and elastomeric bearings. RCC crash barriers are provided on all structures.

Table 4.2: Inventory of Minor Bridges

S. No.	Chainage(Km.)	Span	Total Length of Bridge (m)	Description
1	2+112	2x8.830	18.6	It has RCC Slab structure. It has RCC Railing, bituminous wearing coat, buried type expansion joints.
2	3+143	3x7.1	21.2	It has RCC Slab structure. It has RCC Railing, bituminous wearing coat, buried type expansion joints.
3	5+201	3x7.1	21.1	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
4	6+645	3x6.5	13.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
5	9+779	2x6	2.0	It has RCC Box structure. It has RCC

S. No.	Chainage(Km.)	Span	Total Length of Bridge (m)	Description
				Railing, bituminous wearing coat.
6	11+443	3x4.7	9.4	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
7	15+811	3x3.5	10.5	It has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC railing, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
8	25+707	4x10	40.0	It has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC railing, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
9	27+12	2x6.5	13.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
10	28+845	6x9.1	54.5	It has RCC Slab Super structure and RCC Sub Structure. It has RCC Railing, bituminous wearing coat, buried type expansion joints.
11	33+187	2x15	30.0	It has RCC Slab structure. It has RCC Railing, bituminous wearing coat, buried type expansion joints.
12	44+396	1x8	8	It has RCC Slab structure. It has RCC Railing, bituminous wearing coat, buried type expansion joints.
13	46+051	2x9.2	18.4	It has RCC Slab structure. It has RCC Railing, bituminous wearing coat, buried type expansion joints.
14	50+284	2x8.5	17.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
15	54+674	2x5	10	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
16	2+143	4x7.50	30.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
17	7+188	2 x 7.5	15.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
18	7+437	1X15.0	5.0	It has RCC I Girder It has RCC Railing, bituminous wearing coat, strip seal type expansion joints.
19	8+129	1x15	5.0	It has RCC I Girder It has RCC Railing, bituminous wearing coat, strip seal type expansion joints.
20	10+942	1X10.0	10.0	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.

Km. 28+845

KM.54.674

Figure 4.1: Representative photos of Minor Bridges.

4.4 Details of Underpass

There are 11 Underpasses in the project stretch. The type of superstructure for underpass is RCC I Girder/RCC Box type and the substructure is PCC/RCC conventional wall type supported on open foundations. Expansion joints are buried type/Strip seal and bearings are tar paper and elastomeric bearings. RCC crash barriers are provided on all structures.

Table 4.3: List of Underpass in the Project Road

S. No.	Chainage(Km)	Structure Type	Span	Total Length of Bridge (m)	Description
1	6+100	LVUP	1x10.5	10.5	It has RCC Box structure. It has RCC Crash barrier, bituminous wearing coat.
2	21+152	VUP	1x20	20.0	It has RCC I Girder type. It has RCC crash barrier, bituminous wearing coat, Strip seal expansion joints.
3	29+751	VUP	1x20	20.0	It has RCC I Girder type. It has RCC crash barrier, bituminous wearing coat, Strip seal expansion joints.

Km. 55+074

Figure 4.2: Representative photos of underpass

4.5 Details of Culverts:

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 2**

4.5.1. Slab/Box Culverts

There are 17 Nos. of slab/Box culvert in the project stretch. The details of the culverts are as given below

Table 4.4: List of Slab/Box Culverts

Sl. No.	Chainage (Km)	Span (m)	Vent Size (m)
1	10+170	1x5.1	1.6
2	16+840	1x4.5	2.47
3	20+250	1x4	4.1
4	36+330	1x4	1.5
5	39+300	1x4	1.5
6	39+800	1x4	2.47
7	40+920	1x4.5	3.4
8	42+100	1x1.5	5
9	1+462	1x3.0	2.0
10	3+838	1x3.0	1.5
11	4+007	1x4.0	1.5
12	4+215	1x4.0	4.0
13	5+113	1x4.0	4.0
14	6+846	1x3.0	2.0
15	6+944	1x3.0	2.0
16	6+955	1x3.0	2.
17	7+903	1x3.0	3.0

4.5.2. Condition of the Slab/Box Culverts:

The general condition of above Box/slab culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

4.5.3. General Description of the Pipe Culverts

There are 72 Nos. of pipe culverts in the project stretch. The details of the culverts are as given below.

Table 4.5 List of Pipe Culverts

S. No.	Chainage (Km)	Span	S. No.	Chainage (Km)	Span
1	1+270	1x1.2	37	36.750	2x1.2

69	4+663	2X1.2
70	2+300	1x1.2
71	2+500	1x1.2
72	11+328	1x1.2

4.5.4. Condition of the Pipe Culverts

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

The culverts are in fair condition and can be retained in the present condition with following repairs/rehabilitation measures.

- Chocked culverts must be cleared.
- Debris and garbage near outside the vents must be removed.

CHAPTER 5. REVIEW OF PAVEMENT DESIGN

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, pavement condition and CA provisions.

5.2 Pavement design crust thickness

The Pavement Design shall be carried out in accordance with Indian Roads Congress guidelines. The pavement is designed in accordance with IRC: 58 -2015 “Guidelines for the Design of Plain Jointed Rigid Pavements for highways”, IRC: SP 84 -2014, IRC: 15-2011 “Construction Concrete Road (FOURTH REVISION)” and relevant clauses of schedule B of the EPC agreement. Pavement crust thickness for main carriageway as per pavement design report summarized below.

Table 5.1: Rigid Pavement Design for Main carriageway

Description	Design/Adopted Parameters
CBR of sub grade	6 %
Two-way commercial traffic volume per day	1560
Design life in years	30
Pavement Quality Concrete (PQC) – (mm)	270
Dry Lean Concrete (DLC) – (mm)	150
Drainage Layer (GSB) - (mm)	150
Diameter of Dowel Bar (mm)	36
Length of Dowel Bar (mm)	450
Spacing of Dowel Bars (mm)	300
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	580

As per schedule D, (Annexure-I), clause 2, pavements for Slip road/Service road shall be flexible pavement and designed as per provision of design manual IRC: SP: 84:2014. The design traffic in case of service road shall be ten million standard axles as per Cl:5.5.5 of IRC: SP: 84:2014. The crust composition shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”.

Table 5.2: Flexible Pavement for service road

S. No	Description/ Pavement layer	Design/Adopted Parameters
1	Sub Grade CBR (%)	9 %
2	Design Life (Years)	15 years for non-bituminous
3	Design Traffic (MSA)	10 MSA
4	Surface course (BC)	40mm
5	Binder course (DBM)	50 mm
6	Base course (WMM)	250 mm
7	Sub Base course (GSB)	200 mm

The Pavement crust has been designed according to IRC specification and found in order, the adopted/ Constructed pavement layer thickness is adequately provided than actual/designed thickness.

5.3 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC for service roads. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Next Periodic Renewal Proposed for Service road on or before 2027 and 2033.

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction. (As per IRC 58-2015).

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRR) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 6.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety

6.2 Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 6.2: Road safety Items

S. No.	Item Description		Status	Condition
Road Furniture				
1	Sign Boards	Chevron Signs	Available as per site requirement	Good
		Village sign boards	Available as per site requirement	Good
		Information Boards	Available as per site requirement	Good
		Other Sign Boards	Available as per site requirement	Good
		Gantry Sign Boards	Available as per site requirement	Good
2	Road Marking	Studs & Lane marking	Available as per site requirement	good
3	Metal Beam Crash Barriers	At High embankments	Available as per site requirement	good

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

Few observations on the road furniture in safety aspects for the project road are mentioned below:

Marking & OH marker at junction islands at Km.2+500

Separator Railing on Both sides at Km. 11+600

OH marker board before the Head wall at 45+100.

Sign Boards at Km.55+000 (end Point)

Figure 6.1: Representative photos during road safety audit

6.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is required during the maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General:

There is one toll Plaza on the project road at Km.35+200. The width of each toll lane is provided 3.2 m, except for the lane for over dimensioned vehicles, where it is 4.5 m. between each toll lane of the toll plaza, traffic islands is constructed to accommodate tollbooth. Protective barriers of reinforced concrete and traffic impact attenuators is placed at the front of each island to prevent out of control approaching vehicles crashing into the toll booth. The canopy is provided for weather protection to toll operators, drivers and facilities. The canopy is designed aesthetically pleasing with cylindrical support columns located at traffic island so that there is no restriction on visibility and traffic movement. Total 7 Nos. toll booths are provided in toll plaza.

Toll Plaza is updated to ETC Lane system as per the Change of Scope Order issued to the Concessionaire.

7.2 Tolling Equipment and Control Room Equipment

List of equipment provided at toll plaza and control room is given below.

CHAPTER 8. SCHEDULE OF ANNUITY PAYMENTS

8.1 Hybrid Annuity Model (HAM)

Hybrid annuity model is the PPP model in which Authority makes payment of 40% of the Bid Project cost during construction period based on progress milestones set forth in Concession Agreement. Payment of the balance 60% of the Bid Project Cost is made in form of bi-annual annuities with interest during the operational phase of concession.

8.2 Payment during Construction

As per the provisions of Article 23 of the Concession Agreement, 40% of the Bid Project Cost adjusted with Price Index in accordance with Clause 23.2.3 of the CA, shall be paid during the Construction Period. Amount payable during construction period shall be paid in five equal installments upon achieving the following Project Milestones.

Table 8.1 : Schedule of Payment Milestones

S. No.	Project Milestone No	Criteria for releasing the Payment
1	Project Milestone I	On Achievement of 10% of Physical Progress
2	Project Milestone II	On Achievement of 30% of Physical Progress
3	Project Milestone III	On Achievement of 50% of Physical Progress
4	Project Milestone IV	On Achievement of 75% of Physical Progress
5	Project Milestone V	On Achievement of 90% of Physical Progress

During the Operation Period, remaining 60% of the balance Completion Cost shall be paid in 30 Annuities each Annuity payable biannually. Each Annuity amount shall be based on the percentages of the balance Completion Cost mentioned in 23.6.3 of the Concession Agreement. During the Operation Period following payment components are payable.

- Annuity Payments are due and payable every six months as per the Annuity Payment Schedule provided in 23.6.3 of the Concession Agreement.
- Interest on the balance amount to be paid at an interest rate equal to the applicable Bank Rate Plus 3%, the Interest would be calculated on simple interest basis and no compounding of the same would be undertaken.
- O&M Payment is payable in two installments every year by adjusting the same with Price Index Multiple on the Reference Index Date preceding the due date of payment there of as per Clause 23.7.1 of the Concession Agreement.

Details of Annuity payments are as below.

Table 8.2: Schedule of Annuity Payments

Annuity No.	% of Completion Cost remaining to be paid on COD	Annuity Due Date	Annuity paid date
1	2.10%	16.05.2020	26.05.2020
2	2.17%	12.11.2020	04.12.2020
3	2.24%	16.05.2021	-

Annuity No.	% of Completion Cost remaining to be paid on COD	Annuity Due Date	Annuity paid date

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of CA, the Concessionaire will operate and maintain the Project roads by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual Inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz. pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

9.3 Operations

9.3.1. Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- i. Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- ii. Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.
- iii. carrying out preventive and periodic maintenance of the Project road;
- iv. undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;

- v. Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- vi. Functioning of the lighting system;
- vii. Functioning of the Patrolling System
- viii. Functioning of rescue and medical aid services
- ix. Ambulance as and when required
- x. Functioning of the Project Facilities
- xi. Administrative, Operational and Maintenance Base Camp
- xii. Truck Lay byes
- xiii. Pickup Bus stops / Bus Bays
- xiv. protection of the environment and provision of equipment and materials therefor;
- xv. Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- xvi. complying with Safety Requirements in accordance with Article 18.

9.4 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

9.4.1. Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence does not require any immediate or preventive interventions.

9.4.2. Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

9.4.3. Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road. The details of periodic maintenance schedule are given below.

Table 9.1: Schedule and status of for Periodic Maintenance

Description	Schedule of Major Maintenance	Status of Major Maintenance
1 st Periodic Maintenance	2027	Planned to execute on service roads
2 nd Periodic Maintenance	2033	Planned to execute on service roads

9.4.4. Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sandstorms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction
- c. Construction of Diversions
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.5 Review of Test Reports

9.5.1. Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

As per Schedule K of the CA, Roughness value shall not exceed 2750 mm in a KM. As the riding quality is good, the Independent Engineer has not directed the Concessionaire to conduct the BI Test.

9.6 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 3**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance	Incidental maintenance	Periodic / Major maintenance	Operation Expenses	Total cost per year
2020	2.138	2.100		3.11	7.35
2021	2.202	2.163		3.21	7.57
2022	2.268	2.228		3.30	7.80
2023	2.336	2.295		3.40	8.03
2024	2.406	2.364		3.50	8.27
2025	2.479	2.435		3.61	8.52
2026	2.553	2.508		3.72	8.78
2027	2.629	2.583	29.70	3.83	38.74
2028	2.708	2.660		3.94	9.31
2029	2.790	2.740		4.06	9.59
2030	2.873	2.822		4.19	9.88
2031	2.959	2.907		4.31	10.18
2032	3.048	2.994		4.44	10.48
2033	3.140	3.084	34.95	4.57	45.75
2034	3.234	3.177		4.71	11.12
2035	2.108	2.071		3.07	7.25
Total	41.87	41.13	64.65	60.99	208.64

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 Scope of Work (Article 2)

Article 2 of the CA provides the scope of work, which includes the following.

- Operation and Maintenance of the Project Highway on the Site set forth in Schedule A and as specified in Schedule B together with provision of Project Facilities as specified in Schedule C, and in conformity with the Specifications and Standards set forth in Schedule D;
- collection of Fee from the Users of the Project; subject and in accordance with the provisions of the Concession Agreement;
- performance and fulfillment of all other obligations of the Contractor in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Contractor under this Agreement

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE-4**.

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfill its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the Concession Agreement

10.5 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 30 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 30% of the Total Project Cost.

10.6 Tests (Clause 13.3)

For determining that the Project, conforms to the Maintenance Requirements, the Independent Engineer shall require the Concessionaire (Concessionaire shall in turn require the Contractor) to carry out, or cause to be carried out, tests specified by it in accordance with Good Industry Practice. One half of the costs incurred on such tests, and to the extent certified by the Independent Engineer as reasonable, shall be reimbursed by the Authority to the Concessionaire

10.7 Provisional Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA. The Provisional Certificate copy given in **ANNEXURE-5**.

10.8 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire.

10.9 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of scope proposals that were initiated during construction period and consented by the HAI are provided in **Annexure 7**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents

- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (The “**Maintenance Requirements**”).

10.13 Maintenance Manual (Clause 17.3)

No later than 90 (ninety) days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 2% (two percent) of the performance security, and
- 0.1% (zero decimal one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with

the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Payment of Bid Project Cost (Article 23)

The Authority agrees to pay 40% of the Bid Project Cost in five installments against the achievement of Project Milestones specified in Clause 23.4 of the Concession Agreement and the amount shall be adjusted with Price index.

Remaining balance completion cost shall be paid as per the Percentage of balance completion cost biannually from the date of COD. Percentage of amounts payable for each Annuity is specified in 23.6.3 of the Concession Agreement.

10.18 Change in Law (Article 35)

Increase in costs

If as a result of Change in Law, the Concessionaire suffers an increase in costs or reduction in net after-tax return or other financial burden, the aggregate financial effect of which exceeds the higher of Rs.2.20 Crore (Rupees two crore twenty lakhs) or 2%(two percent) of the total Annuity payments in any Accounting Year, the Concessionaire may so notify the Authority and propose amendment to this Agreement so as to place the Concessionaire in the same financial position as it would have enjoyed had there been no such Change in Law resulting in increased costs, reduction in return or other financial burden as aforesaid. Upon notice by the Concessionaire, the Parties shall meet, as soon as reasonably practicable as but no later than 30 (Thirty) days from the date of notice and either agree on amendments to this Agreement or on any other mutually agreed arrangement.

Reduction in costs

If as a result of Change in Law, the Concessionaire benefits from a reduction in costs or increase in net after-tax return or other financial gains, the aggregate financial effect of which exceeds the higher of Rs.2.20 crore(Rupee two crore twenty Lakhs) or 2% (Two percent) of the total Annuity Payment in any Accounting year, the Authority may so notify the Concessionaire and propose amendments to this Agreement so as to place the Concessionaire in the same financial position as it would have enjoyed had there been no such Change in Law resulting in decreased costs, increase in return or other financial gains as aforesaid. Upon notice by the Authority, the parties shall meet, as soon as reasonably practicable as but no later than 30 (thirty) days from the date of notice and either agree on such amendments to this Agreement or on any other mutually agreed arrangement.

CHAPTER 11. INSURANCE

11.1 Details of Insurance:

As per clause 26.1 of the CA, the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Insurance copy is given in **ANNEXURE 6**.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Property	Remarks
			From	To		
Standard Fire & Special Perils Policy	The Oriental Insurance Co Ltd	171200/11/2021/230	18.11.2020	17.11.2021	Road & Structure: Toll Building & Toll Booths, TMS, HTMS, Office & IT equipment, Electronic Equipment, Road Furniture, Fixtures, electrical Poles Lighting & Fittings, Sign boards & Safety Barrier	Endorsement issued for change in policy period.
Fire Industrial All Risk Policy	The Oriental Insurance Co Ltd	171200/11/2021/229	18.11.2020	17.11.2021	Maintenance of Roads, Bridges	Endorsement issued for change in policy period.
Electronic Equipment Insurance Policy schedule	Oriental Insurance Company Ltd	171200/44/2021/48	25.9.2020	24.9.2021	Electronic Equipment installed in the Project road	
Employees Compensation Insurance	HDFC Ergo General Insurance Co Ltd	3114203370090800000	24.3.2020	23.3.2021	All categories of Employees of the Contractor & sub-contractor engaged in the Project	

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The Pavement condition for the overall project is good. RCC drains are constructed in Built up locations and earthen drains in rural locations which facilitates, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are being cleared during regular maintenance period.

12.4 Project Facilities

Toll Plaza is constructed at Km.35+200 and is operational. Bus bays and truck laybys are in fair condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained well. Highway lighting is provided at toll plaza, bus bay and truck lay bye locations and the same is found functional.

12.5 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 84-2014. The condition of sign boards & other road appurtenances like metal beam crash barriers is fair.

12.6 Maintenance

- Routine maintenance is being carried out by O&M contractor effectively, based on documents reviewed, time to time observations made by client/Authority are being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance scheduled in the year 2027 and 2033.

12.7 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times

<p>Sub:</p>	<p>Four Laning of Tuljapur - Ausa (including Tuljapur Bypass) Section of NH-361 from km 0.000 to km 55.835 in the State of Maharashtra on Hybrid Annuity Mode under NHDP Phase IV - Letter of Award - Reg.</p>	
<p>Ref:</p>	<p>(i) Your RFP application submitted on 09.01.2017. (ii) Financial proposal opened on 25.01.2017.</p>	
<p>Sir,</p>	<p>With reference to NHAI's Request for Proposal for "Four Laning of Tuljapur - Ausa (including Tuljapur Bypass) Section of NH-361 from km 0.000 to km 55.835 in the State of Maharashtra on Hybrid Annuity Mode under NHDP Phase IV" and considering your proposal in this regard submitted on 09.01.2017 cited under ref (i), NHAI hereby accepts your proposal quoting Bid Project Cost of Rs. 911.07 Cr. (Rupees Nine Hundred Eleven Crores Seven Lakhs Only) and First Year O&M Cost of Rs. 3.00 Cr. (Rupees Three Crores Only), as included in Appendix - 1B of your Bid Document, and declares you as the "Selected Bidder" as per the provisions of the RFP Documents.</p> <p>2. In accordance with the clause 3.8.4 of the RFP document, you are requested to sign the duplicate copy of the LOA and return the same as your acknowledgement within 7 (Seven) days of the receipt of the LOA. Thereafter, you are required to execute the Concession Agreement within 45 (Forty Five) days from the date of issue of LOA as specified in Clause 1.3 of RFP.</p> <p>3. Further, as per RFP documents, you are required to incorporate a Special Purpose Vehicle solely for the purpose of domiciling the project (The "Concessionaire"). The Concessionaire for due and faithful performance of its obligations during the Concession Period shall furnish a Performance Security by way of irrevocable and unconditional Bank Guarantee of Rs. 45.56 Crore (Rupees Forty Five Crores and Fifty Six Lakhs only) within the period of the 30 days from the date of signing of the Concession Agreement. Till the time the Concessionaire provides NHAI with the Performance Security, the Bid Security shall remain in full force and effect (refer clause 4.1.2 and Clause of Article 9 of DCA).</p> <p>4. You are required to comply with all the terms and conditions set forth in the RFP documents. In case of any default on your part, you shall be liable for action as stated in the Bid Documents.</p>

4-lane operational length (km) considered for Pre-COD i.e. (1)+(2)+(3)				54.265	
Total length of Project Highway (km)				67.428	

4. As per NHAI Policy circular dated 21.12.2015, the Independent Engineer vide letter no. 6913; dtd: 23.08.2019 has submitted the proposal regarding concurrence for issuance of Provisional Completion Certificate under clause 14.3 of the Concession Agreement.
5. Further, the RO Nagpur vide their letter no 1427; dtd: 29.08.2019 has issued requisite concurrence with instructions to Independent Engineer to assure followings before issuance of provisional certification:
- The following item including List-C shall be completed before issuance of PCOD:
 - Metal Beam Crash Barrier,
 - New Jersey Crash Barrier,
 - Casting of curbs including painting,
 - Finishing work around Toll Booths,
 - Road Marking and sign Boards.
6. Furthermore, the Concessionaire vide letter no. 1354; dtd: 20.10.2019, 3373; dtd: 31.10.2019 has confirmed compliance of pending works and requested for issuance of provisional completion certificate in pursuant to article 14 of CA. In this continuation, the Independent Engineer has inspected project highway on 14.11.2019 to 16.11.2019 and observed that all the pending works are now satisfactorily completed by the Concessionaire.
7. In view of above, the Independent Engineer is of opinion that you are now eligible for issuance of provisional completion certification in accordance with article 14 of CA. Hence, the Independent Engineer is herewith issuing Provisional Completion Certificate (enclosed in Appendix-I) in pursuant to clause 14.3 of the Concession Agreement along with followings:
- The Project Highway has been constructed as per scope defined under Schedule B & C, in conformity with the technical specifications and standards set forth in Schedule-D of the Concession Agreement. The detailed summary against each item of the Schedule B & C is shown in Annexure-J. The List of minor outstanding works of Pre-COD section (forming "PUNCH LIST-A") is attached as Appendix-II. As per clause 14.4.1 of the Concession Agreement, the works in PUNCH LIST-A

HDFC ERGO General Insurance Company Limited

March 26, 2020

DILIP BUILDCON LIMITED

PLOT NO. 5, GOVIND NARAYAN SINGH GATE,
CHUNA BHATTI, BHOPAL, MADHYA PRADESH,
BHOPAL,
MADHYA PRADESH, 462016.

Dear Customer,

Sub: Employees Compensation Insurance Policy No: 3114203370090800000

We thank you for having preferred us for your *Insurance* requirements. We at HDFC ERGO General Insurance believe "Insurance" as not only to be an assurance to indemnify in the event of unfortunate circumstances, but one that signifies protection and support, which you can count on when you need it most.

The Insurance Policy enclosed herewith is a written agreement providing confirmation of our responsibility towards you that puts insurance coverage into effect against stipulated perils.

Please note that the policy has been issued based on the information contained in the proposal form and / or documents received from you or your representative / broker.

Name of the Intermediary : GLOBAL INSURANCE BROKERS PVT LTD
Intermediary Code : 200113159601

Where the proposal form is not received, information obtained from you or your representative /broker, whether orally or otherwise, is captured in the policy document.

If you wish to contact us in reference to your existing policy and /or other general insurance solutions offered by us, you may write to our correspondence address as mentioned below. Alternatively, you may visit our website www.hdfcergo.com. To enable us to serve you better, you are requested to quote your Policy Number in all correspondences.

Thanking you once again for choosing HDFC ERGO General Insurance Company Limited and looking forward to many more years of association.

Yours sincerely,

Authorised Signatory

CHAPTER 1. INTRODUCTION

1.1 General

DBL WARDHA BUTIBORI HIGHWAYS PRIVATE LIMITED (herein after referred to as the “**Concessionaire**”) had augmented the existing two lane road “Wardha Butibori section of NH361 in the State of Maharashtra, in accordance with the provisions of the Concession Agreement executed with National Highways Authority of India (herein after referred to as the “**Authority**”) on 9th June, 2017 on Design, Build, Operate and Transfer (DBOT) on Hybrid Annuity Mode (HAM).

The Project Highway starts at Km. 465+500 (Near Wardha) and ends at Km. 524+690 (at Butibori) on NH 361. It passes through settlements namely Salod, Seloo and Kelzar. Project location map is provided at **Figure 1.1**.

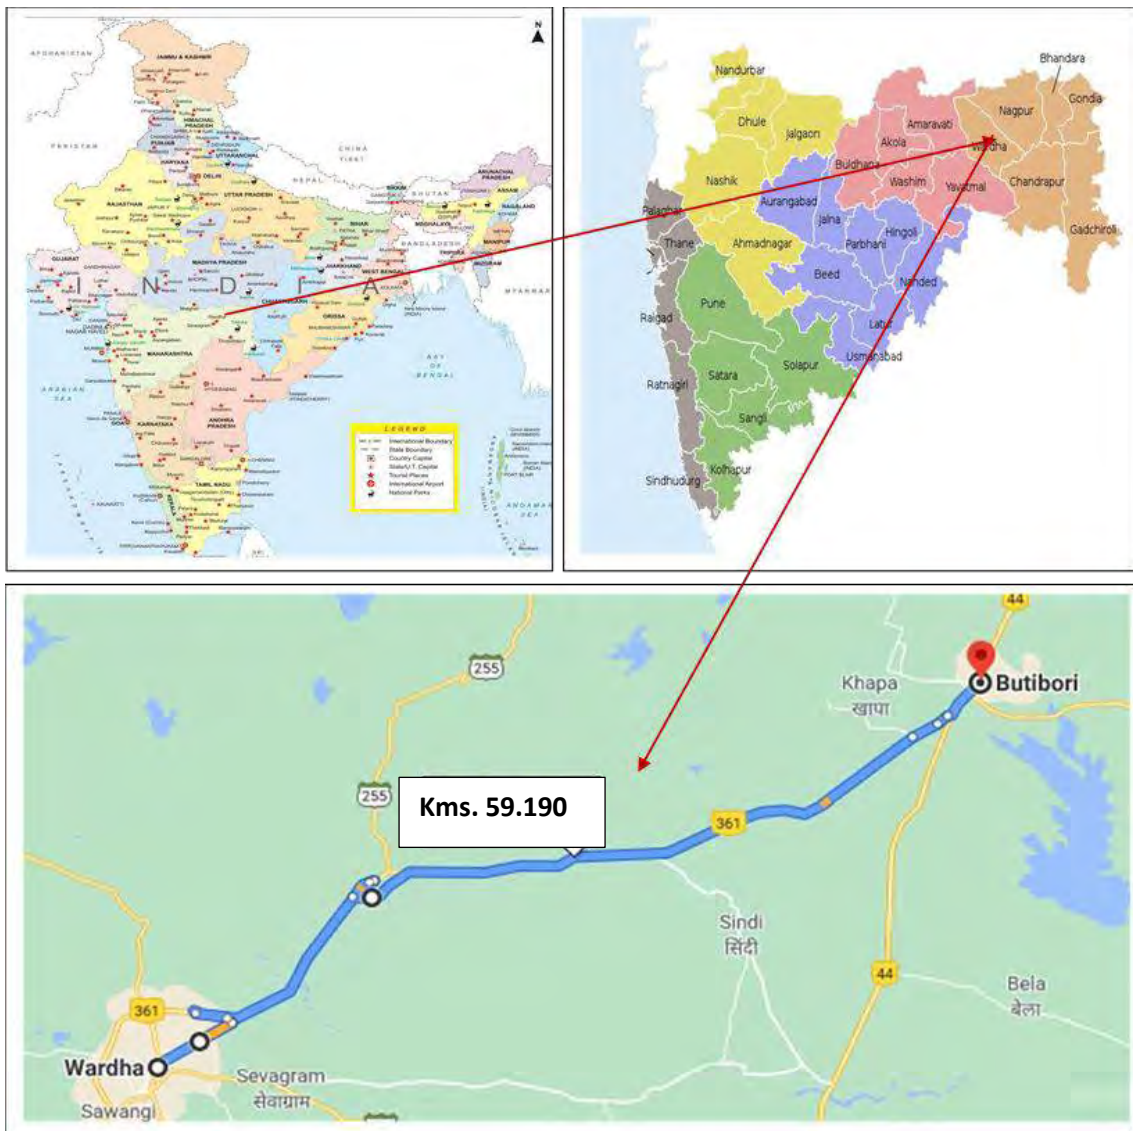

Figure 1.1: Project Location Map

SHREM INFRAVENTURE PRIVATE LIMITED (SIPL) acquired DBL WARDHA BUTIBORI HIGHWAYS PRIVATE LIMITED vide agreement dated 26.03.2018.

SHREM FINANCIAL PRIVATE LIMITED (SFPL). appointed RUKY Projects Pvt. Ltd. as consultant for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the annuity payments received and future schedule of annuity payments. etc.

1.2 The Project Data

Table 1.1: Project Data

S. No.	Particulars	Details
1	Name of the project	Four Laning of Wardha-Butibori Section of NH- 361 From Km. 465+500 to Km. 524+690 (Design Length Kms. 59.190) under NH (O) in the state of Maharashtra on Hybrid Annuity Mode.
2	Road Type	National Highway
3	Name of the Authority	National Highways Authority of India
4	Name of the Concessionaire	DBL WARDHA BUTIBORI HIGHWAYS PRIVATE LIMITED
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Date of LOA	28.03.2017
7	Date of Agreement	09.06.2017
8	Design Length as per Schedule B of CA	59.190 Kms.
9	Project Lane Configuration	Four Lane
10	EPC Cost	Rs. 796.50Cr.
11	BPC Cost	Rs. 1,065.51 Cr.
12	Nature of contract	Hybrid Annuity Mode
13	Toll collected by	Authority
14	Operation Period	15 years from the Commercial Operation Date (COD)
15	Appointed date	30.11.2017
16	Concession End Date	19.11.2034
17	Construction Period	910 days from the Appointed Date
18	Schedule Completion Date	27.05.2020
19	Date of issuance of Provisional Certificate (COD)	20.11.2019
20	Bonus on early completion	Applicable as per Cl.23.5 of CA
21	Date of issuance of Completion Certificate	---
22	Annuity Amount	As per Cl.23.4 and Cl.23.6.3 of CA
23	Total Number of Annuities payable	30 Nos.
24	First Annuity Payment Date	20.05.2020
25	Total Number of Annuity Payments received as on date.	2 No.

1.3 Scope of Consultancy Services

The scope of work includes providing Technical Due Diligence of the Project Highway and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per schedule B and Schedule C of THE Concession Agreement (CA) including Change of scope (COS) are listed in the following **Table 2.1.**

Table 2.1: Salient Features

S. No.	Particulars	As per CA	As COS	As per Site
1	Total Length of Main Carriageway 4 Lane with Rigid Pavement	59.190 Kms.		59.190 Kms.
2	Total length of Service Roads	8.800 Kms.		8.80 Kms.
3	Total length of Slip Roads	19.100 Kms.		19.10 Kms.
4	Toll Plazas	1 No.		1 No.
5	Bus Bays with Bus Shelters	28 Nos.		28 Nos.
6	Truck Lay Bays	2 Nos.		2 Nos.
7	Rest Areas	Nil		Nil
8	Major Junctions	Nil		9 Nos.*
9	Minor Junctions	26 Nos.		30 Nos.*
10	Vehicular underpasses	9 Nos.		9 Nos.
11	Light Vehicular underpasses	2 Nos.		2 Nos.
12	Pedestrian underpasses	1 No.		1 No.
13	Grade Separators	1 No.		1 No.
14	Major Bridges	2 Nos.		2 Nos.
15	Minor Bridges	15 Nos.	+1 Nos.	16 Nos.
16	ROBs	1 No.		1 No.
17	RUBs	1 No.		1 No.
18	Hume Pipe Culverts	65 Nos.		65 Nos.
19	Box / Slab Culverts	27Nos.	+1 No.	28 Nos.

*As per site requirement 9Nos. of Major junctions and 4Nos. of additional Minor junctions are developed

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Section Schedule, shown below as per Schedule B of the CA during the Construction.

Figure 2.1: TCS-1-TYPE-A3 TCS of 4-Laning By Concentric Widening with 4.0m Raised Median

Figure 2.2: TCS-2-TYPE-B Built - Up Section - Plain /Rolling Terrain with Service Roads

Figure 2.3: TCS-3-TYPE-A3 TCS of 4-Laning By Eccentric Widening (LHS) with 4.0m Raised Median

Figure 2.19: Pictorial Diagram of TCS Lengths.

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from the Carriageway, side drains are constructed along the main carriage way on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are constructed in open and rural areas.

2.4 Service Roads

Service Roads and Slip Roads are provided as per the provisions of Schedule B of the CA. The details are provided below.

Table 2.3: List of Service Road locations

S. No.	Design Chainage (Km.)		Length (Kms.)	Side	Carriageway width (m)
	From	To			
1	472+600	472+900	0.600	BHS	7.5
2	484+490	485+350	1.720	BHS	7.5
3	506+940	508+420	2.960	BHS	7.5
4	522+380	523+800	2.840	BHS	7.5
5	514+690	515+070	0.760	BHS	7.5
Total			8.860		

Table 2.4: List of Slip Road locations

S. No.	Design Chainage (Km.)		Length (Kms.)	Side	Carriageway width (m)
	From	To			
1	465+950	466+775	1.650	BHS	5.5
2	467+525	468+500	1.950	BHS	5.5
3	473+390	474+350	1.920	BHS	5.5
4	475+800	478+100	4.600	BHS	5.5
5	481+520	482+750	2.460	BHS	5.5
6	491+650	492+800	2.300	BHS	5.5
7	501+550	502+600	2.100	BHS	5.5
8	516+740	517+800	2.120	BHS	5.5
Total			19.100		

2.5 Bypass/Realignment

As per the provisions of Schedule B of the CA Realignment is provided at the following locations.

Table 2.5: Realignment/ Bypass stretches

S. No.	Design Chainage (Km.)		Design Length (Kms.)
	From	To	
Realignment stretches			
1	476+270	476+620	0.350
2	481+780	482+600	0.820
3	483+130	483+600	0.470
4	485+350	485+580	0.230
5	486+110	486+270	0.160
6	505+660	506+600	0.940
7	515+210	515+520	0.310
Total			3+280
Bypasses stretches			
1	465+500	472+900	7.400
2	491+130	494+850	3.720
3	500+420	503+460	3.040
Total			14.160

2.6 Intersections

As per provisions of Schedule B of the CA, 26 Minor Junctions are to be provided. However, as per site requirement additional 9 nos. of Major Junctions and 4 nos. of Minor Junctions are developed. Details are given below.

Table 2.6: List of Major Junctions

S.No.	Chainage (Km.)	Side	Type
1	468+026	BHS	Major
2	474+004	BHS	Major
3	477+589	BHS	Major
4	482+530	RHS	Major
5	492+205	BHS	Major
6	501+942	BHS	Major
7	507+659	RHS	Major
8	517+059	RHS	Major
9	523+004	LHS	Major

Table 2.7: List of Minor Junctions

S.No.	Chainage (Km.)	Side	Type
1	465+860	RHS	Minor
2	466+361	BHS	Minor
3	472+750	BHS	Minor
4	475+610	LHS	Minor
5	478+700	BHS	Minor
6	480+190	LHS	Minor

2.7 Grade Separated Structures and underpasses

As per the provisions of Schedule B of the Concession Agreement 1 no. of Pedestrian Underpass, 2 nos. of Light Vehicular Underpass, 1 no of Grade separator and 9 nos. of Vehicular Underpass structures are provided in the Project Corridor. Details are provided in **Chapter 4**.

2.8 Road Over Bridge (ROB) Road Under Bridge

One ROB is constructed and one RUB is retaining as per provisions of Schedule B of the CA.

2.9 Carriageway Details

Summary of Carriageway Details is given below:

Table 2.8: Summary of Carriageway Details

S.No.	Description	Flexible (Kms.)	Rigid (Kms.)
1	Service Roads	8.860	---
2	Slip Roads	19.100	---
3	4 Lane Rigid Pavement	---	59.190
4	Total Length	27.960	59.190
TYPE OF ALIGNMENT			
5	Widening	---	35.353
6	Realignment	---	10.707
7	Flyover approaches	---	13.13
8	Total Length of the Project	---	59.190

2.10 Summary of Structures

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.9: Summary of Structures

2.11 Toll Plazas

- One Toll Plaza is provided on the project road at Km. 510+865, which comprises of Eight lanes.
- The width of each toll lane is provided 3.2 m, except for the lane for over dimensioned vehicles, where it is 4.5 m.
- Between each toll lane of the toll plaza, traffic islands are constructed to accommodate tollbooth.
- Protective barriers of reinforced concrete and traffic impact attenuators are placed in the front of each island to prevent out of control approaching vehicles crashing into the tollbooth.
- The canopy is provided for weather protection to toll operators, drivers and facilities. The canopy is designed aesthetically pleasing with cylindrical support columns located at traffic island so that there is no restriction on visibility and traffic movement.
- Total 8 Nos. toll booths are provided in toll plaza.
- Toll Plaza is updated to ETC Lane system as per the Change of Scope Order issued to the Concessionaire.
- List of tolling equipment provided at site is furnished in the Detailed Report.

2.12 Bus bays/Bus shelters

As per provisions of Schedule C of the CA bus shelters are provided at 28 locations. Details are provided below.

Table 2.10: List of Bus shelters

S.No.	Chainage (Km.)	Side	S.No.	Chainage (Km.)	Side
1	472+850	LHS	1	472+850	RHS

14	514+727	LHS	14	514+727	RHS

2.13 Other Project Facilities Provided as per Schedule C of CA

- Roadside furniture: Sign Boards Kilometer stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 84-2014.
- Traffic safety devices: W Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of CA.
- Landscaping: Provided at Toll Plaza location and being maintained
- Tree Plantation: Median plantation and Avenue plantation on both sides of the Project Corridor is provided all along the way and is being maintained.
- Medical Aid Post: Provided at Toll Plaza location and is operational
- Highway Lighting: Highway lighting is provided at Toll Plaza, Bus bays and Truck Lay byes and is functional.

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections provided below

3.2 Road Inventory

Inventory of the project road was carried out physically and the same is summarized in the following Table 3.1. Few representative photographs are presented below.

Table 3.1: Road Inventory

S.No.	Features	Remarks
1	Terrain	Plain rolling Terrain
2	Land Use	Agriculture and forest
3	Four lane length	59.190 Kms.
4	Earthen shoulder	1.0 m to 1.5m Width on site
5	Junctions	39 Nos.
6	Toll Plazas	At Km. 510+865
7	Sign boards	Sign boards are provided as per Highway requirements
8	Road Markings	Lane markings are provided as per Highway requirement
9	Bus Bays /shelters	28 Nos.
10	Highway Lighting	Provided as per requirement
11	Avenue plantation	Provided

3.3 Pavement Condition

Pavement condition survey was carried out on the project road. The criteria adopted for the classification of condition of the pavement is as per of IRC 83-2018.

Table 3.2: Pavement condition summary

Chainage From (Km.)	Chainage To (Km.)	Length (Kms.)	Condition
465+500	524+690	59.190	Good

Km. 474+004

Km. 475+623

Km. 517.889

Km. 521+775

Figure 3.1: Representative Photographs of Pavement Condition.

CHAPTER 4. INVENTORY AND CONDITION OF STRUCTURES

4.1 General Assessment and Condition of the structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guidelines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

There are 02 Nos. of Major Bridges, 16 Nos. of Minor Bridges, 1 No of ROB, 12 Nos. of Underpasses (02-LVUP, 09-VUP & 01-PUP), 01 Nos. of Grade separator, 65 Nos. of Pipe culverts and 28 Nos. of Slab/ Box culverts are there along this project road.

Table 4.1: List of Structures

S.No.	Type of Structure	Numbers
1	Major bridges	02
2	Minor Bridge	16
3	VUP	09
4	LVUP	02
5	PUP	01
6	Grade separator	01
7	ROB	01
8	Pipe culverts	65
9	Slab/ Box Culverts	28

The Super Structure of Major bridges is of RCC Girder/ Solid slab resting on RCC wall type Piers and Abutments with open foundation. The Super Structure of Minor bridges is of RCC solid slab/RCC Girder and the substructures are of PCC/RCC conventional wall type supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 1**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Condition of most of the culverts is fair except in few locations. Detailed inventory and condition survey of culverts are given in **ANNEXURE 2**.

4.3 Details of Major Bridges

The total length of the Major bridge at Km. 485+730 is 186.0m with 8 spans. The superstructure consists of RCC/PSC I Girder. Each Pier and Abutment is regular RCC wall type. Open foundations have been constructed for all Piers and Abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC crash barriers have been provided on both sides of the deck.

The total length of the Major bridge at Km. 493+285 is 120.0m with 4 spans. The Superstructure consists of PSC I Girder. Each Pier is regular RCC circular type Abutment is of RCC wall type structure. Open foundations have been constructed for all Piers and Abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC railings have been provided on both sides of the deck.

Table 4.2: List of Major Bridge

S.No.	Chainage (Km.)	Span (Nos.x m)	Total Length of Bridge (m)
1	485+730	2x16.5+6x25.5	186.0
2	493+285	4 x 30.0	120.0

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, cleaning drainage spouts are to be carried out

Km. 485+730

Km. 493+285

Figure 4.1: Representative Photographs of Overall view of the major bridge

4.4 Details of Road Over Bridge (ROB)

The total length of the ROB at Km 471+516 is 181m with 5 spans. The superstructure consists of PSC Girder & Composite girder. Each pier and whereas abutment is regular RCC wall type abutment. Pile foundations have been constructed for all piers and abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal/pot ptf type. RCC railings have been provided on both sides of the deck.

Table 4.3: Details of ROB

S.No.	Chainage (Km.)	Span (Nos. X m)	Total Length of Structures (m)
1	471+516	1x30+1x46+2x37+1x31	181.000

4.5 Details of Minor Bridges

There are 16 minor bridges in the project stretch. The type of superstructure for minor bridges is RCC Box type and the substructure is PCC/RCC conventional wall type supported on open foundations. Expansion joints are buried type/Strip seal and bearings are of tar paper/ elastomeric bearings. RCC crash barriers are provided for most of the structures.

Table 4.4: Inventory of Minor Bridges

S.No.	Chainage (Km.)	Span (m)	Total Length of Bridge (m)	Description
1	465+694	1x9.0	9.000	It has RCC Box structure. It has RCC crash barrier/Railing, bituminous wearing coat.

Km. 487+508

Km. 501+114

Figure 4.2: Representative photographs of Minor Bridges.

4.6 Details of Underpass

There are 12 Underpasses (02-LVUP, 09-VUP & 01-PUP) and one Grade Separator in the project stretch. The type of superstructure for underpass/Flyover is RCC/PSC I Girder/RCC Box type and the substructure is PCC/RCC conventional wall type supported on open foundations. Expansion joints are buried type/Strip seal and bearings are Tar paper and elastomeric bearings. RCC crash barriers are provided on all structures.

Table 4.5: Inventory of Underpass/Flyovers

S.No.	Chainage (Km.)	Types	Span (Nos.Xm.)	Total Length of Bridge (m)	Description
1	466+365	LVUP	1x10.5	10.500	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
2	468+026	VUP	2x12	24.000	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
3	474+004	VUP	1x12	12.000	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
4	476+24	VUP	1x10.5	10.500	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
5	477+589	VUP	1x12	12.000	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
6	482+200	VUP	2x12	24.000	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
7	492+205	VUP	1x12	12.000	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
8	501+942	VUP	1x12	12.000	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
9	507+659	VUP	1x12	12.000	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
10	514+960	PUP	1x7.0	7.000	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.

4.7 Details of Culverts:

The culverts observed along the project road are mainly of two types viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent way cleaning is required. In general, the condition of all the structures is found satisfactory. Details of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 2**.

4.7.1. Slab/Box Culverts

There are 28 Nos. of slab/Box culvert in the project stretch. The details of the culverts are as given below.

Table 4.6: List of Slab/Box Culverts

S.No.	Chainage (Km.)	Span (m)	Vent Size (m)
1	0+137	1 x 5.7 x 6.06	6.060
2	466+374	1 x 2 x 2.1	2.100
3	466+830	1 x 6 x 4.1	4.100
4	468+722	1 x 4 x 2.5	2.500

28	521+775	1 x 5.1 x 3.373	3.373

4.7.2. Condition of the Slab/Box Culverts:

The general condition of above Box/slab culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

4.7.3. General Description of the Pipe Culverts

There are 65 Nos. of pipe culverts in the project stretch. The details of the culverts are as given below.

Table 4.7: List of Pipe Culverts

Km. 501+060

Km. 489+250

Km. 524.207

Figure 4.4: Representative photographs of Pipe Culverts

The culverts are in fair condition and can be retained in the present condition with following repairs/rehabilitation measures.

- Chocked culverts must be cleared.
- Debris and garbage near outside the vents must be removed.

CHAPTER 5. REVIEW OF PAVEMENT DESIGN

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, pavement condition and CA provisions.

5.2 Pavement design crust thickness

The Pavement Design shall be carried out in accordance with Indian Roads Congress guidelines. The pavement is designed in accordance with IRC: 58 -2015 “Guidelines for the Design of Plain Jointed Rigid Pavements for highways”, IRC: SP 84 -2014, IRC: 15-2011 “Construction Concrete Road (FOURTH REVISION)” and relevant clauses of schedule B of the EPC agreement. Pavement crust thickness for main carriageway as per pavement design report summarized below.

Table 5.1: Rigid Pavement Design for Main carriageway

Description	Design/Adopted Parameters
CBR of sub grade	7 %
Two-way commercial traffic volume per day	3622
Design life in years	30
Pavement Quality Concrete (PQC) – (mm)	270
Dry Lean Concrete (DLC) – (mm)	150
Drainage Layer (GSB) - (mm)	150
Diameter of Dowel Bar (mm)	36
Length of Dowel Bar (mm)	450
Spacing of Dowel Bars (mm)	300
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	580

As per schedule D, (**Annexure-I**), clause 2, pavements for Slip road/Service road shall be flexible pavement and designed as per provision of design manual IRC: SP: 84:2014. The design traffic in case of service road shall be ten million standard axles as per Cl: 5.5.5 of IRC: SP: 84:2014. The crust composition shall be designed in accordance with the IRC: 37. “Guidelines for the Design of Flexible Pavements”.

Table 5.2: Flexible Pavement for service road

S.No.	Description/ Pavement layer	Design/Adopted Parameters
1	Sub Grade CBR (%)	8 %
2	Design Life (Years)	15 years for non-bituminous
3	Design Traffic (MSA)	10 MSA
4	Surface course (BC)	40mm
5	Binder course (DBM)	60 mm
6	Base course (WMM)	250 mm
7	Sub Base course (GSB)	200 mm

The Pavement crust has been designed according to IRC specification and found in order, the adopted/ Constructed pavement layer thickness is adequately provided than actual/ designed thickness.

5.3 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC for service roads. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement for Service Roads – Proposed on or before 2027 and 2033.

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction. (As per IRC 58-2015).

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 6.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety Audit

6.2 Existing Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following Table 6.2.

Table 6.2: Details of Road Furniture

S.No.	Item Description		Status	Condition
1	Sign Boards	<ul style="list-style-type: none"> • Chevron Signs • Village sign boards • Information Boards • Other Sign Boards • Gantry Sign Boards 	Available as per site requirement	Good
2	Road Marking	Studs & Lane marking	Available as per	Good

S.No.	Item Description		Status	Condition
			site requirement	
3	Metal Beam Crash Barriers	At High embankments & Bridge Approaches	Available as per site requirement	Good
4	Median Kerb	Along the Project Highway	Provided as per IRC SP:84-2014	Good
5	Road studs & Solar Blinkers	Along the Project Highway	Provided as per IRC SP:84-2014	Good

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

Km. 482+020

Km. 482+200

Km. 496+477

Km. 505+878

Figure 6.1: Representative photographs during Road Safety Audit

6.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is highly appreciated during the maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There is one toll Plaza on the project road at Km510+865. The width of each toll lane is provided 3.2 m, except for the lane for over dimensioned vehicles, where it is 4.5 m. between each toll lane of the toll plaza, traffic islands is constructed to accommodate tollbooth. Protective barriers of reinforced concrete and traffic impact attenuators is placed at the front of each island to prevent out of control approaching vehicles crashing into the toll booth. The canopy is provided for weather protection to toll operators, drivers and facilities. The canopy is designed aesthetically pleasing with cylindrical support columns located at traffic island so that there is no restriction on visibility and traffic movement. Total 7 Nos. toll booths are provided in toll plaza.

Toll Plaza is updated to ETC Lane system as per the Change of Scope Order issued to the Concessionaire.

7.2 Tolling Equipment and Control Room Equipment

List of equipment provided at toll plaza and control room is given below.

Table 7.1: List of Equipment Toll Plaza and Control Room

S.No	Particulars	Quantity
1	Toll plaza Building	1
2	Toll Booths	7
3	Electrical Room	1
4	Generator Room	
5	Generators	1
6	ETC RFID Transiver near pay axis mounted on canopy	12
7	Electronic Enclosure	8
8	Lane Controller with industrial PC	8
9	AVC including sensor loop detector	10
10	Used fare display with mounting pole	10
11	Automatic Barrier Gate	9
12	Overhead Lane Status	10
13	Customized Industrial Grade Keyboard	8
14	Thermal receipt Printer	8
15	Barcode Reader with Stand	8
16	Violation light & alarm (on Existing Pole) and Foot switch in Booth	1
17	Booth CCTV camera with Voice Recording	10
18	Intercom slave Unit in booth	8
19	Medium speed weight in Motion	10
	Control Room	
1.	Plaza Servers in Hot standby Configuration	1
2.	Static Weight Bridge	2
3.	Network Printer	1
4.	8 port Network switches (Layer 1)	12

S.No	Particulars	Quantity
5.	28 Port Network Switch(Layer 2)	2
6.	Internet router for Connection to the CCH	1
7.	UPS system as require for Complete Hybrid ETC Toll Plaza System	3
8.	55" LED Display for CCTV Monitoring	1
9.	Network Video Recorder (NVR) for CCTV recording	1
10.	CCTV Cameras for plaza building surveillance (server from, control room, Cash Up Room Admin)	5
11.	Intercom Master Unit in Control room-10 Channel (For<=8 Lanes)	1

7.3 Vehicles

The list of vehicles, which were observed at site, for operation of Highway and Toll Plaza are presented below.

Table 7.2: List of Vehicles

S.No.	Vehicle Type	Toll Plaza
1	Patrol Vehicle	1 No.
2	Ambulance	1 No.
3	Crane	1 No.

Figure 7.1: Photographs of Toll Plaza at Km. 511+000

CHAPTER 8. SCHEDULE OF ANNUITY PAYMENTS

8.1 Hybrid Annuity Model (HAM)

Hybrid annuity model is the PPP model which allows the payment of 40% of the Project cost during construction period based on progress milestones set forth by Authority to Concessionaire and Payment of 60% to the Concessionaire Biannually with the Interest during the balance concession period.

8.2 Payment during Construction

As per the provisions of Article 23 of the Concession Agreement, 40% of the Bid Project Cost adjusted with Price Index in accordance with Clause 23.2.3 of the CA, shall be paid during the Construction Period. Amount payable during construction period shall be paid in five equal installments upon achieving the following Project Milestones.

Table 8.1: Schedule of Payment Milestones

S.No.	Project Milestone No	Criteria for releasing the Payment
1	Project Milestone I	On Achievement of 10% of Physical Progress
2	Project Milestone II	On Achievement of 30% of Physical Progress
3	Project Milestone III	On Achievement of 50% of Physical Progress
4	Project Milestone IV	On Achievement of 75% of Physical Progress
5	Project Milestone V	On Achievement of 90% of Physical Progress

During the Operation Period, remaining 60% of the balance Completion Cost shall be paid in 30 Annuities each Annuity payable biannually. Each Annuity amount shall be based on the percentages of the balance Completion Cost mentioned in 23.6.3 of the Concession Agreement. During the Operation Period following payment components are payable.

- Annuity Payment as per the Annuity Payment Schedule provided in 23.6.3 of the Concession Agreement.
- Interest on the balance amount to be paid at an interest rate equal to the applicable Bank Rate Plus 3%.
- O&M Payment as a lump sum amount as per Clause 23.7.1 of the Concession Agreement.

Details of Annuity payments are as below.

Table 8.2: Schedule of Annuity Payments

S.No.	Following the COD	% of Completion Cost remaining to be paid on COD	Annuity Due date	Annuity Paid date
1	Annuity No 1	2.10%	18.05.2020	21-May-20
2	Annuity No 2	2.17%	18.11.2020	3-Dec-20
3	Annuity No 3	2.24%	18.05.2021	
4	Annuity No 4	2.31%	18.11.2021	
5	Annuity No 5	2.38%	18.05.2022	
6	Annuity No 6	2.45%	18.11.2022	
7	Annuity No 7	2.52%	18.05.2023	
8	Annuity No 8	2.60%	18.11.2023	

S.No.	Following the COD	% of Completion Cost remaining to be paid on COD	Annuity Due date	Annuity Paid date
9	Annuity No 9	2.68%	18.05.2024	
10	Annuity No 10	2.76%	18.11.2024	
11	Annuity No 11	2.84%	18.05.2025	
12	Annuity No 12	2.93%	18.11.2025	
13	Annuity No 13	3.02%	18.05.2026	
14	Annuity No 14	3.11%	18.11.2026

21	Annuity No 21	3.83%	18.05.2030	
22	Annuity No 22	3.94%	18.11.2030	
23	Annuity No 23	4.06%	18.05.2031	
24	Annuity No 24	4.18%	18.11.2031	
25	Annuity No 25	4.25%	18.05.2032	
26	Annuity No 26	4.25%	18.11.2032	
27	Annuity No 27	4.44%	18.05.2033	
28	Annuity No 28	4.71%	18.11.2033	
29	Annuity No 29	4.75%	18.05.2034	
30	Annuity No 30	4.75%	18.11.2034	

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of CA, the Concessionaire will operate and maintain the Project roads by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual Inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz. pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

9.3 Operations

9.3.1. Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- i. Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- ii. carrying out preventive and periodic maintenance of the Project road;
- iii. undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- iv. Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- v. Functioning of the lighting system;
- vi. Functioning of the Patrolling System

- vii. Functioning of rescue and medical aid services
- viii. Ambulance as and when required
- ix. Functioning of the Project Facilities
- x. Administrative, Operational and Maintenance Base Camp
- xi. Truck Lay byes
- xii. Pickup Bus stops / Bus Bays
- xiii. protection of the environment and provision of equipment and materials therefor;
- xiv. Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- xv. complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plazas

There are four lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the Escrow Account. In case of ETC system, Toll collection is connected with Network system and directly deposited into the Escrow account.

9.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

9.5.1. Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement as well as rigid pavement are in good condition and hence does not require any immediate or preventive interventions.

9.5.2. Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

9.5.3. Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road. The details of periodic maintenance schedule are given below.

Table 9.1: Schedule and status of for Periodic Maintenance

Description	Schedule of Major Maintenance	Status of Major Maintenance
1 st Periodic Maintenance	2027	Planned to execute
2 nd Periodic Maintenance	2034	Planned to execute

The details of Routine Maintenance and Periodic/Major maintenance are enclosed in **ANNEXURE 3**

9.5.4. Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sandstorms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- Culvert and bridge repairs
- Retaining wall repairs and construction
- Construction of Diversions
- Floodway repairs; and
- Flood damage restoration works, etc.

9.6 Review of Test Reports

9.6.1. Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

Further it is to be noted that during O&M period, the roughness value shall not exceed 2750 mm/Km in accordance with schedule k (a)(ii), on review of documents, no NCRs were noticed pertinent to riding quality.

9.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 3**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance	Incidental maintenance	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	2.009	2.122		2.80	6.93
2021	2.069	2.185		2.88	7.14
2022	2.131	2.251		2.97	7.35
2023	2.195	2.318		3.06	7.57
2024	2.261	2.388		3.15	7.80
2025	2.328	2.459		3.24	8.03
2026	2.398	2.533		3.34	8.27
2027	2.470	2.609	22.89	3.44	31.41
2028	2.544	2.688		3.54	8.78
2029	2.621	2.768		3.65	9.04
2030	2.699	2.851		3.76	9.31
2031	2.780	2.937		3.87	9.59
2032	2.864	3.025		3.99	9.88
2033	2.950	3.116	29.53	4.11	39.70
2034	3.038	3.209		4.23	10.48
2035	1.998	2.110		2.78	6.89
Total	39.355	41.569	52.42	54.81	188.15

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 General: Scope of Work (Article 2)

Article 2 of the CA provides the scope of work, which includes the following.

- Operation and Maintenance of the Project Highway on the Site set forth in Schedule A and as specified in Schedule B together with provision of Project Facilities as specified in Schedule C, and in conformity with the Specifications and Standards set forth in Schedule D;
- collection of Fee from the Users of the Project; subject and in accordance with the provisions of the Concession Agreement;
- performance and fulfillment of all other obligations of the Contractor in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Contractor under this Agreement

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 4**.

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfill its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the Concession Agreement

10.5 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 30 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 30% of the Total Project Cost.

10.6 Tests (Clause 13.3)

For determining that the Project, conforms to the Maintenance Requirements, the Independent Engineer shall require the Concessionaire (Concessionaire shall in turn require the Contractor) to carry out, or cause to be carried out, tests specified by it in accordance with Good Industry Practice. One half of the costs incurred on such tests, and to the extent certified by the Independent Engineer as reasonable, shall be reimbursed by the Authority to the Concessionaire

10.7 Provisional Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA. Provisional Certificate is enclosed as **ANNEXURE 5**

10.8 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire.

10.9 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of Scope (Article 16)

Change of scope proposals that were initiated during construction period and consented by the HAI are provided in **ANNEXURE 7**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices

- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (The “**Maintenance Requirements**”).

10.13 Maintenance Manual (Clause 17.3)

No later than 90 (ninety) days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 2% (two percent) of the performance security, and
- 0.1% (zero decimal one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Payment of Bid Project Cost (Article 23)

The Authority agrees to pay 40% of the Bid Project Cost in five installments against the achievement of Project Milestones specified in Clause 23.4 of the Concession Agreement and the amount shall be adjusted with Price index.

Remaining balance completion cost shall be paid as per the % of balance completion cost biannually from the date of COD. Percentage of amounts payable for each Annuity is specified in 23.6.3 of the Concession Agreement.

10.18 Change in Law (Article 35)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11.INSURANCE

11.1 Details of Insurance:

As per clause 26.1 of the CA, the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Copies of Insurance Policies are enclosed as **ANNEXURE 6**

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of Property
			From	To	
Fire Industrial All Risk Policy	The Oriental Insurance Co Ltd	171200/11/20 21/227	22.11.2020	21.11.2021	Roads, including service Roads, structures, Bridges, underpasses etc.
Standard Fire & Special Perils Policy	The Oriental Insurance Co Ltd	171200/11/20 21/228	26.11.2020	25.11.2021	Four Laning of Wardha-Butibori section
Electronic Equipment Insurance Policy	Oriental Insurance Company Ltd	171200/44/20 21/36	08.09.2020	07.09.2021	Electronic equipment provided for Road and Bridges stretch Wardha to Butibori
Employees Compensation Insurance Policy	HDFC ERGO General Insurance Co Ltd	31142033841 08600000	02.05.2020	01.05.2021	All Categories employees of DBL & Sub-Contractor engaged in DBL

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The Pavement condition for the overall project is good. RCC drains are constructed in Built up locations and earthen drains in rural locations which facilitates, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. Major structural defects were not noticed. General condition of Culverts is good. Vegetation growth is observed in vent ways of Box and Hume Pipe culverts and they are being cleared during regular maintenance period.

12.4 Project Facilities

One Toll Plaza is constructed at Km. 510+865 and the same is operational. Toll Plaza is operated by ETC Toll collection system and connected by network system monitored in administrative building. Bus bays are in fair condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained well. Highway lighting is provided at toll plaza locations and the same is found functional.

12.5 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 84-2014. The condition of sign boards & other road appurtenances like metal beam crash barriers is fair.

12.6 Maintenance

- Routine maintenance is being carried out by O&M contractor effectively, based on documents reviewed, time to time observations made by client/Authority are being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance is scheduled in the year 2027.

12.7 Epilogue:

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

2. Opening of Financial proposal on 22.03.2017

Sir,

With Reference to NHA's Request for Proposal for "Four Laning of Wardha-Butibori Section of NH-361 from km 465.500 to km 524.690 (design length 59.190 km) under NH (O) in the State of Maharashtra on Hybrid Annuity Mode" and considering you proposal in this regard submitted on 23.02.2017 vide reference no. (i), NHA hereby accepts your proposal quoting Bid Project Cost of Rs. 1065.51 crore (Rupees One Thousand Sixty Five Crore and Fifty One Lakh Only) and first year O&M of Rs. 3.00 Crore (Rupees Three Crore Only) as included in Appendix- 1B of your document and declares you as the "Selected Bidder" as per the provisions of RFP Documents.

2. In accordance with the clause 3.8.4 of the RFP document, you are requested to sign the duplicate copy of the LOA and return the same as your acknowledgement within 7 (Seven) days of the receipt of the LOA, Thereafter you are required to execute the concession Agreement within 45 (Forty five) days from the date of issue of LOA as specified in Clause 1.3 of RFP.

3. Further, As per RFP document, you are required to incorporate a Special Purpose Vehicle solely for the purpose of domiciling the project (the "Concessionaire"). The Concessionaire For due and faithful performance of its obligations during the Concession Period shall furnish a Performance Security by way of irrevocable and unconditional Bank guarantee of Rs 53.28 Crores (Rupees Fifty Three Crore Twenty Eight Lakh only) within a period of the 30 days from the date of signing of the Concession Agreement. Till the time the Concessionaire provides NHA with the performance Security the Bid Security shall remain in full Force and Effect (refer Clause 4.1.2 and Clause of Article 9 of RFP).

4. You are required to comply with all the terms and conditions set forth in the RFP Documents. In case of any default on your part, you shall be liable for action as stated in the Bid Documents.

(Ashish Asati)
General Manager (Tech)
(Maharashtra Division)

3	508+320	514+660	BHS	6.340	This section is considered in Pre-COD. Balance work highlighted in <u>Punch List-A</u>
4	515+260	524+690	BHS	9.430	This section is considered in Pre-COD. Balance work highlighted in <u>Punch List-A</u>
4-lane operational length (km) considered for Pre-COD				52.095	
Total length of Project Highway (km)				59.190	

4. As per NHAI Policy circular dated 21.12.2015, the Independent Engineer vide letter no. 7253; dtd: 23.10.2019, has submitted the proposal regarding concurrence for issuance of Provisional Completion Certificate under clause 14.3 of the Concession Agreement.
5. Further, the RO-Nagpur has inspected project highway on 12.11.2019 and vide letter no 2104; dtd: 15.11.2019 has issued requisite concurrence to IE with instructions to ensure balance items of list-C and compliance of observation of Safety Consultant.
6. Further, the Concessionaire has confirmed compliance and the Independent Engineer has inspected project highway on 19.11.2019 and observed that all the pending works are now satisfactorily completed by the Concessionaire.
7. In view of above, the Independent Engineer is of opinion that you are now eligible for issuance of provisional completion certification in accordance with article 14 of CA. Hence, the Independent Engineer is herewith issuing Provisional Completion Certificate (enclosed in Appendix-I) in pursuant to clause 14.3 of the Concession Agreement along with followings.
- The Project Highway has been constructed as per scope defined under Schedule B & C, in conformity with the technical specifications and standards set forth in Schedule-D of the Concession Agreement. The detailed summary against each item of the Schedule B & C is shown in Annexure-I. The List of minor outstanding works of Pre-COD section (forming “PUNCH LIST-A”) is attached as Appendix-II. As per clause 14.4.1 of the Concession Agreement, the works in PUNCH LIST-A have to be completed by the Concessionaire within 90 days of issuance of Provisional Certificate. Also, the list of outstanding works for section is not considered in Pre-COD, annexed as LIST-B of Appendix-II.
 - The Concessionaire has carried out all the tests successfully in accordance with clause 2 of schedule-I & clause 14.1 of the CA in presence of Independent Engineer and the representative of Authority. The Concessionaire vide letter no: DBL/WBHPL/IE/2019/1506; dtd:04.10.2019, has submitted test reports as

 S.M. GHOSH
 INDEPENDENT ENGINEER

- annexed in Annexure-II (a), Annexure-II (b), Annexure-II (c), Annexure-II (d), Annexure-II (e) -
- c. The Environmental Audit as per the provisions of clause 2.9 of Schedule-I, has been conducted by Environmental Expert and found that Concessionaire has complied with the Applicable Law and Permits and the same confirms to Good Industry Practice. The Concessionaire vide letter no: DBL WBHPL/IE/2019/1430 ; dtd: 24.08.2019, has submitted Environmental Audit Report which annexed as Annexure-II (f).
- d. As directed by PD-Yavatmal vide letter no. 2278; dtd: 14.11.2019, the Safety Consultant M/s Design Aid has carried out Safety Audit during Pre-COD stage as per IRC SP-88-2009 and submitted Safety Audit report vide mail dtd: 06.11.2019 enclosed as Annexure-II (g) containing their observations to enhance safety on Pre-COD section of Project Highway. Further, the Concessionaire vide letter no. 1547; dtd: 11.11.2019, has submitted compliance report for the same. IE during visit 19.11.2019, has inspected project highway and observed that the Concessionaire has successfully complied all observations of the Safety Consultants pertaining to Safety of Road Users.
- e. The Independent Engineer has issued total 11 nos. of Non-Conformance Reports during the construction period and the Concessionaire has been satisfactorily complied and rectified all deficiencies highlighted in NCRs issued by the Independent Engineer. Accordingly, all NCRs were closed by the Independent Engineer. Copy of all NCRs with summary is annexed as Annexure-V.
- f. The Concessionaire has achieved Project Mile Stone-I, I & III well in advance before schedule date in accordance with Schedule-G of CA. (Refer Annexure-III).
- g. The Concessionaire has submitted the consolidated Change of Scope proposal for works completed / under progress / to be taken up and all COS proposals were reviewed by the Independent Engineer as per Article-16 of the Concession Agreement. The summary & Status of COS proposals with all correspondences are enclosed as Annexure-IV.
- h. The Concessionaire has mobilised incident management vehicles i.e. Ambulance, Patrolling Vehicle & Crane at toll plaza. It is pertinent to mention herein that the Concessionaire has undertaken to mobilise incident management vehicle as per NHAI policy circular no. 12.19; dtd: 20.03.2018 within period of 96 days from issuance of Pre-COD.
- i. The Concessionaire has applied for electrical connections at all such locations where work is in progress by the Electricity Department. However, Concessionaire has undertaken for requisite lightening at completed section through DG set. (refer Annexure-VI)
- j. The integration of toll equipment checked and found in order. The toll plaza is now ready for operation as per IHMCL Guidelines. However, the Concessionaire has undertaken to ensure followings till & at time of handing over toll plaza to toll operation agency (appointed by NHAI):
- To calibrate Static Weigh Bridge (SWB) & Medium Speed Weigh in Motion (MS WIM) by Weight & Measurement Department.
 - To keep watch and ward of equipment and system installed at the Toll Plazas. To conduct all requisite tests as per NHAI Policy/Guidelines, once it introduced by the Authority.
- k. As per clause 17.3.1 of the Concession Agreement, the Concessionaire vide letter no: WBHPL/IE/ 2019/1422; dtd: 17.08.2019 has submitted Maintenance Manual which has been reviewed by IE. (Refer Annexure-VII)
- l. After issuance of Provisional Certificate, the Concessionaire shall ensure following with immediate effect.
- As per clause 17.1.2 of the Concession Agreement "The Concessionaire shall remove promptly from the Project Highway all surplus construction machinery and material, waste materials (including hazardous materials and waste water), rubbish and other debris (including without limitation, accident debris) and keep the Project Highway in a clear, tidy and orderly condition and in conformity with Applicable Laws, Applicable

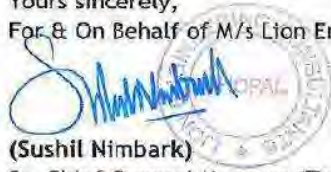

- Permits and Good Industry Practice. For Avoidance of doubt, it is to be agreed that the debris and material excavated shall be carried out and deposited at a place to decide in consultation with Authority/Independent Engineer”
- ii. In pursuant to Article-17 of the Concession Agreement, the Concessionaire, during the O&M Period, shall operate and maintain the project highway in accordance with Concession Agreement, applicable laws and applicable permits, and confirm to specification & standards and good industry practices.
 - iii. In pursuant to clause 10.5 of the Concession Agreement, “The Concessionaire, during Concession Period, shall protect the site from any and all occupations, encroachment or Encumbrance and shall not place or create nor permit any Contractor or other person claiming through or under the Concessionaire to place or create any Encumbrance or security interest over all or any part of the site or project assets or on any rights of the Concessionaire therein or under this Agreement, save and except as otherwise expressly set forth in the Concession Agreement.”
 - iv. As per clause 17.16 of the Concession Agreement, “The Concessionaire shall not undertake or permit any form of commercial advertising, display or hoarding at any place on the site.
 - v. The Concessionaire shall ensure traffic regulation on the Project in accordance with Applicable Laws, and subject to the supervision and control of the State authorities [or a substitute thereof] empowered in this behalf under Applicable Laws.
 - vi. All obligations pertaining to operation & maintenance of the project highway as per relevant provisions of the Concession Agreement.

Therefore, in the view of the above and as per the provisions of clause 14.3 of the Concession Agreement, the Independent Engineer herewith issuing Provisional Completion Certificate to the Concessionaire (annexed as **Appendix-I**) with effective from 20.11.2019.

Thanking you and assuring our best services at all times, we remain

Thanking You,
Yours sincerely,
For & On Behalf of M/s Lion Engineering Consultants,

(Sushil Nimbark)

PROVISIONAL CERTIFICATE

1. We, M/S Lion Engineering Consultants, Bhopal, acting as the Independent Engineer under and in accordance with the Concession Agreement dated 09th June-2017, for development and operation of the Four Laning of the Wardha-Butibori section of NH-361 from km 465.500 to km 524.690 (design length 59.190 km) under NH(O) in the State of Maharashtra on design, build, operate and transfer (the "Hybrid Annuity") basis through *DBL WARDHA BUTIBORI HIGHWAYS PRIVATE LIMITED*, hereby certify that the Tests specified in Article 14 and Schedule-I of the Agreement have been undertaken for the project section of Existing NH-361 from Km. 465+500 to km 467+525, km 472+900 to km 507+200, km 508+320 to km 514+660 and km 515+260 to km 524+690 of the Project to determine compliance thereof with the provisions of the Agreement.
2. Construction Works forming part of the project/section of the project that were found to be incomplete and/or deficient have been specified in the Punch list-A appended hereto, and the Concessionaire has agreed and accepted that it shall complete and/or rectify all such works in the time and manner set forth in the Agreement. Some of the incomplete works (LIST-B) have been delayed as a result of reasons attributable to Authority or due to Force Majeure and the Provisional Certificate cannot be withheld on this account. Though the remaining incomplete works have been delayed as a result of reasons not attributable to the Concessionaire. We are satisfied that having regard to the nature and extent of such incomplete works, it would not be prudent to withhold commercial operation of the section Km. 465+500 to km 467+525, km 472+900 to km 507+200, km 508+320 to km 514+660 and km 515+260 to km 524+690 of the project, pending completion thereof.
3. In view of the foregoing We are satisfied that the section from Km. 465+500 to km 467+525, km 472+900 to km 507+200, km 508+320 to km 514+660 and km 515+260 to km 524+690 of the Project can be safely and reliably placed in commercial service of the users thereof, and in terms of the Agreement, the section of the Project is hereby provisionally declared fit for entry into operation on this the 20th day of November 2019.

CHAPTER 1. INTRODUCTION

1.1 General

DBL MAHAGAON YAVATMAL HIGHWAYS PRIVATE LIMITED (herein after referred to as the “Concessionaire”), had augmented the existing two-lane road Section of NH 361 from Mahagaon to Yavatmal in the state of Maharashtra, in accordance with the provisions of the Concession Agreement (CA) executed with National Highways Authority of India (herein after referred to as the “Authority”) on 9th June 2017.

Project road starts at Km. 320+580 located near Mahagaon and ends at Km. 400+575 near Yavatmal on NH-361. The design length of the Project is 79.995 Km. The Project Highway passes through the urban stretches of Amboda, Lonbhel, Kolwan, Bhamb, Arjuna, Hivari and Kinhi located along the Project Corridor. Project location map is provided at **Figure 1.1.**

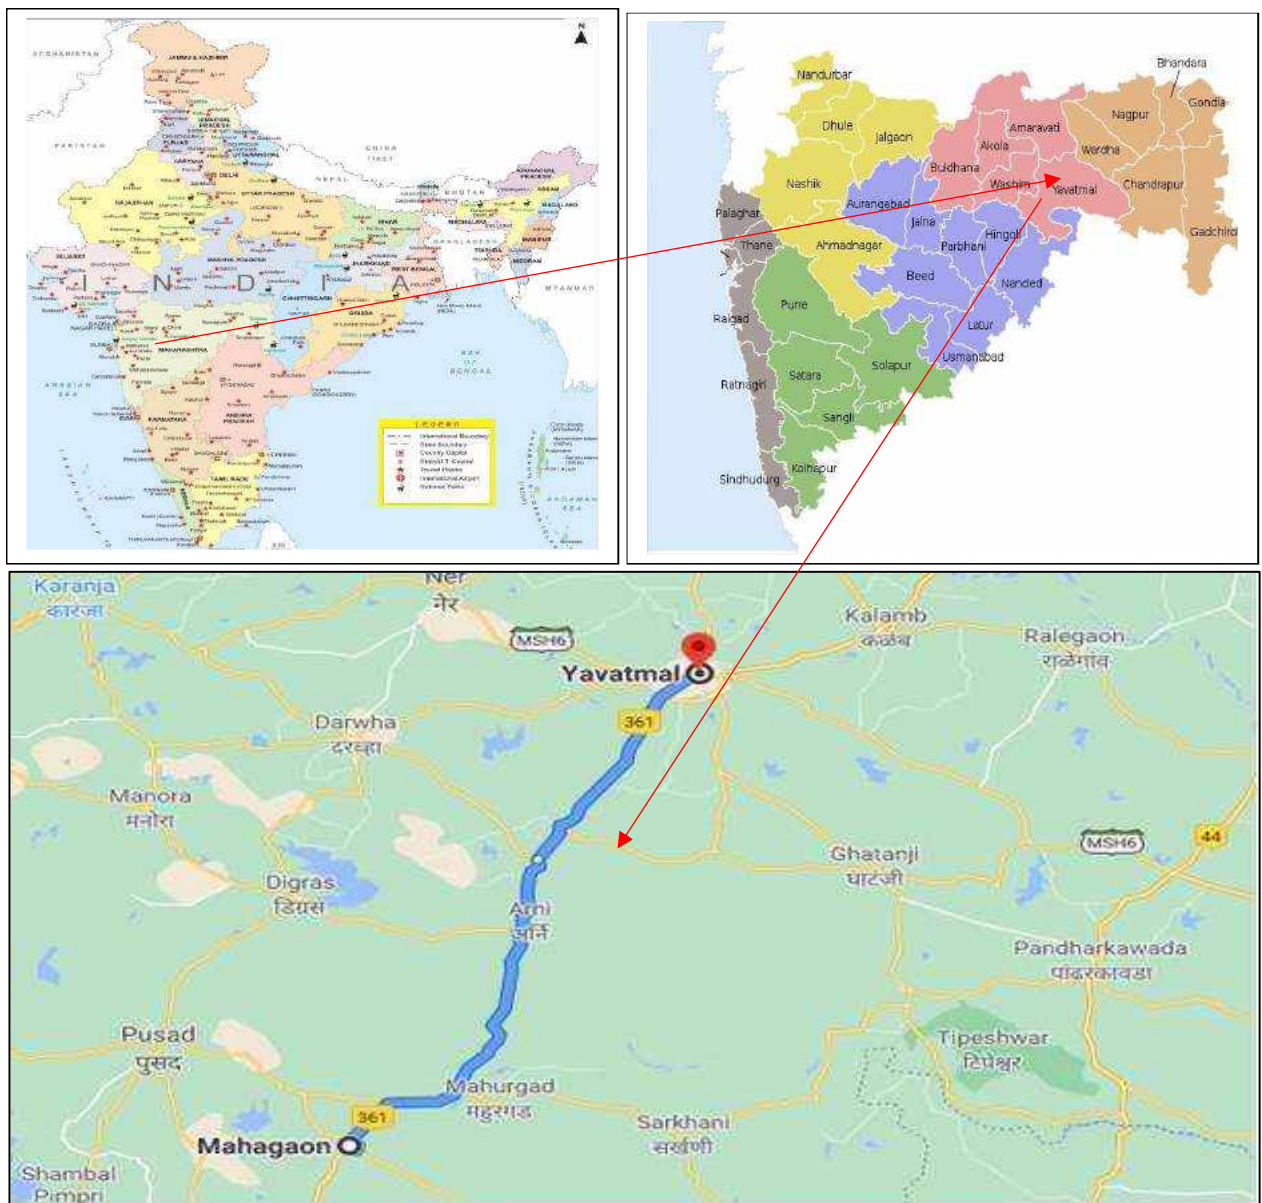

Figure 1.1: Project Location Map

SHREM INFRAVENTURE PVT. LTD. (SIPL) acquired DBL MAHAGAON YAVATMAL HIGHWAYS PRIVATE LIMITED vide agreement dated 26 March 2018.

SHREM FINANCIAL PVT. LTD (SFPL). appointed RUKY Projects Pvt. Ltd. as consultant for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the annuity payments received and future schedule of annuity payments.

1.2 The Project Data

Table 1.1: Project Data

S. No.	Particulars	Details
1	Name of the project	Four Laning of Mahagaon to Yavatmal Section of NH-361 from Km.320.580 to Km.400.575 (Design Length79.995) in the State of Maharashtra under NHDP-IV on Hybrid Annuity Mode.
2	Road Type	National Highway
3	Name of the Authority	National Highways Authority of India
4	Name of the Concessionaire	DBL Mahagaon Yavatmal Highways Private Limited
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Date of LOA	28.03.2017
7	Date of Agreement	09.06.2017
8	Design Length as per Schedule B of CA	79.995 Kms.
9	Actual Length Constructed	72.089 Kms.
10	Project Lane Configuration	Four Lane
11	Bid Project Cost	1160.64
12	EPC Cost	857.76Cr
13	Nature of contract	Hybrid Annuity Mode
14	Toll collected by	The Authority
15	Concession Period	15 years from the Commercial Operation Date (COD)
16	Appointed date	28.02.2018
17	Concession End Date	22.05.2035
18	Construction Period	910 days from the Appointed Date
19	Schedule Completion Date	27.02.2020
20	Date of issuance of Provisional Certificate (COD)	23.05.2020
21	Bonus on early completion	Applicable as per Cl.23.5 of CA
22	Date of issuance of Completion Certificate	---
23	Annuity Amount	As per Cl.23.4 and Cl.23.6.3 of CA
24	Total Number of Annuities payable during concession period	30 Nos.
25	First Annuity Payment Date	23.11.2020
26	Total Number of Annuity Payments received as on January 2021	1 No.

1.3 Scope of Consultancy Services

The scope of work includes providing Technical Due Diligence of the Project Highway and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per schedule B and Schedule C of Concession Agreement (CA) including Change of scope are listed in the following Table.

Table 2.1: Salient Features

S. No.	Particulars	As per CA	As per COS	As per Site
1	Total Length of Main Carriageway with Rigid Pavement (Considering both sides)	79.995 Kms.	---	79.995 Kms.
2	Total Length of Main Carriageway with Flexible Pavement (Considering both sides)	---	---	---
3	Total length of Service Roads	14.59 Kms.	0.750 Km.	15.340 Kms.
4	Total length of Slip Roads	10.54 Kms.	---	10.54 Kms.
5	No of Toll Plazas	1 No.	---	1 No.
6	No of Bus Bays with Bus Shelters	38 Nos.	---	38 Nos.
7	Number of Truck Lay Bays	1 No.	---	1 No.
8	No of Rest Areas	1 No.	---	1 No.
9	No of Major Junctions	0 Nos.	---	7 Nos.*
10	No of Minor Junctions	50 Nos.	---	45 Nos.*
11	No of Vehicular underpasses	5 Nos.	---	5 Nos.
12	No of Light Vehicular underpasses	5 Nos.	---	5 Nos.
13	No of Small Vehicular Underpass	Nil	1 No	1 No
14	No of Pedestrian underpasses	3 Nos.	---	3 Nos.
15	No of Subways	Nil	---	Nil
16	No of Flyovers	Nil	---	Nil
17	No of Major Bridges	2 Nos.	---	2 Nos.
18	No of Minor Bridges	47 Nos.	---	39 Nos.
19	No of Hume Pipe Culverts	137Nos.	---	133Nos.*
20	No of Box / Slab Culverts	24 Nos.	---	24 Nos.

*As per site requirement 7 Major junctions are developed. 5 Minor junctions are not developed as per site condition.

* Four minor bridges closely are merged and constructed as 2 no of minor bridges. 6 Minor bridges are not constructed due to LA problem.

*4 Pipe culverts are not constructed due to LA Problem

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Section Schedule, shown below as per Schedule B of CA during the Construction.

Figure 2.1: TCS-1 Typical Cross Section Of 4-Laning by Concentric Widening With 4.0m Raised Median

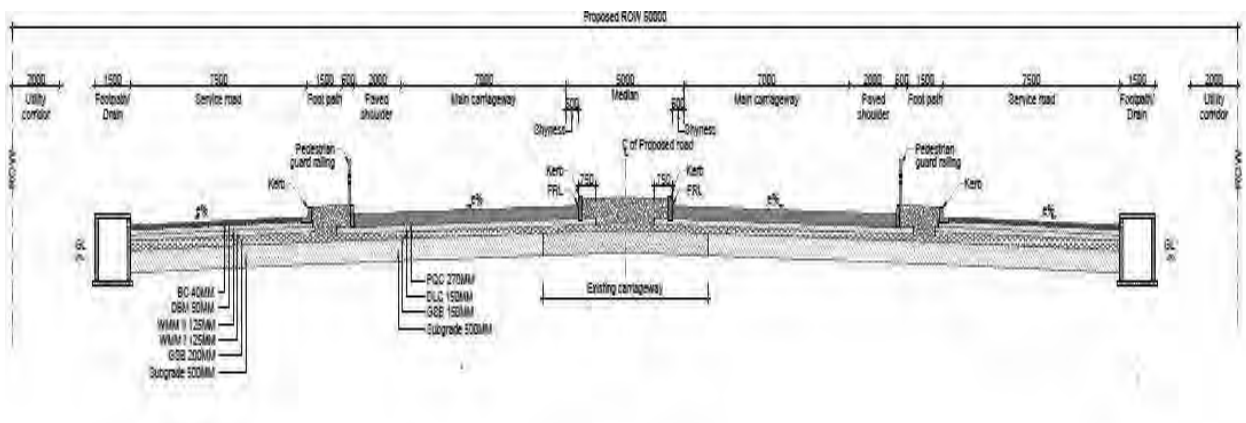

Figure 2.2: TCS-2 Built-Up Section-Plain /Rolling Terrain with Service Roads

Figure 2.3: TCS-3 (Typical Cross Section Of 4-Laning By Eccentric Widening (LHS) With 4.0m Raised Median

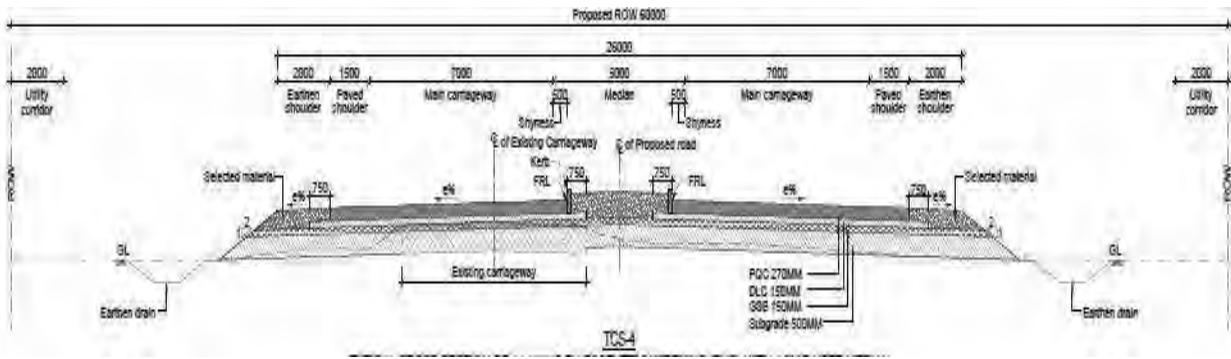

Figure 2.4: TCS-4 Typical Cross Section Of 4-Laning By Eccentric Widening (RHS) With 4.0m Raised Median

Figure 2.5: TCS-5 Typical Cross Section Of 4-Laning for Bypass and Realignment

Figure 2.6: TCS-6A Typical Four Lane Underpass Cross Section with Slip Roads in the Existing Road

Figure 2.7: TCS-6B Typical Four Lane Underpass Cross Section with Service Roads in The Existing Road

Figure 2.8: TCS-6C Typical Four Lane Underpass Cross Section With Slip Roads In Bypass & Realignment

Figure 2.9: TCS-6D Typical Four Lane Underpass Cross Section with Service Roads in Bypass & Realignment

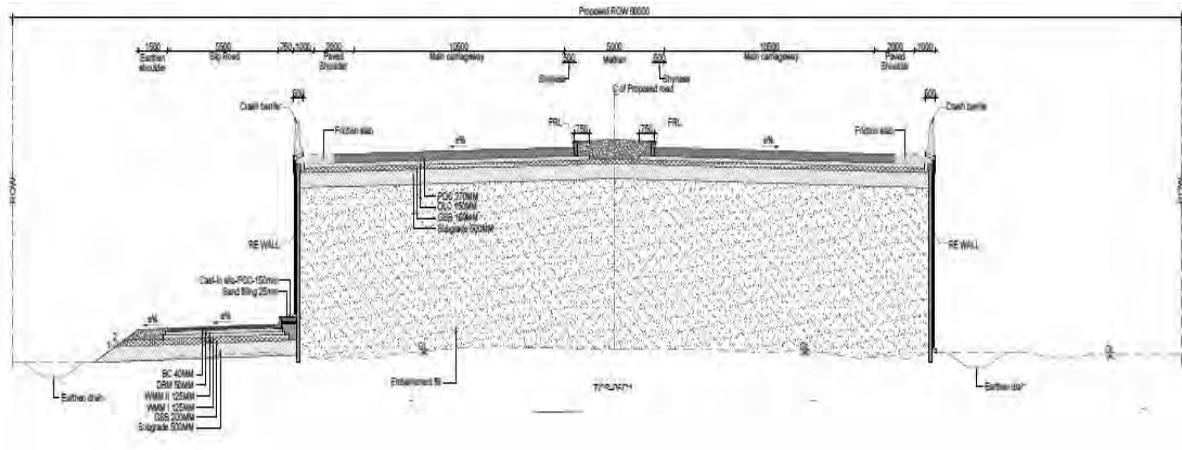

Figure 2.10:TCS-6C1 Typical Four Lane Underpass Cross Section with Slip Roads in Bypass & Realignment

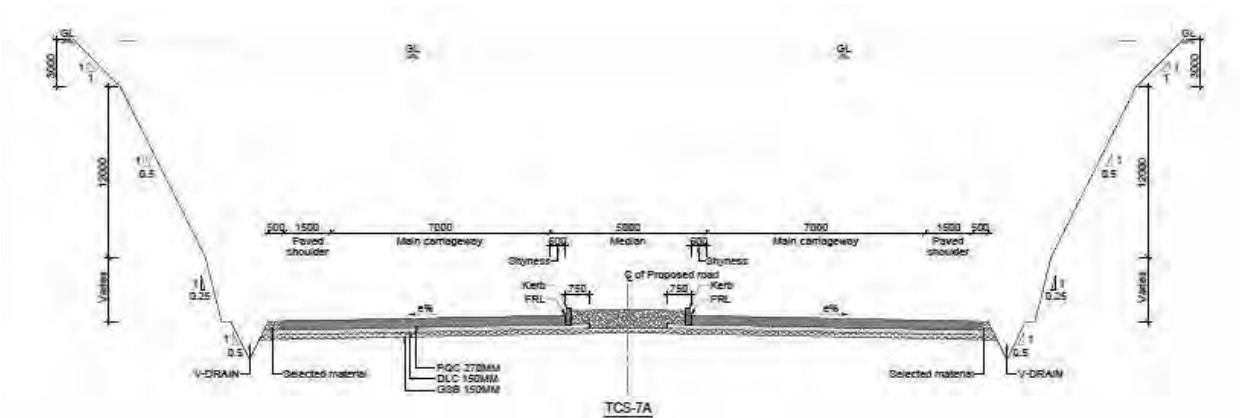

Figure 2.11:TCS-7A Typical Cross Section of 4-Lane Carriageway (Both Side Cutting)

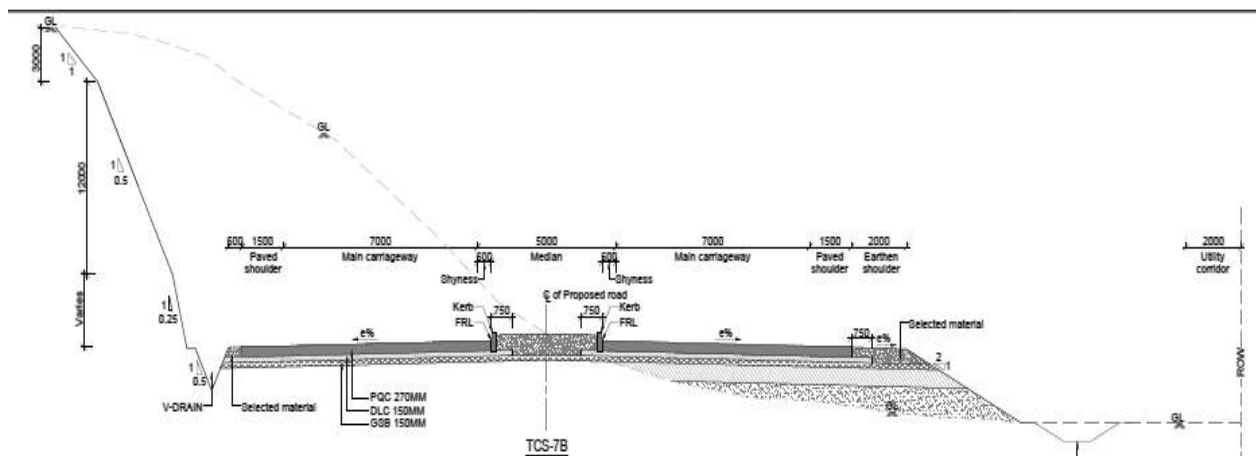

Figure 2.12:TCS-7B Typical Cross Section of 4-Lane Carriageway (One Side Cutting)

Figure 2.13: TCS-8 Typical cross section of 4-laning by concentric widening With 1.5m raised median for restricted row

Figure 2.14: TCS-N1 Typical Four Lane Underpass Cross Section with Slip Roads in Bypass & Realignment

Figure 2.15: TCS-N2 Typical Four Lane Underpass Cross Section with Slip Roads in Bypass & Realignment

TCS Schedule is provided below.

Table 2.2: TCS Schedule

S. No.	From (Km.)	To (Km.)	Length (Kms.)	TCS TYPE
1	320+580	320+940	0.360	3

Figure 2.16: Pictorial Diagram of TCS Lengths.

2.3 Road Side Drainage

- To facilitate quick disposal of water from the Carriageway and to avoid accumulation of drainage from the Carriageway, RCC side drains are constructed along the main carriage way on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are constructed in open and rural areas.

2.4 Service Roads

Service Roads and Slip Roads are provided as per the provisions of Schedule B of the Concession Agreement. The details are provided below.

Table 2.3: List of Service Road locations

S. No.	From (Km.)	To (Km.)	Side	Length (Kms.)	Remarks
1	322+240	323+620	BHS	2.760	40m on LHS is not constructed due to LA Problem*
2	348+340	349+710	BHS	2.740	270m on LHS is not constructed

S. No.	From (Km.)	To (Km.)	Side	Length (Kms.)	Remarks
					due to LA Problem*
3	357+100	357+850	BHS	1.500	
4	380+740	381+900	BHS	2.320	
5	393+620	394+830	BHS	2.420	
6	397+200	397+960	BHS	1.520	230m on RHS is not constructed due to LA Problem*
7	399+910	400+575	BHS	1.330	
			Total	14.590	

Note: * SRPL confirmed upon handing over of land uncompleted service roads shall be completed by the EPC Contractor at his cost and risk as provided under the EPC Agreement.

Table 2.4: List of Slip Road locations

S. No.	From Chainage (Km.)	To Chainage (Km.)	Side	Length (Kms.)
1	326+210	327+300	BHS	2.180
2	330+860	331+600	BHS	1.480
3	333+900	334+800	BHS	1.800
4	359+580	360+130	BHS	1.100
5	362+790	363+680	BHS	1.780
6	369+900	371+000	BHS	2.200
			Total	10.540

2.5 Realignment

As per the provisions of Schedule B of the Concession Agreement Realignment is provided at the following locations.

Table 2.5: Realignment stretches

S. No.	From Chainage (Km.)	To Chainage (Km.)	Length (Kms.)
1	329+460	329+970	0.510
2	330+150	331+950	1.800
3	332+060	332+250	0.190

43	399+052	Y-Junction	RHS
44	400+138	T-Junction	LHS
45	400+377	Y-Junction	LHS

2.7 Grade Separated Structures and underpasses

As per the provisions of Schedule B of the CA 3 Nos. of Pedestrian Underpass, 5 Nos. of Light Vehicular Underpass, 1 No of small vehicular underpass and 5 Nos. of Vehicular Underpass structures are provided in the Project Corridor. Details are provided in **Chapter 4**.

2.8 Road Over Bridge (ROB)

ROB is not proposed in the project road as per provisions of Schedule B of CA.

2.9 Carriageway and Pavement Details

Summary of Carriageway is given below:

Table 2.8: Summary of Carriageway and Pavement Details

S. No.	Description	Flexible (Km.)	Rigid (Km.)
1	Service Roads	14.590	
2	Slip Roads	10.540	
3	4 Lane Paved shoulder		79.995
4	Total Length	21.130	79.995
TYPE OF ALIGNMENT			
5	Widening		49.745
6	Realignment		16.545
7	Flyover approaches		12.210
8	Cutting Section		1.495
9	Total Length of the Project		79.995

2.10 Summary of Structures

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.9: Summary of Structures

S. No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts	Underpasses
1	Retained					
2	Widening		21	51	3	
3	Reconstruction		11	46	13	
4	New	2	15	40	8	1 No. PUP 3 Nos. VUP 10 Nos. LVUP
5	Improvement					
	Total	2	47	137	24	14

2.11 Toll Plazas

- Toll Plaza is located on the project road at Km. 382+920, which comprises of eight lanes.
- The width of each toll lane is provided 3.2 m, except for the lane for over dimensioned vehicles, where it is 4.5 m.

- Between each toll lane of the toll plaza, traffic islands are constructed to accommodate tollbooth.
- Protective barriers of reinforced concrete and traffic impact attenuators are placed in the front of each island to prevent out of control approaching vehicles crashing into the tollbooth.
- The canopy is provided for weather protection to toll operators, drivers and facilities. The canopy is designed aesthetically pleasing with cylindrical support columns located at traffic island so that there is no restriction on visibility and traffic movement.
- Total 7 Nos. toll booths are provided in toll plaza.
- Toll Plaza is updated to ETC Lane system as per the Change of Scope Order issued to the Concessionaire.
- List of tolling equipment provided at site is furnished in the Detailed Report.

2.12 Bus bays/Bus shelters/Truck Lay bye

As per provisions of Schedule C of CA bus shelters are provided at 38 locations. Details are provided below.

Table 2.10: List of Bus shelters

S. No.	Location at Km.	S.No.	Location at Km.
1	323+000	20	323+100
2	331+360	21	331+140
3	334+450	22	334+550
4	337+750	23	338+000
5	340+750	24	340+950
6	342+850	25	342+800

1	384+300	LHS	

2.13 Other Project Facilities Provided as per Schedule C of CA

- Roadside furniture: Sign Boards Kilometer stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 84-2014.
- Traffic safety devices: W Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of CA.
- Landscaping: Provided at Toll Plaza location and being maintained
- Tree Plantation: Median plantation and Avenue plantation on both sides of the Project Corridor is provided all along the way and is being maintained.
- Medical Aid Post: Provided at Toll Plaza location and is operational
- Highway Lighting: Highway lighting is provided at Toll Plaza, Bus bays and Truck Lay byes and is functional.

Mini Nest at Km.383+400

Truck Lay bye at Km.384+300

Rest area at Km.385+300

Weigh Bridge at Km.383+200

Km.391+800

Junction at Km.392+800

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections provided below

3.2 Road Inventory

Inventory of the project road was carried out physically and the same is summarized in the following table. Few representative photographs are presented below.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain rolling Terrain
2	Land Use	Agriculture and forest
3	Four lane length	79.995 km
4	Earthen shoulder	1.0 m to 1.5m Width on site
5	Junctions	52 Nos.
6	Toll Plaza	At Km.382+920
7	Sign boards	Sign boards are provided as per Highway requirements
8	Road Markings	Lane markings are provided as per Highway requirement
9	Bus Bays /shelters	38 Nos.
10	Truck lay bye	1 No.
11	Highway Lighting	Provided as per requirement
12	Avenue plantation	Provided

3.3 Pavement Condition Survey

The survey on general pavement condition was primarily undertaken by means of slow drive-over survey, and supplemented with measurements wherever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition

As per the provisions of Schedule B, the Concessionaire has constructed the Main Carriageway with Rigid Pavement and Service & Slip Roads with Flexible Pavement. Pavement Design submitted by the Concessionaire was reviewed and found in accordance with the provisions of IRC:37 and IRC 58. Design parameters are provided below. CBR considered for Flexible Pavement was 13% and Effective CBR for

Rigid pavement was 7%. Based on CBR values, axle loads and Traffic the crust designed is satisfactory. The crust details are given below.

Table 3.2: For Rigid pavement –Main carriage way

1	PQC	270mm
2	DLC	150mm
3	GSB	150mm
5	Sub Grade	500mm

Table 3.3: Flexible Pavement-Service Roads

1	BC	40mm
2	DBM	60mm
3	WMM	250mm
4	GSB	200mm
5	Sub Grade	500mm

- Based on the review on Designs submitted by the Concessionaire, the above crust is safe for project.

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP-19. The summary of Pavement condition is given below.

Table 3.4: Pavement condition summary

From (Km)	To (Km)	Length (Kms.)	Condition
320+580	400+575	79.995	Good

Km. 320+000

Km. 389+100

Km.391+613

Km.391+800

Figure 3.1: Representative Photos of Pavement Condition.

CHAPTER 4. INVENTORY AND CONDITION OF STRUCTURES

4.1 General Assessment and Condition of the structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

The list of structures along this project highway.

Table 4.1 : List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	02 Nos.
2	Minor Bridge	39 Nos.
3	Underpasses	14 Nos.
4	Pipe culverts	133 Nos.
5	Slab/Box Culverts	24 Nos.

The major bridges of superstructure provided is RCC Solid slab resting on RCC wall type piers and abutments with open foundation. The minor bridges of superstructure are RCC solid slab/RCC Box type and the substructures are of PCC/RCC conventional wall type supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 1**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Structural condition of most of the culverts is fair except in few locations. Detailed inventory and condition survey of culverts are given in **ANNEXURE 2**.

4.3 Details of Major Bridges

The total length of the major bridge at Km 360+485 is 75.0m with 5 spans. The superstructure consists of RCC solid slab. Each pier and whereas abutment is regular RCC Circular type abutment. Open foundations have been constructed for all piers and abutments. Superstructure is seated on Elastomeric/Tar paper bearings. Expansion joints are of Strip seal type. RCC railings have been provided on both sides of the deck.

The total length of the major bridge at Km 376+231 is 90.0m with 6 spans. The superstructure consists of RCC solid slab. Each pier and whereas abutment is regular RCC wall type abutment. Open foundations have been constructed for all piers and abutments. Superstructure is seated on Elastomeric/Tar paper bearings. Expansion joints are of Strip seal type. RCC railings have been provided on both sides of the deck

Table 4.2: List of Major Bridge

S. No.	Chainage (Km.)	Span	Total Length of Bridge (m.)
1	360+485	3 x 25.0	75.0
2	376+231	6 x 15.0	90.0

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, drainage spouts and strip seal expansion joints are to be carried out.

Km.376+231

Figure 4.1: Representative photos of Major Bridges

4.4 Details of Minor Bridges

The details of minor bridges along the project stretch are listed. The type of superstructure for minor bridges is RCC solid slab/RCC Box type and the substructure is PCC/RCC conventional wall/Circular type, supported on open foundations. Expansion joints are buried type/Strip seal and bearings are tar paper and elastomeric bearings. RCC crash barriers and Railings are provided for most of the structures.

Table 4.3: List of Minor Bridge

S. No.	Chainage (Km.)	Span	Total Length of Bridge (m.)	Description
1	321+151	2 x 6.5	13	It has RCC Box structure. It has RCC Railing, bituminous wearing coat.
2	323+321	3X7.0	21	It has RCC Box structure. It has RCC Crash barrier/Railing, bituminous wearing coat.
3	324+256	1x6.0	6	It has RCC Box structure. It has RCC Crash barrier/Railing, bituminous wearing coat.
4	325+915	3X7.0	21	It has RCC Box structure. It has RCC Crash barrier/Railing, bituminous wearing coat.
5	326+082	3x12.5	37.5	It has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC crash barrier/Railing, bituminous wearing coat, and Tar paper/Elastomeric Bearings and Strip seal expansion joints.

4.5 Details of Underpasses

The details of Underpasses in the project stretch are listed below. The type of superstructure for underpass is RCC Girder/RCC Box type and the substructure is PCC/RCC conventional wall type supported on open foundations. Expansion joints are buried type/Strip seal and bearings are tar paper and elastomeric bearings. RCC crash barriers are provided on all structures

Table 4.4: List of Underpasses

S. No.	Chainage (Km.)	Type of Structure	Span	Total Length of Bridge (m.)	Description

4.6 Details of Culverts:

The culverts observed along the project road are mainly of two types viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 2**.

4.6.1. Slab/Box Culverts

The details of Slab/Box culvert in the project stretch are listed below.

Table 4.5: List of Slab/Box Culverts

S. No.	Chainage (Km.)	Span (m.)	Vent Size (m.)
1	334+222	1x1.5x1.6	1.6

4.6.4. Condition of the Pipe Culverts

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

The culverts are in fair condition and can be retained in the present condition with following repairs/rehabilitation measures.

- Chocked culverts must be cleared.
- Debris and garbage near outside the vents must be removed.

Km.384+018

Km.387+933

Figure 4.5: Representative photos of Pipe Culverts

CHAPTER 5. REVIEW OF PAVEMENT DESIGN

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design

The Pavement Design shall be carried out in accordance with Indian Roads Congress guidelines. The pavement is designed in accordance with IRC: 58 -2015 “Guidelines for the Design of Plain Jointed Rigid Pavements for highways”, IRC: SP 84 -2014, IRC: 15-2011 “Construction Concrete Road (FOURTH REVISION)” and relevant clauses of schedule B of the EPC agreement. Pavement crust thickness for main carriageway as per pavement design report summarized below.

Table 5.1: Rigid Pavement Design for Main carriageway

Description	Design/Adopted Parameters
CBR of sub grade	6 %
Two way commercial traffic volume per day	1053
Design life in years	30
Pavement Quality Concrete (PQC) – (mm)	270
Dry Lean Concrete (DLC) – (mm)	150
Drainage Layer (GSB) - (mm)	150
Diameter of Dowel Bar (mm)	36
Length of Dowel Bar (mm)	450
Spacing of Dowel Bars (mm)	300
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	580

As per schedule D, (Annexure-I), clause 2, pavements for Slip road/Service road shall be flexible pavement and designed as per provision of design manual IRC: SP: 84:2014. The design traffic in case of service road shall be ten million standard axles as per Cl:5.5.5 of IRC: SP: 84:2014. The crust composition shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”.

Table 5.2: Flexible Pavement for service road

S. No.	Description/ Pavement layer	Design/Adopted Parameters
1	Sub Grade CBR (%)	9 %
2	Design Life (Years)	15 years for non-bituminous
3	Design Traffic (MSA)	10 MSA
4	Surface course (BC)	40mm
5	Binder course (DBM)	50 mm
6	Base course (WMM)	250 mm
7	Sub Base course (GSB)	200 mm

The Pavement crust has been designed according to IRC specification and found in order, the adopted/constructed pavement layer thickness is adequately provided than actual/designed thickness.

5.3 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC for service roads. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Proposed for Service road on or before 2028.

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction. (As per IRC 58-2015).

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 6.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety audit

6.2 Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 6.2: Existing Road Safety items

S. No.	Item Description	Status	Condition	
Road Furniture				
1	Sign Boards	Chevron Signs	Available as per site requirement	Good
		Village sign boards	Available as per site requirement	Good
		Information Boards	Available as per site requirement	Good

S. No.	Item Description	Status	Condition	
		Other Sign Boards	Available as per site requirement	Good
		Gantry Sign Boards	Available as per site requirement	Good
2	Road Marking	Studs & Lane marking	Available as per site requirement	Good
3	Metal Beam Crash Barriers	At High embankments & Bridge Approaches	Available as per site requirement	Good
4	Median kerb	Along the Project Highway	Provided as per IRC SP:84-2014	Good
5	Road studs & Solar Blinkers	Along the Project Highway	Provided as per IRC SP:84-2014	Good

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

The Concessionaire is maintaining the safety features in good condition from time to time in accordance with the provisions of Schedule K of the Concession Agreement.

Km. 392+800

Km.389+553

Km.360+165

Km.393+111

Figure 6.1: Representative photos during road safety audit

6.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is highly necessary during the maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General:

There is one toll Plaza on the project road at Km. 382+920. The width of each toll lane is provided 3.2 m, except for the lane for over dimensioned vehicles, where it is 4.5 m. between each toll lane of the toll plaza, traffic islands is constructed to accommodate tollbooth. Protective barriers of reinforced concrete and traffic impact attenuators is placed at the front of each island to prevent out of control approaching vehicles crashing into the toll booth. The canopy is provided for weather protection to toll operators, drivers and facilities. The canopy is designed aesthetically pleasing with cylindrical support columns located at traffic island so that there is no restriction on visibility and traffic movement. Total 7 Nos. toll booths are provided in toll plaza.

Toll Plaza is updated to ETC Lane system as per the Change of Scope Order issued to the Concessionaire.

7.2 Tolling Equipment and Control Room Equipment

List of equipment provided at toll plaza and control room is given below.

Table 7.1: List of Equipment at Toll Plaza and Control Room

S .No.	Materials Description	Quantity
LANE ITEMS		
1	ETC RFID Readers	10
2	ETC RFID Readers (DETC: Physical installed)	2
3	Automatic Lane Barrier Gate (Exit)	10
4	User Fare Display (UFD)	10
5	AVC (V3.0)_ with RX & TX	10
6	AVC Incident Capture Camera with pole	10
7	Licence Plate Image Capture Camera	9
8	Traffic Light	8
9	Traffic Light (DETC: Physically Installed)	6
10	OHLS(Over Head Lane Signal)	8

Figure 7.1: Photographs of Toll Plaza

CHAPTER 8. SCHEDULE OF ANNUITY PAYMENTS

8.1 Hybrid Annuity Model (HAM)

Hybrid annuity model is the PPP model which allows the payment of 40% of the Project cost during construction period based on progress milestones set forth by Authority to Concessionaire and Payment of balance 60% to the Concessionaire Bi annually with the Interest during the balance concession period.

8.2 Payment during Construction

As per the provisions of Article 23 of the Concession Agreement, 40% of the Bid Project Cost adjusted with Price Index in accordance with Clause 23.4 of the CA, shall be paid during the Construction Period. Amount payable during construction period shall be paid in five equal installments upon achieving the following Project Milestones.

Table 8.1 : Schedule of Payment Milestones

S. No.	Payment Milestone No	Criteria for releasing the Payment
1	Payment Milestone I	On Achievement of 10% of Physical Progress
2	Payment Milestone II	On Achievement of 30% of Physical Progress
3	Payment Milestone III	On Achievement of 50% of Physical Progress
4	Payment Milestone IV	On Achievement of 75% of Physical Progress
5	Payment Milestone V	On Achievement of 90% of Physical Progress

During the Operation Period, remaining 60% of the balance Completion Cost shall be paid in 30 Annuities each Annuity payable biannually. Each Annuity amount shall be based on the percentages of the balance Completion Cost mentioned in 23.6.3 of the Concession Agreement. During the Operation Period following payment components are payable.

- Annuity Payment as per the Annuity Payment Schedule provided in 23.6.3 of the Concession Agreement.
- Interest on the balance amount to be paid at an interest rate equal to the applicable Bank Rate Plus 3%
- O&M Payment as a lump sum amount as per Clause 23.7.1 of the Concession Agreement.

8.3 Schedule of Annuity Payments

Details of Annuity payments are as below.

Table 8.2 : Schedule of Annuity Payments

S. No.	Following the COD	% of Completion Cost remaining to be paid on COD	Due date for Payment	Date of Payment
1	Annuity 1	2.10%	18.11.2020	7-Dec-20
2	Annuity 2	2.17%	23.06.2021	
3	Annuity 3	2.24%	18.11.2021	
4	Annuity 4	2.31%	23.06.2022	
5	Annuity 5	2.38%	18.11.2022	
6	Annuity 6	2.45%	23.06.2023	

S. No.	Following the COD	% of Completion Cost remaining to be paid on COD	Due date for Payment	Date of Payment
7	Annuity 7	2.52%	18.11.2023	
8	Annuity 8	2.60%	23.06.2024	
9	Annuity 9	2.68%	18.11.2024	
10	Annuity 10	2.76%	23.06.2025	
11	Annuity 11	2.84%	18.11.2025	
12	Annuity 12	2.93%	23.06.2026	
13	Annuity 13	3.02%	18.11.2026

30	Annuity 30	4.75%	18.11.2035	

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of CA, the Concessionaire will operate and maintain the Project roads by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual Inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz. pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

9.3 Operations

9.3.1. Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- i. Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- ii. Carrying out preventive and periodic maintenance of the Project road;
- iii. Undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- iv. Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- v. Functioning of the lighting system;
- vi. Functioning of the Patrolling System
- vii. Functioning of rescue and medical aid services

- viii. Ambulance as and when required
- ix. Functioning of the Project Facilities
- x. Administrative, Operational and Maintenance Base Camp
- xi. Truck Lay byes
- xii. Pickup Bus stops / Bus Bays
- xiii. Protection of the environment and provision of equipment and materials therefor;
- xiv. Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- xv. Complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plazas

There are two lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the Escrow Account. In case of ETC system, Toll collection is connected with Network system and directly deposited into the Escrow account.

9.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

9.5.1. Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement as well as rigid pavements are in good condition and hence does not require any immediate or preventive interventions.

9.5.2. Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

9.5.3. Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road. The details of periodic maintenance schedule are given below.

Table 9.1: Schedule and status of for Periodic Maintenance

Description	Schedule of Major Maintenance	Status of Major Maintenance
1 st Periodic Maintenance	2027	Planned to execute
2 nd Periodic Maintenance	2034	Planned to execute

9.5.4. Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.6 Review of Test Reports

9.6.1. Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

Further it is to be noted that during O&M period, the roughness value shall not exceed 2750mm/Km in accordance with Schedule K(a)(ii).Based on documents renewed, no NCRS were noticed pertinent to riding quality.

9.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports.The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 3**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance	Incidental maintenance	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	2.521	4.026		4.42	10.96
2021	2.596	4.147		4.55	11.29
2022	2.674	4.271		4.69	11.63
2023	2.754	4.399		4.83	11.98
2024	2.837	4.531		4.97	12.34
2025	2.922	4.667		5.12	12.71
2026	3.010	4.807		5.28	13.09
2027	3.100	4.951	30.97	5.43	44.46
2028	3.193	5.100		5.60	13.89
2029	3.289	5.253		5.77	14.31
2030	3.387	5.410		5.94	14.74
2031	3.489	5.573		6.12	15.18
2032	3.594	5.740		6.30	15.63
2033	3.701	5.912	36.54	6.49	52.64
2034	3.813	6.089		6.68	16.59
2035	3.927	6.272		6.88	17.08
2036	0.576	0.920		1.01	2.51
Total	51.382	82.067	67.51	90.07	291.03

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 General: Scope of Work (Article 2)

Article 2 of the CA provides the scope of work, which includes the following.

- Operation and Maintenance of the Project Highway on the Site set forth in Schedule A and as specified in Schedule B together with provision of Project Facilities as specified in Schedule C, and in conformity with the Specifications and Standards set forth in Schedule D;
- collection of Fee from the Users of the Project; subject and in accordance with the provisions of the Concession Agreement;
- performance and fulfillment of all other obligations of the Contractor in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Contractor under this Agreement

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE - 4**.

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfill its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the Concession Agreement

10.5 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 30 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date

- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 30% of the Total Project Cost.

10.6 Tests (Clause 13.3)

For determining that the Project, conforms to the Maintenance Requirements, the Independent Engineer shall require the Concessionaire (Concessionaire shall in turn require the Contractor) to carry out, or cause to be carried out, tests specified by it in accordance with Good Industry Practice. One half of the costs incurred on such tests, and to the extent certified by the Independent Engineer as reasonable, shall be reimbursed by the Authority to the Concessionaire

10.7 Provisional Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA. Provisional Completion Certificate given in **ANNEXURE - 5**.

10.8 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire.

10.9 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of scope proposals that were initiated during construction period and consented by the NHAI are provided in **Annexure 7**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (**The “Maintenance Requirements”**).

10.13 Maintenance Manual (Clause 17.3)

No later than 90 (ninety) days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the **“Maintenance Manual”**) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 2% (two percent) of the performance security, and
- 0.1% (zero decimal one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Payment of Bid Project Cost (Article 23)

The Authority agrees to pay 40% of the Bid Project Cost in five installments against the achievement of Project Milestones specified in Clause 23.4 of the Concession Agreement and the amount shall be adjusted with Price index.

Remaining balance completion cost shall be paid as per the % of balance completion cost biannually from the date of COD. Percentage of amounts payable for each Annuity is specified in 23.6.3 of the Concession Agreement.

10.18 Change in Law (Article 35)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 Details of Insurance:

As per clause 26.1 of the CA, the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Insurance copies are provided in **ANNEXURE 6**. Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table:11-1 Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Property covered
			From	To	
Employees Compensation Insurance	HDFC ERGO General Insurance Co Ltd	3114203384088500000	2.5.2020	1.5.2021	All categories of Employees of the Contractor & sub-contractor engaged in the Project
Standard Fire & Special Perils Policy	The Oriental Insurance Co Ltd	171200/11/2021/406	12.02.2021	04.10.2021	Fire Basic cover, STFI cover, Earth Quake cover
Fire Industrial All Risk Policy	The Oriental Insurance Co Ltd	171200/11/2021/405	12.02.2021	04.10.2021	Toll Plaza Building & Booths, TMS, HTMS, Office & IT Equipment, Road Furniture and Rigid Pavement etc.

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical overview of the Project is provided below.

12.2 Pavement Condition

The Pavement condition for the overall project is good. RCC drains are constructed in Built up locations and earthen drains in rural locations which facilitates, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are being cleared during regular maintenance period.

12.4 Project Facilities

Toll plaza was constructed at Km.382+920 and is operational. Bus bays and truck lay byes are in good condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained well. Highway lighting is provided at toll plaza, bus bay and truck lay bye locations and the same is found functional.

12.5 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 73-2007. The condition of signboards & other road appurtenances like metal beam crash barriers is fair.

12.6 Maintenance

- Routine maintenance is being carried out by O&M contractor effectively, based on documents reviewed, time-to-time observations made by client/Authority are being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance was carried recently and next MM is scheduled in the year 2027.

12.7 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

Subject: Four Laning of Mahagaon to Yavatmal (Package-II) section of NH-361 from km 320.580 to km 400.575 (Design Length 80.195) in the State of Maharashtra Under NHDP Phase - IV on Hybrid Annuity Mode - Letter of Award - Reg.

Ref: 1. Your Proposal submitted on 15.02.2017
2. Opening of Financial proposal on 22.03.2017

Sir,
With Reference to NHAI's Request for Proposal for "Four laning of Mahagaon to Yavatmal (Package-II) section of NH-361 from km 320.580 to km 400.575 (Design Length 80.195) in the State of Maharashtra Under NHDP Phase - IV on Hybrid Annuity Mode" and considering your proposal in this regard submitted on 15.02.2017 vide reference no. (4), NHAI hereby accepts your proposal quoting Bid Project Cost of Rs. 1160.64 crore (Rupees Eleven Hundred Sixty Crore and Sixty Four Lakh Only) and first year O&M cost of Rs. 3.00 Crore (Rupees Three Crore Only) as included in Appendix-1B of your document and declares you as the "Selected bidder" as per the provisions of RFP Documents.

2. In accordance with the clause 3.8.4 of the RFP document, you are requested to sign the duplicate copy of the LOA and return the same as your acknowledgement within 7 (Seven) days of the receipt of the LOA. Thereafter you are required to execute the Concession Agreement within 45 (Forty five) days from the date of issue of LOA as specified in Clause 1.1 of RFP.

3. Further, As per RFP document, you are required to incorporate a Special Purpose Vehicle solely for the purpose of de-risking the project (the "Concessionaire"). The Concessionaire for due and faithful performance of its obligations during the Concession Period shall furnish a Performance Security by way of irrevocable and unconditional Bank guarantee of Rs 58.04 Crores (Rupees Fifty Eight Crore Four Lakh only) within a period of the 30 days (upto the date of signing of the Concession Agreement. Till the time the Concessionaire provides NHAI with the performance Security the Bid Security shall remain in full force and Effect (refer Clause 4.1.2 and Clause of Article 9 of RFP).

4. You are required to comply with all the terms and conditions set forth in the RFP Documents. In case of any default on your part, you shall be liable for action as stated in the Bid Documents.

(Ashish Asati)
General Manager (Tech)
(Maharashtra Division)

Annexure 5: Provisional Certificate

Schedule-J (Page 194)

“PROVISIONAL CERTIFICATE”

1. We, Artefact Projects Ltd. acting as Independent Engineer, under and in accordance with the Concession Agreement dated 09.06.2017 (the “Agreement”), for development and operation of Four-Laning of the Mahagaon to Yavatmal Section of National Highway No. 361 (the “Project Highway”) on design, build, operate and transfer (the “DBOT Annuity or Hybrid Annuity”) basis through DBL Mahagaon Yavatmal Highways Private Limited, hereby certify that the tests specified in Article 14 and Schedule-I of the Concession Agreement have been undertaken for the partial Project / section of **72.089 Km** of the Project to determine compliance thereof with the provisions of the Agreement.
2. Construction Works forming part of the Project/section of **72.089 Km** of the Project that were found to be incomplete and/or deficient have been specified in the Punch List appended hereto, and the Concessionaire has agreed and accepted that it shall complete and all such works in the time and manner set forth in the Agreement. [Some of the incomplete works have been delayed as a result of reasons attributable to the Authority or due to Force Majeure and the Provisional Certificate cannot be withheld on this account. Though the remaining incomplete works have been delayed as a result of reasons not attributable to the Concessionaire]. We are satisfied that having regard to the nature and extent of such incomplete works, it would not be prudent to withhold commercial operation of the Project/section of **72.089 Km** of the Project, pending completion thereof.
3. In view of the foregoing, We are satisfied that the partial Project/section of **72.089 Km** of the Project can be safely and reliably placed in commercial service of the Users thereof, and in terms of the Agreement, the Project/section of the Project is hereby provisionally declared fit for entry into commercial operation on this the 23rd day of May 2020.

CHAPTER 1. INTRODUCTION

1.1 General

JALPA DEVI TOLLWAYS LIMITED (herein after referred to as the “Concessionaire”) had augmented the existing two lane road “Guna - Biora” (SH-15) in the state of Madhya Pradesh, in accordance with the provisions of the Concession Agreement (CA) executed with National Highways Authority of India (herein after referred to as the “Authority”) on 21st September, 2015 by four laning on design, build, Finance, operate and transfer (BOT-Toll).

Project road starts at Km. 332+100 Near Guna (design chainage Km. 97+700) and ends at Km. 426+100 Near Biora (design chainage Km. 191+200) on NH-3. It is situated in central part of Madhya Pradesh and passes through settlements namely, Umariya, Ruthiyai and Binaganj. Project location map is provided at **Figure 1.1**.

SHREM TOLLWAYS PRIVATE LIMITED (STPL) acquired JALPA DEVI TOLLWAYS LIMITED vide agreement dated 18.07.2018.

SHREM FINANCIAL PVT LTD (SFPL) appointed RUKY Projects Pvt. Ltd. as consultant for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the traffic potential and to estimate the projected Toll Collection etc.

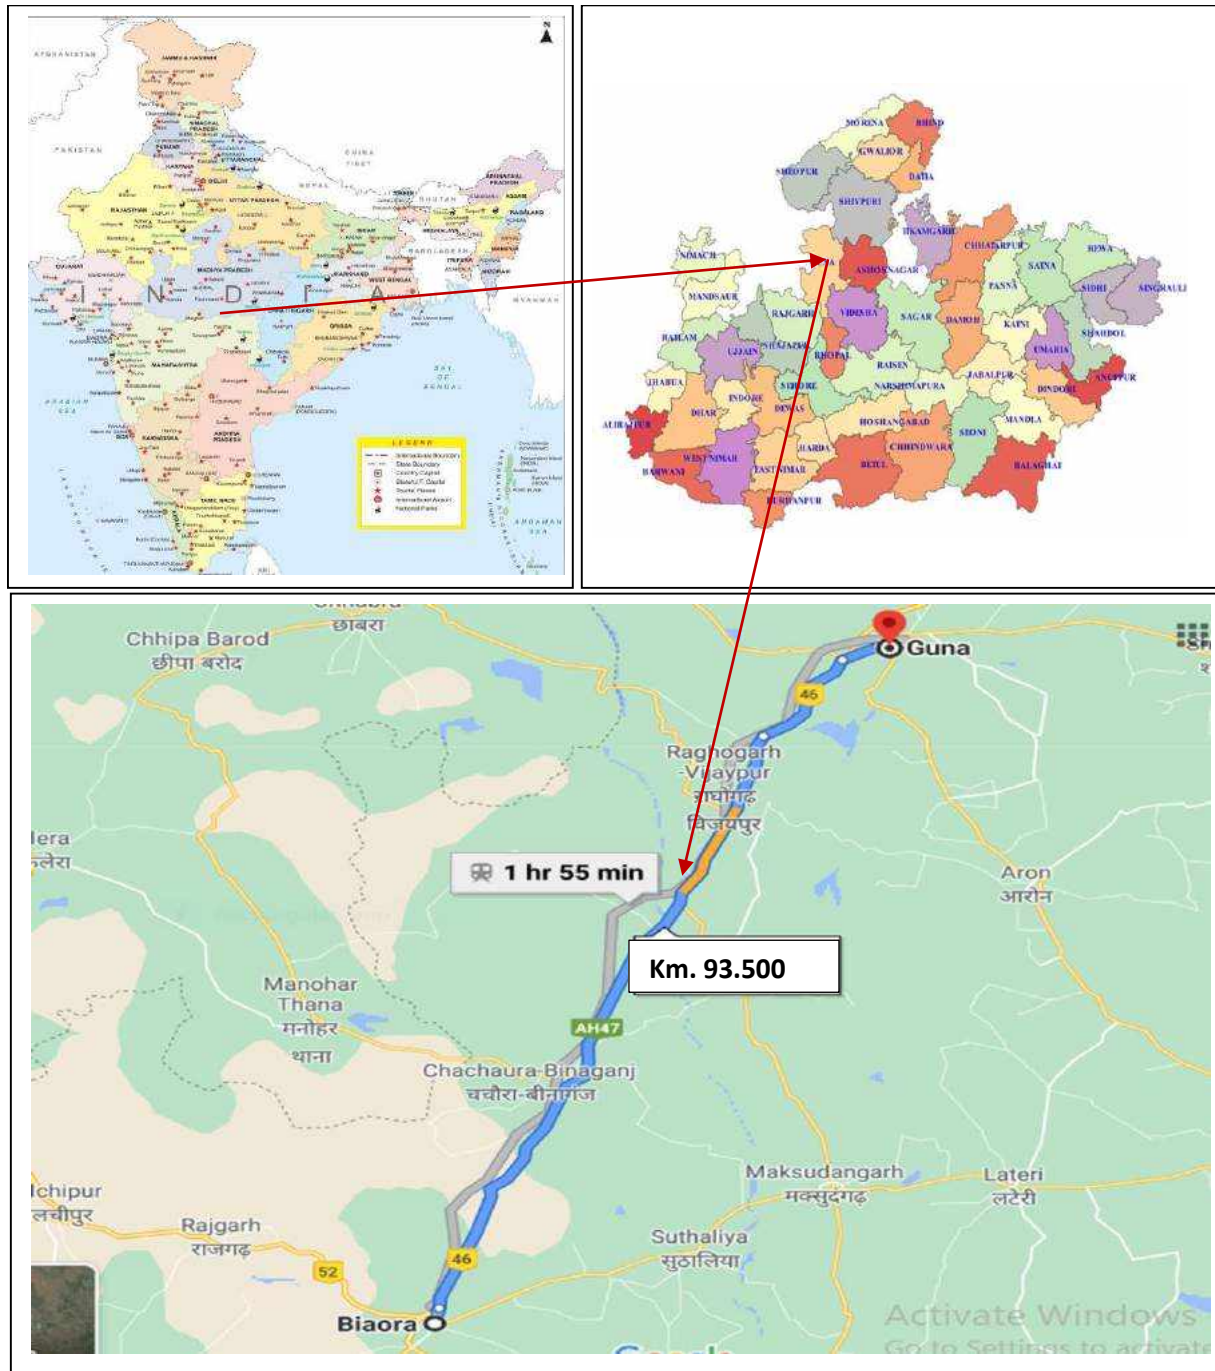

Figure 1.1: Project Location Map

1.2 The Project Data

Table 1.1: Project Data

S No.	Particulars	Details
1	Name of the project	Four Laning of Guna- Biora Section of NH-3 from Km. 332+100 to Km. 426+100 in the state of Madhya Pradesh under NHDP Phase IV to be executed on BOT(Toll) Mode on DBFOT
2	Road Type	National Highway
3	Name of the Authority	National Highways Authority of India
4	Name of the Concessionaire	Jalpa Devi Tollways Ltd
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Date of LOA	29.06.2015
7	Date of Agreement	21.09.2015
8	Design Length as per Schedule B of CA	93.5 Kms.
9	Actual Length Constructed	93.5 Kms.
10	Project Lane Configuration	Four lane with paved shoulder
11	EPC Cost	1012.90 Cr.
12	Nature of contract	BOT (Toll)
13	Toll collected by	The Concessionaire
14	Concession Period	26 years from the Appointed Date
15	Appointed date	07.09.2016
16	Concession End Date	06.09.2042
17	Construction Period	910 days from the Appointed Date
18	Schedule Completion Date	05.03.2019
19	Date of issuance of Provisional Certificate (Commercial Operation Date)	18.06.2018 for 90.0 Kms. length
20	Date of issuance of Completion Certificate	15.09.2018

1.3 Scope of Consultancy Services

The scope of work includes providing Technical Due Diligence of the Project Highway and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Collection of historic/past toll revenue data
- Collection of historic/past classified Traffic data from toll plaza and to estimate the projected traffic to arrive at revenue projections.
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest FWD/BI test report

- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout review of tolling system to evaluate the efficiency and functionality of tolling system and to identify and give suggestions to improve if any setbacks in the system.
- Carryout out road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per schedule B and Schedule C of Concession Agreement (CA) including Change of scope are listed in the following Table.

Table 2.1: Salient Features

S. No.	Particulars	As per Schedule B of CA	As per COS	As per Site
1	Total Length (Four lane)	93.5 Kms.		93.5 Kms.
2	Realignment/Bypass	06/02 Nos.		06/02 Nos.
3	Toll Plaza	02 Nos.		02 Nos.
4	Bus Bays / Bus Shelters	22 Nos.		22 Nos.
5	Truck Lay Bays	2 Nos.		2 Nos.
6	Rest Area	1 Nos.	-1 Nos.	Nil
7	Major Junction	07 Nos.		07 Nos.
8	Minor Junctions	34 Nos.		34 Nos.
9	ROB	Nil		Nil
10	Level Crossing	Nil		Nil
11	Major Bridges	04 Nos.		04 Nos.
12	Minor Bridges	34 Nos.		34 Nos.
13	Flyovers	02 Nos.		02 Nos.
14	VUP/PUP/CUP	12 Nos.		12 Nos.
15	Box/ Slab Culverts	18 Nos.		18 Nos.
16	Pipe Culverts	73 Nos.		77 Nos.
17	FOB	2 Nos.		2 Nos.
18	Tunnels	2 Nos.		2 Nos.

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire followed the Typical Cross Section shown below and TCS Schedule as given in Table 2.2 below as per Schedule B of CA during the Construction.

Figure 2.1: Typical Cross Section for new construction without service road (TCS-1)

Figure 2.2: Typical Cross Section for left side widening without service road (TCS-3)

Figure 2.3: Typical Cross Section for right side widening without service road (TCS-4)

Figure 2.4: Typical Cross Section for ghat section (TCS-5)

Figure 2.5: Typical Cross Section for concentric widening with both side service road with PUP (TCS-6)

Figure 2.6: Typical Cross Section for right side widening without service road (TCS-9)

Figure 2.7: Typical Cross Section for CUP/PUP with both side service road 2.5m median (TCS-9A)

Figure 2.8: Typical Cross Section for concentric widening with both side service road (TCS-11)

Figure 2.9: Typical Cross Section for left widening with both side service road (TCS-13)

Figure 2.10: Typical Cross Section for concentric widening without service road (TCS-14)

Figure 2.11: Typical Cross Section for 3 lane flyover left side payment widening with service road (TCS-18)

Figure 2.12: Typical Cross Section for 3 lane flyover left side widening with service road (TCS-18A)

Figure 2.13: Typical Cross Section for 6 lane of PUP/CUP without service road (TCS-19)

Figure 2.14: Typical Cross Section for PUP/CUP without service road (TCS-19A)

TCS Schedule is provided below.

Table 2.2: TCS Schedule

S. No.	Existing Chainage (Km.)		Design Chainage (Km.)		Length (Kms.)	TYPE
	From	To	From	To		
1	332+100	332.+800	97+700	98+400	0.70	TCS-4

Figure 2.15: Pictorial Diagram of TCS Lengths.

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from the Carriageway, RCC side drains are constructed along the main carriage way on both flanks at locations as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are in open and rural areas.

2.4 Service Roads

Service road shall be provided along the project road as per provisions of Schedule B of CA. the locations are given below.

Table 2.3: Service road details

S. No.	Existing Chainage (Km.)		Design Chainage (Km.)		Side	Length (Kms.)
	From	To	From	To		
1	351+500	355+500	115+850	119+900	Both	2*4.050
2	394+000	395+640	158+800	160+450	Both	2*1.650
3	420+050	421+450	184+250	185+850	Both	2*1.600
4	421+450	422+230	185+850	186+650	Both	2*0.800

7	Binaganj	152+821	–	New 6lane (Clear Height 4.0m)	RCC Single Box	1*7	2*14.5
8	409+500	173+788	Sinduriya	New 6lane (Clear Height 4.0m)	RCC Single Box	1*8	2*14.6
9	417+000	181+436	–	New 6lane (Clear Height 4.0m)	RCC Single Box	1*7	2*14.5

2.8 Road Over Bridge (ROB)

ROB is not proposed in the project road as per provisions of Schedule B of CA.

2.9 Pavement and carriageway details

Summary of Pavement Details is given below:

Table 2.10: Summary of Pavement and Carriageway Details

S. No.	Description	Flexible (Kms.)	Rigid (Kms.)	Remarks
1	4 Lane with paved shoulder without service road	82.50	1.20	TCS-1, 3, 4, 5, 14, 19A & Toll plaza
2	4 Lane with paved shoulder with service road	9.80	---	TCS-6, 9A, 11, 13 & 18A
3	Total Length of the Project	92.30	1.20	
TYPE OF ALIGNMENT				
4	New Alignment & Reconstruction	22.60	1.20	
5	Widening with strengthening	69.70	---	
6	Total Length of the Project	92.30	1.20	

2.10 Summary of Structures

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.11: Summary of Structures

S. No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts	Fly Overs	VUP/PUP /CUP	Remarks
1	Retained							
2	Widening			7	10			
3	Reconstruction			7	8			
4	New	4	34	63		2	12	
5	R & R	1 on RHS	17 one C/W					
	Total	4	34	77	18	2	12	

2.11 Toll Plazas

- There are two toll Plazas on the project road at Km. 113+278 & Km.165+197.
- Each side of toll plaza comprises of 5 lanes.
- List of tolling equipment provided at site is furnished in the Detailed Report.

2.12 Rest areas

As per provisions of Schedule C of CA rest areas is provided at 1 location. Details are provided below.

Table 2.12: List of rest areas

S. No.	Existing Chainage (Km.)	Design Chainage (Km.)
1	371+650	135+978

2.13 Truck lay byes

As per provisions of Schedule C of CA truck lay byes are provided at 2 locations. Details are provided below.

Table 2.13: List of Truck lay byes

S. No.	Existing Chainage (Km.)	Design Chainage (Km.)	Side
1	343+500	108+550	Both Side
2	381+425	145+800	Both Side

2.14 Bus bays/Bus shelters

As per provisions of Schedule C of CA bus bays/shelters are provided at 22 locations. Details are provided below.

Table 2.14: List of Bus bays/shelters

S. No.	Existing Chainage (Km.)	Design Chainage (Km.)	Side
1	334+200	99+732	Both Side
2	338+200	103+506	Both Side
3	344+000	109+026	Both Side
4	347+250	111+620	Both Side
5	350+250	114+630	Both Side

22	425+700	190+028	Both Side

Figure 2.17: Bus bays Km. 229+700.

2.15 Other Project Facilities Provided as per Schedule C of CA

- Road side furniture: Sign Boards Kilometer stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 84-2014.
- Traffic safety devices: W Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of CA.
- Landscaping: Provided at Toll Plaza location and being maintained
- Tree Plantation: Tree plantation is provided on both sides of the Project Corridor all along the way and is being maintained.
- Medical Aid Post: Provided at Toll Plaza location and is operational
- Highway Lighting: Highway lighting is provided at Toll Plaza and is functional.

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections provided below.

Project road starts at Km. 332+100 Near Guna (design chainage Km. 97+700) and ends at Km. 426+100 Near Biora (Design chainage Km. 191+200) on NH-3. It is situated in central part of Madhya Pradesh and passes through settlements namely, Umariya, Ruthiyai and Binaganj. However, during implementation stage due to change in NH number from NH-3 to NH-46 for continuity of NH chainage it is observed that all Km stones are fixed with new project chainages i.e. starts at Km. 223+000 and ends at Km. 317+000. Accordingly, site inventory conducted based on new chainages found at site.

3.2 Road Inventory

Inventory of the project road was carried out physically and the same is summarized in the following table. Few representative photographs are presented below.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain and rolling Terrain
2	Land Use	Agriculture and forest
3	Two lane length	93.5 Kms.
4	Earthen shoulder	1.0 m to 1.5m Width on site
5	Junctions	41 Nos.
6	Toll Plazas	At Km. 113+278 (Design Chainage) & Km. 165+197 (Design Chainage)
7	Sign boards	Sign boards are provided as per Highway requirements
8	Road Markings	Lane markings are provided as per Highway requirement
9	Bus Bays /shelters	6 Nos.
10	Highway Lighting	Provided as per requirement
11	Avenue plantation	Provided

Km. 239+300

Km. 250+140

Figure 3.1: Photographs of the Road Project

3.3 Pavement Condition

Pavement condition survey was carried out on the project road based on observations supplemented by simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement Condition Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Assessment of the condition of Pavement surface is a key component of infrastructure asset management. The information used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey

The survey on general pavement condition was primarily undertaken by means of slow drive- over survey, and supplemented with measurements wherever necessary. Pavement assessment was

done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of Surface area)
 - Ravelling (% of Surface area)
 - Potholes (% of Surface area)
 - Patching (% of Surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is fair. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP-19 and is given in **ANNEXURE 1**. The summary of Pavement condition is given below.

Table 3.3: Pavement condition summary

CHAPTER 4. INVENTORY AND CONDITION OF STRUCTURES

4.1 General Assessment and Condition of the structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

There are 04 Nos. Major Bridge, 34 Nos. Minor Bridges, 12 Nos. Underpasses, 02 Nos. Flyovers ,77 Nos. Pipe culverts and 18 Nos. Slab/ Box culverts are there along this project road

Table 4.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	04
2	Minor Bridge	34
3	PUP/CUP	12
4	Flyovers	02
5	Pipe culverts	77
6	Slab/Box Culverts	18

The major bridges of superstructure are of RCC/PSC I Girder resting on RCC wall type/Circular piers and abutments with open foundation. The minor bridges of superstructure are RCC solid slab/RCC Box type/ RCC/PSC I Girder and the substructures are of PCC/RCC conventional wall type supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Structural condition of most of the culverts is fair except in few locations. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges

The total length of the major bridge at Km. 234+951 is 150.0m with 5 spans. The superstructure consists of PSC Girder. Each pier and whereas abutment is regular RCC wall/Circular type abutment. Open foundations have been constructed for all piers and abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC railings/Crash barrier have been provided on both sides of the deck.

The total length of the major bridge at Km. 257+942 is 278.0m with 9 spans. The superstructure consists of RCC/PSC Girder. Each pier and whereas abutment is regular RCC wall/Circular type abutment. Open foundations have been constructed for all piers and abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC railings/Crash barrier have been provided on both sides of the deck.

The total length of the major bridge at Km. 293+929 is 98.7m with 3 spans. The superstructure consists of PSC Girder. Each pier and whereas abutment is regular RCC wall type/Circular abutment. Open foundations have been constructed for all piers and abutments. Superstructure is seated on Elastomeric

bearings. Expansion joints are of Strip seal type. RCC railings/Crash barrier have been provided on both sides of the deck.

The total length of the major bridge at Km. 310+744 is 101.6m with 4 spans. The superstructure consists of RCC/PSC Girder. Each pier and whereas abutment is regular RCC wall type/Circular abutment. Open foundations have been constructed for all piers and abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are of Strip seal type. RCC railings/Crash barrier have been provided on both sides of the deck.

Table 4.2: List of Major Bridge

S. No.	Chainage (Km.)	Span (m)	Total Length of Bridge (m)
1	234+951	5x30.0	150.0
2	257+942	2x20+7x34	278.0
3	293+929	3x32.9	98.7
4	310+744	4x25.4	101.6

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, drainage spouts and strip seal expansion joints are to be carried out.

Km. 293+929

Km. 258+200

Figure 4.1: Overall view of the major bridge

4.4 Details of Minor Bridges

There are 34 minor bridges in the project stretch. The type of superstructure for minor bridges is RCC solid slab, RCC Box type & RCCI Girder and the substructure is PCC/RCC conventional wall type supported on open foundations. Expansion joints are buried type/Strip seal and bearings are tar paper and elastomeric bearings. RCC crash barriers are provided on all structures.

Table 4.3: List of Minor Bridge

S. No.	Chainage (Km.)	Span (m)	Total Length of Bridge (m)	Description
1	226+094	2x5.0	10	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
2	230+216	3x18.5	55.5	It has RCC I Girder. It has RCC crash barrier, bituminous wearing coat & Strip seal expansion joints.
3	235+261	1x30.0	30	It has PSC I Girder. It has RCC Railing,

4.5 Details of Flyover/Underpass

There are 12 Underpasses & 2 Flyovers in the project stretch. The type of superstructure for underpass/Flyover is RCC I Girder/RCC Box type and the substructure is PCC/RCC conventional wall type supported on open foundations. Expansion joints are buried type/Strip seal and bearings are tar paper and elastomeric bearings. RCC crash barriers are provided on all structures.

Table 4.4: Inventory of Underpass

S. No.	Chainage (Km.)	Type of Structure	Span (m)	Total Length of Bridge (m)	Description
1	311+256	Flyover	2x15.6+2x21.6	74.4	It has RCC I Girder type. It has RCC crash barrier, bituminous wearing coat, Strip seal expansion joints, elastomeric bearings.

4.6 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections.

4.6.1. Slab/Box Culverts

There are 18 Nos. of slab/Box culvert in the project stretch. The details of the culverts are as given below.

Table 4.5: List of Slab/Box Culverts

S. No.	Chainage (km.)	Span (m)	Vent Size (m)
1	224+900	1x3.0	1.6
2	226+912	1x3.0	2.47
3	231+970	1x2.0	1.5
4	238+839	1x3.0	1.5
5	242+534	1x2.0	1.5

18	314+583	1x3.0	2.2

4.6.2. Condition of the Slab/Box Culverts:

The general condition of above Box/slab culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

4.6.3. General Description of the Pipe Culverts

There are 77 Nos. of pipe culverts in the project stretch. The details of the culverts are as given below.

Table 4.6: List of Pipe Culverts

S. No.	Chainage (Km.)	Span (m)	Sl. No.	Chainage (Km.)	Span (m)

39	265+991	1x1.2			

4.6.4. Condition of the Pipe Culverts

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

The culverts are in fair condition and can be retained in the present condition with following repairs/rehabilitation measures.

- Chocked culverts must be cleared.
- Debris and garbage near outside the vents must be removed.
- Slope protection works must be repaired / provided.

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2001 publication while the current publication is IRC: 37-2018.

5.2.1. Pavement design crust thickness

The new pavement shall be designed in accordance with the IRC:37. "Guidelines for the Design of Flexible Pavements". Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. "Guidelines for the Design of Plain Jointed Rigid Pavements for Highways".

The project road has been divided into 2 sections i.e. HS-1 (from Km. 97+700 to Km. 145+400) and HS-2 (from Km. 145+400 to Km. 191+200). The design traffic as per traffic during design stage and design traffic as per CA is summarized below

Review of Pavement Design

As per the pavement design approved in the project, the following conclusions are given.

Table 5.1: Pavement Design summary

S. No.	Description/ Pavement layer	Design Parameters for Main carriageway *	Design Parameters for Service roads
1	Eff. Sub Grade CBR (%)	11% for HS-1 & 13% for HS-2	9%
2	Design Life (Years)	10 years for BT 25 years for Granular	23 years
3	Design Traffic (MSA)	45 MSA for 10 years 185 MSA for 26 years	10 MSA
4	Surface course (BC)	40 mm	40 mm
5	Binder course (DBM)	90 mm	50 mm
6	Base course (WMM)	250 mm	250 mm
7	Sub Base course (GSB)	200 mm	200 mm

Note: *The effective CBR is 11% for HS-1 and 13% for HS-, however the pavement crust has been proposed same for both homogenous sections

Details of Pavement design for Rigid Pavement are as follows:

Table 5.2: Rigid Pavement Design for Toll Plaza

Description	Design/Adopted Thickness
CBR of sub grade	10 %
Design life in years	30
Commercial Vehicles per Day (CVPD)	5116
Pavement Quality Concrete (PQC) - mm	280
Dry Lean Concrete (DLC) - mm	150
Drainage Layer (GSB) - (mm)	150
Diameter of Dowel Bar (mm)	32
Length of Dowel Bar (mm)	450
Spacing of Dowel Bars (mm)	290
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	710

The Pavement crust has been designed according to IRC specification and found in order, the adopted/Constructed pavement layer thickness is adequately provided than actual/designed thickness.

5.2.2. Validation of Pavement Design

The new pavement shall be designed in accordance with the IRC:37. "Guidelines for the Design of Flexible Pavements". Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. "Guidelines for the Design of Plain Jointed Rigid Pavements for Highways".

Pavement design validation is carried out as per actual traffic from COD. As per IRC 37, Vehicle Damage Factor (VDF), Distribution of commercial vehicles and growth rate values are considered from pavement design report. Summary is given below.

Table 5.3: Real Time Traffic From COD & Project Traffic Current Years For CMSA (TP1:Pagara)

	LCV	Bus	2AT	3AT	MAV					
2032	829	557	2526	2627	4564	10273	7.48	75.66	15	Projected
2033	876	584	2654	2770	4801	10809	7.88	83.54	16	Projected
2034	926	614	2788	2921	5051	11373	8.29	91.83	17	Projected
2035	978	644	2928	3080	5314	11967	8.73	100.55	18	Projected
2036	1034	677	3076	3248	5590	12591	9.19	109.74	19	Projected
2037	1092	710	3232	3425	5881	13248	9.67	119.41	20	Projected
2038	1154	746	3395	3612	6186	13939	10.18	129.59	21	Projected
2039	1219	783	3566	3809	6508	14666	10.71	140.30	22	Projected
2040	1289	822	3746	4016	6846	15431	11.28	151.58	23	Projected
2041	1362	863	3935	4235	7202	16237	11.87	163.45	24	Projected
2042	1439	907	4134	4466	7577	17084	12.50	175.95	25	Projected

Based on the above actual traffic, estimated MSA for 10 years and 25 years are 40, 170 of TP1 respectively. Similarly estimated MSA for 10 years and 25 years of TP2 are 42, 175 respectively. Traffic considered in pavement design is more than estimated traffic based on actual traffic. Hence the pavement design adopted is found in order.

5.3 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 45 MSA and 185 MSA for a design life of 10 years for Bituminous layers (up to end of year 2027) and 25 years for granular layers respectively (up to end of year 2042), whereas the actual traffic is 40/42 MSA and 170/175 MSA for 10 years and 25 years respectively. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation before the end of Stage-I of design life (as per pavement design report) and prior to the end of concession period to evaluate the requirement of overlay.

5.4 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Proposed in the year 2024.

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction. (As per IRC 58-2015).

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 6.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety Audit

6.2 Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 6.2: Road safety audit summary

S. No.	Item Description		Status	Condition
Road Furniture				
1	Sign Boards	Chevron Signs	Available as per site requirement	Good
		Village sign boards	Available as per site requirement	Good

S. No.	Item Description		Status	Condition
		Information Boards	Available as per site requirement	Good
		Other Sign Boards	Available as per site requirement	Good
		Gantry Sign Boards	Available as per site requirement	Good
2	Road Marking	Studs & Lane marking	Available as per site requirement	fair
3	Metal Beam Crash Barriers	At High embankments	Available as per site requirement	Fair

This Project Section is part of an important corridor. It is the Concessionaire's duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

6.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is highly appreciated during the maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General:

There are two toll Plazas on the project road at Km. 113+278 (Design Chainage) and Km. 165+197 (Design Chainage). Each side comprises of 4 normal lanes, 1 extra wide lane. The lane width in normal lanes was 3.2 m and extra wide lane was 4.5 m. The width of islands provided is 1.8 m. The single canopy is provided to cover the toll lanes. Toll plaza buildings are G+1 floor building which houses control room, UPS and Pantry.

7.2 Tolling Equipment and Control Room Equipment

List of equipment provided at toll plaza and control room is given below.

Table 7.1: List of Equipment at Toll Plaza and Control Room

S. No.	Name of Assets	Make	Units	TP-1	TP-2
Admin Building					
1	Main Server	Lenova	2	1	1
2	24 Port Network Switch	D-Link	4	2	2
3	INTERCOM "MASTER UNIT"	Aiphone	2	1	1
4	NVR	HIKVISION	2	1	1
5	LED TV	AOC/LG	4	2	2

CHAPTER 8. TRAFFIC CENSUS AND TOLL REVENUE

8.1 Traffic Census

In accordance with clause 22.1, the Concessionaire shall install, maintain and operate electronic/computerized traffic counters at each of the Toll Plazas and collect data relating to the number and types of vehicles using the Project Highway.

The Total traffic analysis and revenue calculations at the both toll plazas are replicated from the Traffic study report by Ramboll in month of February 2021.

The Concessionaire provided toll plaza wise details of 2020-21 based on the data available and the summarized AADT for the 2020-21 year is provided in **Table 8.1** below.

Table 8.1: Year wise Traffic (Vehicles) Details as per Toll plaza Data

FY/Mode	Car	LCV	Bus	2-axle Truck	3-axle Truck	MAV	O/size/HME	Total
TP01 at Pagara toll plaza								
FY21	3984	548	462	1357	1418	2534	3	10306
TP02 at Jogipura toll plaza								
FY21	3030	424	488	1178	1363	2409	3	8895

8.2 Tollable Traffic at both Toll plazas

The Tollable traffic Nos. at the both toll plazas are arrived based on the total traffic movement at both the toll plazas. The Summarized tollable traffic is presented in the below table:

Table 8.2: Summary of 2020-21 Tollable traffic at Toll Plaza

FY/Mode	Car	LCV	Bus	2-axle Truck	3-axle Truck	MAV	O/size/HME	Total
TP01 at Pagara toll plaza								
FY21	3369	521	437	1336	1380	2510	3	9555
TP02 at Jogipura toll plaza								
FY21	2709	409	464	1166	1342	2401	3	8493

The figures shown in **Table 8.2** are actual tollable traffic (excluding exempted/non tollable traffic) based on which the toll revenue is collected.

Considering 2021 as the base year and traffic growth rates observed from Ramboll Traffic Survey Report, traffic projections for the balance concession period for both the toll plaza have been calculated and summarized below in **Table 8.3**.

Table 8.3: Details of Projected traffic

a) TP-1: Pagara toll plaza

FY Ending	Car	LCV	Bus	2-axle Truck	3-axle Truck	MAV	O/size/HME	PCUs
2021	3,369	521	437	1,336	1,380	2,510	3	24,916
2025	4,886	613	541	1,628	1,544	3,114	4	30,978

FY Ending	Car	LCV	Bus	2-axle Truck	3-axle Truck	MAV	O/size/HME	PCUs
2030	7,048	728	661	2,013	1,746	4,033	5	39,572
2035	9,931	864	809	2,449	2,004	5,172	7	50,316
2040	13,227	983	946	2,852	2,224	6,323	8	61,260
2042	14,834	1,034	1,008	3,032	2,318	6,852	9	66,335

b) TP-1: Jogipura toll plaza

FY Ending	Car	LCV	Bus	2-axle Truck	3-axle Truck	MAV	O/size/HME	PCUs
2021	2,709	409	464	1,166	1,342	2,401	3	23,054
2025	3,929	481	574	1,414	1,499	2,973	4	28,510
2030	5,667	571	702	1,744	1,694	3,848	5	36,285
2035	7,986	679	858	2,122	1,945	4,935	7	46,015
2040	10,637	771	1,004	2,472	2,158	6,033	8	55,881
2042	11,929	812	1,069	2,628	2,250	6,538	9	60,446

8.3 Toll Revenue Calculations

The toll revenue for horizon year is calculated based on the input from the above data, actual toll rates collected on base year (2020-21) with calculated Traffic growth rates. The WPI growth and toll efficiency has been assumed 4% and 100% respectively and other inputs considered in revenue calculations is given in **Table 8.4**.

Table 8.4: Details of Toll Revenue inputs

Particular	Toll plaza 1	Toll plaza 2
Location	Km. 113+278	Km. 165+197
4 lane length in Kms.	51.7	41.8
2 lane length in Kms.	0	0
Agreement Date	21-09-2015	21-09-2015
Appointed Date	19-03-2016	19-03-2016
Concession period	26	26
Commercial operation date	18-Jun-2018	18-Jun-2018
Concession End Date	18-Mar-42	18-Mar-42
Traffic study year	2020-21	2020-21
Vehicle Type	AADT	AADT
Car/Taxi/Van	3369	2709
LCV	521	409
Bus	437	464
Truck (2-Axle)	1336	1166
Truck (3-Axle)	1380	1342
4 to 6 Axle	2510	2401
Oversized Vehicle	3	3

The summarized Toll Rates for the both toll plazas used in toll revenue collection for year-wise is given in Table below:

Table 8.5: Details of Toll Rates at each Toll Plaza

a) TP-1: Pagara toll plaza

FY Ending	Car	LCV	Bus	2-axle Truck	3-axle Truck	MAV	O/size/HME	Car Local
2021	70	110	230	230	250	360	440	275
2025	80	130	270	270	290	420	510	325
2030	100	160	330	330	360	520	635	400
2035	120	195	410	410	450	645	785	495
2040	150	245	510	510	555	800	970	615
2042	165	265	555	555	605	870	1060	670

b) TP-1: Jogipura toll plaza

FY Ending	Car	LCV	Bus	2-axle Truck	3-axle Truck	MAV	O/size/HME	Car Local
2021	60	95	195	195	215	305	370	275
2025	65	110	230	230	250	355	435	325
2030	85	135	280	280	305	440	540	400
2035	105	165	350	350	380	545	665	495
2040	130	205	435	435	470	680	825	615
2042	140	225	470	470	515	740	900	670

The split trip type based on the available toll data from Concessionaire is used to derive the annual toll collection for each plaza. The revenue estimated and presented below. Detailed toll revenue estimation is given in **ANNEXURE 4**.

Table 8.6: Details of Toll Revenue for both Toll Plaza Estimated (in Rs. Million)

Financial Year	Annual Revenue of TP1 (Km. 348+885)	Annual Revenue of TP2 (Km. 400+465)	Total (in mi.)
2020-21	670.445	532.844	1203.289
2021-22	779.017	621.322	1400.339
2022-23	863.869	685.037	1548.906
2023-24	927.812	740.000	1667.812
2024-25	1019.711	801.575	1821.286
2025-26	1111.037	876.500	1987.536
2026-27	1205.717	961.852	2167.569
2027-28	1329.353	1047.972	2377.325
2028-29	1465.294	1153.548	2618.842
2029-30	1605.289	1260.603	2865.893
2030-31	1740.217	1375.041	3115.259
2031-32	1914.871	1508.409	3423.279
2032-33	2089.688	1649.307	3738.995
2033-34	2292.409	1812.492	4104.900
2034-35	2512.280	1978.974	4491.254

Project: Four Laning of Guna- Biora Section of NH-3 from Km. 332.100 to Km. 426.100 in the state of Madhya Pradesh under NHDP Phase IV to be executed on BOT(Toll) Mode on DBFOT

**TECHNICAL DUE DILIGENCE
REPORT**

Financial Year	Annual Revenue of TP1 (Km. 348+885)	Annual Revenue of TP2 (Km. 400+465)	Total (in mi.)

2040-41	4097.997	3231.273	7329.270
2041-42	4462.736	3498.821	7961.557

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of CA, the Concessionaire will operate and maintain the Project roads by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual Inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz. pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

9.3 Operations

9.3.1. Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- i. Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- ii. Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.
- iii. carrying out preventive and periodic maintenance of the Project road;
- iv. undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;

- v. Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- vi. Functioning of the lighting system;
- vii. Functioning of the Patrolling System
- viii. Functioning of rescue and medical aid services
- ix. Ambulance as and when required
- x. Functioning of the Project Facilities
- xi. Administrative, Operational and Maintenance Base Camp
- xii. Truck Lay byes
- xiii. Pickup Bus stops / Bus Bays
- xiv. protection of the environment and provision of equipment and materials therefor;
- xv. Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- xvi. complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plazas

There are two lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the Escrow Account. In case of ETC system, Toll collection is connected with Network system and directly deposited into the Escrow account.

9.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

9.5.1. Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence does not require any immediate or preventive interventions.

9.5.2. Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

9.5.3. Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road. The details of periodic maintenance schedule are given below.

Table 9.1: Schedule and status of for Periodic Maintenance

Description	Schedule of Major Maintenance	Status of Major Maintenance
1 st Periodic Maintenance	Overlay in the year 2024	Planned to execute
2 nd Periodic Maintenance	Overlay in the year 2030	Planned to execute
3 rd Periodic Maintenance	Overlay in the year 2036	Planned to execute
4 th Periodic Maintenance	Overlay in the year 2041	Planned to execute

9.5.4. Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.6 Review of Test Reports

9.6.1. Bump Integrator Test

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of September, 2020. As per Schedule K of CA, “If the stretch exceeds 3000mm in a KM shall be rectified”. No stretch exceeds the permissible limit.

9.6.2. Falling Weight Deflectometer (FWD)

The main objective of this study is to conduct Falling Weight Deflectometer (FWD) test for evaluation of strength (MR) of existing crust and propose overlay requirements, for strengthening of the road as per IRC: 115-2014- "Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique". Entire section (Km. 191.200 to Km. 97.700) of the project road has been considered as single homogeneous section. The FWD test was conducted in the month of March 2020. Based the FWD results the pavement performance is good, however 40 mm BC has been proposed for entire project to cater the further 50 MSA traffic. In the year 2021. CMSA from COD has reached 11.18 MSA and 11.63 MSA for HS-1 and HS-2 respectively.

9.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 5**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance (In crores)	Incidental maintenance (In crores)	Periodic / Major maintenance	Operation Expenses	Total cost per year
2020	1.417	0.604		8.45	10.47
2021	1.460	0.622		8.71	10.79
2022	1.504	0.641		8.97	11.11
2023	1.549	0.660		9.24	11.45
2024	1.595	0.680	49.61	9.51	61.40
2025	1.643	0.701		9.80	12.14
2026	1.692	0.722		10.09	12.51
2027	1.743	0.743		10.40	12.88
2028	1.795	0.766		10.71	13.27
2029	1.849	0.788		11.03	13.67
2030	1.905	0.812	109.61	11.36	123.69
2031	1.962	0.837		11.70	14.50
2032	2.021	0.862		12.05	14.93
2033	2.081	0.887		12.41	15.38
2034	2.144	0.914		12.78	15.84
2035	2.208	0.942		13.17	16.32
2036	2.274	0.970	130.21	13.56	147.02
2037	2.343	0.999		13.97	17.31
2038	2.413	1.029		14.39	17.83
2039	2.485	1.060		14.82	18.37
2040	2.560	1.091		15.27	18.92
2041	2.637	1.124	143.6	15.72	163.08
2042	2.716	1.158		16.20	20.07

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 Scope of Work (Article 2)

Article 2 provides the scope of work, which includes the following.

- Construction of the Project road on the Site set forth in Schedule-A and as specified in Schedule-B of CA together with provision of Project Facilities as specified in Schedule-C of CA, and in conformity with the Specifications and Standards set forth in Schedule-D of CA;
- Operation and maintenance of the Project road in accordance with the provisions of the Agreement;
- Performance and fulfillment of all other obligations of the Concessionaire in accordance with the provisions of the Agreement and matters incidental

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 6**.

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfill its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the Concession Agreement

10.5 Obligations relating to the Competing Roads (Clause 6.3)

Neither Authority nor any Governmental Instrumentality shall construct the Competing Road before 10th Anniversary of the Appointed Date.

10.6 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 20% of the Total Project Cost.

10.6.1. Tests (Clause 13.3)

For determining that the Project, conforms to the Maintenance Requirements, the Independent Engineer shall require the Concessionaire (Concessionaire shall in turn require the Contractor) to carry out, or cause to be carried out, tests specified by it in accordance with Good Industry Practice. One half of the costs incurred on such tests, and to the extent certified by the Independent Engineer as reasonable, shall be reimbursed by the Authority to the Concessionaire

10.7 Provisional Completion Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA. Provisional Completion Certificate given in **ANNEXURE 7**.

10.8 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire. Completion Certificate given in **ANNEXURE 8**.

10.9 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Following Change of scope proposals were initiated during construction period and consented by the NHAI. Details are provided in **ANNEXURE 10**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (The “**Maintenance Requirements**”).

10.13 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 0.5% (zero decimal five percent) of the Average Daily Fee, and

- 0.1% (zero decimal one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Monthly Fee Statement (Clause 19.5)

During the Operations Period, the Contractor shall furnish to the Concessionaire and the Authority, if required by the Contractor, within 7 (seven) days of completion of each month, a statement of Fee substantially in the format set out in the Concession Agreement (“Monthly Fee Statement”).

10.18 Concession Fee (Article 26)

- In consideration of the grant of Concession, the Concessionaire shall pay Concession Fee of Rs.1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC.

10.19 Toll fee (Clause 27.1.1)

Toll Fees shall be revised annually in accordance with Clause 27.2.1.

10.20 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 Details of Insurance

As per clause 32.1 of the CA, the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Insurance copies are provided in **ANNEXURE 9**. Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Property
			From	To	
Civil Engineering Completed Risk	National Insurance Company Ltd	321300441910001993	27.03.2020	26.03.2021	Road & Structure: Toll Building & Toll Booths, TMS, HTMS, Office & IT equipment, Electronic Equipment, Road Furniture, Fixtures, electrical Poles Lighting & Fittings, Sign boards & Safety Barrier
Policy Schedule for Money Insurance	The New India Insurance Co. Ltd	45010048190300000003	18.5.2020	17.5.2021	Money in safe(during and after business hours-Jogipura Toll Plaza

Electronic Equipment Insurance Policy schedule	Oriental Insurance Company Ltd	171200/44/2021/51	7.10.2020	06.10.2021 7.9.2021	Electronic Equipment installed in the Project road
Employees Compensation Insurance Policy	HDFC ERGO General Insurance Company Ltd	3114203391761300000	18.5.2020	17.05.2021	All categories of Employees of the Contractor & sub-contractor engaged in the Project

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The Pavement condition for the overall project is good. RCC drains are constructed in Built up locations and earthen drains in rural locations which facilitates, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are being cleared during routine maintenance period.

12.4 Project Facilities

There are two toll Plazas on the project road at Km. 113+278 and Km. 165+197. Toll plaza buildings are G+1 floor building which houses control room, UPS and Pantry. Bus bays are in fair condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained well. Highway lighting is provided at as per highway requirements and the same is found functional.

12.5 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 73. The condition of sign boards & other road appurtenances like metal beam crash barriers is fair.

12.6 Traffic Growth

Based on real time, traffic data was extracted from Schedule N of CA, the traffic growth observed at toll plaza is good, whereas calculated growth rates are considered while evaluating forecast of traffic volumes.

12.7 Maintenance

Routine maintenance is being carried out by O&M contractor effectively, based on documents reviewed, time to time observations made by client/Authority are being complied and no outstanding NCR's are to be attended as on date. Major maintenance (MM) /Periodic maintenance was carried recently and next MM is scheduled in the year 2024.

12.8 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

Annexure 1: Pavement Condition

Condition: G=Good, F=Fair, P=Poor & VP=Very poor, Rutting: M=Moderate & S=Severe

Drain: LD=Lined open Drain, ULD=Unlined Drain, CD=Covered Drain, NO=No drain, PF=Partial Function, F= Functional

Annexure 4: Toll Revenue Calculations

Toll Plaza-I & II:

1. Tollable Traffic considered for Toll Revenue in No.s (AADT):

Table-1: Details of Tollable Traffic (Base Year 2020-21)

Vehicle Type	Traffic (AADT)	Traffic (AADT)
	Km. 113+778	Km. 165+197
Car/Taxi/Van	3369	2709
LCV	521	409
Bus	437	464
Truck (2-Axle)	1336	1166
Truck (3-Axle)	1380	1342
4 to 6 Axle	2510	2401
Oversized Vehicle	3	3

2. Traffic Growth Rates

Table-2: Details of Growth rates adopted

Vehicle Type	Cars	Bus	LCV	2-AT	3-AT	MAV
2022.00	12.00	8.50	5.10	7.50	4.90	8.20
2023-25	9.00	4.50	3.80	5.60	3.70	6.10
2026-30	7.60	4.10	3.50	4.60	2.80	5.60
2031-35	7.10	4.10	3.50	4.00	2.80	5.10
Beyond 2035	5.90	3.20	2.60	3.10	2.10	4.10

3. Trip Distribution Ratio as per the Toll Data.

Table-3: Details of Trip Distribution

A) TP-1: Km. 113+778 at Pagara for Base Year 2020-21 (in %)

Category	Car	LCV	Bus	2-axle Truck	3-axle Truck	MAV	O/size/HME
Normal Toll	95.8	85.8	99.6	100.0	100.0	100.0	100.0
Daily Pass	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Monthly Pass	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Local Personal Concessions	4.1	0.0	0.0	0.0	0.0	0.0	0.0
Local Commercial	0.0	14.2	0.4	0.0	0.0	0.0	0.0
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0

B) TP-2: Km. 165+197 at Jogipura for Base Year 2020-21 (in %)

Category	Car	LCV	Bus	2-axle Truck	3-axle Truck	MAV	O/size/HME
Normal Toll	99.4	99.3	100.0	100.0	100.0	100.0	100.0
Daily Pass	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Monthly Pass	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Local Personal Concessions	0.6	0.0	0.0	0.0	0.0	0.0	0.0
Local Commercial	0.0	0.6	0.0	0.0	0.0	0.0	0.0
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0

4. Toll Rates :

Table-4: Details of Toll Fee (Base Year 2020-21)

Vehicle Type	Km. 348+885	Km. 400+465
Car/Taxi/Van	70	60
LCV	110	95
Bus	230	195
Truck (2-Axle)	230	195
Truck (3-Axle)	250	215
4 to 6 Axle	360	305
Oversized Vehicle	440	370

Note: Local personal car passes: Rs.275

Toll Plaza-1 Toll Revenue (in Rs. million per year):

Financial Year(FY)	Car	LCV	Bus	2-axle Truck	3-axle Truck	MAV	O/size/HME	Total

<p>Sub: Four laning of Guna-Bioara section of NH-3 from Km 332.100 to Km 426.100 in the State of Madhya Pradesh under NHDP Phase-IV to be executed in BOT (Toll) mode on DBFOT basis.-LOA.</p>	
<p>Ref : 1. NHA's letter no. NHAI/MP/BOT/Guna-Bioara/11012/02/2014 dated 24.04.2015. 2. Your Bid submitted on 22.06.2015.</p>	
<p>Sir,</p>	
<p>Consequent upon NHA's letter mentioned at reference no. 1, wherein you were informed of having been qualified in terms of the requirements of the Request for Qualification (RFQ) document and eligible to submit the Request for Proposal (RFP) in respect of the Project of "Four laning of Guna-Bioara section of NH-3 from Km 332.100 to Km 426.100 in the State of Madhya Pradesh under NHDP Phase-IV to be executed in BOT (Toll) mode on DBFOT basis" and considering your proposal in this regard submitted on 22.06.2015 vide Ref. 2, NHA hereby accepts your proposal, quoting a grant amounting to Rs 27.00 Cr (Rupees twenty seven crores only) (i.e. 2.67% of TPC) as included in Appendix-1 of your Bid Document(i.e. Price Bid) and declares you as the "Selected Bidder" as per provision of RFP Documents. Please note that the amount of grant quoted by you shall be dealt in accordance with the provisions of RFP Documents. The Concession Period is 26 (Twenty Six) years including Construction Period of 910 (Nine Hundred Ten) days from the "Appointed Date".</p>	
<p>2. In accordance with the clause 3.3.5 of the RFP document (Volume - I), you are requested to sign the duplicate copy of the LOA and return the same as your acknowledgment within 07(seven) days of receipt of LOA. Thereafter, you are required to execute the Concession Agreement within 45 (Forty Five) days from the date of issue of LOA as specified in clause 1.3 of RFP.</p>	
<p>3. Further, as per RFP documents, you are required to incorporate a Special Purpose Vehicle (SPV) solely for the purpose of domiciling the project (the "Concessionaire"). The Concessionaire for due and faithful performance of its obligations during the Construction Period shall furnish a Performance Security by way of an irrevocable and unconditional Bank Guarantee of Rs. 50.65 Crores (Rupees Fifty Crores and Sixty Five Lakhs Only) within the period of the 180th day from the date of signing of the Concession Agreement. Till the time the Concessionaire provides NHA with the Performance Security, the Bid Security shall remain in full force and effect (refer Clause 4.1.2 and Clauses of Article-9 of RFP-Vol- II).</p>	
	

-2-

4. You are required to comply with all the terms and conditions set forth in the RFQ and the RFP documents. In case of any default on your part, you shall be liable for action as stated in the Bid Documents.

Yours faithfully,

(Atul Kumar)

Chief General Manager (Tech)

5. Concessionaire's Letter No. Jalpa Devi/IE/GUNA-BIARO/BOT/2018-2019/887, dated 20.04.2018.

Dear Sir,

Pursuant to the provisions of Clause 14.3.2 of the Concession Agreement and concurrence of Authority for issuance of Provisional Certificate for a part length of 90 km of the Project Highway, vide letter no. 31519, we are pleased to issue 'Provisional Certificate' upon substantial completion of part length of 90 km of the Project Highway, duly appended with the Punch List (List-A) containing the list of minor works to be completed within 90 days of issuance of Provisional Certificate and List-B, the works, to be taken-up as and when land is made available and to be completed within a reasonable time as assessed by the Independent Engineer.

We wish you all the best.

With best regards,
for Aarvee Associates Architects Engineers & Consultants Pvt. Ltd.,

K.V.S. Prasad
Authorised Signatory

End: a. Provisional Certificate for part length of 90.000 km of the Project Highway
b. Punch List (List-A)
c. List-B

Copy to:

1. The General Manager-MP, NHAI HQ, Delhi.
2. The Project Director, PIU, NHAI, Guna.
3. The Authorised Signatory, M/s Jalpa Devi Tollways Ltd., Village: Gader, District: Guna.
4. The Team Leader, Aarvee Associates Architects Engineers & Consultants Pvt. Ltd., Guna.

PROVISIONAL CERTIFICATE

1. We, Aarvee Associates Architects Engineers & Consultants Pvt. Ltd., acting as Independent Engineer, under and in accordance with the Concession Agreement dated 21st Sep'15 (the "**Agreement**"), for Four-Laning of the Guna – Biora section of NH-3 from Km 332.100 to Km 426.100 in the state of Madhya Pradesh under NHDP Phase IV to be executed on BOT (Toll) mode on DBFOT basis (the "**Project Highway**") through M/s. Jalpa Devi Tollways Limited, hereby certify that the Tests specified in Article 14 and Schedule-I of the Agreement have been undertaken to determine compliance of a part of the Project Highway (96.25%) with the provisions of the Agreement.
2. Construction Works that were found to be incomplete and/or deficient have been specified in the Punch List appended hereto, and the Concessionaire has agreed and accepted that it shall complete and/or rectify all such works in the time and manner set forth in the Agreement. (Some of the incomplete works have been delayed as a result of reasons attributable to the Authority or due to Force Majeure and the Provisional Certificate cannot be withheld on this account. Though the remaining incomplete works have been delayed as a result of reasons attributable to the Concessionaire), we are satisfied that having regard to the nature and extent of such incomplete works, it would not be prudent to withhold commercial operation of the Project Highway, pending completion thereof.
3. In view of the foregoing, we are satisfied that the Project Highway from Km 97.700 to Km 119.200, Km 120.000 to Km 130.600, Km. 131.300 to Km. 184.200 and Km 185.000 to Km 190.000 for an aggregate length of 90.000 km can be safely and reliably placed in commercial service of the Users thereof, and in terms of the Agreement, the Project Highway is hereby provisionally declared fit for entry into commercial operation on this the 18th day of June 2018.

CHAPTER 1. INTRODUCTION

1.1 General:

DBL ASHOKNAGAR-VIDISHA TOLLWAYS LIMITED. (herein after referred to as the “Concessionaire”) had augmented the existing road into two lane undivided carriageway from Bypass junction of Ashoknagar to Bangla Chauraha (35.680 Kms. length) section of Major District Road (here in after called “Project Highway”) in the state of Madhya Pradesh on design, build, finance, operate and transfer (DBFOT), Toll + Annuity basis in accordance with the terms and conditions set forth in the Concession Agreement executed with Madhya Pradesh Road Development Corporation Limited (herein after referred to as the “MPRDCL”) on March 22, 2013.

Project Road starts from Bypass Junction of Ashoknagar (Km. 0+100) in Ashoknagar and terminates at Bangla Chauraha (Km. 35+682). Total length of the Project Highway is 35.682 Kms. The Project road passes through plain terrain predominantly agricultural land except some Built-up sections viz. Athaikheda, Kharila and Bangla Chouraha. Project Location map is given at **Figure 1.1**.

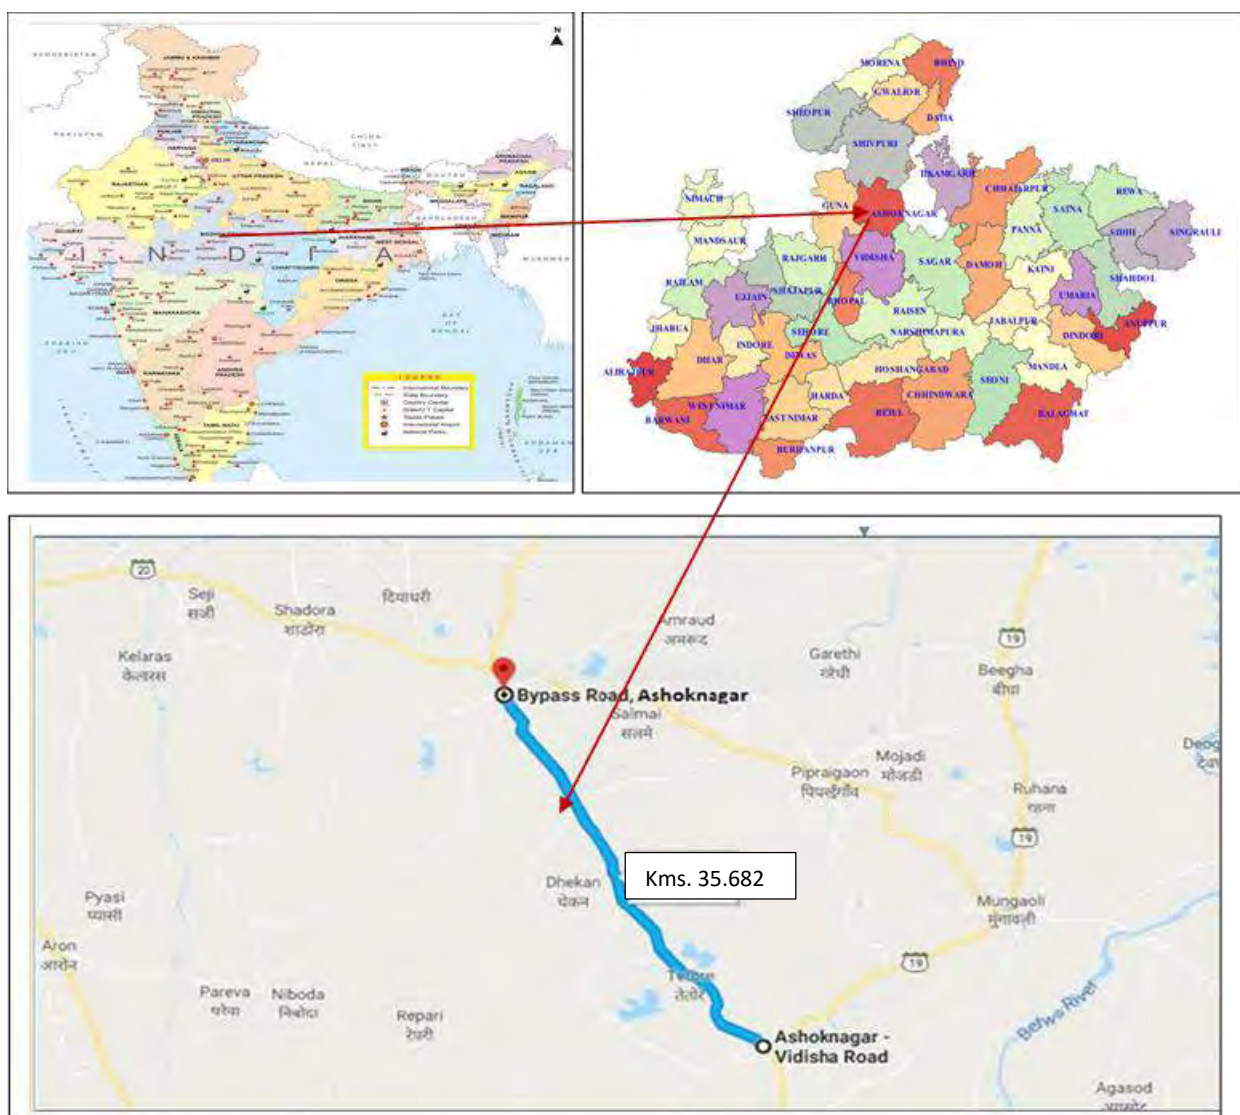

Figure 1.1: Project Location Map

SHREM ROADWAYS PVT. LTD. (SRPL) acquired DBL ASHOKNAGAR-VIDISHA TOLLWAYS LIMITED vide agreement dated 26th March 2018.

SHREM FINANCIAL PVT. LTD. (SFPL) appointed RUKY Projects Pvt. Ltd. as consultants for detailed Technical Due Diligence Services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the traffic potential and to estimate the projected Toll Collection etc.

1.2 Project Data

The details of the Project are listed in the following table.

Table 1.1: Project Data

S. No.	Particulars	Details
1	Name of the project	Construction, Operation and maintenance of road from Ashoknagar to Bangla chauraha on DBFOT (Design, Build, Finance, Operate and Transfer) on Toll Plus Annuity Basis.
2	Road Type	Major District Road (MDR)
3	Name of the Authority	Madhya Pradesh Road Development Corporation Limited
4	Name of the Concessionaire	DBL Ashoknagar-Vidisha Tollways Limited
5	Name of the EPC Contractor	Dilip Build con Limited
6	Date of LOA	08.02.2013
7	Date of Agreement	22.03.2013
8	Design Length as per Schedule B	35.682 Kms.
9	Length omitted under negative Change in Scope	0.107 Kms.
10	Actual Length Constructed	35.575 Kms.
11	Project Lane Configuration	2 Lane
12	EPC Cost	Rs. 77.22 Cr.
13	Nature of contract	BOT (Toll + Annuity)
14	Toll collected by	Concessionaire
15	Concession Period	15 years from the Appointed date
16	Appointed date	09.11.2013
17	Concession end date	08.11.2028
18	Construction Period	730 days from the Appointed date.
19	Schedule Completion Date	08.11.2015
20	Date of issuance of Provisional Certificate (Commercial Operation Date)	26.07.2014
21	Date of issuance of Completion Certificate	22.10.2014
22	Annuity Amount (every six months)	Rs 5.04 Cr
23	Total Number of Annuities payable	26 Nos.
24	First Annuity Payment Date	26.01.2015
25	Total Number of Annuity Paid	13 Nos.

1.3 Scope of consultancy services

The scope of work includes providing Due Diligence of the project road and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Collection of historic/past toll revenue data
- Collection of historic/past classified Traffic data from toll plaza and to estimate the projected traffic to arrive at revenue projections.
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout review of tolling system to evaluate the efficiency and functionality of tolling system and to identify and give suggestions to improve if any setbacks in the system.
- Carryout road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per schedule B and Schedule C of CA including Change of scope are listed in the following **Table 2.1**.

Table 2.1: Salient Features

S. No.	Particulars	As per CA	As per COS	As per Site
1	Total Length	35.682 Kms.	-0.107 Kms.	35.575 Kms.
2	Total Length of 2Lane (Flexible)	33.682 Kms.	+0.093 Kms.	33.775 Kms.
3	Total Length of 4Lane (Flexible)	2.00 Kms.	-0.200 Kms.	1.800 Kms.
4	Toll Plaza	1 No.	-	1 No.
5	Bus Shelters	16 Nos.	-	16 Nos.
6	Truck Lay Bays (Both sides)	2 Nos.	-	2 Nos.
7	Major Junction	2 Nos.	-	2 Nos.
8	Minor Junctions	9 Nos.	-	9 Nos.
9	ROB	Nil	-	Nil
10	Major Bridges	1 No.	-	1 No.
11	Minor Bridges	9 Nos.	+1 Nos.	10 Nos.
12	Pipe Culverts	14 Nos.	-2 & +1 Nos.	15* Nos.
13	Slab/Box Culverts	19 Nos.	-1 & +2 Nos.	19* Nos.

*As per site requirement two additional pipe culverts are constructed and one Box Culvert is not constructed as per site condition.

2.2 Typical Cross Section (TCS) Schedule:

The Concessionaire has followed the following Typical Cross Section figures shown below during the construction and schedule of TCS is given in Table 2.2 below.

**Figure 2.1: TCS 2.1 2-Lane Carriageway with Hard Shoulders without service road
(Open Country-Plain/rolling terrain)**

Figure 2.2: TCS 2.2 4-Lane divided Carriageway with Footpath (Built-up area)

Figure 2.3: TCS 2.3 2-Lane Carriageway with Paved Shoulder (Built-up area)

Table 2.2: TCS Schedule

S. No	From (Km.)	To (Km.)	Lengths(Km.)	Type of TCS
1	0+000	0+200	0.200	TCS 2.3 of Schedule D of CA
2	0+200	2+000	1.800	TCS 2.2 of Schedule D of CA
3	2+000	16+160	14.160	TCS 2.1 of Schedule D of CA
4	16+160	17+000	0.840	TCS 2.3 of Schedule D of CA
5	17+000	17+680	0.680	TCS 2.1 of Schedule D of CA
6	17+680	18+231	0.551	TCS 2.3 of Schedule D of CA
7	18+231	19+800	1.569	TCS 2.1 of Schedule D of CA
8	19.800	20+090	0.290	TCS 2.3 of Schedule D of CA
9	20+090	35+050	14.960	TCS 2.1 of Schedule D of CA
10	35+050	35+575	0.525	TCS 2.3 of Schedule D of CA

Figure 2.4: Pictorial Diagram of TCS Lengths.

2.3 Road Side Drainage:

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from road side community on the Carriageway, RCC side drains are constructed along the main carriageway on both flanks as specified in Schedule B of the CA in strict adherence to the Standard Specifications set forth in Schedule D of the CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas and earthen drains in open & rural areas.

2.4 Service Roads

Service roads are not provided along the entire stretch of the project road as per provisions of Schedule B of the CA.

2.5 Bypass/Realignment

There is no bypass / realignment proposed on the project road as per provisions of Schedule B of the CA.

2.6 Intersections

As per provisions of Schedule B of the CA, 2 Major Junctions and 9 Minor Junctions are provided. Details are given below.

Table 2.3: List of Junctions

S. No	Chainage (Km.)	Side
Major Intersection		
1	0+000	LHS
2	35+682	LHS
Minor Intersection		
1	0+100	RHS
2	1+600	LHS

S. No	Chainage (Km.)	Side
3	3+400	LHS
4	10+200	RHS
5	11+000	RHS
6	16+800	RHS
7	17+400	RHS
8	18+500	RHS
9	21+500	RHS

2.7 Grade Separated Structures and underpasses:

There are no Grade separated structures in the Project, as per provisions of Schedule B of the CA.

2.8 Road Under Bridge:

There are no RUBs in the Project, as per provisions of Schedule B of the CA.

2.9 Summary of Carriageway and pavement Details:

Table 2.4: Summary of Carriageway and pavement Details

S. No.	Description	Flexible (Kms.)	Rigid (Kms.)	Remarks
1	2 Lane with Earthen shoulder	31.369	---	Fig 2.1 of Schedule D of the CA
2	2 Lane with Paved shoulder	2.406	---	Fig 2.3 of Schedule D of the CA.

8	Reconstruction	35.575	---	
9	Total Length of the Project	35.575	---	

2.10 Summary of Structures and Culverts:

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.5: Summary of Structures

S. No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts
1	Retained	---	---	---	---
2	Widening	---	3	3	2
3	Reconstruction	1	6	4	17
4	New	---	---	7	---
5	Improvement	---	---	---	---
6	Total	1	9	14	19

2.11 Toll Plazas:

As per Schedule C of the CA provisions, one Toll Plaza has been constructed at Km. 7+300. Salient features of Toll Plaza are provided below.

- Each side comprises of, one normal lane and one extra wide lane.
- The lane width in normal lanes is 3.2 m and extra lane is of 4.5 m width.
- Single canopy is provided to cover the toll lanes.
- Toll plaza has been constructed as per standards set forth in Schedule D of the CA having facilities like lighting, water supply and firefighting Arrangements.
- Close circuit cameras are installed and monitored in administrative building.

2.12 Bus shelters and truck lay bays:

As per provisions of Schedule C of the CA bus shelters are provided at 16 locations and truck lay bays at 2 locations. Details of Chainage location are listed in the following Table 2.6.

Table 2.6: List of Bus shelters/Truck Lay bays

S. No.	Chainage (Km.)	Side*	Description
1	0+100	RHS	Bus shelter
2	0+120	LHS	Bus shelter
3	0+550	RHS	Bus shelter
4	0+570	LHS	Bus shelter
5	3+400	LHS	Bus shelter
6	3+600	RHS	Bus shelter
7	10+200	LHS	Bus shelter
8	10+200	RHS	Bus shelter
9	16+500	RHS	Bus shelter
10	16+520	RHS	Bus shelter
11	17+750	BHS	Truck Lay bay
12	18+500	LHS	Bus shelter
13	18+500	RHS	Bus shelter
14	21+500	LHS	Bus shelter
15	21+500	RHS	Bus shelter
16	35+100	BHS	Truck Lay bay
17	35+250	RHS	Bus shelter
18	35+250	LHS	Bus shelter

*Note: LHS-Left Hand Side, RHS-Right Hand Side

2.13 Other Project Facilities Provided as per Schedule C

- Roadside furniture: Sign boards, kilometer stones, road marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic safety devices: W beam crash barriers, parapet walls are provided as per the provisions of Schedule C of the CA.
- Landscaping: provided at toll plaza location and being maintained

- Tree plantation: Tree plantation is provided on both sides, for the full length of project corridor and being maintained.
- Medical Aid Post: Provided at toll plaza location and operational.
- Highway Lighting: Highway lighting is provided at Toll Plaza location and is functional.

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections below:

3.2 Road Inventory

Inventory of the project road was carried out physically, and the details are summarized in **Table 3.1**. Few representative photographs are presented in **Figure 3.1**.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain Terrain
2	Land Use	Built Up 12 %, Agriculture 45% and Barren 43%
3	Two lane length	33.775 Kms.
4	Four lane length	1.800 kms.
5	Earthen shoulder	2 m to 2.5 m Width on site
6	Junctions	11 Nos.
7	Toll Plaza	Km. 7+300
8	Sign boards	Sign boards are provided as per requirement
9	Road Markings	Lane markings are provided as per requirement
10	Bus Bays /shelters	16 Nos.
11	Truck Lay bye	02 Nos.
12	Street Lighting	Highway lighting provided as per requirement
13	Avenue plantation	Provided

3.3 Pavement Condition

Pavement Condition survey was carried out on the Project road, based on observations supplemented with simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement Condi-tion Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Pavement surface condition assessment is a key component of infrastructure asset management. The information is used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future Pavement Conditions and assessing long term needs;

Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey:

The survey on general Pavement Condition was primarily undertaken by means of slow drive- over survey, and supplemented with measurements where ever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, pot holes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The Pavement Condition is measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of surface area)
 - Ravelling (%of surface area)
 - Potholes (%of surface area)
 - Patching (%of surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement Condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP-19 and is given in **ANNEXURE 1**. The summary of Pavement Condition is given below.

Table 3.3: Pavement condition summary

From Chainage (Km.)	To Chainage (Km.)	Length (Kms.)	Condition

CHAPTER 4. INVENTORY AND CONDITION OF STRUCTURES

4.1 General Assessment and Condition of the Structures

Inspection of existing structures on the Project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

The list of structures as per the site is enclosed below

Table 4.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	1
2	Minor Bridge	10
3	Pipe culverts	15
4	Slab/Box Culverts	19

Bridges with RCC T Beam and Slab and RCC solid slab superstructure are supported on wall type piers and abutments. Single / multi cell box cell structure has been provided at some bridge locations. The condition of the structures is generally good. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. The condition of most of the Culverts is fair. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges

Major bridge at Km 9+900 has span arrangement of 6x14.9m with a total length of 89.4m. It has RCC solid slab superstructure supported on wall type piers and abutments. Other features include elastomeric bearings, RCC crash barrier and bituminous wearing coat.

Table 4.2: List of Major Bridge

S. No.	Chainage (Km.)	Span	Total Length of Bridge (m)
1	9+900	6 x 14.9	89.40

The condition of the superstructure and substructure of major bridge is good.

Km. 9+900

Figure 4.1: Representative photos of Major Bridges

4.4 Details of Minor Bridges

There are 10Nos. minor bridges on the project road. These bridges have box cell type structure RCC T Beam and slab and RCC solid slab type of superstructure supported on wall type piers and abutments with open foundations.

Table 4.3: Inventory of Minor Bridges

S. No.	Chainage (Km.)	Span Arrangement	Total Length of Bridge (m)	Description
1	3+200 (3+150)	2 x 14.7	29.4	It has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Elastomeric Bearings and buried type expansion joints.
2	10+950	6 x 8.2	49.2	It has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
3	16+050 (15+900)	1 x 7.1	8.2	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
4	16+750	3 x 5.4	16.2	It has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
5	18+300	2 x 6.8	14.9	It has existing RCC solid slab superstructure supported on CR masonry wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
6	20+700	2 x 5.0	11.0	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
7	23+050	2 x 5.0	11.0	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
8	28+800 (28+775)	1 x 7.1	8.2	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
9	30+900 (30+960)	2 x 10.0	20.0	It has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
10	5+021	1 x 6.7	6.70	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.

Km. 3+200

Km. 10+950

Km. 23+050

Km. 20+700

Figure 4.2: Representative photos of Minor Bridges

4.5 Details of Culverts

The culverts observed along the project road are mainly of two types viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.6 Details of Slab/Box Culverts

There are 19 Nos. of slab/Box culvert in the project stretch. The details of the culverts are as given below.

Table 4.4: List of Slab/Box Culverts

S. No.	Chainage (Km.)	Type	Span (m)
1	4+350 (4+250)	Slab	1 x 5.7
2	14+600	Box	1 x 3.9
3	22+150	Box	1 x 4
4	23+700	Box	1 x 6.2
5	24+100	Box	1 x 3
6	24+500 (24+760)	Box	1 x 4

S. No.	Chainage (Km.)	Type	Span (m)
7	25+350	Box	1 x 3
8	25+900	Box	1 x 3
9	26+750	Box	1 x 4.9
10	27+150	Box	1 x 6
11	27+900 (extra)	Box	1 x 2.1
12	28+100	Slab	1 x 2.6
13	28+400 (28+370)	Box	1 x 4.1
14	29+200	Box	1 x 5
15	29+400	Box	1 x 3.8
16	30+325	Box	1 x 3
17	31+650	Box	1 x 6.2
18	32+050 (32+100)	Box	1 x 3
19	32+300	Box	1 x 4

The general condition of above slab/box culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

Km. 23+700

Km. 24+500

Km. 25+350

Km. 25+900

Figure 4.3: Representative photos of Box/Slab Culverts

4.7 Details of the Pipe Culverts

There are 15 Nos. of pipe culverts in the project stretch. The details of the culverts are as given below.

Table 4.5: List of Pipe Culverts

S. No.	Chainage (Km.)	Type	No. of Rows & Dia (m)
1	0+100	Pipe	1 x 1.2
2	1+200	Pipe	1 x 1.2
3	2+000 (1+950)	Pipe	2 x 1
4	3+850	Pipe	1 x 1.2
5	6+605 (extra)	Pipe	1 x 1
6	7+900	Pipe	1 x 1.2
7	9+500 (9+375)	Pipe	1 x 1
8	14+250	Pipe	1 x 1.2
9	15.320	Pipe	1 x 1.2
10	15+350 (15+205)	Pipe	1 x 1.2
11	16+650	Pipe	1 x 1.2
12	17+150 (17+070)	Pipe	1 x 1.2
13	18+650	Pipe	1 x 1.2
14	27+360	Pipe	1 x 1.2
15	33+050	Pipe	1 x 1.2

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

Km. 18+650

Figure 4.4: Representative photos of Pipe Culverts

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General

Review of Pavement design report, providing insights on design life of pavement, crust thickness, history of overlays over the existing pavement etc., Based on pavement condition and CA provisions recommendation for the upcoming renewal cycles.

5.2 Pavement design

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2012 publication while the current publication is IRC: 37-2018.

5.3 Review of Pavement Design

As per the pavement design approved in the project, the following conclusions are given.

Table 5.1: Flexible Pavement Design summary

S. No.	Description/ Pavement layer	Design Parameters
1	Sub Grade CBR (%)	10%
2	Design Life (Years)	15 years
3	Design Traffic (MSA)	10 MSA
4	Surface course (BC)	40 mm
5	Binder course (DBM)	50 mm
6	Base course (WMM)	250 mm
7	Sub Base course (GSB)	200 mm

5.4 Validation of Pavement design

The new pavement shall be designed in accordance with the IRC:37. "Guidelines for the Design of Flexible Pavements".

Pavement design validation as per actual traffic from COD. As per IRC 37, Vehicle Damage Factor (VDF), Distribution of commercial vehicles and growth rate values are 3.5, 0.75 and 5% respectively. summary is given below.

Table 5.2: Flexible Pavement Design Traffic Validation

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2016	445	183	32	94	159	468	0.45	0.45	3	Actual
2017	651	165	30	59	100	354	0.34	0.79	4	Actual
2018	842	207	28	48	127	411	0.39	1.18	5	Actual
2019	658	207	30	34	106	378	0.36	1.54	6	Actual
2020	677	212	28	38	92	371	0.36	1.90	7	Actual
2021	711	222	30	40	97	389	0.37	2.27	8	Projected
2022	747	234	31	42	102	409	0.39	2.66	9	Projected
2023	784	245	33	44	107	429	0.41	3.07	10	Projected
2024	823	257	34	47	112	451	0.43	3.51	11	Projected
2025	864	270	36	49	118	473	0.45	3.96	12	Projected
2026	908	284	38	51	124	497	0.48	4.44	13	Projected
2027	953	298	40	54	130	522	0.50	4.94	14	Projected
2028	1001	313	42	57	137	548	0.52	5.46	15	Projected

Based on the above actual traffic, estimated MSA at 15 years is 5.46. Traffic considered in pavement design(10MSA) is more than estimated traffic based on actual traffic. Hence the pavement design adopted is found in order.

5.5 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 10 MSA for a design life of 15 years after construction (up to 2028), whereas the actual traffic at pavement design stage is 2.08 MSA for 15 years. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation before the 8 years of design life (as per pavement design report) and prior to end of concession period to evaluate the requirement of overlay.

Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC. The detailed maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – next major maintenance proposed in the year 2021.

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety has a multi-sectorial and multi-dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992

Table 6.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP-88	Manual of Road Safety

6.2 Existing Road Safety Audit

During the site visit, it is observed that all safety items are provided as shown in the following Table 6.2.

Table 6.2: Safety Items

S. No.	Item Description		Status	Condition
1	Sign Boards	Chevron signs	Available as per site requirement	Good
		Village sign Board	Available as per site requirement	Good
		Informatory Boards	Available as per site requirement	Good
		Object Hazard Markers at culverts	Available as per site requirement	Good
2	Road Marking	Studs & Lane Marking	Available as per site requirement	Good
3	Metal Beam Crash Barriers	At High Embankments	Available as per site requirement	Good

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

Few Observations on the road furniture in safety aspects for the project road are mentioned below:

- At few places, reflectors were missing on the sign boards and few sig boards were also damaged.
- The object hazard markers are placed only on one side of Head walls/parapet walls of all structures, whereas it is to be installed on both sides at structures.

6.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is required during the maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There is one toll Plazas on the project road at Km. 7+300. Each side comprises of 1 Normal Lanes, 1 extra wide lane. Only one lane in each direction is operational and the extra wide lane is used as bike lane. The lane width in normal lanes was 3.20m. The width of islands provided is 1.8m. The single canopy is provided to cover the toll lanes. Toll plaza building is single floor building which houses control room, UPS and Pantry.

7.2 Tolling Equipment's

List of equipment provided at toll plaza and control room is given below.

Table 7.1: List of TMS Lane Assets

S. No.	Description	No
1	TLC (Toll lane Controller)	4
2	Monitor	4

Figure 7.1: Representative photos of Toll Plaza at Km. 7+300

CHAPTER 8. TOLL REVENUE

8.1 Traffic Census

In accordance with clause 22.1, the Concessionaire shall install, maintain and operate electronic/computerized traffic counters at each of the Toll Plazas and collect data relating to the number and types of vehicles using the Project Highway. A weekly statement of such data shall be compiled and furnished forthwith by the Concessionaire to MPRDC substantially in the form specified in Schedule N of CA.

Accordingly, the Concessionaire provided toll plaza wise details. Based on the data made available the summarized annual classified Traffic census details for the past five years are provided in Table 8.1 below. The Actual traffic data recorded below has been taken as a basis to calculate AACGR % (Annual Average Compound Growth Rate).

Table 8.1: Year wise Traffic (Vehicles) Details as per schedule N of CA

FY Year	Car	LCV	Bus	Truck	MAV	Total Traffic
2016	162326	66776	11566	34390	58018	333076
2017	237500	60349	10892	21418	36470	366629

AACGR* (%)						4.7%

*AACGR- Annual Average Compound Growth Rate

8.2 Actual Revenue Collection

In accordance with clause 19.5, “During the operation period, the Concessionaire shall furnish to MPRDC within 7 days of completion of each month, a statement of fee substantially in the form set forth in Schedule-M (Monthly fee statement)”. As per provisions of CA the concessionaire submitted monthly fee statement and the summary of form submitted under Schedule M during the financial year 2019-20 is given under as Table 8.2.

Table 8.2: Summary of 2019-20 Tollable traffic and revenue collected at Toll Plaza

Description	Car	Car(pass)	LCV	Bus	Truck	MAV	Total

Toll Revenue collection in Rs.	3611860	197675	3858550	1055310	1706710	8296730	18726835

The figures shown in Table 8.1 are Real time traffic data on project road for the past five years and the growth rate is calculated to be 4.7%. It is pertinent to note that the figures given in Table 8.1 are inclusive of exempted /non tollable traffic.

The figures shown in Table 8.2 are actual tollable traffic based on which the toll revenue collected and is excluding of exempted/non tollable traffic. For the realistic estimate of the traffic growth and projected revenue calculation actual traffic based on which FY 2019-20 revenue collected (Table 8.2) is considered as a base year traffic and the projected traffic growth rate is restricted to 5%.

Based on the base year traffic and growth rate as explained above traffic projections from year 2019-20 to till end of Concession period toll plaza wise are calculated and summarized below in **Table 8-3**.

Table 8.3: Projected traffic

FY Year	AADT in Vehicles					CVPD* (Veh.)	AADT in PCU					CVPD* (PCU)	Remarks
	Car	LCV	BUS	2-AT	MAV		Car	LCV	BUS	2-AT	MAV		
PCU Factor							1	1.5	3	3	4.5		
2020	502	211	28	38	93	370	502	317	84	114	416	932	Actual
2021	527	222	30	40	97	389	527	333	89	120	437	979	Projected
2022	553	233	31	42	102	408	553	350	93	126	459	1028	Projected
2023	581	245	33	44	107	429	581	367	98	132	482	1079	Projected
2024	610	257	34	46	112	450	610	385	103	139	506	1133	Projected
2025	640	270	36	49	118	472	640	405	108	146	531	1190	Projected

2029	778	328	44	59	144	574	778	492	131	177	646	1446	Projected

*CVPD: Commercial vehicle per day (LCV+BUS+2 AT+MAV)

8.3 Toll Revenue Calculations

The toll revenue for horizon year is calculated based on the input from the above data, actual toll rates collected on base year (2019-20), with Traffic growth, WPI growth and toll efficiency has been assumed 5%, 4% and 100% respectively and other inputs considered in revenue calculations is given in **Table 8.4**.

Table 8.4: Toll Revenue inputs

Particular	Toll plaza 1
Location	Km. 7+300
4 lane length in km	
2 lane length in km	35.682
Agreement Date	22-03-2013
Appointed Date	09-11-2013
Concession period	15 years
Commercial operation date	26-Jul-14
Concession End Date	08-Nov-28
Traffic study year	2020

Particular	Toll plaza 1
Vehicle Type	AADT
Car/Jeep/Van	502
2-axle Bus	211
LCV/LGV	28
2A-Truck	38
MAV (2A-6A)	93
Growth Rate (%)	5%

The split trip type based on the available toll data from Concessionaire is used to derive the annual toll collection for each plaza. The revenue estimated and presented below. Detailed toll revenue estimation is given in **ANNEXURE 4**.

Table 8.5: Toll Revenue Estimated (in Rs. lakhs)

Financial Year	Annual Revenue of TP (Km. 7+300)	Remarks
2019-20	187.268	Actual
2020-21	201.005	Projected
2021-22	220.350	Projected
2022-23	236.803	Projected
2023-24	270.017	Projected
2024-25	289.353	Projected
2025-26	309.184	Projected
2026-27	335.783	Projected
2027-28	359.510	Projected
2028-29	237.665	222 Days

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of the Concession Agreement (CA), the Concessionaire will operate and maintain the Project road by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate, need (if any) for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to beginning of each accounting year during the operation period.

9.3 Operations

Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- 1 Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- 2 Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.
- 3 Carrying out preventive and periodic maintenance of the Project road;

- 4 Undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- 5 Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- 6 Functioning of the lighting system;
- 7 Functioning of the Patrolling System
- 8 Functioning of rescue and medical aid services
- 9 Ambulance as and when required
- 10 Functioning of the Project Facilities
- 11 Administrative, Operational and Maintenance Base Camp
- 12 Truck Lay byes
- 13 Pickup Bus stops / Bus Bays
- 14 Protection of the environment and provision of equipment and materials therefor;
- 15 Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- 16 Complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plaza

There are two lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the escrow account. In case of ETC system Toll collection is connected with Network system and directly deposited into the Escrow account

9.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year. Road maintenance can be carried out in four ways as listed below.

1. Preventive Maintenance
2. Routine Maintenance
3. Periodic Maintenance
4. Special repairs

9.6 Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard

pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence doesn't require any immediate or preventive interventions.

9.7 Routine Maintenance:

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

9.8 Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as "functional overlays," as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a "structural overlay" they are intended to increase load-carrying capabilities of the project road.

The details of periodic maintenance schedule are given below.

Table 9.1: Schedule and status of for Periodic Maintenance

S. No.	Major Maintenance	Schedule	Status
1	1st Periodic Maintenance	2021	Planned to execute
2	2nd Periodic Maintenance	2028	Planned to execute

9.9 Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides, which shall be unpredictable. The affected Project Highway shall be rectified, and the system shall be restored to function as per Programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.10 Review of Test Reports:

9.10.1. Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of July 2020. As per Schedule K, If the value exceeds 3000mm in a KM, the stretch shall be rectified. No stretch exceeded the permissible limit of 3000 mm in the Project road.

9.10.2. Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement. The BBD Test is to be carried yearly.

Concessionaire has conducted the test in Feb 2020. The test report has been verified and found within permissible limits as per IRC 81.

9.10.3. O&M Forecast:

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in ANNEXURE 5.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance (In crores)	Incidental maintenance (In crores)	Periodic / Major maintenance	Operational Expenses	Total cost per year
2021	0.137	0.210	5.09	0.40	5.84
2022	0.141	0.217		0.41	0.77
2023	0.145	0.223		0.42	0.79
2024	0.149	0.230		0.44	0.82
2025	0.154	0.237		0.45	0.84
2026	0.158	0.244		0.46	0.87
2027	0.163	0.251		0.48	0.89
2028	0.168	0.259	-	0.49	0.92
2029	0.105	0.162	6.12	0.31	6.69
Total	1.32	2.03	11.21	3.86	18.42

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 Scope of Work (Article 2)

Article 2 provides the scope of work which includes the following.

- construction of the Project road on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of Project Facilities as specified in Schedule-C, and in conformity with the Specifications and Standards set forth in Schedule-D.
- operation and maintenance of the Project road in accordance with the provisions of Concession Agreement (CA).
- performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this CA and matters incidental.

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 6**.

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the CA

Conditions precedent to be fulfilled by the Concessionaire

Provide performance security to the Authority

- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfil its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the CA

10.5 Obligations relating to the Competing Roads (Clause 6.3)

Neither Authority nor any Governmental Instrumentality shall construct the Competing Road before 10th Anniversary of the Appointed Date.

10.6 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 20% of the Total Project Cost.

10.7 Provisional Completion Certificate (Clause 14.3)

Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA and after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA. Provisional Completion Certificate given in **ANNEXURE 7**.

10.8 Completion Certificate (Clause 14.4)

Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire. Completion Certificate given in **ANNEXURE 8**

10.9 Commercial Operation Date (COD) (clause 15.1)

COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer. With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of scope proposals that were initiated during construction period and consented by the MPRDCL are provided in **ANNEXURE 10**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project Highway
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents

- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any unauthorized use of the Project Highway.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the Contract Agreement.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations Period; the Project Highway conforms to the maintenance requirements set forth in Schedule K (the “Maintenance Requirements”).

10.13 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty) days prior to the Scheduled Two Lanning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “Maintenance Manual”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.

The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8)

In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of this Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.

0.5% (zero decimal five percent) of the Average Daily Fee, and

0.1% (zero point one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Monthly Fee Statement (Clause 19.5)

During the Operations Period, the Contractor shall furnish to the Concessionaire and the Authority, if required by the Contractor, within 7 (seven) days of completion of each month, a statement of Fee substantially in the format set out in the Concession Agreement (“Monthly Fee Statement”).

10.18 Annuity (Clause 25.1.1)

The Authority agrees and undertakes to pay the Concessionaire for each annuity Payment period on each annuity payment date as set forth in schedule Y the sum of Rs 5.04 Crores.

As per Clause 25.2.1, In case the COD is different from the Schedule Y, then the annuity payment schedule shall be suitably modified to be a period of 6 months from the preceding Annuity Payment date.

Table 10.1: Status of Annuity Payments

S. No.	Particulars	Payment Paid on
1	1st Annuity	02-Feb-15
2	2nd Annuity	30-Jul-15
3	3rd Annuity	29-Jan-16
4	4th Annuity	30-Jul-16
5	5th Annuity	07-Feb-17
6	6th Annuity	8-Aug-17
7	7th Annuity	07-Feb-18
8	8th Annuity	26-Jul-18
9	9th Annuity	30-Jan-19
10	10th Annuity	29-Jul-19
11	11th Annuity	03-Feb-20
12	12th Annuity	28-Jul-20
13	13 th Annuity	28-Jan-21

10.19 Concession Fee (Article 26):

In consideration of the grant of Concession, the Concessionaire shall pay Concession Fee of Rs 1.00 per year during the Concession Period
Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year. Yearly the Concessionaire is paying the Concession Fee to the MPRDC

10.20 Toll fee Clause 27.1.1:

Toll Fees Shall be revised annually in accordance with Clause 27.2.1.

10.21 Change in Law (Article 41):

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 Details of Insurance

As per clause 32.1 of the Concession Agreement (CA), the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Accordingly, the following policies being maintained by the concessionaire copies of the same are provided in **Annexure-9**.

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Property
			From	To	
Standard Fire & Special Perils Policy	Oriental Insurance Company Ltd	171200/11/2020/253	16.12.2020	15.12.2021	Fully constructed Road of Ashoknagar-bridges and Concrete/Steel
Fire Industrial All Risk Policy	Oriental Insurance Company Ltd	171200/11/2021/254	15.12.2020	15.12.2021	Operation & Maintenance of Road, Bridges and any other property on the stretch.
Electronic Equipment Insurance Policy schedule	Oriental Insurance Company Ltd	171200/44/2021/45	08.09.2020	07.09.2021	Equipment's for Toll plaza
Employees Compensation Insurance Policy	HDFC ERGO General Insurance Company Ltd	3114203388023000000	19.05.2020	18.05.2021	All categories of Employees of DBL & sub-contractor engaged in Project SPV

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The overall project pavement condition is good. RCC drains are constructed in Built up locations and earthen drains in rural locations resulting in, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are getting cleared during regular maintenance period.

12.4 Traffic Growth

Based on real time traffic data collected from the submissions made as per Schedule N, the traffic growth observed almost 5% and the same is considered while estimating forecast of traffic volumes.

12.5 Project Facilities

Toll Plaza is located at Km.7+300 and is operational. Toll Plaza is operated by ETC Toll collection system and connected by network system monitored in administrative building. Bus bays are in fair condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained. Highway lighting is provided at toll plaza locations and found functional.

12.6 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 73-2007. The condition of sign boards & other road appurtenances like metal beam crash barriers is fair.

12.7 Maintenance

The routine maintenance being carried out by O&M contractor effectively, based on documents reviewed, time to time observations made by client/Authority, being complied and no outstanding NCR's are to be attended as on date.

Major maintenance (MM) /Periodic maintenance is scheduled in 2021 and 2028.

12.8 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance Work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

Annexures

Annexure 1: Pavement Condition

Condition: G=Good, F=Fair, P=Poor & VP=Very poor Rutting: M=Moderate & S=Severe Drain: LD=Lined open Drain, ULD=Unlined Drain, CD=Covered Drain, NO=No drain, PF=Partial Function, F= Functional

Provisional Certificate

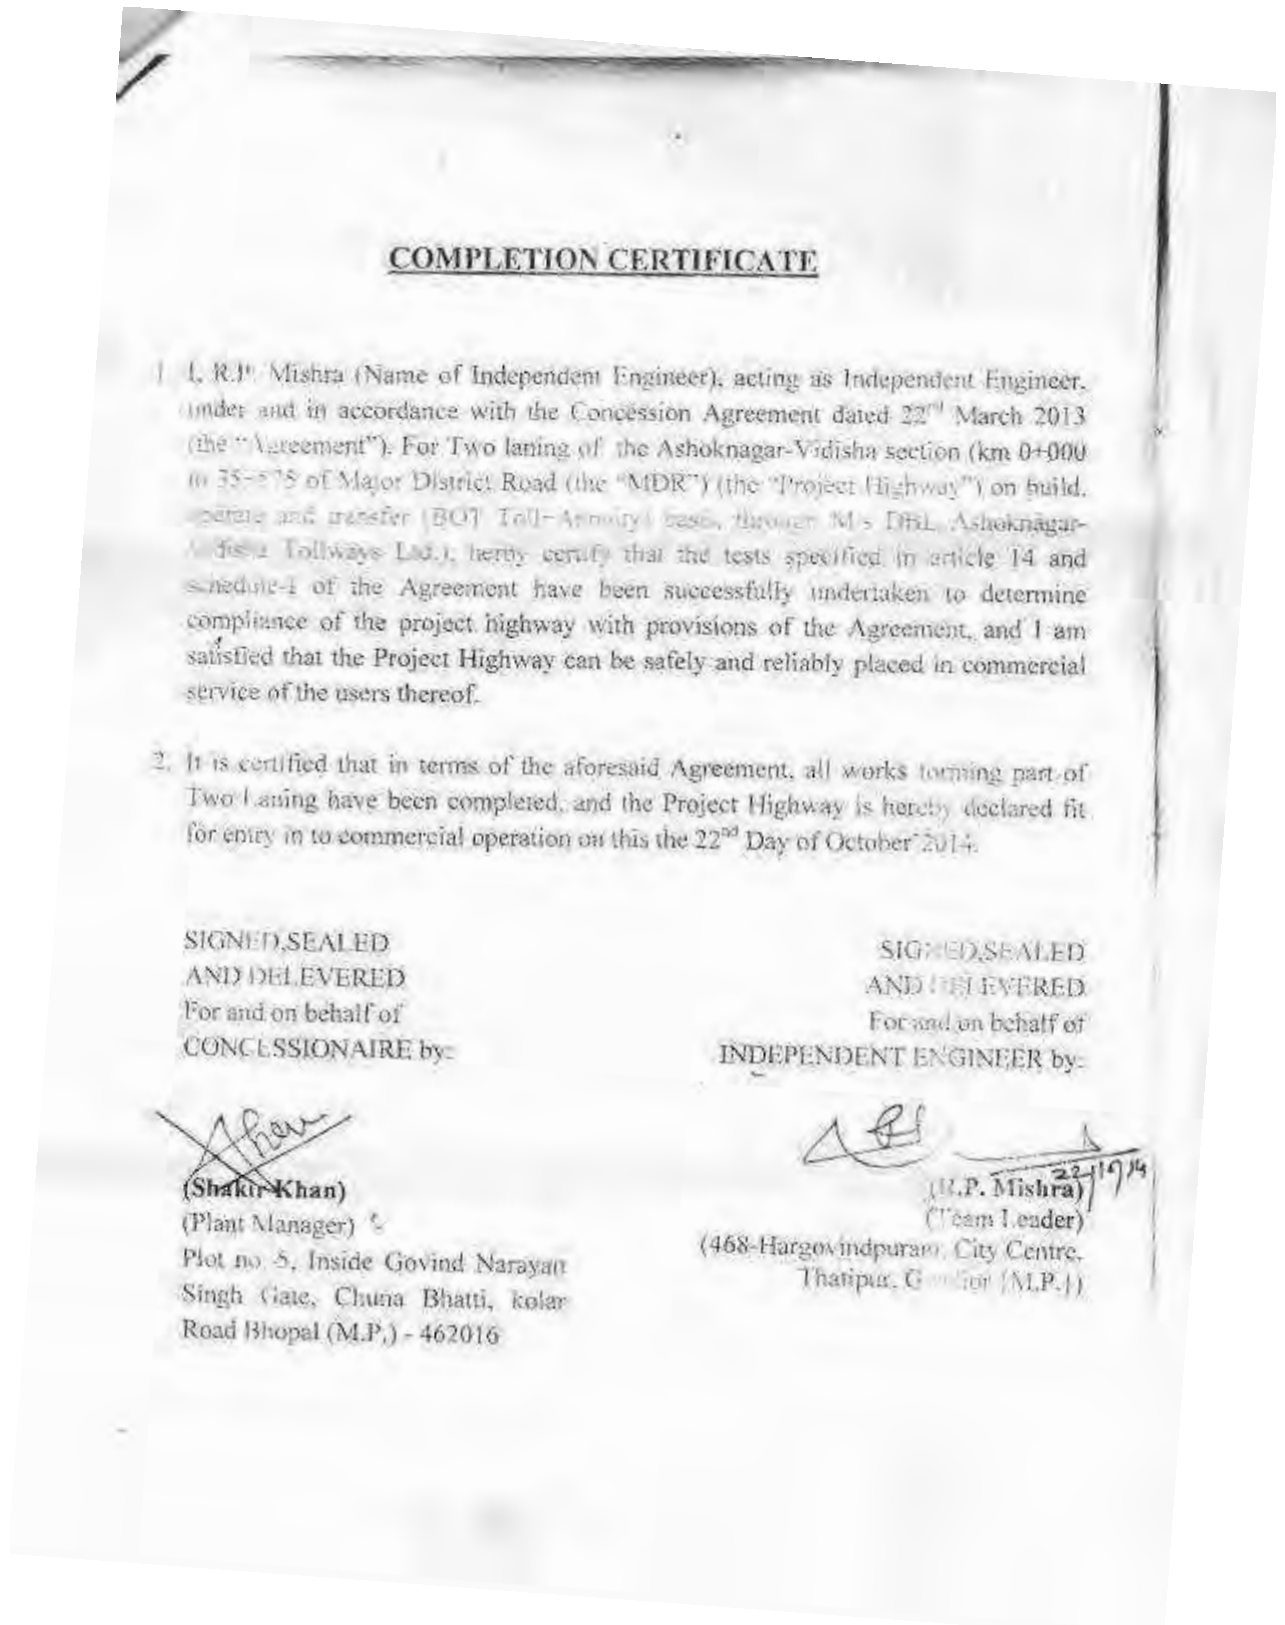

1. I **R.P. Mishra** (Name of Independent Engineer), acting as Independent Engineer, under and in accordance with the Concession Agreement dated **22nd March 2013** (the "Agreement") for development of the **Ashoknagar-Vidisha Road** section (**km 0+000 to km 35+661**) of MDR the "Project Highway" on build, Operate, and Transfer (BOT(Toll+Annuity)) basis, through **M/s DBL Ashoknagar-Vidisha Tollways Ltd., Bhopal (M.P.)**, hereby certify that the tests specified in article 14 and Schedule-I of the agreement have been undertaken to determine compliance of the Project Highway with the provision of the Agreement.

2. Construction works that were found to be incomplete and/or deficient have been specified in the Punch List appended hereto, and the concessionaire has agreed and accepted that it shall complete and/or rectify all such works in the time and manner set forth in the Agreement. (Some of the incomplete works have been delayed as a result of reasons attributable to the MPRDC or due to Force Majeure and the Provisional Certificate cannot be withheld on this account. Through the remaining incomplete works have been delayed as a result of reason attributable to the concessionaire), I am satisfied that having regard to the nature and extent of such incomplete works, it would not be prudent to withhold commercial operation of the Project Highway pending completion thereof.

3. In view of the foregoing, I am satisfied that the Project Highway can be safely and reliably placed in commercial service of the users thereof, and in terms of the Agreement, the Project Highway is hereby Provisionally declared fit for entry into commercial operation on this the **26th day of July 2014**.

HDFC ERGO General Insurance Company Limited

May 13, 2020

DBL ASHOK NAGAR VIDISHA TOLLWAYS LTD

PLOT NO. 5, GOVIND NARAYAN SINGH GATE,
CHUNA BHATTI, BHOPAL,
MADHYA PRADESH, 462016

Dear Customer,

Sub: Employees Compensation Insurance Policy No: 3114203388023000000

We thank you for having preferred us for your insurance requirements. We at HDFC ERGO General Insurance believe "insurance" is not only to be an assurance to indemnify in the event of unfortunate circumstances, but one that signifies protection and support, which you can count on when you need it most.

The Insurance Policy enclosed herewith is a written agreement providing confirmation of our responsibility towards you that puts insurance coverage into effect against stipulated perils.

Please note that the policy has been issued based on the information contained in the proposal form and / or documents received from you or your representative / broker.

Name of the Intermediary : GLOBAL INSURANCE BROKERS PVT LTD

Intermediary Code : 200113159601

Where the proposal form is not received, information obtained from you or your representative / broker, whether orally or otherwise, is captured in the policy document.

If you wish to contact us in reference to your existing policy and / or other general insurance solutions offered by us, you may write to our correspondence address as mentioned below. Alternatively, you may visit our website www.hdfcergo.com. To enable us to serve you better, you are requested to quote your Policy Number in all correspondences.

Thanking you once again for choosing HDFC ERGO General Insurance Company Limited and looking forward to many more years of association.

Yours sincerely,

Authorised Signatory

CHAPTER 1. INTRODUCTION

1.1 General

DBL Betul Sarni Tollways Limited (herein after referred to as the “Concessionaire”) had augmented the existing two lanes road “Betul-Sarni-Tikadhan-Junnardeo-Parasiya (SH-43) in the State of Madhya Pradesh, in accordance with the provisions of the Concession Agreement executed on July 11, 2013 with Madhya Pradesh Road Development Corporation (herein after referred to as the “MPRDC) on DBFOT Toll+ Annuity basis. The Project Highway starts at Km 0+000 (Kamani Gate at Betul) and ends at Km 124+100 (Bus stand Parasiya). The State Highway (SH - 43) connects Betul-Sarni-Tikadhan-Junnardeo-Parasiya.

Total length of the Project Highway is 124.100 Km. The Project road passes through Plain, rolling and hilly terrain, predominantly agriculture land and balance constitute Built up area. It also passes through forest area. Project Location map is given at Fig 1-1.

SHREM ROADWAYS PRIVATE LIMITED (SRPL) acquired DBL BETUL SARNI TOLL WAYS LIMITED vide agreement dated 26.03.2018.

SHREM FINANCE PRIVATE LIMITED (SFPL) appointed RUKY Projects Pvt. Ltd. as consultants for detailed Technical Due Diligence Services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the traffic potential and to estimate the projected Toll Collection etc.

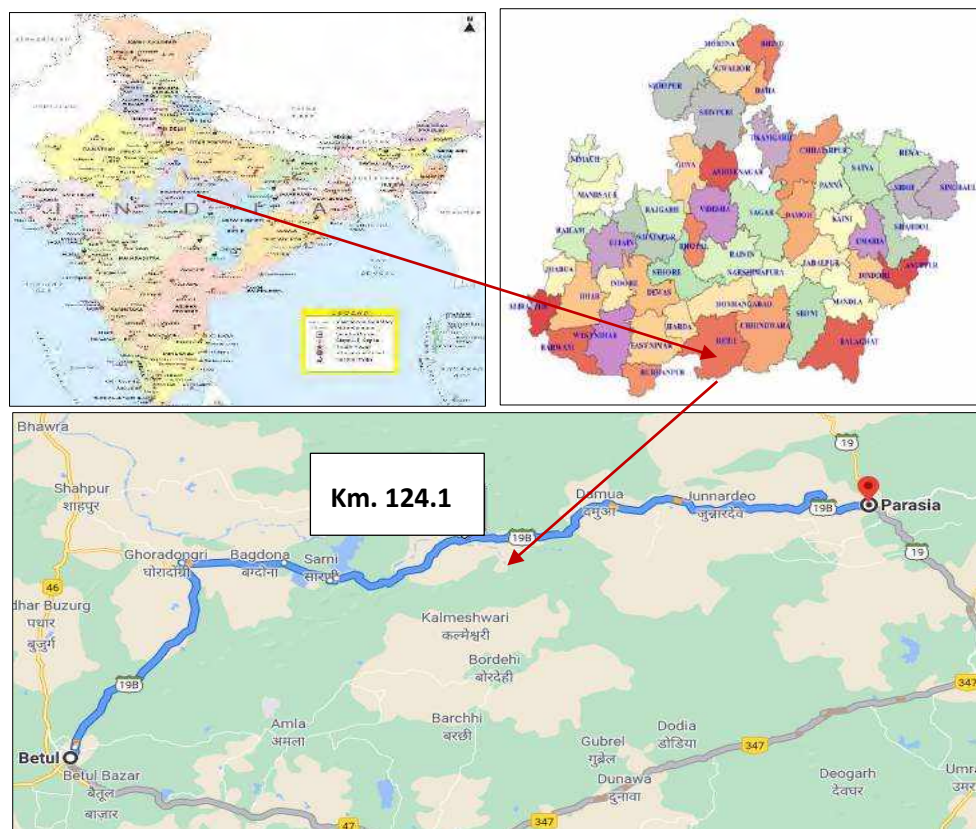

Figure 1.1: Project Location Map

1.2 Project Data

The details of the Project are listed in the following table.

Table 1.1: Salient features of the Project

S. No.	Particulars	Details
1	Name of the project	Construction of Betul - Sarni - Junnardeo – Parasia (SH-43), development, maintenance and management on design, build, finance, operate and transfer (DBFOT) Toll Plus Annuity Basis in the State of Madhya Pradesh.
2	Road Type	State Highway (SH)-43
3	Name of the Authority	Madhya Pradesh Road Development Corporation Limited
4	Name of the Concessionaire	DBL BETUL SARNI Toll ways Limited
5	Name of the EPC Contractor	Dilip Build con Limited
6	Design Length as per Schedule B	124.100 Kms.
7	Length omitted under negative Change in Scope	---
8	Actual Length Constructed	124.100 Kms.
9	Project Lane Configuration	2 Lane/4 Lane
10	Total Project Cost	Rs. 237.64 Cr
11	Nature of contract	BOT(Toll + Annuity)
12	Toll collected by	Concessionaire
13	Concession Period	15 years from the Appointed date
14	Appointed date	07.04.2014
15	Concession End Date	06.04.2029
16	Construction Period	730 days from the Appointed date.
17	Schedule Commercial Operation Date	April 05, 2016
18	Date of issuance of Provisional Certificate	May 12, 2015. (Annexure-7)
19	Commercial Operation Date	May 12, 2015.
20	Date of issuance of Completion Certificate	February 28, 2019. (Annexure-8)
21	Annuity Amount (every six months)	Rs 15.48 Cr
22	Total Number of Annuities payable	26 Nos.
23	First Annuity Payment Date	November 12,2015
24	Total Number of Annuities Paid	11

1.3 Scope of consultancy services

The scope of work includes providing Due Diligence of the project road and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Collection of historic/past toll revenue data
- Collection of historic/past classified Traffic data from toll plaza and to estimate the projected traffic to arrive at revenue projections.
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout review of tolling system to evaluate the efficiency and functionality of tolling system and to identify and give suggestions to improve if any setbacks in the system.
- Carryout out road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per schedule B and Schedule C of the CA including Change of scope are listed in the following Table.

Table 2.1: Salient Features

S. No.	Particulars	As per Schedule B of CA	As per COS*	As per Site
1	Total Length	124.10		124.10
2	Two lane length with earthen shoulder	93.100 Km	6.444 Km is converted into Paved Shoulder	86.656 Km
3	Two lane with paved shoulder	25.750 Km	Flexible pavement with paved shoulder for an additional length of 1.760 km	27.510 Km
4	Four Lane	5.250 Km	---	5.250 Km
5	Two lane Rigid Pavement	-	Rigid pavement with PQC in 10 m width for a length of 2.624 km and 2.06 km with 7 m concrete pavement over existing concrete base treated as DLC	4.684 Km
6	Major Junctions	05 Nos.	-	05 Nos.
7	Minor Junctions	10 Nos.	-	10 Nos.
8	Toll Plaza	02 Nos.	-	02 Nos.
9	Bus Bays/ Shelter	22 Nos.	-	22 Nos.
10	Truck Lay bye	02 Nos.	-	02 Nos.
11	Major Bridges	09 Nos.	-	09 Nos.
12	Minor Bridges	36 Nos.	-	36 Nos.
13	Pipe Culverts	252 Nos.	-16Nos., +9Nos.	245 Nos.
14	Slab/Box Culverts	33 Nos.	-1No., +4Nos.	36 Nos.

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Section Schedule during the Construction as shown below.

Figure 2.1: TCS 2.1 of Schedule D
Two Laning with Granular Shoulder. (Cross Section In Open Areas & Rural Areas having

Figure 2.2: TCS 2.2 of Schedule D
Widening to 4 Lane divided Carriageway with footpath Built up area.

Figure 2.3: TCS 2.3 of Schedule D
The Carriageway shall be 7.0 m with Paved shoulder (In Built up Areas)

Figure 2.4: Pictorial Diagram of TCS Lengths.

TCS Schedule is provided below.

Table 2.2: TCS Schedule

S. No.	Chainage (km.)		Length (m)	Type of TCS
	From	To		
1	0+000	0+900	900	TCS.2.1
2	0+900	1+350	450	TCS.2.3
3	1+350	3+400	2050	TCS.2.1
4	3+400	4+000	600	TCS.2.3
5	4+000	20+650	16650	TCS.2.1
6	20+650	21+300	650	TCS.2.3
7	21+300	37+100	15800	TCS.2.1
8	37+100	38+300	1200	TCS.2.3
9	38+300	39+500	1200	TCS.2.3

36	107+900	108+400	500	TCS.2.1
37	108+400	109+400	1000	TCS.2.3
38	109+400	109+500	100	TCS.2.3
39	109+500	109+700	200	TCS.2.3
40	109+700	110+500	800	TCS.2.3
41	110+500	110+600	100	TCS.2.1
42	110+600	111+550	950	TCS.2.3
43	111+550	112+700	1150	TCS.2.3
44	112+700	114+000	1300	TCS.2.1
45	114+000	115+600	1600	TCS.2.3
46	115+600	115+700	100	TCS.2.1
47	115+700	116+000	300	TCS.2.3
48	116+000	116+700	700	TCS.2.3
49	116+700	118+200	1500	TCS.2.1
50	118+200	119+100	900	TCS.2.3
51	119+100	119+700	600	TCS.2.1
52	119+700	120+750	1050	TCS.2.3
53	120+750	120+850	100	TCS.2.1
54	120+850	124+100	3250	TCS.2.2

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from side drains are constructed along the main carriage way on both flanks as specified in Schedule B of the CA in strict adherence to the Standard Specifications set forth in Schedule D of the CA.

The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains in open and rural areas.

2.4 Service Roads

Service roads are not provided along the entire stretch of the project road as per provisions of Schedule B of the CA.

2.5 Bypass/Realignment

Bypass/Realignment are not provided along the entire stretch of the project road as per provisions of Schedule B of the CA.

2.6 Intersections

As per provisions of Schedule B of the CA, 5 Major Intersection and 10 Minor Intersections are provided. Details are given below.

Table 2.3: Summary of Junctions

S. No.	Chainage (Km.)	Type of junction	Type of Cross Road
1	0+000	X	Major
2	21+000	T	Minor
3	21+200	X	Major
4	24+150	X	Minor
5	24+200	X	Minor
6	30+000	X	Major
7	30+500	T	Minor
8	33+600	T	Minor
9	93+300	T	Minor
10	102+600	X	Major
11	114+750	T	Minor
12	119+500	X	Minor
13	121+700	X	Minor
14	122+750	T	Minor
15	124+050	X	Major

2.7 Grade Separated Structures and underpasses:

There are no Grade separated structures in the Project, as per provisions of Schedule B of the CA.

2.8 Road Over Bridge:

There are no Road Over Bridge in the Project, as per provisions of Schedule B of the CA.

2.9 Summary of the carriageway and Pavement Details:

Table 2.4: Summary of Carriageway and Pavement Details

S. No.	Description	Flexible (Kms.)	Rigid (kms.)	TCS Type
1	2 Lane with Earthen shoulder	93.100	---	Fig 2.1 of Schedule D
2	2 Lane with Paved shoulder	25.750	---	Fig 2.3 of Schedule D

S. No.	Description	Flexible (Kms.)	Rigid (kms.)	TCS Type
3	4 Lane	5.250	---	Fig 2.2 of Schedule D
4	Total Length	124.100	---	
5	TYPE OF ALIGNMENT			
6	New Alignment	---	---	
7	Realignment	---	---	
8	Strengthening	---	---	
9	Reconstruction	124.100	---	
10	Total Length of the Project	124.100	---	

2.10 Summary of Structures:

Table 2.5: Summary of Structures

S. No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts
1	Retained	5	9	34	23
2	Widening	-	1	61	6
3	Reconstruction	4	26	157	4
4	New	-	-	-	-
5	Improvement	-	-	-	-
6	Total	9	36	252	33

2.11 Toll Plazas:

As per Schedule C of the CA provisions, two Toll Plazas have been constructed at Km. 31+000 and 111+950. Salient features of Toll Plaza are provided below.

- Each side comprises of, two normal lane and one extra wide lane.
- The lane width in normal lanes is 3.2 m and extra lane is of 4.5 m width.
- Single canopy is provided to cover the toll lanes.
- Toll plaza has been constructed as per standards set forth in Schedule D of CA having facilities like lighting, water supply and firefighting Arrangements.
- C.C. Cameras are installed and monitored in administrative building.

2.12 Bus Bays/Shelters and truck lay byes

As per the provisions of Schedule C of the CA, 22 Nos. Bus shelters and 2 Nos. Truck lay byes are provided in the entire length of Project. Details such as Chainage Location and Name of Village are listed in the following table.

Table 2.6: Truck lay byes Details

S. No.	Location (Km.)	Side	Remarks
1	44+000	LHS	Before Sarni
2	105+000	RHS	Near Junnardev

Table 2.7: Bus Bays/Shelters Details

S. No.	Location (Km.)	Location	S. No.	Location (Km.)	Location
1.	1+125	Godhana	12.	95+400	Kautia
2.	3+700	Chiklar	13.	97+250	Dugariya
3.	20+975	Ranipur	14.	100+250	Dawala
4.	37+700	Saliya	15.	103+300	Junnardeo (Jamai)
5.	39+600	Bagdona (Sarni)	16.	107+650	Jamkunda
6.	48+150	Sarni	17.	110+100	Nzarpur
7.	70+225	Rampur	18.	111+650	Gudi
8.	86+125	Madi	19.	114+800	Ekalhara
9.	88+275	Damua	20.	116+200	MajipaniBamodi)
10.	91+500	Ghodawadi	21.	118+650	Chandameta
11.	93+575	Neemdhana	22.	122+475	Parasiya

2.13 Other Project Facilities Provided as per Schedule C of the CA

- Roadside furniture: Sign boards, KM stones, road marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic safety devices: W beam crash barriers, parapet walls are provided as per the provisions of Schedule C of the CA.
- Landscaping: provided at toll plaza location and being maintained
- Tree plantation: Tree plantation is provided on both sides, for the full length of project corridor and being maintained.
- Medical Aid Post: Provided at toll plaza location and operational.
- Highway Lighting: Highway lighting is provided at Toll Plaza location and is functional.

W Beam MCB at approaches at Km.13+500

Toll Plaza board at Km. 31+000

Km. 104+000

MNB approaches at Km.4+300

Figure 2.5: Representative Photographs of Project Facilities

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented below.

3.2 Road Inventory

Inventory of the project road was carried out physically and is summarized in the following table. Couple of representative photographs are given below to have a clear picture of the Project.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain rolling Terrain
2	Land Use	Agriculture and forest
3	Villages	31 Nos.
4	Two lane length	114.166Km
5	Four Lane	5.250 km
6	Two lane Rigid Pavement	4.684 km
7	Earthen shoulder	1.0 m to 1.5m Width on site
8	Bypasses	Nil
9	Embankment	Average height of 0.8 m
10	Junctions	15 Nos.
11	Toll Plaza	Km.31+000 & Km.111+950
12	Sign boards	Sign boards are provided as per requirement
13	Road Markings	Lane markings are provided as per requirement
14	Bus Bays /shelters	22 Nos.
15	Truck Lay bye	2 Nos.
17	Street Lighting	Highway lighting provided as per requirement

3.3 Pavement Condition

Pavement Condition survey was carried out on the Project road, based on observations supplemented with simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement Condition Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Pavement surface condition assessment is a key component of infrastructure asset management. The information is used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future Pavement Conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey:

The survey on general Pavement Condition was primarily undertaken by means of slow drive- over survey, and supplemented with measurements where ever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively. The Pavement Condition is measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of surface area)
 - Ravelling (%of surface area)
 - Potholes (%of surface area)
 - Patching (%of surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement Condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP 19 and is given in **ANNEXURE 1**. The summary of Pavement Condition is given below.

Table 3.3: Pavement condition summary

From (km.)	To (km.)	Length (kms)	Condition
0+000	124+100	124.100	Good

Km. 15+000

Km. 33+000

Km. 50+900

Km. 104+000

Figure 3.1: Representative Photographs of Pavement Condition

CHAPTER 4. INVENTORY AND REVIEW OF STRUCTURES

4.1 General Assessment and Condition of the Existing structures

Inspection of existing structures on the project road was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

There are 09 Nos Major Bridge, 36 Nos Minor Bridges, 245 Nos Pipe culverts, 36 Slab/Box culverts are there along this project road.

Table 4.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	09 No's
2	Minor Bridge	36No's
3	Pipe culverts	245 No's
4	Slab/Box Culverts	36 No's.

For major bridges the type of superstructure is RCC Solid slab for some structures and RCC / PSC I Girder for some structures with wall type abutments and Wall type / circular type piers resting on open foundations. There are 36 minor bridges in which some are RCC solid slab type bridges with wall type abutments or piers resting on open foundations. Also, there are some RCC box type minor bridges. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Structural condition of most of the culverts is fair except in few locations. Detailed inventory and condition survey of box culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges

In Betul-Sarni-Parasia Road, there are total 09 major bridges. Type of superstructure is Solid slab, RCC I Girder and PSC I Girder with wall type abutment, wall type piers and circular piers resting on open foundations. The superstructure is seated on elastomeric bearings. Expansion joints are of Buried type. Crash barrier has been provided on both sides of the deck.

Table 4.2: List of Major Bridges

S. No.	Chainage (Km.)	Span	Total Length of Bridge (m)
1	14+700	3 x 30.0	90.00
2	17+000	9 x 15.0	135.00
3	17+860	3 x 30.0	90.00
4	31+950	5 x 20.0	100.00
5	58+850	2 x 28.2 + 1 x 33.0	89.40
6	67+750	7 x 20.0	140.00
7	69+600	6 x 12.0	72.00

S. No.	Chainage (Km.)	Span	Total Length of Bridge (m)
8	75+950	2 x 12.5 + 2 x 21.7	68.40
9	86+950	6 x 12.0	72.00

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, drainage spouts and strip seal expansion joints are to be carried out.

Km. 14+700

Km. 17+860

Km. 58+850

Km. 67+750

Figure 4.1: Representative photographs of Major Bridges

4.4 Details of Minor Bridges

In Betul-Sarni-Parasia Road there are 36 minor bridges. The type of superstructure for minor bridges are RCC box type and RCC Solid slab and the substructure is of RCC/PCC conventional wall type supported on open foundations. Expansion joints are buried type and bearings are tar paper or neoprene bearings. RCC crash barriers are provided on all structures.

Table 4.3: Inventory of Minor Bridges

S. No.	Chainage (Km.)	Span(m)	Total Length of Bridge (m)	Description
1	4+300	1 x 10.00	10.00	MNB has RCC solid slab superstructure

S. No.	Chainage (Km.)	Span(m)	Total Length of Bridge (m)	Description
				supported on conventional PCC/RCC wall type piers and abutments resting on open foundations. Buried type expansion joints.

4.5 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of box culverts are given in **ANNEXURE 3** and pipe culverts are given in **ANNEXURE 4**.

General description of the Slab/Box Culverts

There are 36 Nos. of slab / Box culverts in the project stretch. The details of the culverts are as given below.

Table 4.4: List of Slab/Box Culverts

S. No.	Chainage (Km.)	Span	S. No.	Chainage (Km.)	Span
1	3+360	1 x 4.0	19	40+190	1 x 2.0

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULE

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2012 publication while the current publication is IRC: 37-2018.

Review of Pavement Design

As per the pavement design approved in the project, the following conclusions are given

Table 5.1: Flexible Pavement Design summary

S. No.	Description/ Pavement layer	Design Parameters
1	Sub Grade CBR (%)	7%
2	Design Life (Years)	10 years for BT 15 years for Granular
3	Actual Traffic	7.8 MSA for 10 Years & 14.4 MSA for HS-1 3.5 MSA for 10 Years & 6.4 MSA for HS-2
4	Design Traffic (MSA)	10 MSA for HS-1 & HS-2 14.4 MSA for Granular
5	Surface course (BC)	40 mm
6	Binder course (DBM)	60 mm
7	Base course (WMM)	250 mm
8	Sub Base course (GSB)	230 mm

5.3 Validation of Pavement design

The new pavement shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”. Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. “Guidelines for the Design of Plain Jointed Rigid Pavements for Highways”.

Pavement design validation is carried out as per actual traffic from COD. As per IRC 37, Vehicle Damage Factor (VDF), Distribution of commercial vehicles and growth rate values are 3.5, 0.75 and 5% respectively. Summary is given below.

Table 5.2: Flexible Pavement Design Traffic Validation (TP-1)

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2016	945	188	62	78	180	508	0.49	0.49	2	Actual
2017	1077	198	66	69	186	519	0.50	0.98	3	Actual
2018	1181	214	63	75	239	591	0.57	1.55	4	Actual
2019	1265	236	63	66	248	613	0.59	2.14	5	Actual
2020	1428	247	61	63	214	584	0.56	2.70	6	Actual
2021	1499	259	64	66	225	614	0.59	3.29	7	Projected
2022	1574	272	67	69	236	644	0.62	3.90	8	Projected
2023	1653	286	70	73	248	676	0.65	4.55	9	Projected
2024	1736	300	74	77	260	710	0.68	5.23	10	Projected
2025	1822	315	77	80	273	746	0.71	5.95	11	Projected
2026	1913	331	81	84	287	783	0.75	6.70	12	Projected
2027	2009	347	85	89	301	822	0.79	7.48	13	Projected
2028	2110	365	90	93	316	863	0.83	8.31	14	Projected
2029	2215	383	94	98	332	907	0.87	9.18	15	Projected

Table 5.3: Flexible Pavement Design Traffic Validation (TP-2)

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2016	324	45	15	9	14	84	0.08	0.08	2	Actual
2017	792	116	36	20	27	199	0.19	0.27	3	Actual
2018	807	109	35	14	25	183	0.18	0.45	4	Actual
2019	829	116	35	13	80	244	0.23	0.68	5	Actual
2020	857	107	38	10	21	176	0.17	0.85	6	Actual
2021	899	113	40	11	22	185	0.18	1.03	7	Projected
2022	944	118	42	11	23	195	0.19	1.21	8	Projected
2023	992	124	44	12	24	204	0.20	1.41	9	Projected
2024	1041	130	46	12	26	214	0.21	1.61	10	Projected
2025	1093	137	48	13	27	225	0.22	1.83	11	Projected
2026	1148	144	51	14	28	236	0.23	2.06	12	Projected
2027	1205	151	53	14	30	248	0.24	2.29	13	Projected
2028	1266	159	56	15	31	261	0.25	2.54	14	Projected
2029	1329	166	59	16	33	274	0.26	2.81	15	Projected

Based on the above actual traffic, estimated MSA at 10 years and 15 years are 5.23, 9.18 of TP1 respectively. Similarly estimated MSA at 10 years and 15 years of TP2 are 1.61, 2.81 respectively.

Traffic considered in pavement design is more than estimated traffic based on actual traffic. Hence the pavement design adopted is found in order.

Details of Pavement design for Rigid Pavement are as follows:

Table 5.4: Rigid Pavement Design for Toll Plaza

Description	Design/Adopted Thickness
CBR of sub grade	7 %
Design life in years	30
Pavement Quality Concrete (PQC) - mm	230
Dry Lean Concrete (DLC) - mm	150
Drainage Layer (GSB/CRM) - (mm)	150
Diameter of Dowel Bar (mm)	32
Length of Dowel Bar (mm)	450
Spacing of Dowel Bars (mm)	300
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	605

The Pavement crust has been designed according to IRC specification and found in order, the adopted/Constructed pavement layer thickness is adequately provided than actual/designed thickness.

5.4 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 10 MSA for a design life of 10 years for Bituminous layers (up to end of year 2024) and 14.4 MSA for 15 years for granular layers respectively (up to end of year 2029), whereas the actual traffic is 7.8 MSA and 14.4 MSA for HS-1 and 3.5 MSA and 6.4 MSA for HS-2 for 8 years and 15 years respectively. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation prior to end of concession period to evaluate the requirement of overlay.

5.5 Maintenance/ Overlay schedule

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation before the end of Stage-I of design life (as per pavement design report) and prior to the end of concession period to evaluate the requirement of overlay.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Next Proposed Periodic Renewal on or before 2022.

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction (as per IRC 58-2015).

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety has multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special publication SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992

Table 6.1: Referred IRC Publications

IRC : 35	Code of Practice for Road Markings
IRC : 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC : 67	Code of Practice for Road signs
IRC : 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC:SP- 88	Manual of Road Safety Audit

6.2 Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 6.2: Safety Items

S. No.	Item Description	Status	Condition
1	Sign Boards	Chevron signs	Available as per site requirement Good
		Village sign Board	Available as per site requirement Good

		Informatory Boards	Available as per site requirement	Good
		Object Hazard Markers at culverts	Available as per site requirement	Good
2	Road Marking	Studs & Lane Marking	Available as per site requirement	Fair
3	Metal Beam Crash Barriers	At High Embankments	Available as per site requirement	Good

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

S Curve board at Km. 13+000

Speed Limit board at Km. 76+000

W Beam at approaches at Km.13+300

Road safety at the Head wall of Structure at 74+850

Right Turn board at Km. 76+000

Left Turn board at Km. 75+510

Figure 6.1: Representative photos during road safety audit

6.3 Conclusion

Safety arrangements are done for road users along the project road and the same is found in conformity with project highway requirements and good industry practice. However, a continuous monitoring on safety arrangements is highly appreciated during the operation and maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There are two toll Plazas on the project road at Km.31+000 and Km.111+950. Both Toll Plazas comprises of 6 lanes. Two lanes in each direction is operational and the third lane is used as bike lane and extra wide lane. The lane width in both the plazas is 3.20m. The width of islands provided is 1.8m. The single canopy is provided to cover the toll lanes. The lane is provided with tolling system from Rajdeep. Both Toll plazas are provided with G+1 floor building which houses control room, UPS and Pantry.

7.2 Tolling Equipment's

The equipment list was not made available at the toll plaza. But based on our visual observations we have listed down the equipment provided in the TMS.

Table 7.1: List of Tolling Equipment

S. No.	Description	Toll Plaza 1	Toll Plaza 2	Total
Lane and Booth Equipment				
1	RFID Readers	6	6	12
2	LPIC Cameras	6	6	12
3	Monitors	6	2	8

CHAPTER 8. TRAFFIC CENSUS AND TOLL REVENUE

8.1 Traffic Census

In accordance with clause 22.1, the Concessionaire shall install, maintain and operate electronic/computerized traffic counters at each of the Toll Plazas and collect data relating to the number and types of vehicles using the Project Highway. A weekly statement of such data shall be compiled and furnished forthwith by the Concessionaire to MPRDC substantially in the form specified in Schedule N of CA.

Accordingly, the Concessionaire provided toll plaza wise details. Based on the data made available the summarized annual classified Traffic census details for the past five years are provided in Table 8.1 below. The Actual traffic data recorded below has been taken as a basis to calculate AACGR % (Average Annual Compound Growth Rate).

**Table 8.1: Year wise Traffic (Vehicles) Details
(A) Sarni toll plaza**

FY Year	Car	LCV	Bus	Truck	MAV	Total Traffic
Apr-Mar 2015-16	306322	60943	20158	25213	58261	470897

AACGR* (%)						30.12%

8.2 Actual Revenue Collection

In accordance with clause 19.5, “During the operation period, the Concessionaire shall furnish to MRPDC within 7 days of completion of each month, a statement of fee substantially in the form set forth in Schedule-M (Monthly fee statement)”. As per provisions of CA the concessionaire submitted monthly fee statement and the summary of form submitted under Schedule M during the financial year 2019-20 is given under as Table 8-2.

Table 8.2: Summary of 2019-20 Tollable traffic and revenue collected at Toll Plaza

(A) Sarni toll plaza

Description	Car	Car(pass)	LCV	Bus	Truck	MAV	Total
In Nos.	265147	19177	73415	22120	22385	78047	480291
Toll Revenue collection in Rs.	9280145	1534191	6447050	3993740	4844000	33779840	59878966

(B) Parasia toll plaza

Description	Car	Car(pass)	LCV	Bus	Truck	MAV	Total
In Nos.	169401	8239	30674	13483	3616	7624	233037
Toll Revenue collection in Rs.	5866790	659150	2684890	2385555	774265	3273160	15643810

The figures shown in Table 8-1 are Real time traffic data (AADT) on project road for the past five years and the growth rate is calculated to be 12.04% in TP-1 & 44.73% for TP-2. It is pertinent to note that the figures given in table 8-1 are inclusive of exempted /non tollable traffic.

The figures shown in Table 8-2 are actual tollable traffic based on which the toll revenue collected and is excluding of exempted/non tollable traffic. For the realistic estimate of the traffic growth and projected revenue calculation actual traffic based on which FY 2019-20 revenue collected (table 8-2) is considered as a base year traffic and the projected traffic growth rate is restricted to 5% even though the growth as per table 8-1 is >5%.

Based on the base year traffic and growth rate as explained above traffic projections from year 2019-20 to till end of Concession period toll plaza wise are calculated and summarized below in Table 8-3.

**Table 8.3: Projected traffic
(A) Sarni toll plaza (Km. 31+000)**

8.3 Toll Revenue Calculations

The toll revenue for horizon year is calculated based on the input from the above data, actual toll rates collected on base year (2019-20), with Traffic growth, WPI growth and toll efficiency has been assumed 5%, 4% and 100% respectively and other inputs considered in revenue calculations is given in table 8-4

Table 8.4: Toll Revenue inputs

Particular	Toll plaza 1	Toll plaza 2
Location	Sarni (Km. 31+000)	Parasia (Km.111+950)
4 lane length in km	0	0
2 lane length in km	50.000	72.000
Agreement Date	20.05.2013	01.09.2015
Appointed Date	07-04-2014	07-04-2014
Concession period	15	15
Commercial operation date (PCOD)	11-11-2015	11-11-2015
Concession End Date	06-Apr-29	09-Apr-29
Traffic study year	2020	2020
Vehicle Type	AADT	AADT
Car/Jeep/Van	779	487
2-axle Bus	201	84
LCV/LGV	61	37
2A-Truck	61	0
MAV (2A-6A)	214	10
Growth Rate (%)	5%	5%

The split trip type based on the available toll data from Concessionaire is used to derive the annual toll collection for each plaza. The revenue estimated and presented below. Detailed toll revenue estimation is given in **ANNEXURE 4**.

Table 8.5: Toll Revenue Estimated (in Rs. lakhs)

Financial Year	Annual Revenue of TP1 @ Km.31+000	Annual Revenue of TP2 @ Km.111+950	Total	Remarks
2019-20	598.790	156.438	755.228	Actual

2029-30	22.473	5.612	28.085	6 Days

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of the Concession Agreement (CA), the Concessionaire will operate and maintain the Project road by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behaviour of various elements. These inspections also indicate, need (if any) for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution.
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments.

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to beginning of each accounting year during the operation period.

9.3 Operations

Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.
- carrying out preventive and periodic maintenance of the Project road;
- undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- Functioning of the lighting system;
- Functioning of the Patrolling System
- Functioning of rescue and medical aid services
- Ambulance as and when required

- Functioning of the Project Facilities
- Administrative, Operational and Maintenance Base Camp
- Truck Lay byes
- Pickup Bus stops / Bus Bays
- Protection of the environment and provision of equipment and materials therefore;
- Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- Complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plaza

There are 2+1 lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the escrow account. In case of ETC system Toll collection is connected with Network system and directly deposited into the Escrow account.

9.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year. Road maintenance can be carried out in four ways as listed below.

1. Preventive Maintenance
2. Routine Maintenance
3. Periodic Maintenance
4. Special repairs

Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period. Preventive Maintenance shall include the activities related to each element and the system as a whole of the Project Preventive Maintenance for Structures is estimated by the consultant. The condition data collected from site was used to arrive at the appropriate treatments and quantities. Rates from Schedule of Rates (SOR) of MP, was used to arrive at the cost.

The flexible pavement is in good condition and hence doesn't require any immediate or preventive interventions.

Routine Maintenance:

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road.

The details of periodic maintenance schedule are given below.

Table -1: Schedule and status of for Periodic Maintenance

S No.	Scheduled Major Maintenance	Year	Status at site
1	1st Periodic Maintenance	2022	Executed
2	2 nd Periodic Maintenance	2028	scheduled
3	2 nd Periodic Maintenance	2029	scheduled

Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per Programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction
- c. Construction of Diversions
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.6 Review of Test Reports:

Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of Oct 2020. As per Schedule K of the CA, If the value exceeds 3000mm in a KM, the stretch shall be rectified. No stretch exceeded the permissible limit of 3000 mm in the Project road.

Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage

conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

Concessionaire has conducted the test in Oct 2020. The test report has been verified and found within permissible limits as per IRC 81.

9.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 5**.

Table 9.1: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance (In crores)	Incidental maintenance (In crores)	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	0.780	0.322		1.73	2.83
2021	0.803	0.332		1.78	2.91
2022	0.827	0.342	9.69	1.83	12.69
2023	0.852	0.352	9.69	1.89	12.78
2024	0.878	0.363		1.94	3.18
2025	0.904	0.374		2.00	3.28
2026	0.931	0.385		2.06	3.38
2027	0.959	0.396		2.12	3.48
2028	0.988	0.408	6.82	2.19	10.40
2029	1.018	0.421	16.30	2.25	19.99
2030	0.017	0.007		0.04	0.06
Total	8.96	3.70	42.49	19.84	74.99

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 Scope of Work (Article 2)

Article 2 provides the scope of work, which includes the following.

- construction of the Project road on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of Project Facilities as specified in Schedule-C, and in conformity with the Specifications and Standards set forth in Schedule-D of the CA
- operation and maintenance of the Project road in accordance with the provisions of Concession Agreement (CA)
- performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this CA and matters incidental

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 6**.

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the CA

Conditions precedent to be fulfilled by the Concessionaire

Provide performance security to the Authority

- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of the CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfil its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the CA

10.5 Obligations relating to the Competing Roads (Clause 6.3)

Neither Authority nor any Governmental Instrumentality shall construct the Competing Road before 10th Anniversary of the Appointed Date.

10.6 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 20% of the Total Project Cost.

10.7 Provisional Completion Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA and after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of the CA. Provisional Completion Certificate given in **ANNEXURE 7**.

10.8 Completion Certificate (Clause 14.4)

Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire. Completion Certificate given in **ANNEXURE 8**

10.9 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of scope, proposals were initiated during construction period and consented by the MPRDC. Details are given in **ANNEXURE 10**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents.
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any un authorized use of the Project road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations Period; the Project road conforms to the maintenance requirements set forth in Schedule K of the CA (the “Maintenance Requirements”).

10.13 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty) days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “Maintenance Manual”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8):

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 0.5% (zero decimal five percent) of the Average Daily Fee, and
- 0.1% (zero point one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Monthly Fee Statement (Clause 19.5)

During the Operations Period, the Contractor shall furnish to the Concessionaire and the Authority, if required by the Contractor, within 7 (seven) days of completion of each month, a statement of Fee substantially in the format set out in the CA (“Monthly Fee Statement”).

10.18 Annuity (Clause 25.1.1)

The Authority agrees and undertakes to pay the Concessionaire for each annuity Payment period on each annuity payment date as set forth in schedule Y of the CA, the sum of Rs 15.48 Crores.

As per Clause 25.2.1, In case the COD is different from the Schedule Y, then the annuity payment schedule shall be suitably modified to be a period of 6 months from the preceding Annuity Payment date.

Table 10.1: Status of Annuity Payments

S. No.	Particulars	Payment Paid on
1	1st Annuity	15-Dec-15
2	2nd Annuity	12-May-16
3	3rd Annuity	23-Nov-16
4	4th Annuity	25-May-17
5	5th Annuity	5-Dec-17
6	6th Annuity	4-Jun-18
7	7th Annuity	29-Nov-18
8	8th Annuity	28-May-19
9	9th Annuity	14-Nov-19
10	10th Annuity	22-May-20
11	11th Annuity	12-Nov-20
12	12th Annuity	15-Dec-15
13	13th Annuity	12-May-16

10.19 Concession Fee (Article 26)

- In consideration of the grant of Concession the Concessionaire shall pay Concession Fee of Rs1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC

10.20 Toll fee (Clause 27.1.1)

Toll Fees Shall be revised annually in accordance with Clause 27.2.1.

10.21 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 Details of Insurance

As per clause 32.1 of the Concession Agreement (CA), the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Accordingly, the following policies being maintained by the concessionaire copies of the same are provided in **Annexure-9**.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks.

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Policy
			From	To	
Civil Engineering Completed Risk	National Insurance Company Ltd	3213004419 10001990	27.03.2020	26.03.2021	Road & Structure: Toll Building & Toll Booths, TMS, HTMS, Office & IT equipment, Electronic Equipment, Road Furniture, Fixtures, electrical Poles Lighting & Fittings, Sign boards & Safety Barrier
Employees Compensation Insurance Policy	HDFC Ergo General Insurance Company	3114203388 063900000	20.05.2020	19.05.2021	Employees Insurance of DBL & Sub-contractor engaged in DBL

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The overall project pavement condition is good. Drainage system is effective along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are getting cleared during regular maintenance period.

12.4 Traffic Growth

Based on real time, traffic data was extracted from Schedule N of CA, the traffic growth observed is 12.04% in TP-1 & 44.73% for TP-2, whereas 5% growth as standard practice is considered while evaluating forecast of traffic volumes.

12.5 Project Facilities

Toll Plaza is located at Km.31+000 and 111+950 is operational. Toll Plaza is operated by ETC Toll collection system and connected by network system monitored in administrative building. Bus bays are in fair condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained. Highway lighting is provided at toll plaza locations and found functional.

12.6 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per site requirement. The condition of sign boards & other road appurtenances like metal beam crash barriers is fair.

12.7 Maintenance

- The routine maintenance being carried out by O&M contractor effectively. Based on documents reviewed, time to time observations made by client/Authority, being complied and no outstanding NCR's are to be attended as on date.
- 1st Major maintenance (MM) /Periodic maintenance was scheduled in the year 2022 and 2nd MM is scheduled in 2028 & 2029.

12.8 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

ANNEXURES

Annexure 1: Pavement Condition

Condition: G=Good, F=Fair, P=Poor & VP=Very poor Rutting: M=Moderate & S=Severe Drain: LD=Lined open Drain, ULD=Unlined Drain, CD=Covered Drain, NO=No drain, PF=Partial Function, F= Functional

Annexure 4: Toll Revenue Calculations

Toll Plaza-I & II:

1. Tollable Traffic considered for Toll Revenue in No.s (AADT)

Table-1: Details of Tollable Traffic (Base Year 2019-20)

Vehicle Type	Traffic (AADT)	Traffic (AADT)
	Km.31+000	Km.111+950
Car/Taxi/Van	779	487
LCV	201	84
Bus	61	37
Truck	61	10
MAV	214	21

2. Traffic Growth Rates

Table-2: Details of Growth rates adopted

Year	Car	LCV	BUS	Truck	MAV
2019-25	5.00	5.00	5.00	5.00	5.00
2025-30	5.00	5.00	5.00	5.00	5.00

3. Trip Distribution Ratio as per the Toll Data

Table-3: Details of Trip Distribution (Base Year 2019-20)

Vehicle Type	Single Trip	Local Pass	Total
Km.31+000			
Car/Taxi/Van	93%	7%	100%
LCV	100%	0%	100%
Bus	100%	0%	100%
Truck	100%	0%	100%
MAV	100%	0%	100%
Km.111+950			
Car/Taxi/Van	95%	5%	100%
LCV	100%	0%	100%
Bus	100%	0%	100%
Truck	100%	0%	100%
MAV	100%	0%	100%

4. Toll Rates :

Table-4: Details of Toll Fee (Base Year 2019-20)

Vehicle Type	Km.31+000	Km.111+950
Car/Taxi/Van	35	35
LCV	90	85
Bus	180	170
Truck	215	210
MAV	430	420

No. MPRDC/BOT/B/S-P/2013/ 264
Bhopal, dated 4 April, 2013

M/s Dilip Builders Ltd.,
E-5/99, Arera Colony,
Bhopal

**Sub: Development of Betul-Sarni-Junnardeo-Parasia (SH-43)
Road on BOT (Toll +Annuity) basis.**

In response to your Pre-Qualification you have submitted Technical and Financial Bid for development of **Betul-Sarni-Junnardeo-Parasia (SH-43) Road on BOT (Toll +Annuity) basis**. In this connection, kindly refer to the clarification, addendum etc. issued from time to time before submission of the tender document.

Also refer to your bid documents containing an unconditional price bid of **Rs. 15,48,00,000.00 (Rupees fifteen crores forty eight lacs only)** as Annuity Amount payable in terms of Clause.25 of the Concession Agreement.

Pursuant to our acceptance of your tender and decision to award the work to you, we request you to send your acceptance and sign the Concession Agreement within the time stipulated in the Tender.

(Duplicate LOA to be returned after acknowledgement)

Yours faithfully,

Connecting People Through quality infrastructure

PROVISIONAL CERTIFICATE

1. I, **K.H. Waghmare** Team Leader (Theme Engineering Services Pvt. Ltd.), acting as Independent Engineer, under and in accordance with the Concession Agreement dated 20th May 2013 for two laning of **Betul-Sarni-Technadon-Parasia (SH-43) Road** from KM 0+000 to KM 124+100 on Build, Operate and Transfer (BOT), Toll+Annuity basis, through M/s **DBL BETUL-SARNI TOLLWAYS LIMITED**, hereby certify that the Tests specified in Article 14 and Schedule-I of the Agreement have been undertaken to determine compliance of the Project Highway with the provisions of the Agreement.

2. Construction Works that were found to be incomplete and/or deficient have been specified in the Punch List appended hereto, and the Concessionaire has agreed and accepted that it shall complete and/or rectify all such works in the time and manner set forth in the Agreement. (Some of the incomplete works have been delayed as a result of reasons attributable to the MPRDC or due to force majeure and the Provisional Certificate cannot be withheld on this account. Through the remaining incomplete works have been delayed as a result of reason attributable to the concessionaire.) I am satisfied that having regard to the nature and extent of such incomplete works, it would not be prudent to withhold commercial operation of the Project Highway pending thereof.

3. In view of the foregoing, I am satisfied that the Project Highway can be safely and reliably placed in commercial service of the Users thereof, and in terms of the Agreement, the Project Highway is hereby Provisionally declared fit for entry into commercial operation on this the 12th day of May 2015.

Minutes of Meeting

Meeting of advisory committee of MPRDC for change of scope for Development of Betul -Sarni- Tekhnadhon -Junnardeo -Parasiya -Road SH -43 On BoT Toll Annuity Basis in The State of Madhya Pradesh has been held in the office of MPRDC on dated 07/04/16. Following officials were presenting in the meeting:-

1. Shri A.S Chendke, Technical Advisor, MPRDC, Bhopal
2. Shri Anil Chansoria, Chief Engineer(BOT), MPRDC, Bhopal
3. Shri A.L.Suryavanshi, General Manager(BOT), MPRDC, Bhopal
4. Shri B.S. Meena, Divisional Manager, MPRDC, Bhopal
5. Shri K.H Waghmare, Team Leader, Independent Engineer, M/S Theme Engineering Services, Pvt.Ltd.
6. Shri Nitin Shrivastava, General Manager, Concessionaire, M.S DBL Bhopal

The change of Scope Recommended by Independent Engineer vide its letter no.Theme/MPRDC/Betul-Sarni/356 dated 29.09.2015 has been discussed by advisory committee. Item wise reason & recommendation of Team leader were checked & decision of advisory committee recorded as below:-

Development of Betul -Sarni- Tekhnadhon -Junnardeo -Parasiya -Road SH -43 On Bot Toll Annuity Basis in The State of Madhya Pradesh

Client :- Madhya Pradesh Road Development Corporation Limited
 Concessioner :- DBL Betul Sarni Toll Ways Limited
 Independent Engineer :- Theme Engineering Service Pvt. Ltd
 EPC Contractor :- Dilip Builders Ltd.

Details of Concrete Pavement										Reasons and Recommendation of Independent Engineer	Decision of Committee
Item No.	Scheduled Chainage	Designed Chainage	Existing Detail as per Schedule 4 - A	Development Proposal as per Schedule - B			Actual Construction By Concessionaire At Site				
				From	To	Length	From	To	Length		
1	38+640 To 40+000			N/A	N/A	N/A	38+640	40+000	1360	The Concrete pavement (PQC) carriage way with 7 m width was available at different location. Cracks and settlement are noticed at many stretches it was in poor condition as per Chief Engineer (BOT) inspection note dated 17th April, 2014 para 2&3 the existing rigid pavement should be treated as DLC because of poor condition and new PQC should be laid over it. Hence concessionaire has constructed 2.624Km, rigid pavement with PQC in 10mtr width along with paved shoulder and 2.06 km with 7 m concrete pavement road over existing 7 m concrete base treated as DLC. Concrete pavement (PQC) length of 4.684 km is recommended as (+) change of scope. Flexible pavement of 4.684 Km will be (-) Variation.	Committee agreed to consider Positive Change of Scope, as Recommended by IE that Concrete pavement (PQC) length of 2.624 km length in 10mtr width and 2.060 km length in 7 mtr width PQC, positive (+) vs Change of Scope and 4.684 Km for Flexible Pavement will be (-) vs Change of scope.

CE (BOF)

21	113+130	111+552	1 Row 1000	RC as 1 row 1200	Remain	Existing structure is in good condition HPC 1 row 1200mm width 12mtr hence retained. (-)ve COS for reconstruction of 1 row 1200mm HPC width 12 mtr	Committee agreed as recommended by IE to consider (-)ve COS for reconstruction HPC 1 row of 1200mm width 12 mtr because it is retained; where as in schedule B it is under reconstruction as 1 row of 1200mm HPC.
22	117+450	116+241	1 Row 900	RC as 1 row 1200	RC as Minor Bridge span 1x6.1 Box type	To maintain and improve the Geometries specially the verticle curves and heavy water suply pipe line, it is found suitable to have a minor bridge. As per site verification at this chainage there is a Arch cubxert. with the span arrangement as 1 x 3.6mtr. As per the hydraulic design minor bridge of 6.1 x 4.6 mtr box bridge is required. Because of the variation in provision of the aggrement and site and as per the provision of hydraulic design, there is a (-)ve COS for reconstructions of HPC 1row 1200mm reconstruction. It is certified that there is a position of minor bridge 1x10 mtr span at ch-99+100 which is not needed as per the site requirement and retained as HPC. This minor bridge considered and included under the Scope of Minor Bridge.	Committee agreed as recommended by IE to consider (-)ve COS for reconstruction of HPC 1row 1200mm width 12 mtr.
23	120+425	118+801	1 Row 1 x 1	RC as 1 row 1200	Remain	Existing structure is in good condition HPC 1 row 1200mm having width 12.0mtr hence retained. (-)ve COS for reconstruction of 1 row 1200mm HPC width 12 mtr	Committee agreed as recommended by IE to consider (-)ve COS for reconstruction HPC 1 row of 1200mm width 12 mtr because it is retained.
24	122+159		1 Row 1000	RC as 1 row 1200	As per site no C.D. work is needed	As per site condition there is no existing structure and further there is no need for C.D. work (-)ve COS for reconstruction of HPC 1 Row of 1200mm width 12mtr.	Committee agreed as recommended by IE to consider (-)ve COS for reconstruction of 1 row 1200mm HPC width 12 mtr as not reconstructed
widening HPC							
1	2	3	4	5	6	7	8
25	22+255	21+912	1 Row 900	Widening as 1 row 900	Proposed as Utility Duct	As per site condition, there is utility duct. With 12 mtr width hence widening is not done (-)ve COS for widening of 1 row of 900mm HPC	Committee agreed as recommended by IE to consider (-)ve COS for widening of 1 row of 900mm HPC.
26	28+560	26+206	1 Row 1000	Widening as 1 row 1600	RC as 2 row 1200	Existing structure 1 row of 1000mm HPC width 7.5 mtr is not in good condition.hence reconstructed HPC 2 rows of 1200mm width 12mtr (+)ve COS for reconstruction of 2 rows of 1200 mm HPC width 12 and (-)ve COS for widening for 1row of 1000mm HPC from 7.5mtr to 12.mtr In shedule B proposed under widening	Committee agreed as recommended by IE to consider (-)ve COS for reconstruction of 2 rows of 1200 mm HPC width 12 mtr and (-)ve COS for widening for 1row of 1000mm HPC from 7.5 mtr to 12mtr

Sl. No.	Scheduled Chainage	Designed Chainage	Existing Data as per Scheduled - A	Development Proposal as per Schedule - B	Actual Construction by Dimensions at Site	Reasons and Recommendations of Independent Engineer	Decision of Committee
38	67+640	66+390	1 Row 900	Widening as 1 row 900	RC as 2 row 1200	Existing structure 1 row of 900mm HPC width 6.8 mtr is not in good condition, hence reconstructed HPC 2 rows of 1200mm formation width 12mtr and barrel length 21.25 mtr (+)ve COS for reconstruction of 2 rows of 1200 mm HPC formation width 12 mtr and barrel length 21.25 mtr and (-)ve COS for widening for 1 row of 900 mm HPC from 6.8 mtr to 12 mtr with barrel length 21.25 mtr because of high embankment. In shedule B proposed under widening	Committee agreed as recommended by IE to consider (+)ve COS for reconstruction of 2 rows of 1200 mm HPC formation width 12 mtr and barrel length 21.25 mtr and (-)ve COS for widening for 1 row of 900 mm HPC from 6.8 mtr to 12 mtr with barrel length 21.25 mtr because of high embankment.
39	69+860	68+514	1 Row 900	Widening as 1 row 900	Retain	Existing structure is HPC 1 row of 900mm, width 12 mtr is in good condition, sufficient to accommodate the discharge Hence HPC 1 row 900mm retained (-)ve COS for widening of 1 row of 900mm HPC	Committee agreed as recommended by IE to consider (-)ve COS for widening of 1 row of 900mm HPC as structure is retained
40	79+250	69+045	2 Row 1000	Widening as 2 row 900	RC as 2 row 1200	Existing structure 2 row of 900mm HPC width 7.5 mtr is not in good condition, hence reconstructed HPC 2 rows of 1200mm formation width 12mtr and barrel length 18.70 mtr (+)ve COS for reconstruction of 2 rows of 1200 mm HPC formation width 12 mtr and barrel length 18.70 mtr and (-)ve COS for widening for 2 row of 900 mm HPC from 7.5 mtr to 12 mtr with barrel length 18.70 mtr because of high embankment. In shedule B proposed under widening	Committee agreed as recommended by IE to consider (+)ve COS for reconstruction of 2 rows of 1200 mm HPC formation width 12 mtr and barrel length 18.70 mtr and (-)ve COS for widening for 2 row of 900 mm HPC from 7.5 mtr to 12 mtr with barrel length 18.70 mtr because of high embankment.
41	83+190	81+706	1 Row 900	Widening as 1 row 900	RC as 1 row 1200	Existing structure 1 row of 900mm HPC width 10 mtr is not in good condition, hence reconstructed HPC 1 rows of 1200mm formation width 12mtr and barrel length 17.5 mtr (+)ve COS for reconstruction of 1 rows of 1200 mm HPC formation width 12 mtr and barrel length 17.5 mtr and (-)ve COS for widening for 1 row of 900 mm HPC from 10 mtr to 12 mtr with barrel length 17.5 mtr because of high embankment. In shedule B proposed under widening	Committee agreed as recommended by IE to consider (+)ve COS for reconstruction of 1 rows of 1200 mm HPC formation width 12 mtr and barrel length 17.5 mtr and (-)ve COS for widening for 1 row of 900 mm HPC from 10 mtr to 12 mtr with barrel length 17.5 mtr because of high embankment.
42	99+750	-	1 Row 1000	Widening as 1 row 1000	As per site no C.D. work is needed	As per site condition there is no existing structure and further there is no need for C.D. work. Recommended (-)ve COS for widening to 12 mtr of 1 row of 1000mm HPC.	Committee agreed as recommended by IE to consider (-)ve COS for widening of 1 row of 1000mm HPC as recommended by IE.

S.no	Scheduled Chainage	Design Chainage	Existing Detail as per Schedule - A	Development Proposal as per Schedule - B	Actual Construction by Concessionaire at Site	Remarks and Recommendation of Independent Engineer	Decision of Committee
HPC Retain to Widening							
43	62+750	61+566	1 Row 1000	Retain 1 row 1000	Widening as 2 row 1200	Existing structure 2 rows of 1200mm HPC width 7.7 mtr is in good condition, hence widening is done from 7.7mtr to 12 mtr with barrel length 21.5 mtr. (+) ve COS for widening 2 rows of 1200 mm HPC from 7.7mtr to 12mtr barrel length 21.5 mtr, because of high embankment	Committee agreed as recommended by IE to consider (+) ve COS for widening 2 rows of 1200 mm HPC from 7.7mtr to 12mtr barrel length 21.5 mtr, because of high embankment
44	86+400	85+127	1 Row 900	Retain as 1 row 900	Widening as 2 row 900	Existing structure 2 rows of 900mm HPC width 9.3 mtr is in good condition, hence widening is done from 9.3 mtr to 12 mtr with barrel length 21.80 mtr. (+) ve COS for widening 2 rows of 900 mm HPC from 9.3 mtr to 12mtr barrel length 21.80 mtr, because of high embankment	Committee agreed as recommended by IE to consider (+) ve COS for widening 2 rows of 900 mm HPC from 9.3 mtr to 12mtr barrel length 21.80 mtr, because of high embankment
45	88+500	87+024	1 Row 1000	Retain 1 row 1000	Widening as 3 row 1000	Existing structure 3 rows of 1000mm HPC width 9.6 mtr is in good condition, hence widening is done from 9.6 mtr to 12 mtr with barrel length 20.60 mtr. (+) ve COS for widening 3 rows of 1000 mm HPC from 9.6 mtr to 12mtr barrel length 20.60 mtr, because of high embankment	Committee agreed as recommended by IE to consider (+) ve COS for widening 3 rows of 1000 mm HPC from 9.6 mtr to 12mtr barrel length 20.60 mtr, because of high embankment
46	119+300	117+670	1 Row 1000	Retain 1 row 1000	Widening as 1 row 1000	Existing structure 1 rows of 1000mm HPC width 10 mtr is in good condition, hence widening is done from 10 mtr to 12 mtr with barrel length 17.50 mtr. (+) ve COS for widening 1 row of 1000 mm HPC from 10 mtr to 12mtr barrel length 17.50 mtr, because of high embankment	Committee agreed as recommended by IE to consider (+) ve COS for widening 1 row of 1000 mm HPC from 10 mtr to 12mtr barrel length 17.50 mtr, because of high embankment
47	120+030	118+392	slab 1 x 1	Retain as slab 1 x 1.0	Widening as 1 row 1000	Existing structure 1 rows of 1000mm HPC width 10 mtr is in good condition, hence widening is done from 10 mtr to 12 mtr with barrel length 18.75 mtr. (+) ve COS for widening 1 row of 1000 mm HPC from 10 mtr to 12mtr barrel length 18.75 mtr, because of high embankment	Committee agreed as recommended by IE to consider (+) ve COS for widening 1 row of 1000 mm HPC from 10 mtr to 12mtr barrel length 18.75 mtr, because of high embankment
HPC Retain to Reconstruction							
48	27+100	26+752	1 Row 1000	Retain as 1 row 1000	Reconstruction as 1 row 1200	Existing structure 1 row of 1000mm HPC width 9.6 mtr is not in good condition, hence reconstructed HPC 1 row of 1200mm width 12mtr. (+) ve COS for reconstruction 1 row of 1200 mm width 12mtr.	Committee agreed as recommended by IE to consider (+) ve COS for reconstruction 1 row of 1200 mm width 12mtr.
49	70+815	69+620	1 Row 1000	Retain as 1 row 1000	RC as 1 x 1200	Existing structure is HPC 1 row of 1000mm width 10.0mtr but not in good condition hence reconstructed HPC 1 row of 1200mm width 12 mtr. (+)ve COS for reconstruction of HPC 1 row of 1200mm width 12mtr	Committee agreed as recommended by IE to consider (+)ve COS for reconstruction of HPC 1 row of 1200mm width 12mtr

Sno.	Schedule Change	Designed Chalnage	Existing Detail as per Schedule - A	Discrepancy/Remarks as per Schedule - B	Actual Construction by Consultant at Site	Reasons and Recommendation of Independent Engineer	Decision of Committee
50	71+150	69+962	2 Rows 900	2 Rows 900 <i>Retained</i>	RC as 1 row 1200	Existing structure is HPC 2 rows of 900 mm width 9 mtr but not in good condition Hence reconstructed HPC 1 row of 1200 mm width 12mtr, which is sufficient to accommodate the discharge. (+)Ve COS for reconstructed 1 row of 1200mm HPC width 12mtr	Committee agreed as recommended by IE to consider (+)Ve COS for reconstruction 1 row of 1200mm HPC width 12mtr
51	74+275	73+060	rec solid slab 1 x 4.6	Retain as rec solid slab 1 x 4.6	RC as 1 x 1200	Existing structure is 1 x 4.6 culvert width 9.60mtr but not in good condition hence reconstructed HPC 1 row of 1200mm width 12mtr. (+)ve COS for reconstruction of HPC 1 row of 1200mm width 12 mtr	Committee agreed as recommended by IE to consider (+)ve COS for reconstruction of HPC 1 row of 1200mm width 12 mtr <i>OK</i>
Extra HPC- Reconstuction							
52	8+130	8+032	1 Row 900mm	RC as Minor Bridge span 1x10	RC as 1 row 1200	As per site condition 1x1200 dia HPC width 12mtr is sufficient to accommodate the discharge. Hence Reconstructed as HPC 1 row of 1200mm, width 12mtr, when compared with schedule B, it is (-)ve COS For reconstruction of minor bridge span 1x 10mtr and (+) COS For reconstruction HPC 1 Row of 1200mm width 12 mtr.	Committee agreed as recommended by IE to consider (-)ve COS For Reconstruction of minor bridge span 1x 10mtr and (+) COS for reconstruction HPC 1 Row of 1200mm width 12 mtr, as per hydraulics there is no need of minor bridge <i>OK</i>
53	11+425	11+409	Extra	Extra	RC as 1 row 1200	as per site condition, there is need of C.D. work which is not provided in schedule Hence constructed HPC 1 row of 1200mm width 12.00mtr. (+)ve COS for construction 1 row of 1200mm HPC width 12.0mtr	Committee agreed as recommended by IE to consider (+)ve COS for construction 1 row of 1200mm HPC width 12.0mtr <i>OK</i>

CHAPTER 1. INTRODUCTION

1.1 General

DBL HATA DARGAWAN Tollways Limited (herein after referred to as the “Concessionaire”) had augmented the existing road from Km. 0+000 (Hata town) to Km. 64+400 (Dargawan Tihara) in the state of Madhya Pradesh, in accordance with the provisions of the Concession Agreement (CA) executed with Madhya Pradesh Road Development Corporation Limited (herein after referred to as the “MPRDC”) on 10.08.2015.

Project highway starts at Hata town (Km. 0+000) and ends at Dargawan Tihara (Km. 64+400) passing through Baroda, Fatehpur, Bari, Rajpura, Bhojpura in the state of Madhya Pradesh on Design, Build, Finance, Operate and Transfer (DBFOT) Toll + Annuity basis.

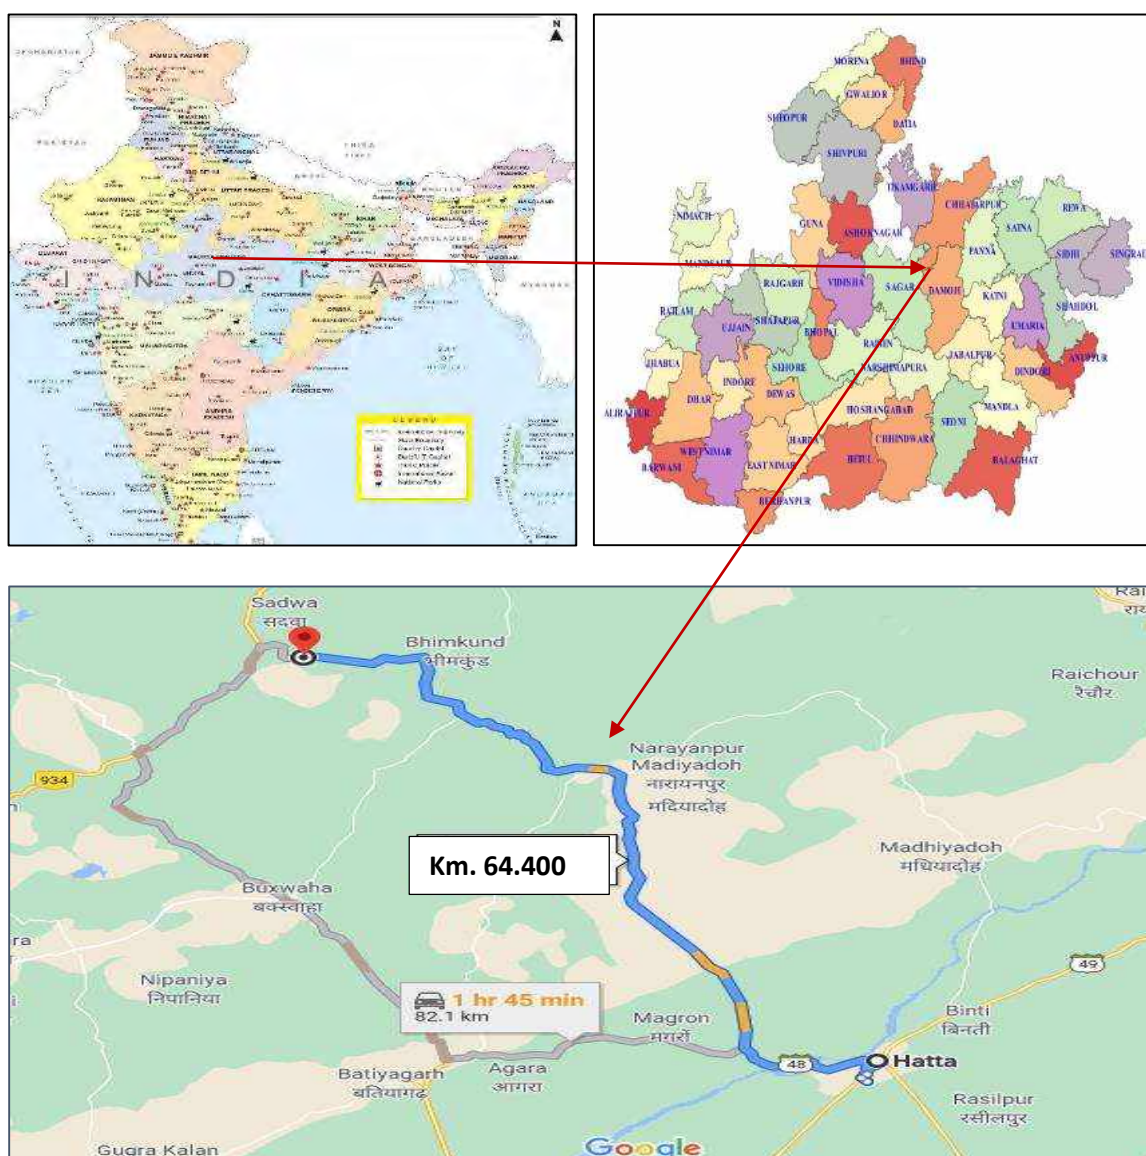

Figure 1.1: Project Location Map

SHREM ROADWAYS PRIVATE LIMITED (SRPL) acquired DBL HATA DARGAWAN TOLL WAYS LIMITED vides agreement dated 26th March 2018.

SHREM FINANCIAL PRIVATE LIMITED (SFPL) appointed RUKY Projects Pvt. Ltd. as consultants for detailed Technical Due Diligence Services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the traffic potential and to estimate the projected Toll Collection etc.

1.2 The Project Data

Table 1.1: The Project Data

S.No.	Particulars	Details
1	Name of the project	Construction, operation and maintenance of road from Hata-Fatehpura-Rajpura-Silapuri-Bajna-Dargawan (SH-48) road on BOT.
2	Road Type	SH-48
3	Name of the Authority	Madhya Pradesh Road Development Corporation Limited
4	Name of the Concessionaire	DBL HATA DARGAWAN Toll ways Limited
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Date of LOA	06.06.2015
7	Date of Agreement	10.08.2015
8	Design length as per Schedule B of CA	64.400 Kms.
9	Actual length constructed	64.400 Kms.
10	Project lane configuration	2 Lane
11	EPC cost	87.14 Cr.
12	Nature of contract	BOT (Toll + Annuity)
13	Toll collected by	Concessionaire
14	Concession period	15 years from the appointed date
15	Appointed date	10.04.2016
16	Concession end date	09.04.2031
17	Construction period	730 days from the appointed date.
18	Schedule completion date	09.04.2018
19	Date of issuance of provisional certificate (Commercial operation date)	07.03.2017
20	Annuity amount (every six months)	7.02 Cr
21	Total number of annuities payable	26 No's
22	First annuity payment date	06.09.2017
23	Total number of annuity paid	7 Nos.

1.3 Scope of consultancy services

The scope of work includes providing Due Diligence of the project road and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Collection of historic/past toll revenue data
- Collection of historic/past classified Traffic data from toll plaza and to estimate the projected traffic to arrive at revenue projections.
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout review of tolling system to evaluate the efficiency and functionality of tolling system and to identify and give suggestions to improve if any setbacks in the system.
- Carryout road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features described in the following Table 2.1 to be developed as per schedule B and Schedule C of Concession Agreement (CA) including Change of scope.

Table 2.1: Salient Features

S.No.	Particulars	As per CA	As per COS	As per Site
1	Total Length of 2Lane (Flexible)	64.40 Kms.	-	64.400 Kms.
2	Toll Plaza	1 Nos.	-	1 No.
3	Bus Bays / Bus Shelters	14 Nos.	-	14 Nos.
4	Major Junction	3 Nos.	-	3 Nos.
5	Minor Junctions	11 Nos.	-	11 Nos.
6	Major Bridges	02 Nos.	-	02Nos.
7	Minor Bridges	15 Nos.	-	15 Nos.
8	Pipe Culverts	73 Nos.	+1 Nos.	74 Nos.
9	Slab/Box Culverts	20 Nos.	-	20 Nos.

2.2 Typical Cross Section (TCS) Schedule

During construction the Concessionaire has followed the Typical Cross Section given in the following figures and schedule of cross sections as given in the Table 2.2 below.

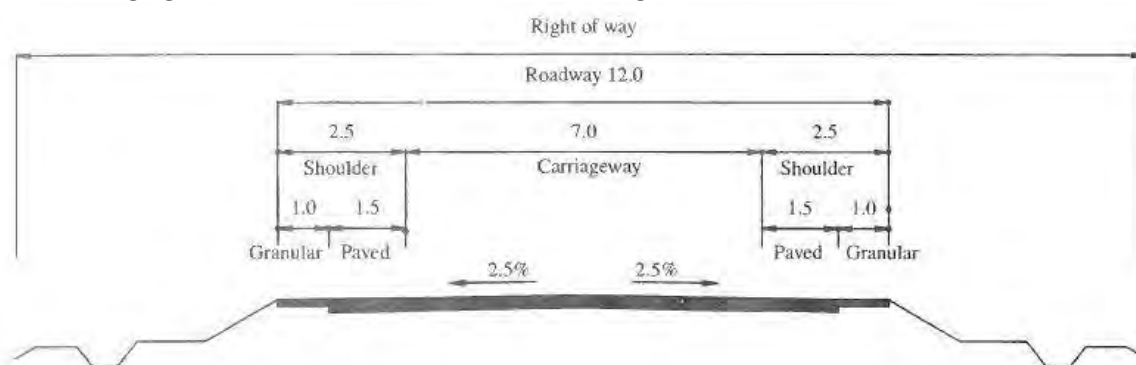

Figure 2.1: TCS 2.3 2-Lane Carriageway with Paved Shoulder (Built-up)

Figure 2.2: TCS 2.6 Intermediate Lane with Hard Shoulder

TCS schedule is provided below.

Table 2.2: TCS Schedule

S.No.	From Chainage (Km.)	To Chainage (Km.)	Length (m)	TCS Type
1	0+000	0+320	320	TCS.2.3
2	0+320	0+500	180	TCS.2.3
3	0+500	1+700	1200	TCS.2.3
4	1+700	6+900	5200	TCS.2.6
5	6+900	7+200	300	TCS.2.3
6	7+200	9+050	1850	TCS.2.6
7	9+050	9+600	550	TCS.2.3
8	9+600	15+000	5400	TCS.2.6
9	15+000	16+000	1000	TCS.2.3
10	16+000	21+400	5400	TCS.2.6
11	21+400	22+300	900	TCS.2.3
12	22+300	28+200	5900	TCS.2.6
13	28+200	28+500	300	TCS.2.3
14	28+500	34+350	5850	TCS.2.6
15	34+350	34+750	400	TCS.2.3
16	34+750	35+250	500	TCS.2.6
17	35+250	35+900	650	TCS.2.3
18	35+900	41+500	5600	TCS.2.6
19	41+500	42+300	800	TCS.2.3
20	42+300	52+400	10100	TCS.2.6
21	52+400	53+700	1300	TCS.2.3
22	53+700	56+500	2800	TCS.2.6
23	56+500	57+150	650	TCS.2.3
24	57+150	58+000	850	TCS.2.6
25	58+000	58+350	350	TCS.2.3
26	58+350	58+900	550	TCS.2.6
27	58+900	59+200	300	TCS.2.3
28	59+200	59+500	300	TCS.2.6
29	59+500	60+000	500	TCS.2.3
30	60+000	61+900	1900	TCS.2.6
31	61+900	62+500	600	TCS.2.3
32	62+500	63+700	1200	TCS.2.6
33	63+700	64+400	700	TCS.2.3

Figure 2.3: Pictorial Diagram of TCS Lengths.

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage on the Carriageway, side drains are constructed along the main carriageway on both flanks as specified in Schedule B of the CA in strict adherence to the Standard Specifications set forth in Schedule D of the CA.

2.4 Service Roads

Service roads are not provided along the entire stretch of the project road as per provisions of Schedule B of the CA.

2.5 Bypass/Realignment

Bypass/Realignment are not provided along the entire stretch of the project road as per provisions of Schedule B of the CA.

2.6 Intersections

As per provisions of Schedule B of the CA, 3 Major Junctions and 11 Minor Junctions are provided. Details are given below.

Table 2.3: Summary of Junctions

S.No.	Chainage (Km.)	Type	Side	Major/Minor	Location
1	0+000	T	LHS	Major	To Damoh
2	1+250	T	RHS	Minor	To Hata
3	3+350	T	LHS	Minor	To Village
4	5+800	T	RHS	Minor	To Village
5	7+075	T	LHS	Minor	To Village
6	9+200	T	LHS	Minor	To Village

S.No.	Chainage (Km.)	Type	Side	Major/Minor	Location
7	15+375	T	RHS	Minor	To Village
8	15+950	T	RHS	Minor	To Village
9	22+350	T	LHS	Minor	To Village
10	28+100	T	RHS	Minor	To Village
11	35+275	T	RHS	Minor	To Village
12	37+100	T	LHS	Minor	To Village
13	47+625	T	BHS	Major	To Jatashankar RHS, Baxwaha LHS
14	64+400	T	BHS	Major	To Chatarpur RHS, Sagar LHS

2.7 Grade Separated Structures and underpasses

There are no Grade separated structures in the Project, as per provisions of Schedule B of the CA.

2.8 Road Under Bridge

There is no Road under Bridge in the Project, as per provisions of Schedule B of the CA.

2.9 Summary of the Pavement Details

Table 2.4: Summary of Pavement Details

S.No.	Description	Flexible (Kms.)	Rigid (Kms.)	Remarks
1	2 Lane with earthen shoulder	53.740	---	Fig 2.1 of Schedule D of CA (TCS 2.6)
2	2 Lane with paved shoulder	10.660	---	Fig 2.3 of Schedule D of CA (TCS 2.3)
3	4 Lane	---	---	Fig 2.2 of Schedule D of CA
4	Total length of the project	64.400	---	---
TYPE OF ALIGNMENT				
5	New alignment	---	---	---
6	Realignment	---	---	---
7	Strengthening	---	---	---
8	Reconstruction	64.400	---	---
9	Total length of the project	64.400	---	---

2.10 Summary of Structures:

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.5: Summary of Structures

S.No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts
1	Retained	1	6	57	9
2	Widening	---	6	---	8
3	Reconstruction	1	3	---	---
4	New	---	---	8	3
5	Improvement	---	---	8	---
6	Total	02	15	73	20

2.11 Toll Plazas

As per Schedule C of the CA provisions, one Toll Plaza has been constructed at Km. 6+100. Salient features of Toll Plaza are provided below.

- Each side comprises of, one normal lane and one extra wide lane.
- The lane width in normal lanes is 3.2 m and extra lane is of 4.5 m width.
- Single canopy is provided to cover the toll lanes.
- Toll plaza has been constructed as per standards set forth in Schedule D of CA having facilities like lighting, water supply and firefighting Arrangements.
- C.C. Cameras are installed and monitored in administrative building.

2.12 Bus shelters

As per the provisions of Schedule C of the CA bus shelters are provided at 14 locations. Details as per Schedule C of the CA and provided as per site condition are given below.

Table 2.6: Bus shelters details

S.No.	Chainage (Km.)	Location
1	0+000	Hatta
2	6+900	Hatta
3	9+050	Baroda
4	15+000	Faehpur
5	21+400	Bari
6	28+200	Hardutolla
7	30+600	Jaupura
8	35+250	Rajpura
9	41+500	Silapuri
10	52+400	Bajana
11	56+500	Dimwara
12	59+500	Bujpura
13	61+900	Darguwan
14	64+400	Surajpura

2.13 Other Project Facilities Provided as per Schedule C of CA

- Roadside furniture: Sign boards, kilometer stones, road marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic safety devices: W beam crash barriers, parapet walls are provided as per the provisions of Schedule C of the CA.
- Landscaping: provided at toll plaza location and being maintained
- Tree plantation: Tree plantation is provided on both sides, for the full length of project corridor and being maintained.
- Medical Aid Post: Provided at toll plaza location and operational.
- Highway Lighting: Highway lighting is provided at Toll Plaza location and is functional.

W Beam crash barrier at approaches at Km. 4+000

Toll Plaza ahead board at Km. 6+100

Km. 10+200

Km. 6+100

Figure 2.4: Project facilities.

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented below.

3.2 Road Inventory

Inventory of the project road was carried out physically and is summarized in the following Table 3.1. Couple of representative photographs is given below to have a clear picture of the Project.

Table 3.1: Road Inventory

S.No.	Features	Remarks
1	Terrain	Rolling and mild hilly
2	Land Use	Built Up 14 %, Agriculture 64% and Barren 22%
3	Earthen shoulder	1.0 m to 1.5m Width on site
4	Junctions	14 Nos.
5	Toll Plaza	Km. 6+100
6	Sign boards	Sign boards are provided as per requirement
7	Road Markings	Lane markings are provided as per requirement
8	Bus Bays /shelters	14
9	Street Lighting	Highway lighting provided as per requirement
10	Avenue plantation	Provided

3.3 Pavement Condition:

Pavement Condition survey was carried out on the Project road, based on observations supplemented with simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement Condition Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Pavement surface condition assessment is a key component of infrastructure asset management. The information is used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future Pavement Conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey:

The survey on general Pavement Condition was primarily undertaken by means of slow drive- over survey, and supplemented with measurements where ever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The Pavement Condition is measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition: -
 - Cracking (% of surface area)
 - Ravelling (%of surface area)
 - Potholes (%of surface area)
 - Patching (%of surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement Condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP 19 and is given in **ANNEXURE 1**. The summary of Pavement Condition is given below.

Table 3.3: Pavement condition summary

From (Km.)	To (Km.)	Length (Kms.)	Condition
0+000	64+400	64.400	Good

Km. 4+000

Km. 10+200

Km. 13+200

Km. 40+900

Figure 3.1: Representative photographs of pavement condition

CHAPTER 4. INVENTORY AND REVIEW OF STRUCTURES

4.1 General Assessment and Details of the Existing structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

There are 02 Nos Major Bridges, 15 Nos Minor Bridges, 74 Nos Pipe culverts and 20 Nos Slab/ Box culverts are there along this project road.

Table 4.1: List of Structures

S.No.	Type of Structure	Numbers
1	Major bridges	02 Nos.
2	Minor Bridge	15 Nos.
3	Pipe culverts	74 Nos.
4	Slab/Box Culverts	20 Nos.

The superstructure of the Major bridges is of RCC Girder type resting on CRSM/RCC wall type Piers and Abutments with open foundation. The Super structure of the Minor bridges is of RCC solid slab and RCC Box structures and the substructures are of PCC/RCC conventional wall type, supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges

The total length of the Retained major bridge at Km. 4+480 is 175.0m with 14 spans. The superstructure consists of RCC Girder. Each pier and abutment are of regular CRM wall type with open foundations. Superstructure is seated on Elastomeric bearings.

The total length of the major bridge at Km 40+900 is 100.0m with 5 spans. The superstructure consists of RCC Girder. Each Pier is of RCC Circular and Abutment are of regular RCC wall type with open foundations Superstructure is seated on Elastomeric bearings. Expansion joints are of strip seal type. RCC crash barrier have been provided on both sides of the deck.

Table 4.2: List of Major Bridges

S.No.	Chainage (Km.)	Span	Total Length of Bridge (m)
1	4+480	14x12.5m	175.0
2	40+900	5x20.0m	100.0

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, cleaning of drainage spouts and strip seal expansion joints are to be carried out.

Figure 4.1: Overall view of the major bridge at Km. 4+480

Figure 4.2: Overall view of the major bridge at Km. 40+900

4.4 Details of Minor Bridges

There are 15 minor bridges in the project stretch. The type of Superstructure for Minor bridges is RCC solid slab and the Substructure is PCC/RCC conventional wall type supported on open foundations. Expansion joints are buried type and bearings are tar paper and elastomeric bearings. RCC crash barriers are provided on all structures.

Table 4.3: Inventory of Minor Bridges

S.No.	Chainage (Km.)	Span	Total Length of Bridge (m)	Description
1	1+119	4x10.0m.	40	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
2	4+250	3x1.0m.	32	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
3	8+870	6x8.7m.	52.2	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are Steel pipe railing, bituminous wearing coat, and Tar paper Bearings and buried type expansion

S.No.	Chainage (Km.)	Span	Total Length of Bridge (m)	Description
				joints.
4	9+800	1x10.0m.	11.4	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
5	14+425	1x10.0m.	11.2	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
6	28+200	1X8.8m.	8.8	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
7	35+610	2x10.0m.	22.3	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
8	40+000	3X7.0m.	21.0	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
9	41+550	2x5.8m.	11.6	The Minor Bridge has RCC solid slab superstructure supported on PCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
10	43+013	2x7.2m.	14.4	The Minor Bridge has RCC solid slab superstructure supported on PCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
11	44+490	1x10.0m.	10	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
12	46+765	1x7.2m.	7.2	The Minor Bridge has RCC solid slab superstructure supported on PCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
13	52+935	4x7.5m.	32.3	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
14	56+400	2x7.6m.	15.2	The Minor Bridge has RCC solid slab superstructure supported on PCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
15	58+450	1x10.0m.	11	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.

Km. 8+870

Km. 9+800

Km. 28+200

Figure 4.3: Representative photos for minor bridges

The condition of the minor bridges is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, cleaning of drainage spouts and strip seal expansion joints are to be carried out.

4.5 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

General description of the Slab/Box Culverts

There are 20 Nos. of slab/Box culvert in the project stretch. The details of the culverts are as given below.

Table 4.4: List of Slab/Box Culverts

S.No.	Chainage (Km.)	Span (m)	Vent Size (m)
1	3+030	1 x 4.0	2.00
2	9+675	2 x 2.0	2.00
3	14+825	2 x 2.0	2.00
4	15+540	1 x 4.0	2.00
5	18+450	1 x 4.0	2.00
6	22+860	1 x 4.0	2.00
7	27+160	1 x 4.0	2.00
8	29+860	1 x 6.0	2.00
9	31+730	1 x 6.0	2.00
10	34+875	1 x 6.0	2.00
11	35+680	1 x 6.0	2.80
12	40+750	1 x 5.2	4.00
13	42+280	1 x 6.0	2.00
14	42+630	1 x 5.0	2.00
15	46+210	1 x 6.0	1.50
16	53+931	1 x 5.0	3.00
17	55+150	1 x 6.5	2.00
18	55+968	1 x 2.5	2.50
19	59+450	1 x 5.0	2.80
20	60+575	1 x 3.5	3.00

The general condition of above Box/slab culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

37	56+930	1 x 1.0

S.No.	Chainage (Km.)	No. of Rows Dia(m)
51	24+510	2 x 1.0
52	25+205	2 x 1.0
53	25+865	2 x 1.0
54	31+630	2 x 1.0
55	32+100	2 x 1.0
56	33+250	2 x 1.0
57	34+040	2 x 1.0
58	35+720	2 x 1.2
59	37+970	2 x 1.0
60	47+700	2 x 1.0
61	48+980	2 x 1.0
62	49+180	2 x 1.0
63	5+560	3 x 1.0
64	7+850	3 x 1.0
65	11+560	3 x 1.0
66	13+640	3 x 1.0
67	36+990	3 x 1.0
68	42+340	3 x 1.0
69	57+560	3 x 1.0
70	60+198	4 x 1.0
71	61+700	3 x 1.0
72	62+850	3 x 1.0
73	63+980	1 x 1.0
74	64+980	1 x 1.0

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to that no permanent deflections result in the subgrade, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the top surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2012 publication while the current publication is IRC: 37-2018.

5.3 Review of Pavement Design

As per the pavement design approved in the project, the following conclusions are given.

Table 5.1: Flexible Pavement Design summary

S.No.	Description/ Pavement layer	Design/Adopted Parameters
1	Sub Grade CBR (%)	7%
2	Design Life (Years)	15 years
3	Design Traffic* (MSA)	3.2 MSA actual 10 MSA design
4	Surface course (BC)	40 mm
5	Binder course (DBM)	60 mm
6	Base course (WMM)	250 mm
7	Sub Base course (GSB)	230 mm

5.4 Validation of Pavement Design

The new pavement shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”. Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. “Guidelines for the Design of Plain Jointed Rigid Pavements for Highways”.

Pavement design validation is carried out as per actual traffic from COD. As per IRC 37, Vehicle Damage Factor (VDF), Distribution of commercial vehicles and growth rate values are 3.5, 0.75 and 5% respectively. Summary is given below.

Table 5.2: Real Time Traffic From COD & Project Traffic Current Years With 5% Growth For CMSA

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2018	140	76	18	7	18	120	0.11	0.11	2	Actual
2019	316	136	23	10	31	201	0.19	0.31	3	Actual
2020	394	136	22	8	34	200	0.19	0.50	4	Actual
2021	413	143	23	9	35	210	0.20	0.70	5	Projected
2022	434	150	24	9	37	220	0.21	0.91	6	Projected
2023	456	158	25	10	39	231	0.22	1.13	7	Projected
2024	478	166	26	10	41	243	0.23	1.36	8	Projected
2025	502	174	28	11	43	255	0.24	1.61	9	Projected
2026	527	182	29	11	45	268	0.26	1.87	10	Projected
2027	554	192	30	12	47	281	0.27	2.13	11	Projected
2028	581	201	32	13	50	295	0.28	2.42	12	Projected
2029	610	211	34	13	52	310	0.30	2.71	13	Projected
2030	641	222	35	14	55	325	0.31	3.03	14	Projected
2031	673	233	37	14	57	342	0.33	3.35	15	Projected

Based on the above actual traffic, estimated MSA at 15 years is 3.35 of TP respectively. However, Traffic considered in pavement design (10 MSA) is more than estimated traffic (3.35 MSA) based on actual traffic. Hence the pavement design adopted is found in order.

Details of Pavement design for Rigid Pavement are as follows:

Table 5.3: Rigid Pavement Design for Toll Plaza

Description	Design/Adopted Thickness
CBR of sub grade	7 %
Design life in years	30
Pavement Quality Concrete (PQC) - mm	250
Dry Lean Concrete (DLC) - mm	150
Drainage Layer (GSB) - (mm)	150
Diameter of Dowel Bar (mm)	32
Length of Dowel Bar (mm)	450
Spacing of Dowel Bars (mm)	400
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	710

The Pavement crust has been designed according to IRC specification and found in order, the adopted/ Constructed pavement layer thickness is adequately provided than actual/ designed thickness.

5.5 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 10 MSA for a design life of 15 years for Bituminous layers and Granular layers (up to end of year 2031), whereas the actual traffic is 3.35 MSA for 15 years. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation before the end of 7 years of design life and prior to the end of concession period to evaluate the requirement of overlay.

5.6 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Proposed on or before 2023 and 2030.

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction.

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety has multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992

Table 6.1: Referred IRC Publications

IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP-88	Manual of Road Safety Audit

6.2 Road Safety Audit

During the site visit, it is observed that all safety items are provided as shown in the following **Table 6.2**.

Table 6.2: Safety Items

S. No.	Item Description		Status	Condition
1	Sign Boards	Chevron signs	Available as per site requirement	Good
		Village sign Board	Available as per site requirement	Good
		Informatory Boards	Available as per site requirement	Good
		Object Hazard Markers at culverts	Available as per site requirement	Good
2	Road Marking	Studs & Lane Marking	Available as per site requirement	Fair
3	Metal Beam Crash Barriers	At High Embankments	Available as per site requirement	Good

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

Few Observations on the road furniture in safety aspects for the project road are mentioned below:

- At few locations reflectors were missing on the sign boards and few sign boards were also damaged.
- Retro Reflective stickers need to be provided for metal beam crash barriers for night time road users at all locations and damaged metal beam crash barriers requires maintenance regularly

Accident Warning board at Km. 0+500

Speed Limit board at Km. 4+000

W Beam MCB at approaches at Km. 4+000

Safety at bridge approaches at Km. 4+250

Pedestrian Crossing board at Km. 8+000

Pedestrian Crossing board at Km. 15+540

Figure 6.1: Representative photos during road safety audit

6.3 Conclusion

Safety arrangements are done for road users along the project road same are found to be in conformity with project highway requirements and good industry practice. However, a continues monitoring on safety arrangements is highly appreciated during the operation and maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There is one toll Plazas on the project road at Km. 6+100. Each side comprises of 1 normal lanes, 1 extra wide lane. The lane width in normal lanes is 3.2 m and in extra wide lane is 4.5 m. The width of islands provided is 1.8 m. The single canopy is provided to cover the toll lanes. Toll plaza building is G+1 floor building which houses control room, UPS and Pantry.

7.2 Tolling Equipment and Control Room Equipment's

List of equipment provided at toll plaza and control room is given below.

Table 7.1: List of equipment provided at toll plaza and control room

S.No.	Equipment Description	Quantity
Lane Equipment		
1	Over Head Lane Signals (OHLS)	2
2	Barrier	2
3	LPIC	4
4	Automatic Vehicle Classifier (AVC)	2
5	Traffic light	4

7.3 Vehicles

The list of vehicles, which were observed at site for operation of highway and toll plaza, is presented below.

Table 7.2: List of Vehicles

S.No.	Vehicle Type	No of Vehicles
1	Patrol Vehicle	2
2	Ambulance	1

Toll Plaza at Km. 6+100

Toll Building at Km. 6+100

Figure 7.1: Representative Photos of Toll Plaza at Km. 6+100

CHAPTER 8. TRAFFIC CENSUS AND TOLL REVENUE

8.1 Traffic Census

In accordance with clause 22.1, the Concessionaire shall install, maintain and operate electronic/computerized traffic counters at each of the Toll Plazas and collect data relating to the number and types of vehicles using the Project Highway. A weekly statement of such data shall be compiled and furnished forthwith by the Concessionaire to MPRDC substantially in the form specified in Schedule N of CA.

Accordingly, the Concessionaire provided toll plaza wise details. Based on the data made available the summarized annual classified Traffic census details for the past two years are provided in Table 8.1 below. The Actual traffic data recorded below has been taken as a basis to calculate AACGR % (Average Annual Compound Growth Rate).

Table 8.1: Year wise Traffic (Vehicles) Details as per schedule N of CA

FY Year	Car	LCV	Bus	Truck	MAV	Total Traffic
Apr 2018-Mar 2019	115293	49705	8345	3787	11424	188554
Apr 2019-Mar 2020	144024	49843	7922	3102	12264	217155
					AACGR* (%)	15.17

*AACGR- Annual Average Compound Growth Rate

8.2 Actual Revenue Collection

In accordance with clause 19.5, “During the operation period, the Concessionaire shall furnish to MRPDC within 7 days of completion of each month, a statement of fee substantially in the form set forth in Schedule-M (Monthly fee statement)”. As per provisions of CA the concessionaire submitted monthly fee statement and the summary of form submitted under Schedule M during the financial year 2019-20 is given under as Table 8.2.

Table 8.2: Summary of 2019-20 Tollable traffic and revenue collected at Toll Plaza

Description	Car	Car(pass)	LCV	Bus	Truck	MAV	Total
In Nos.	74530	768	31906	7870	3052	12257	130383
Toll Revenue collection in Rs.	2608550	61450	2794940	1437940	673860	5417030	12993770

The figures shown in Table 8.1 are Real time traffic data (AADT) on project road for the past two years and the growth rate is calculated to be 15.17%. It is pertinent to note that the figures given in Table 8.1 are inclusive of exempted /non tollable traffic.

The figures shown in Table 8.2 are actual tollable traffic based on which the toll revenue collected and is excluding of exempted/non tollable traffic. For the realistic estimate of the traffic growth and projected revenue calculation actual traffic based on which FY 2019-20 revenue collected (Table 8.2) is considered as a base year traffic and the projected traffic growth rate is restricted to 5%.

Based on the base year traffic and growth rate as explained above traffic projections from year 2019-20 to till end of Concession period toll plaza wise are calculated and summarized below in Table 8.3.

Table 8.3: Projected traffic

FY Year	AADT in Vehicles					CVPD* (Veh.)	AADT in PCU					CVPD* (PCU)	Remarks
	Car	LCV	BUS	2-AT	MAV		Car	LCV	BUS	2-AT	MAV		
PCU Factor													
	1	1.5	3	3	4.5								
2020	206	87	22	8	34	151	206	131	65	25	151	372	Actual
2021	217	92	23	9	35	158	217	138	68	26	159	391	Projected
2022	227	96	24	9	37	166	227	145	71	28	167	410	Projected
2023	239	101	25	10	39	175	239	152	75	29	175	431	Projected
2024	251	106	26	10	41	183	251	159	79	30	184	452	Projected
2025	263	112	28	11	43	193	263	167	83	32	193	475	Projected
2026	276	117	29	11	45	202	276	176	87	34	203	499	Projected
2027	290	123	30	12	47	212	290	184	91	35	213	523	Projected
2028	305	129	32	12	50	223	305	194	96	37	223	550	Projected
2029	320	136	33	13	52	234	320	203	100	39	234	577	Projected
2030	336	142	35	14	55	246	336	214	105	41	246	606	Projected

*CVPD: Commercial vehicle per day (LCV+BUS+2 AT+MAV)

8.3 Toll Revenue Calculations

The toll revenue for horizon year is calculated based on the input from the above data, actual toll rates collected on base year (2019-20), with Traffic growth, WPI growth and toll efficiency has been assumed 5%, 4% and 100% respectively and other inputs considered in revenue calculations is given in Table 8.4.

Table 8.4: Toll Revenue inputs

Particular	Toll plaza 1
Location	Km. 6+100
4 lane length in kms.	0
2 lane length in kms.	64.42
Agreement Date	10-08-2015
Appointed Date	10-04-2016
Concession period	15
Commercial operation date	06-03-2017
Concession End Date	09-04-2031
Traffic study year	2020
Vehicle Type	AADT
Car/Jeep/Van	206

LCV/LGV	22
2A-Truck	8
MAV (2A-6A)	34

Particular	Toll plaza 1
Growth Rate (%)	5%

The split trip type based on the available toll data from Concessionaire is used to derive the annual toll collection for each plaza. The revenue estimated and presented below. Detailed toll revenue estimation is given in **ANNEXURE 4**.

Table 8.5: Toll Revenue Estimated (in Rs. lakhs)

Financial Year	Annual Revenue of TP1 at Km. 6+100	Remarks
2019-20	129.9377	Actual
2020-21	141.9371	Projected
2021-22	156.3655	Projected
2022-23	169.5336	Projected
2023-24	183.5495	Projected
2024-25	198.7709	Projected
2025-26	217.6724	Projected
2026-27	235.0047	Projected
2027-28	253.4879	Projected
2028-29	276.8745	Projected
2029-30	298.0787	Projected
2030-31	320.8868	Projected
2031-32	8.509685	9 Days

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of the Concession Agreement (CA), the Concessionaire will operate and maintain the Project road by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate, need (if any) for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to beginning of each accounting year during the operation period.

9.3 Operations

Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- i. Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- ii. Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.
- iii. carrying out preventive and periodic maintenance of the Project road;
- iv. undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;

- v. undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- vi. Functioning of the lighting system;
- vii. Functioning of the Patrolling System
- viii. Functioning of rescue and medical aid services
- ix. Ambulance as and when required
- x. Functioning of the Project Facilities
- xi. Administrative, Operational and Maintenance Base Camp
- xii. Truck Lay byes
- xiii. Pickup Bus stops / Bus Bays
- xiv. Protection of the environment and provision of equipment and materials therefore;
- xv. Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- xvi. Complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plaza

There are two lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the escrow account. In case of ETC system Toll collection is connected with Network system and directly deposited into the Escrow account

9.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year. Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period. Preventive Maintenance shall include the activities related to each element and the system as a whole of the Project Preventive Maintenance for Structures is estimated by the consultant. The condition data collected from site was used to arrive at the appropriate treatments and quantities. Rates from Schedule of Rates (SOR) of MP, was used to arrive at the cost.

The flexible pavement is in good condition and hence doesn't require any immediate or preventive interventions.

Routine Maintenance:

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as "functional overlays," as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a "structural overlay" they are intended to increase load-carrying capabilities of the project road.

The details of periodic maintenance schedule are given below.

Table 9.1: Schedule and status of for Periodic Maintenance

S. No.	Scheduled Major Maintenance	Year	Status at site
1	1st Periodic Maintenance	2023	Planned to Execute
2	2nd Periodic Maintenance	2030	Planned to Execute

Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per Programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.6 Review of Test Reports:

Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness

measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of Aug. 2020. As per Schedule K of the CA, If the roughness value exceeds 3000mm in a Km, the stretch shall be rectified. No stretch exceeded the permissible limit of 3000 mm in the Project road.

Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

Concessionaire has conducted the test in Jan 2020. The test report has been verified and found within permissible limits as per IRC 81.

9.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 5**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance (In crores)	Incidental maintenance (In crores)	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	0.360	0.176		0.30	0.84
2021	0.370	0.182		0.31	0.86
2022	0.381	0.187		0.32	0.89
2023	0.393	0.193	10.04	0.33	10.96
2024	0.405	0.199		0.34	0.94
2025	0.417	0.205		0.35	0.97
2026	0.429	0.211		0.36	1.00
2027	0.442	0.217		0.37	1.03

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 Scope of Work (Article 2)

Article 2 provides the scope of work, which includes the following.

- construction of the Project road on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of Project Facilities as specified in Schedule-C, and in conformity with the Specifications and Standards set forth in Schedule-D of the CA.
- operation and maintenance of the Project road in accordance with the provisions of Concession Agreement (CA).
- performance and fulfillment of all other obligations of the Concessionaire in accordance with the provisions of this CA and matters incidental.

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 6**.

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the CA

Conditions precedent to be fulfilled by the Concessionaire

Provide performance security to the Authority

- Executed and procured Escrow Agreement & Substitution Agreement.
- Procured all applicable permits specified in Schedule E of the CA.
- Executed financing Agreements and delivering 3 copies of Financial Package.
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire.

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws.
- Procure appropriate rights for obtaining materials.
- Perform and fulfil its obligations under financing Agreements.
- To make reasonable efforts to facilitate the acquisition of land required for execution.
- Transfer the Project road upon termination of the CA.

10.5 Obligations relating to the Competing Roads (Clause 6.3)

Neither Authority nor any Governmental Instrumentality shall construct the Competing Road before 10th Anniversary of the Appointed Date.

10.6 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date.
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 20% of the Total Project Cost.

10.7 Provisional Completion Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA and after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of the CA. Provisional Completion Certificate given in **ANNEXURE 7**.

10.8 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire.

10.9 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of scope proposals were initiated during construction period and consented by the MPRDC and the same are given in **ANNEXURE 9**

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road.
- Collecting and appropriating the Fee.
- Minimizing the disruption to traffic in the event of accidents.
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment.
- Preventing any un authorized use of the Project road.

- Protection of environment and provision of equipment and materials.
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations Period; the Project road conforms to the maintenance requirements set forth in Schedule K of the CA (the “**Maintenance Requirements**”).

10.13 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty) days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8):

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 0.5% (zero decimal five percent) of the Average Daily Fee, and
- 0.1% (zero point one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Monthly Fee Statement (Clause 19.5)

During the Operations Period, the Contractor shall furnish to the Concessionaire and the Authority, if required by the Contractor, within 7 (seven) days of completion of each month, a statement of Fee substantially in the format set out in the CA (“Monthly Fee Statement”).

10.18 Annuity (Article 25)

The Annuity payment of Rs 7.02 Crores is due and payable by the Authority to the Concessionaire for each six months after COD as set forth in Clause 25.2.1 and Schedule Y of CA.

Table 10.1: Status of Annuity Payments

Particulars	Payment Paid on
1st Annuity	4-Oct-17
2nd Annuity	31-Mar-18
3rd Annuity	27-Sep-18
4th Annuity	20-Mar-19

15th Annuity	-

10.19 Concession Fee (Article 26)

- In consideration of the grant of Concession the Concessionaire shall pay Concession Fee of Rs.1.00 per year during the Concession Period.
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC.

10.20 Toll fee (Clause 27.1.1)

Toll Fees Shall be revised annually in accordance with Clause 27.2.1.

10.21 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 Details of Insurance

As per clause 32.1 of the Concession Agreement (CA), the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Insurance copies are provided in **ANNEXURE 8**.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of Property
			From	To	
Civil Engineering Completed Risk	National Insurance Co. Ltd	32130044190001995	27.3.2020	26.3.2021	Road and structures, tollbooth, Equipment. Road furniture etc.
Electronic Equipment Insurance Policy schedule	Oriental Insurance Company Ltd	171200/44/2021/69	7.12.2020	6.12.2021	EEL Equipment-Road and bridge stretch connecting from Hata to Dargawan
Employees compensation Insurance Policy	HDFC ERGO General Insurance Co Ltd	3114203678157100000	12.10.2020	11.10.2021	Employees compensation belongs to Road paving, tarring and road making of DBL and sub-contractor engaged in DBL, Engineers, Supervisors, Managers, daily labour etc.

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The overall project pavement condition is good. RCC drains are constructed in Built up locations and earthen drains in rural locations resulting in, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. Major defects were not noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are getting cleared during regular maintenance period.

12.4 Traffic Growth

Based on real time, traffic data was extracted. The traffic growth observed is 15.17%, whereas 5% fairly accurate growth is considered while evaluating forecast of traffic volumes.

12.5 Project Facilities

Toll Plaza is located at Km.6+100 and is operational. Toll Plaza is operated by ETC Toll collection system and connected by network system monitored in administrative building. Bus bays are in fair condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained. Highway lighting is provided at toll plaza locations and found functional.

12.6 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per site requirement. The condition of sign boards & other road appurtenances like metal beam crash barriers is fair.

12.7 Maintenance

- The routine maintenance being carried out by O&M contractor effectively. Based on documents reviewed, time to time observations made by client/Authority, being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM)/Periodic maintenance to be carried out in the year 2023.

12.8 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

Dear Customer,

Sub: Employees Compensation Insurance Policy No: 3114203678157100000

We thank you for having preferred us for your Insurance requirements. We at HDFC ERGO General Insurance believe "Insurance" as not only to be an assurance to indemnify in the event of unfortunate circumstances, but one that signifies protection and support, which you can count on when you need it most.

The Insurance Policy enclosed herewith is a written agreement providing confirmation of our responsibility towards you that puts insurance coverage into effect against stipulated perils.

Please note that the policy has been issued based on the information contained in the proposal form and / or documents received from you or your representative / broker.

Name of the Intermediary : GLOBAL INSURANCE BROKERS PVT LTD
Intermediary Code : 200113150001

Where the proposal form is not received, information obtained from you or your representative /broker, whether orally or otherwise, is captured in the policy document.

If you wish to contact us in reference to your existing policy and /or other general insurance solutions offered by us, you may write to our correspondence address as mentioned below. Alternatively, you may visit our website www.hdfcergo.com . To enable us to serve you better, you are requested to quote your Policy Number in all correspondences.

Thanking you once again for choosing HDFC ERGO General Insurance Company Limited and looking forward to many more years of association.

Yours sincerely,

Authorised Signatory

Change of scope for Hata Fatehpur – Rajpura – Silapuri-Bajna Darguwa Road Project

Change of scope for Hata Fatehpur – Rajpura – Silapuri-Bajna Darguwa Road Project on BOT (Toll + Annuity) Basis, as per the order

MINUTES OF MEETING AT MPRDC BHOPAL

Meeting of advisory committee of MPRDC for "Change of scope for Hata Fatehpur – Rajpura – Silapuri-Bajna Darguwa Road" on BOT (Toll + Annuity) Basis, has been conducted in the office of MPRDC on dated 27.05.2017.

Following officials were present in the meeting:-

1. Shri A.S.Chandke, Technical Advisor, MPRDC
2. Shri Anil Chansora, Engineer-in-Chief (BOT), MPRDC
3. Shri Sunil Kumar Mukati, GM (BOT), MPRDC
4. Shri Sanjay Srivastava, Team Leader/Independent Engineer

The works of change of scope recommended by Independent Engineer vide its letter no. MSV/BPL/Sagar Zone/2016/1507 Date:05.05.2017 have been discussed by the committee & decisions taken are recorded below :

Change of scope for Hata Dargawan Road Project

S/N	Location in Km	Existing /Detail schedule 'A'	Provision as per Schedule 'B'	Proposal submitted by concessionaire	Reasons & Recommendation of Independent Engineer on submitted proposal	Decision of Committee
j)	8-870	Solid Slab + C-Abut & pier 6x8.7, 8.5 width fair condition.	Widening with 12m width	This is the Existing Solid slab 6x8.7, 8.5 width submersible bridge is in good condition, there is no need widening of 12 m width for submersible bridge. Hence this bridge may be retained and widening is considered as a (-) negative Change of Scope	This is the Existing Solid slab 6x8.7, 8.5 width submersible bridge is in good condition, there is no need widening of 12 m width for submersible bridge. Hence this bridge may be retained and widening is considered as a (-) negative Change of Scope	The Advisory Committee agrees with the reasons & recommendation of TL for Negative change of scope for widening of Minor Bridge
ii)	64-098	Not in Schedule 'A'	Not in Schedule 'B'	Local villagers demanding Hume Pipe Culvert. Hence, HPC 1x1000 mm is proposed	As per site condition, at junction of NH-86 and SH-48 HPC 1 x 1000 width of 12.0m is required to drain out the rain water across the road. Hence, it will be Change of Scope.	The Advisory Committee agrees with the reasons & recommendation of TL for Positive change of scope for construction of 1Row 1000 mm HPC

CHAPTER 1. INTRODUCTION

1.1 General

DBL SILWANI SULTANGANJ TOLLWAYS LIMITED (herein after referred to as the “Concessionaire”) had augmented the existing two-lane road “Silwani – Sultanganj – Jaisinghnagar - Sagar” (SH-15) in the state of Madhya Pradesh, in accordance with the provisions of the Concession Agreement (CA) executed with Madhya Pradesh Road Development Corporation Limited (herein after referred to as the “MPRDCL”) on 8th September, 2011.

Project road starts at Km. 0+000 located at Silwani (Gairatganj – Bareilly - Udaipura Junction) and ends at Km. 75+995, beyond Mainpani Village at Sagar Road Junction on SH-15. It is situated in central part of Madhya Pradesh and passes through settlements namely, Silwani, Sultanganj, Jaisinghnagar and Sagar Road. Project location map is provided at **Figure 1.1**.

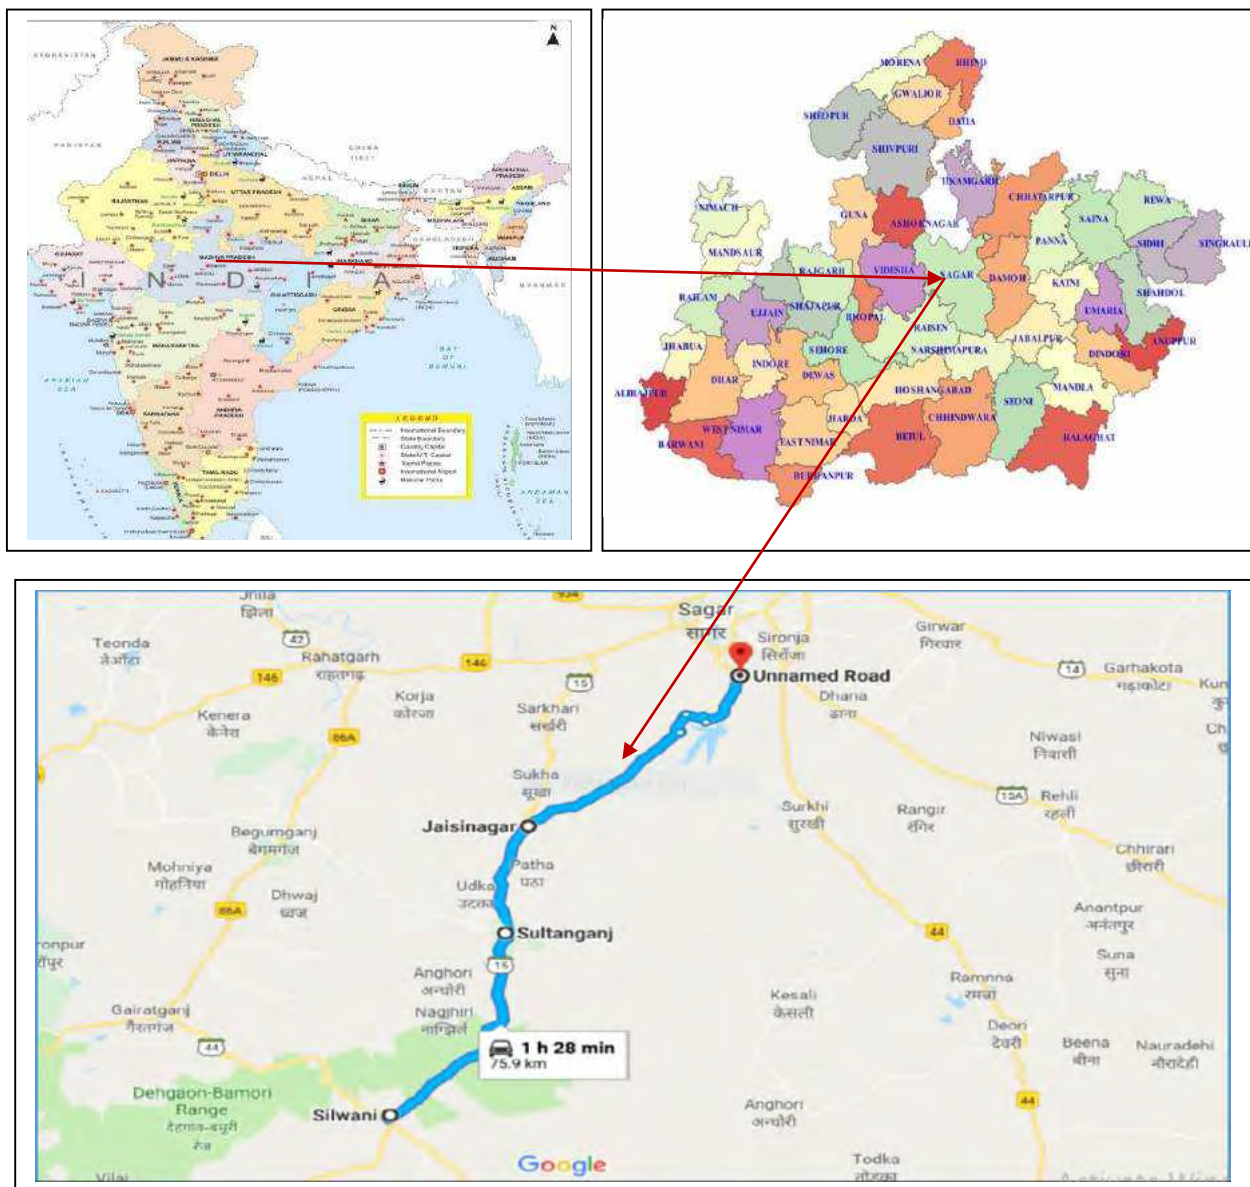

Figure 1.1: Project Location Map

SHREM ROADWAYS PRIVATE LIMITED (SRPL) acquired DBL SILWANI SULTANGANJ TOLLWAYS LIMITED vide agreement dated 26th March 2018.

SHREM FINANCIAL PRIVATE LIMITED (SFPL) appointed RUKY Projects Pvt. Ltd. as consultant for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the traffic potential and to estimate the projected Toll Collection etc.

1.2 The Project Data

Table 1.1: Project Data

S No.	Particulars	Details
1	Name of the project	Construction of Two Lanning of Silwani – Sultanganj – Jaisinghnagar - Sagar Road (SH-15) for development, maintenance and management on design, build, finance, operate and transfer (DBFOT) on Toll + Annuity Basis in the State of Madhya Pradesh.
2	Road Type	State Highway
3	Name of the Authority	Madhya Pradesh Road Development Corporation Limited
3	Name of the Concessionaire	DBL Silwani Sultanganj Tollways Limited
4	Name of the EPC Contractor	Dilip Buildcon Limited
5	Date of LOA	27.07.2011

7	Design Length as per Schedule B of CA	75.995 Km
8	Actual Length Constructed	75.995 Km
9	Project Lane Configuration	Two Lane
10	EPC Cost	115.76 Cr
11	Nature of contract	Toll + Annuity
12	Toll collected by	The Concessionaire
13	Concession Period	15 years from the Appointed Date
14	Appointed date	27.02.2012
15	Concession end date	26.02.2027
16	Construction Period	730 days from the Appointed Date
17	Schedule Completion Date	25.02.2014
18	Date of issuance of Provisional Certificate (Commercial Operation Date)	Section-1: 30.11.2012 Section-2: 25.03.2013
19	Date of issuance of Completion Certificate	Section-1: 28.02.2013 Section-2: 29.05.2013
20	Annuity Amount (every six months)	9.49 Cr.
21	Total Number of Annuities payable	26 Nos.
22	First Annuity Payment Date	25.09.2013
23	Total Number of Annuity Payments paid	15 Nos.

1.3 Scope of Consultancy Services

The scope of work includes providing Technical Due Diligence of the Project Highway and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Collection of historic/past toll revenue data
- Collection of historic/past classified Traffic data from toll plaza and to estimate the projected traffic to arrive at revenue projections.
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout review of tolling system to evaluate the efficiency and functionality of tolling system and to identify and give suggestions to improve if any setbacks in the system.
- Carryout road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per schedule B and Schedule C of Concession Agreement (CA) including Change of scope are listed in the following Table.

Table 2.1: Salient Features

S. No.	Particulars	As per CA	As per COS	As per Site
1	Total Length (Flexible)	75.995 Kms.	-	75.995 Kms.
2	Two lanes with Paved Shoulder	3.700 Kms.	-	3.700 Kms.
3	Two lanes with Granular Shoulder	72.295 Kms.	-	72.295 Kms.
4	Reconstruction	75.995 Kms.	-	75.995 Kms.
5	Realignment/Bypass	Nil	-	Nil
6	Toll Plaza	02 Nos.	-	02 Nos.
7	Bus Bays / Bus Shelters	6 Nos.		6 Nos.
8	Truck Lay Bays	Nil		Nil
9	Major Junction	03 Nos.		3 Nos.
10	Minor Junctions	15 Nos.		15 Nos.
11	ROB	Nil		Nil
12	Level Crossing	Nil		Nil
13	Major Bridges	01 No		01 No
14	Minor Bridges	09 Nos.	-1 Nos.	17* Nos.

16	Pipe Culverts	119Nos.	+13 No -2 No	134*Nos.

* 9 Nos. MNB, 4Nos.HPC are constructed as per site requirement. 8Nos. Box culverts were not constructed on site as they are not required as per site.

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Section Schedule, shown below as per Schedule B of CA during the Construction.

Figure 2.1: TCS-2.1 Open country intermediate lane Carriageway (With Hard Shoulder)

Figure 2.2: TCS-2.2 Built up Area- 2 lane Carriageway (With Paved Shoulder)

Figure 2.3: TCS-2.3 Built up Area 2-Lane Carriageway with Paved Shoulder (Concentric Widening)

TCS Schedule is provided below.

Table 2.2: TCS Schedule

S. No.	From Chainage (Km.)	To Chainage (Km.)	Length (Kms.)	Type of TCS
1	0+000	0+263	0.263	TCS 2.3
2	0+263	0+600	0.337	TCS 2.2
3	0+600	16+700	16.100	TCS 2.1
4	16+700	17+700	1.000	TCS 2.2
5	17+700	29+700	12.000	TCS 2.1
6	29+700	29+800	0.100	TCS 2.2
7	29+800	45+200	15.400	TCS 2.1
8	45+200	45+900	0.700	TCS 2.2
9	45+900	72+100	26.200	TCS 2.1
10	72+100	72+900	0.800	TCS 2.2
11	72+900	74+800	1.900	TCS 2.1
12	74+800	75+300	0.500	TCS 2.2
13	75+300	75+995	0.695	TCS 2.1

Figure 2.4: Pictorial Diagram of TCS Lengths.

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from carriageway side drains are constructed along the main carriage way on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are in open and rural areas.

2.4 Service Roads

Service road is not proposed along the entire stretch of the project road as per provisions of Schedule B of CA.

2.5 Bypass/Realignment

There is no bypass / realignment proposed on the project road as per provisions of Schedule B of CA.

2.6 Intersections

As per provisions of Schedule B of CA, 3 Major Junctions and 15 Minor Junctions are provided. Details are given below.

Table 2.3: List of Junctions

S. No.	Chainage (Km.)	Type of Junction	Side	Major/ Minor
1	0+000	X	BHS	Major
2	17+900	T	RHS	Minor
3	21+100	T	RHS	Minor

S. No.	Chainage (Km.)	Type of Junction	Side	Major/ Minor
4	22+300	Y	RHS	Minor
5	24+000	Y	RHS	Minor
6	24+700	T	LHS	Minor
7	28+200	Y	RHS	Minor
8	29+800	X	BHS	Major
9	33+200	Y	LHS	Minor
10	44+100	X	BHS	Minor
11	46+200	X	BHS	Minor
12	46+900	Y	LHS	Minor
13	54+800	T	LHS	Minor
14	57+200	T	LHS	Minor
15	59+000	T	RHS	Minor
16	62+200	X	BHS	Minor
17	66+000	T	RHS	Minor
18	75+010	X	BHS	Major

2.7 Grade Separated Structures and underpasses

Grade Separated Structures and underpasses are not proposed as per provisions of Schedule B of CA.

2.8 Road Over Bridge (ROB)

ROB is not proposed in the project road as per provisions of Schedule B of CA.

2.9 Carriageway and pavement Details

Summary of Carriageway Details is given below:

Table 2.4: Summary of Carriageway and pavement Details

S No.	Description	Flexible (Kms.)	Rigid (Kms.)	Remarks
1	2 Lane with Earthen shoulder	72.295		Fig 2.1 of Schedule D of CA
2	2 Lane with Paved shoulder	3.700		Fig 2.2 and 2.3 of Schedule D of CA
3	Total Length of the Project	75.995		
TYPE OF ALIGNMENT				
4	New Alignment			
5	Realignment			
6	Strengthening			
7	Reconstruction	75.995		
8	Total Length of the Project	75.995		

2.10 Summary of Structures

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.5: Summary of Structures

S No	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts
1	Retained	1		76	1
2	Widening		08	21	3
3	Reconstruction			22	16
4	New		1		
5	Improvement				
	Total	1	09	119	20

2.11 Toll Plazas

- There are two toll Plazas on the project road at Km. 1+800 & Km.70+000.
- Toll Plaza 1 at Km.1+800 comprises of 4 lanes.
- one lane in each direction is used for four wheelers and the other lane is used as bike lane.
- Toll Plaza 2 which is at Km.70+000 comprises of 6 lanes.
- one lane in each direction is used for four wheelers and the third lane is used as bike lane.
- Toll plaza 1 comprises of Admin building with G+1 floor with control room, UPS and Pantry.
- Toll Plaza 2 has two buildings which houses control room, UPS & Pantry.
- The second building is used as medical aid post, traffic aid post and also used for tolling staff.
- List of tolling equipment provided at site is furnished in the Detailed Report.

2.12 Bus bays/Bus shelters

As per provisions of Schedule C of CA bus shelters are provided at 6 locations. Details are provided below.

Table 2.6: List of Bus shelters

S. No.	Chainage (Km.)	Bus shelter
1	0+000	Bus shelter
2	18+700	Bus shelter
3	19+700	Bus shelter
4	45+200	Bus shelter
5	72+100	Bus shelter
6	75+200	Bus shelter

2.13 Other Project Facilities Provided as per Schedule C of CA

- Road side furniture: Sign Boards Kilometer stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic safety devices: W Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of CA.
- Landscaping: Provided at Toll Plaza location and being maintained
- Tree Plantation: Tree plantation is provided on both sides of the Project Corridor all along the way and is being maintained.

- Medical Aid Post: Provided at Toll Plaza location and is operational
- Highway Lighting: Highway lighting is provided at Toll Plaza and is functional.

Km. 75.995

Figure 2.5: Project Facilities

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections provided below

3.2 Road Inventory

Inventory of the project road was carried out physically and the same is summarized in the following table. Few representative photographs are presented below.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain rolling Terrain
2	Land Use	Agriculture and forest
3	Two lane length	75.995 km
4	Earthen shoulder	1.0 m to 1.5m Width on site
5	Junctions	18 Nos.
6	Toll Plazas	At Km.1+800 & Km.70+000
7	Sign boards	Sign boards are provided as per Highway requirements
8	Road Markings	Lane markings are provided as per Highway requirement
9	Bus shelters	6 Nos.
10	Highway Lighting	Provided as per requirement
11	Avenue plantation	Provided

3.3 Pavement Condition

Pavement condition survey was carried out on the project road based on observations supplemented by simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Assessment of the condition of Pavement surface is a key component of infrastructure asset management. The information used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement

condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey

The survey on general pavement condition was primarily undertaken by means of slow drive-over survey, and supplemented with measurements wherever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of Surface area)
 - Ravelling (% of Surface area)
 - Potholes (% of Surface area)
 - Patching (% of Surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP-19 and is given in **ANNEXURE 1**. The summary of Pavement condition is given below.

Table 3.3: Pavement condition summary

From (Km.)	To (Km.)	Length (Kms.)	Condition
0+000	75+995	75.995	Good

Km. 3+400

Km. 18+400

Km.6+400

Figure 3.1: Representative Photos of Pavement Condition.

CHAPTER 4. INVENTORY AND CONDITION OF STRUCTURES

4.1 General Assessment and Condition of the structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

1 Major Bridge, 17 Minor Bridges, 134 Pipe culverts, 05 Slab culverts and 06 Box culverts are there along this project road.

Table 4.1 : List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	1No.
2	Minor Bridge	17Nos.
3	Slab Culverts	5Nos.
4	Box culverts	6Nos.
5	Pipe culverts	134Nos.

The superstructure for major bridge at Ch.: 6+841 is RCC solid slab and the type of superstructure is of RCC conventional wall type supported with open/pile foundations. The Super structure of Minor bridges is of RCC solid slab and the substructures are of PCC conventional wall type supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. The condition of most of the culverts is fair except in few locations. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges

The total length of the major bridge at Km 6+841 is 69.60 m with 4 spans. The superstructure consists of RCC T-girder. It is Supported on RCC wall type piers and abutments. It has bituminous wearing coat, and Elastomeric/neoprene Bearings and buried type expansion joints. RCC railings have to be provided on both sides of the deck.

Table 4.2: List of Major Bridge

Sl. No.	Chainage (Kms.)	Span	Total Length of Bridge (m.)
1	6+841	4 x 17.40	69.600

The condition of the superstructure and substructure is good. The following are the observations on the bridge: Reflector plates and drainage spouts are required. Strip seal expansion joints need to be rectified at some locations.

Figure 4.1 : Overall view of the major bridge at Km. 6+841

4.4 Details of Minor Bridges

There are 17 minor bridges in the project stretch. The type of superstructure for minor bridges is RCC solid slab and the substructure is PCC conventional wall type supported on open foundations. Expansion joints are buried type and bearings are of Tar paper and neoprene bearings. RCC crash barriers are provided on all structures.

Table 4.3: List of Minor Bridges

S. No.	Chainage (Km.)	Span	Total Length of Bridge (m)	Description
1	0+896	2x 6.6m.	13.2	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type piers and abutments. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
2	10+237	2 x 13.8m.	27.6	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type piers and abutments. Other features are Brick parapet is provided, bituminous wearing coat, Elastomeric Bearings and buried type expansion joints.
3	28+785	3 x 15.1m.	45.3	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type piers and abutments. Other features are RCC crash barrier, bituminous wearing coat, and Elastomeric Bearings and buried type expansion joints.
4	30+500	3x 15.3m.	45.9	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type piers and abutments. Other features are RCC crash barrier, bituminous wearing coat, and Elastomeric Bearings and buried type expansion joints.
5	48+752	1x 7.0m.	7.0	The Minor Bridge has RCC solid slab superstructure supported on PCC wall type piers and abutments. Other features are Brick parapet is provided, bituminous wearing coat, Tar paper Bearings and buried type expansion joints.
6	49+158	1x 9.3m.	9.3	The Minor Bridge has RCC solid slab superstructure supported on PCC wall type piers and abutments.

S. No.	Chainage (Km.)	Span	Total Length of Bridge (m)	Description
				Other features are Brick parapet is provided, bituminous wearing coat, Tar paper Bearings and buried type expansion joints.
7	50+810	1 x 9.7m.	9.7	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type piers and abutments. Other features are Brick parapet is provided, bituminous wearing coat, Tar paper Bearings and buried type expansion joints.
8	54+901	1x 9.5m.	9.5	The Minor Bridge has RCC solid slab superstructure supported on PCC wall type piers and abutments. Other features are Brick parapet is provided, bituminous wearing coat, Tar paper Bearings and buried type expansion joints.
9	56+753	2 x 6.0m. (clear)	13.4	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
10	58+862	2x4.2m. (clear)	9.35	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
11	59+795	2 x 3.4m. (clear)	7.65	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
12	62+629	4 x 4.2m. (clear)	18.25	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
13	63+525	4 x 5.5m. (clear)	23.7	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
14	64+641	2x5.5m. (clear)	12.1	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
15	71+127	2 x 8.6m.	17.2	The Minor Bridge has RCC solid slab superstructure supported on PCC wall type piers and abutments. Other features are Brick parapet is provided, bituminous wearing coat, Tar paper Bearings and buried type expansion joints.
16	71+379	2 x 9.9m.	19.8	The Minor Bridge has RCC solid slab superstructure supported on PCC wall type piers and abutments. Other features are rick parapet is provided, bituminous wearing coat, Tar paper Bearings and buried type expansion joints.
17	75+008	2 x 3.5m. (clear)	7.85	The Minor Bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.

4.5 Details of Culverts:

The culverts observed along the project road are mainly of two types viz. RCC Slab/Box culverts and Pipe culverts. The structural condition of culverts is generally good. Some of the pipe culverts vents have choked with vegetation and vent cleaning is required. In general, the condition of all the structures is found to be satisfactory. The detailed condition of the same are given the following sections, detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.5.1. Slab/Box Culverts

There are 06 Nos. of Box culverts and 05 Slab culverts in the project stretch. The details of the culverts are as given below.

Table 4.4: List of Slab/Box Culverts

S. No.	Chainage (Km.)	Type	Span (m)
1	0+013	Slab	2 x 1
2	3+383	Slab	1 x 1.5
3	3+885	Box	1 x 4
4	5+718	Slab	1 x 6
5	6+157	Slab	1 x 4
6	6+431	Slab	1 x 3
7	6+703	Box	1 x 4
8	17+464	Box	2 x 3
9	19+750	Box	2 x 3
10	52+010	Box	1 x 4.5
11	52+458	Box	2 x 3

4.5.2. Condition of the Slab/Box Culverts:

The general condition of above slab culverts is good. Maintenance is to be carried out to most of the culverts in the form of vent clearance and Stone Pitching for Quadrants.

Km.3+383

Km. 6+157

Figure 4.2: Representative photos of Slab/ Box Culverts

4.5.3. General Description of the Pipe Culverts

There are 134 Nos. of pipe culverts in the project stretch. The details of the culverts are given below.

Table 4.5: List of Pipe Culverts

S. No.	Chainage (Km.)	Type	No. of Rows & Dia (m.)	S. No.	Chainage (Km.)	Type	No. of Rows & Dia (m.)

134	75+233	Pipe	1 x 1.2

4.5.4. Condition of the Pipe Culverts

The general condition of above pipe culverts is good. Maintenance is to be carried out to most of the culverts in the form of clearing debris from pipes and removal of weed.

Km.3+130

Figure 4.3: Representative photo of Pipe Culvert

The culverts are in fair condition and can be retained in the present condition with the following Maintenance works.

- Chocked culverts must be cleared.
- Debris and garbage near outside the vents must be removed.

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2001 publication while the current publication is IRC: 37-2018.

5.3 Review of Pavement Design

As per the pavement design approved in the project, the following conclusions are given.

Table 5.1: Pavement Design Parameters

S. No.	Description/ Pavement layer	Design Parameters	Adopted values
1	Sub Grade CBR (%)	10%	10%
2	Design Life (Years)	8 years for BT 15 years for Granular	8 years for BT 15 years for Granular
3	Design Traffic (MSA)	2.67 MSA for BT 5.86 MSA for Granular	5 MSA for BT 10 MSA for Granular
4	Surface course (BC)	25 mm	25 mm
5	Binder course (DBM)	50 mm	50 mm
6	Base course (WMM)	250 mm	250 mm
7	Sub Base course (GSB)	150 mm	200 mm

5.3.1. Validation of Pavement Design

The new pavement shall be designed in accordance with the IRC:37. "Guidelines for the Design of Flexible Pavements". Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. "Guidelines for the Design of Plain Jointed Rigid Pavements for Highways".

Pavement design validation is carried out as per actual traffic from COD. As per IRC 37, Vehicle Damage Factor (VDF), Distribution of commercial vehicles and growth rate values are 3.5, 0.75 and 5% respectively. Summary is given below.

Table 5.2: Real Time Traffic from COD & Project Traffic Current Years with 5% Growth For CMSA (TP1)

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2015	190	157	7	52	36	252	0.24	0.47	3	Actual
2016	239	189	6	67	42	304	0.29	0.76	4	Actual
2017	259	179	7	65	66	317	0.30	1.07	5	Actual
2018	304	221	12	68	117	418	0.40	1.47	6	Actual
2019	320	216	7	51	148	422	0.40	1.87	7	Actual
2020	391	233	7	59	166	465	0.45	2.32	8	Actual
2021	410	245	8	62	174	488	0.47	2.79	9	Projected
2022	431	257	8	65	183	513	0.49	3.28	10	Projected
2023	453	270	8	68	192	538	0.52	3.79	11	Projected
2024	475	283	9	72	201	565	0.54	4.34	12	Projected
2025	499	298	9	75	211	593	0.57	4.90	13	Projected
2026	524	312	10	79	222	623	0.60	5.50	14	Projected
2027	550	328	10	83	233	654	0.63	6.13	15	Projected

Table 5.3: Real Time Traffic from COD & Project Traffic Current Years with 5% Growth For CMSA (TP-2)

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2015	248	109	5	25	17	156	0.15	0.26	3	Actual
2016	323	145	8	32	19	204	0.20	0.46	4	Actual
2017	433	166	8	42	33	249	0.24	0.70	5	Actual
2018	466	186	8	47	59	301	0.29	0.98	6	Actual
2019	511	157	4	31	80	272	0.26	1.25	7	Actual
2020	565	165	6	37	85	293	0.28	1.53	8	Actual
2021	594	173	6	39	89	308	0.29	1.82	9	Projected
2022	623	182	6	41	94	323	0.31	2.13	10	Projected
2023	654	191	7	43	99	339	0.33	2.46	11	Projected
2024	687	201	7	45	103	356	0.34	2.80	12	Projected
2025	722	211	7	47	109	374	0.36	3.16	13	Projected
2026	758	221	8	50	114	393	0.38	3.53	14	Projected
2027	795	232	8	52	120	412	0.40	3.93	15	Projected

Based on the above actual traffic, estimated MSA at 8 years and 15 years are 2.32, 6.13 of TP1 respectively. Similarly estimated MSA at 8 years and 15 years of TP2 are 1.53, 3.93 respectively.

Traffic considered in pavement design is more than estimated traffic based on actual traffic. Hence the pavement design adopted is found in order.

Details of Pavement design for Rigid Pavement are as follows:

Table 5.4: Rigid Pavement Design for Toll Plaza

Description	Design/Adopted Thickness
CBR of sub grade	10 %
Design life in years	30
Pavement Quality Concrete (PQC) - mm	280
Dry Lean Concrete (DLC) - mm	150
Drainage Layer (GSB) - (mm)	150
Diameter of Dowel Bar (mm)	32
Length of Dowel Bar (mm)	500
Spacing of Dowel Bars (mm)	300
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	480

The Pavement crust has been designed according to IRC specification and found in order, the adopted/ designed traffic is more than the actual traffic. Hence pavement crust is safe.

5.4 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 5 MSA and 10 MSA for a design life of 8 years for Bituminous layers (up to end of year 2020) and 15 years for granular layers respectively (up to end of year 2026), whereas the actual traffic is 3 MSA and 6 MSA for 8 years and 15 years respectively. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation before the end of Stage-I of design life (as per pavement design report) and prior to the end of concession period to evaluate the requirement of overlay.

5.5 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of SDBC. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Proposed on or before 2026

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction. (As per IRC 58-2015).

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP--88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 6.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety Audit

6.2 Existing Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 6.2: Existing Road Safety items

S. No.	Item Description		Status	Condition
Road Furniture				
1	Sign Boards	Chevron Signs Village sign boards Information Boards Other Sign Boards Gantry Sign Boards	Available as per site requirement	Good
2	Road Marking	Studs & Lane marking	Available as per site requirement	Good
3	Metal Beam Crash Barriers	At High embankments	Available as per site requirement	Good

This Project Section is part of an important corridor. It is the Concessionaire's duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

Km. 3+400

Km. 6+100

Km.6+400

Km.18+000

Figure 6.1: Representative photos during road safety audit

6.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is highly appreciated during the maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There are two toll Plazas on the project road at Km. 1+800 and Km. 70+000. Each side comprises of 1 normal lanes, 1 extra wide lane. The lane width in normal lanes was 3.2 m and extra wide lane was 4.5 m. The width of islands provided is 1.8 m. The single canopy is provided to cover the toll lanes. Toll plaza buildings are G+1 floor building which houses control room, UPS and Pantry.

7.2 Tolling Equipment and Control Room Equipment

List of equipment provided at toll plazas and control rooms is given below.

Table 7.1 : List of Equipment at Toll Plazas and Control Rooms

S. No.	Description	Nos.
1	Audit camera	1

CHAPTER 8. TRAFFIC CENSUS AND TOLL REVENUE

8.1 Traffic Census

In accordance with clause 22.1, the Concessionaire shall install, maintain and operate electronic/computerized traffic counters at each of the Toll Plazas and collect data relating to the number and types of vehicles using the Project Highway. A weekly statement of such data shall be compiled and furnished forthwith by the Concessionaire to MPRDC substantially in the form specified in Schedule N of CA.

Accordingly, the Concessionaire provided toll plaza wise details. Based on the data made available the summarized annual classified Traffic census details for the past five years are provided in Table 8.1 below. The Actual traffic data recorded below has been taken as a basis to calculate AACGR % (Annual Average Compound Growth Rate).

Table 8.1: Year wise Traffic (Vehicles) Details

(A) Silwani Toll Plaza

FY Year	Car	LCV	Bus	Truck	MAV	Total Traffic
Apr-Mar 2015-16	87629	69335	2201	24477	15415	199057

AACGR* (%)	18.54%	9.88%	8.45%	11.71%	41.38%	16.90%

*AACGR- Annual Average Compound Growth Rate

8.2 Actual Revenue Collection

In accordance with clause 19.5, "During the operation period, the Concessionaire shall furnish to MPRDC within 7 days of completion of each month, a statement of fee substantially in the form set forth in Schedule-M (Monthly fee statement)". As per provisions of CA the concessionaire submitted monthly fee statement and the summary of form submitted under Schedule M during the financial year 2019-20 is given under as Table 8-2.

Table 8.2: Summary of 2019-20 Tollable traffic and revenue collected at Toll Plaza

(A) Silwani Toll Plaza

Description	Car	Car(pass)	LCV	Bus	Truck	MAV	Total
In Nos.	57046	6669	38128	2624	20416	55153	180036
Toll Revenue collection in Rs.	1007995	533540	1633890	230080	2106405	11489645	17001555

(B) Sagar Toll Plaza

Description	Car	Car(pass)	LCV	Bus	Truck	MAV	Total
In Nos.	111745	7721	35179	1906	10930	27968	195449
Toll Revenue collection in Rs.	2793665	617670	2286635	250525	1723290	8928275	16600060

The figures shown in Table 8-1 are Real time traffic data (AADT) on project road for the past five years and the growth rate is calculated to be 15.81% and 16.90% in TP-1 and TP-2 respectively. It is pertinent to note that the figures given in table 8-1 are inclusive of exempted /non tollable traffic.

The figures shown in Table 8-2 are actual tollable traffic based on which the toll revenue collected and is excluding of exempted/non tollable traffic. For the realistic estimate of the traffic growth and projected revenue calculation actual traffic based on which FY 2019-20 revenue collected (table 8-2) is considered as a base year traffic and the projected traffic growth rate is restricted to 5% even though the growth as per table 8-1 is >5%.

Based on the base year traffic and growth rate as explained above traffic projections from year 2019-20 to till end of Concession period toll plaza wise are calculated and summarized below in Table 8-3.

Table 8.3: Projected Traffic

(A) Silwani Toll Plaza

FY YEAR	AADT in Vehicles					CVPD* (Veh.)	AADT in PCU					CVPD* (PCU)	Remarks

8.3 Toll Revenue Calculations

The toll revenue for horizon year is calculated based on the input from the above data, actual toll rates collected on base year (2019-20), with Traffic growth, WPI growth and toll efficiency has been assumed 5%, 4% and 100% respectively and other inputs considered in revenue calculations is given below.

Table 8.4: Toll Revenue Inputs

Particular	Toll plaza 1	Toll plaza 2
Location	Km. 1+800	Km. 70+000
4 lane length in km	0	0
2 lane length in km	30	35.995
Agreement Date	08-09-2011	08-09-2011
Appointed Date	27-02-2012	27-02-2012
Concession period	15 Years	15 Years
Commercial operation date	28-02-2013	29-05-2013
Concession End Date	26-02-2027	26-02-2027
Traffic study year	2019-2020	2019-2020
Vehicle Type	AADT	AADT
Car/Jeep/Van	175	327
2-axle Bus	104	96
LCV/LGV	7	5
2A-Truck	56	30
MAV (2A-6A)	151	77
Growth Rate (%)	5	5

The split trip type based on the available toll data from Concessionaire is used to derive the annual toll collection for each plaza. The revenue estimated and presented below. Detailed toll revenue estimation is given in **ANNEXURE 4**.

Table 8.5: Toll Revenue Estimated (in Rs. lakhs)

Financial Year	Annual Revenue of TP1 (Km. 1+800)	Annual Revenue of TP2 (Km. 70+000)	Total	Remarks
2019-20	170.016	166.001	336.016	Actual
2020-21	184.945	180.404	365.349	
2021-22	201.519	194.742	396.261	
2022-23	221.880	217.400	439.280	
2023-24	237.959	235.266	473.225	
2024-25	258.338	255.429	513.767	
2025-26	283.162	273.314	556.476	
2026-27	277.773	269.457	547.230	332 Days

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of CA, the Concessionaire will operate and maintain the Project roads by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual Inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz. pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

9.3 Operations

9.3.1. Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- i. Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- ii. Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.
- iii. carrying out preventive and periodic maintenance of the Project road;
- iv. undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;

- v. Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- vi. Functioning of the lighting system;
- vii. Functioning of the Patrolling System
- viii. Functioning of rescue and medical aid services
- ix. Ambulance as and when required
- x. Functioning of the Project Facilities
- xi. Administrative, Operational and Maintenance Base Camp
- xii. Truck Lay byes
- xiii. Pickup Bus stops / Bus Bays
- xiv. protection of the environment and provision of equipment and materials therefor;
- xv. Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- xvi. complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plazas

There are two lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the Escrow Account. In case of ETC system, Toll collection is connected with Network system and directly deposited into the Escrow account.

9.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

9.5.1. Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence does not require any immediate or preventive interventions.

9.5.2. Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

9.5.3. Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road. The details of periodic maintenance schedule are given below.

Table 9.1: Schedule and status of for Periodic Maintenance

Description	Schedule of Major Maintenance	Status of Major Maintenance
1 st Periodic Maintenance -Phase 1	30 Km Micro surfacing in 2018	Executed
1 st Periodic Maintenance - Phase 2	35 Km BC Overlay in 2019	Executed
1 st Periodic Maintenance - Phase 3	18 Km BC Overlay in 2020	Executed
1 st Periodic Maintenance - Phase 4	7 Km BC Overlay in 2021	Work in Progress
2 nd Periodic Maintenance	76 Km BC Overlay in 2026	Scheduled

9.5.4. Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.6 Review of Test Reports

9.6.1. Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of Aug, 2020. As per Schedule K of CA, if the stretch exceeds 3000mm in a KM shall be rectified. No stretch exceeds the permissible limit.

9.6.2. Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

Concessionaire has conducted the test in Dec2019. The test report has been verified and found within permissible limits as per IRC 81.

9.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 5**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance (In crores)	Incidental maintenance (In crores)	Periodic / Major maintenance	Toll Plaza Operator (Including Electricity and Fuel Charges/ AMC/Other expenses/Insurances/Misc.	Total cost per year
2021	0.259	0.424	-	0.61	1.29
2022	0.267	0.437		0.63	1.33
2023	0.275	0.450		0.65	1.37
2024	0.283	0.463		0.67	1.41
2025	0.292	0.477		0.69	1.46
2026	0.300	0.492	7.01	0.71	8.51
2027	0.282	0.461	7.01	0.66	8.41
Total	1.96	3.20	14.02	4.61	23.79

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 General: Scope of Work (Article 2)

Article 2 provides the scope of work, which includes the following.

- Construction of the Project road on the Site set forth in Schedule-A and as specified in Schedule-B of CA together with provision of Project Facilities as specified in Schedule-C of CA, and in conformity with the Specifications and Standards set forth in Schedule-D of CA;
- Operation and maintenance of the Project road in accordance with the provisions of the Agreement;
- Performance and fulfillment of all other obligations of the Concessionaire in accordance with the provisions of the Agreement and matters incidental

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 6**.

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfill its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the Concession Agreement

10.5 Obligations relating to the Competing Roads (Clause 6.3)

Neither Authority nor any Governmental Instrumentality shall construct the Competing Road before 10th Anniversary of the Appointed Date.

10.6 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 20% of the Total Project Cost.

10.6.1. Tests (Clause 13.3)

For determining that the Project, conforms to the Maintenance Requirements, the Independent Engineer shall require the Concessionaire (Concessionaire shall in turn require the Contractor) to carry out, or cause to be carried out, tests specified by it in accordance with Good Industry Practice. One half of the costs incurred on such tests, and to the extent certified by the Independent Engineer as reasonable, shall be reimbursed by the Authority to the Concessionaire

10.7 Provisional Completion Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA. Provisional Completion Certificate given in **ANNEXURE 7**.

10.8 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire. Copy of the Completion Certificate is provided in **ANNEXURE 8**.

10.9 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of scope proposals that were initiated during construction period and consented by the MPRDCL. Details are provided in **ANNEXURE 10**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (The “**Maintenance Requirements**”).

10.13 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 0.5% (zero decimal five percent) of the Average Daily Fee, and
- 0.1% (zero decimal one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Monthly Fee Statement (Clause 19.5)

During the Operations Period, the Contractor shall furnish to the Concessionaire and the Authority, if required by the Contractor, within 7 (seven) days of completion of each month, a statement of Fee substantially in the format set out in the Concession Agreement (“Monthly Fee Statement”).

10.18 Annuity (Clause 25.1.1)

The Annuity payment of Rs 9.49 Crores is due and payable by the Authority to the Concessionaire for each six months after COD as set forth in Clause 25.2.1 and Schedule Y of CA.

Table 10.1: Status of Annuity Payments

S No.	Particulars	Payment Paid on
1	1 st Annuity	17-Oct-13
2	2 nd Annuity	31-Mar-14
3	3 rd Annuity	1-Oct-14
4	4 th Annuity	31-Mar-15
5	5 th Annuity	28-Sep-15
6	6 th Annuity	04-Apr-16
7	7 th Annuity	3-Oct-16
8	8 th Annuity	03-Apr-17
9	9 th Annuity	4-Dec-17
10	10 th Annuity	17-Apr-18
11	11 th Annuity	16-Oct-18
12	12 th Annuity	18-Apr-19
13	13 th Annuity	30-Sep-19
14	14 th Annuity	27-Mar-20
15	15 th Annuity	25-Sep-20

10.19 Concession Fee (Article 26)

- In consideration of the grant of Concession, the Concessionaire shall pay Concession Fee of Rs.1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.

- Yearly the Concessionaire is paying the Concession Fee to the MPRDC.

10.20 Toll fee (Clause 27.1.1)

Toll Fees shall be revised annually in accordance with Clause 27.2.1.

10.21 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 Details of Insurance

As per clause 32.1 of the CA, the Concessionaire shall affect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Insurance copies are provided in **ANNEXURE 9**.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Property
			From	To	
Civil Engineering Completed Risk	National Insurance Company Ltd	321300441910001984	27.03.2020	26.03.2021	Road & Structure: Toll Building & Toll Booths, TMS, HTMS, Office & IT equipment, Electronic Equipment, Road Furniture, Fixtures, electrical Poles Lighting & Fittings, Sign boards & Safety Barrier
Electronic Equipment Insurance Policy schedule	Oriental Insurance Company Ltd	171200/44/2021/40	08.09.2020	07.09.2021	Electronic Equipment installed in the Project road
Employees Compensation Insurance Policy	HDFC ERGO General Insurance Company Ltd	3114203387794500000	19.5.2020	18.05.2021	All categories of Employees of the Contractor & sub-contractor engaged in the Project

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The Pavement condition for the overall project is good. RCC drains are constructed in Built up locations and earthen drains in rural locations which facilitates, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are being cleared during regular maintenance period.

12.4 Project Facilities

Two Toll Plazas are constructed one at Km.1+800 & the other Km.70+000. Both are operational. Toll Plaza is operated by ETC Toll collection system and connected by network system monitored in administrative building. Bus bays are in fair condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained well. Highway lighting is provided at toll plaza locations and the same is found functional.

12.5 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 73-2007. The condition of sign boards & other road appurtenances like metal beam crash barriers is fair.

12.6 Traffic Growth

Based on real time, traffic data was extracted from Schedule N of CA, the traffic growth observed is to 15.81% and 16.90% in TP-1 and TP-2 respectively, where as 5% growth is considered while evaluating forecast of traffic volumes.

12.7 Maintenance

- Routine maintenance is being carried out by O&M contractor effectively, based on documents reviewed, time to time observations made by client/Authority are being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance was carried recently and next MM is scheduled in the year 2026.

12.8 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

ANNEXURES

Annexure 1: Pavement Condition

Condition: G=Good, F=Fair, P=Poor & VP=Very poor Rutting: M=Moderate & S=Severe Drain: LD=Lined open Drain, ULD=Unlined Drain, CD=Covered Drain, NO=No drain, PF=Partial Function, F= Functional

Annexure 4: Toll Revenue Calculations

Toll Plaza-I & II:

1. Tollable Traffic considered for Toll Revenue in No.s (AADT):

Table-1: Details of Tollable Traffic (Base Year 2019-20)

Vehicle Type	Traffic (AADT)	Traffic (AADT)
	Km.1+800	Km.70+000
Car/Taxi/Van	175	327
LCV	104	96
Bus	7	5
Truck	56	30
MAV	151	77

2. Traffic Growth Rates

Table-2: Details of Growth rates adopted

Year	Car	LCV	BUS	Truck	MAV
2019-25	5.00	5.00	5.00	5.00	5.00
2025-30	5.00	5.00	5.00	5.00	5.00

3. Trip Distribution Ratio as per the Toll Data.

Table-3: Details of Trip Distribution

A. TP-1: Km.1+800 (Silwani) (Base Year 2019-20)

Vehicle Type	Single Trip	Local Pass	Total
Car/Taxi/Van	90%	10%	100%
LCV	100%	0%	100%
Bus	100%	0%	100%
Truck	100%	0%	100%
MAV	100%	0%	100%

B. TP-1: Km.70+000 (Sagar) (Base Year 2019-20)

Vehicle Type	Single Trip	Local Pass	Total
Car/Taxi/Van	94%	6%	100%
LCV	100%	0%	100%
Bus	100%	0%	100%
Truck	100%	0%	100%
MAV	100%	0%	100%

4. Toll Rates :

Table-4: Details of Toll Fee (Base Year 2019-20)

Vehicle Type	Km.1+800 (Silwani)	Km.70+000 (Sagar)
Car/Taxi/Van	20	25
LCV	45	65
Bus	90	135
Truck	105	160
MAV	210	320

Toll Plaza-1 Revenue:

Annexure 5: Operation & Maintenance cost

Routine Maintenance cost for 1 year									
S. No.	Item		Unit	No	Frequency per year	Quantity	Rate	Amount	Remarks
1	General Cleaning in Carriageway & Shoulders Rural area	Monthly	Km	75.995	12	4	350	12,76,716	04 Nos. of Labour
2	General Cleaning in Carriageway & Shoulders Urban area	Twice in a month	Km	3.7	24	4	350	1,24,320	04 Nos. of Labour
3	Watering in Median Plants	Once in Week	Km	3.7	52	1	1939	3,73,064	01 Nos. of Labour
6	ROW Cleaning	Half yearly	Km	37.9975	2	5	350	1,32,991	5 Nos of labour per KM (50% of the Project length)
7	Cleaning of Culverts	Half yearly	Nos	147	2	2	650	3,82,200	3 Nos. of Labour along with JCB or Excavator
8	Road Furniture Cleaning	Quarterly	Km	75.995	4	1	350	1,06,393	02 Nos. of Labour
9	Maintenance of Bus shelters	Monthly	Nos	6	6	1	350	12,600	2 Nos./ Bus shelter/month
10	General Cleaning in Building & Facilities	Daily	Nos	2.00	6	15	350	63,000	02 Nos. of Labour for 30 days
11	Bridges	Half yearly	Nos	17	2	2	350	23,800	02 Nos. of Labour for removal of vegetation/Structure
Total								24,95,084	
	EQUIPMENT SUPPLY							-	
1	TRUCK TIPPER 6-8 CUM CAPACITY	Monthly	Nos	1	12	1	15000	15,000	(2000000 is the cost of vehicle, considering 10%

Routine Maintenance cost for 1 year									
S. No.	Item		Unit	No	Frequency per year	Quantity	Rate	Amount	Remarks
									Rental per year) including maintenance
2	Toll plaza AMC	Yearly	Nos		12	1	5000	60,000	10000/month
							Total	75,000	
1	Ambulance	Monthly	Nos	12		1	10000	10000	(1200000 is the cost of vehicle, considering 10% Rental per year) including maintenance (1 Ambulance/toll plaza)
2	Consumables for Medical Aid Post and Ambulance	Monthly	Nos	12		1	500	6000	2500 Per month for per set (Per set - Per toll plaza)
	Consumables for Route Patrolling & Crane	Monthly	Nos	12		1	500	6000	2500 Per month for per set (Per set - Per toll plaza)
								22,000	
							Grand Total	25,92,084.00	

Incidental cost for 1 year

S. No	Item		Unit	No	Frequency	Quantity	Rate	Amount	Remarks
1	Road marking	Half yearly	Sqm	1	1	5852	516	30,19,632	33 % of Total Project length on B/S for 1 year
3	Maintenance of Earthen Shoulder	Half yearly	Cum	1	3	1139.925	225	7,69,449	5% of total Shoulder length throughout the project
4	Sign Board	Quarterly	Km	1	1	25	4000	1,00,000	5 % of Total sign boards per half year (considered 500 Nos.)
5	MBCB	Monthly	RMT			75	2400	1,80,000	5% of Total qty per year - (considered 2400 per number)
6	Mile Stone (KM Stone/ HM Stone / ROW stone etc.)	Quarterly	Nos	75.995	4	19	2250	1,71,000	5 % of total stones per year (unable to understand the backup)
Total amount for 1 Year								42,40,081	

Operational Expenses

S.NO.	PARTICULARS	Amount
1	Man Power	₹ 34,08,000
2	Fuel for Generator & Vehicles	₹ 12,20,560
3	Electricity	₹ 13,20,000
4	Stationary	₹ 10,000
5	Replacement of Electrical Fixtures	₹ 66,080
6	Refurbishment of Toll Plaza Equipment	₹ 75,000
	Total Amount	₹ 60,99,640

Summary Of Major Maintenance

Description	Due date	Base cost	Esc Period	Escalation Rate per Year	Cost of MMR on due date @ 5% Escalation	In crores

**SILWANI-SULTANGANJ-SAGAR ROAD PROJECT (SH-15)
CHANGE OF SCOPE**

Meeting of Advisory Committee of MPRDC for Change of Scope of Silwani -Sultanganj- Sagar Road BOT (Toll plus annuity scheme) has been held in the office of MPRDC on 03.06.2013. Following Officers were present in the meeting:

- 1) Mr. A.S. Chavke, Technical Advisor, MPRDC, Bhopal
- 2) Mr. Anil Chansoria, Chief Engineer (BOT), MPRDC, Bhopal
- 3) Mr. Arun Patilwal, General Manager (Fin.), MPRDC, Bhopal
- 4) Mr. B.S. Meena, Divisional Manager, MPRDC, Bhopal
- 5) Mr. Darshan Mathur, Team Leader, Independent Engineer
- 6) Mr. Nitin Shrivastava Concessionaire Representative

Change of Scope submitted by Independent Engineer vide its letter No. SA/SAGAR/MPRDC-III/2013/475 dated 02.05.2013 have been discussed one by one and finalized as below:

Sr. No.	Change	Existing Details as per Schedule A	Development Proposal as per Schedule 'B'	Proposal of Concessionaire as per site condition	Reasons and Recommendation by Independent Engineer	Decision of Committee
1	HIGHWAY WORK					
1)	Built up area in Silwani between change 0+000 to 0+263		Reconstruction of 7.0 m flexible pavement+ 1.5 m Paved shoulder (both side) + 1.0 m Granular shoulder (both side) with side drain in 0.6 km length between Change 0+000 to 0+000 in Built up Section of Silwani town.	Existing rigid pavement 7.0m wide from Ch. 0 to 263 is in good condition, which is retained. Proposed 2.5 m both side widening with rigid pavement and side drain at km 0+000 to 0+263	The existing 7.0 m wide Rigid pavement is good in condition and as per site condition the requirement of 12.0 m wide rigid pavement is necessary due to Silwani urban area. Concessionaire has proposed the widening of existing rigid pavement by rigid pavement of 2.5 m both side in place of 1.5 m paved shoulder & 1.0 m granular shoulder. Hence negative change of scope is 7.0 m wide flexible pavement+ 2x1.0m paved shoulder+2x1.0 Granular shoulder for 263 length and positive change of Scope for 2x2.5 Rigid Pavement in 263 m length.	Committee agreed with recommendation of IE to negative change of scope for 7.0 m wide flexible pavement + 2x1.5m paved shoulder+ 2x1.0 Granular shoulder for 263m length and positive change of Scope for 2x2.5 Rigid Pavement in 263 m length.

Sr. No.	Chainage	Existing Detail as per Schedule A	Development Proposal as per Schedule "B"	Proposal of Concessionaire as per site condition	Reasons and Recommendation by Independent Engineer	Decision of Committee
2 STRUCTURE WORK						
A MINOR BRIDGE						
1)	10+500 (As per site 10+235)	Minor bridge 2x15m continuous span with over all width 8.4m, in good condition	Widening of Minor Bridge at KM 10+500 of 2 span of 15 m (Total length 30m) to 12 m width	Retained the Minor Bridge at KM 10+235 of 2 span of 15 m (Total length 30m) with 8.4m width as it is.	The location of minor bridge is situated in forest area and condition is good. The bridge is retained as per Clause 7.3.2 (a) of SP-73. Hence widening of 2 spans of 15m from 8.4 m to 12 m i.e. 3.6 m is Negative variation under change of scope	Committee agreed with recommendation of IE to retain the minor bridge and widening of 2 spans of 15m from 8.4 m to 12 m i.e. 3.6 m as Negative variation under change of scope
2)	28+900 (As per site 27+940)		Construction of new Minor Bridge at KM 28+900 with RCC Solid Slab of 2 span of 8 m (Total length 16 m) with 12 m width	Construction of new Hume Pipe Culvert of 2 x 1200 mm dia at KM 27+940 with 15 m width	As per site condition and topography, there was no defined nullah for which such larger minor bridge is required. Hence Minor bridge of size 2x8 m with 12m width is negative variation & Pipe culvert of size 2x1200 mm dia of with 15m width is positive variation	Committee agreed with recommendation of IE for new construction of Minor Bridge of size 2x8m with 12m width as negative variation and pipe culvert of size 2x1200 mm dia with 15m with as positive variation under change of scope.

Sr. No.	Location	Existing Details as per Schedule 'A'	Development Proposal as per Schedule 'B'	Proposal of Counterpart as per site condition	Reasons and Recommendation by Independent Engineer	Decision of Committee
B	BOX CULVERT					
1)	14+000 (As per site 14+003)	Stone masonry arch culvert of 3m span with overall width of 10.5m in post condition.	Re construction with RCC Box Culvert at KM 14+000 of size 1x2 x 2 m with 12 m width.	Re construction with HDPE Pipe Culvert of 2 x 1200 mm dia at KM 14+003 having 12 m width.	The location is situated in ghat section and reconstruction to box culvert was practically difficult due to space and forest cons rain and as per hydraulic calculations 2x1200 mm dia pipe culvert will found sufficient. Hence Box culvert of size 1x2x2 with 12 m width is negative variation & Pipe culvert of 2x1200 mm dia having 12m width is positive variation.	Committee agreed with recommendation of IE for reconstruction of Box Culvert of Size 1x2x2 with 12m width as negative variation under change of scope and reconstruction of pipe culvert 2x1200mm dia with 12.5m width as positive variation under change of scope.
2)	75+080 (As per site 73+373)	Flush causeway of 39 m length.	Re construction with RCC Box Culvert at KM 75+080 of size 2x2 x 2 m with 12 m width.	Re construction with HDPE Pipe Culvert of 2 X 1200 mm dia at KM 73+373 having 15 m width.	As per site condition with larger opening was not required, the pipe culvert proposed was adequate. Hence Box culvert of size 2x2x2 with 12 m width is negative variation & Pipe culvert of 2x1200dia having 15m width is positive variation.	Committee agreed with recommendation of IE for reconstruction of Box Culvert of Size 2x2x2 with 12m width as negative variation and reconstruction of pipe culvert 2x1200mm dia with 15m width as positive variation under change of scope.
3)	75+200 (As per site 73+736)	Flush causeway of 39 m length.	Re construction with RCC Box Culvert at KM 75+200 of size 2x2 x 2 m with 12 m width.	Both side Widening of existing HDPE Pipe Culvert of 2 x 900 mm dia at KM 73+736 from 12m to 17m width.	In schedule 'A' existing FCW is mentioned while at site actual existing structure is 2x900 mm dia HDPE pipe culvert having 12 m width with good condition which is sufficient to cater for discharge. Hence reconstruction by Box culvert of size 2x2x2 m with 12 m width is negative variation & widening of existing Pipe culvert 2x900 mm dia from 12m to 17 m width is positive variation.	Committee agreed with recommendation of IE for reconstruction of Box Culvert of Size 2x2x2 with 12m width as negative variation and widening of pipe culvert 2x900mm dia from 12m to 17m width as positive variation under change of scope.

Sr. No.	Chainage	Existing Details as per Schedule A	Development Proposal as per Schedule "B"	Proposal of Concessionaire as per site condition	Reasons and Recommendation by Independent Engineer	Decision of Committee
C PIPE CULVERT						
(i) RE-CONSTRUCTION INTO BOX CULVERT						
1)	53+300 (As per site 52+010)	Hume Pipe Culvert of 2x1000 mm dia with 12.5 m width	Retained	Re-construction with RCC Box Culvert at KM 52+010 of Single cell of size 4 X 2.66 m with 12 m width	As per site condition and hydraulic assesment pipe culvert was not sufficient hence box culvert of size 1x4x2.66 is recommended. Hence reconstruction of box culvert in place of retained pipe culvert is Positive variation under change of scope	Committee agreed with recommendation of IE for reconstruction of Box Culvert of size 1x4x2.66 in place of retained pipe culvert as positive variation under change of scope
2)	53+600 (As per site 52+458)	Hume Pipe Culvert of 4x1000 mm dia with 12.5 m width	Retained	Re construction with RCC Box Culvert at KM 52+458 of Double cell of size 3 X 3.66 m with 12 m width	As per site condition and hydraulic assesment pipe culvert was not sufficient hence box culvert of size 2x3x3.66 is recommended. Hence reconstruction of box culvert in place of retained pipe culvert is Positive variation under change of scope	Committee agreed with recommendation of IE for reconstruction of Box Culvert of size 2x3x3.66 in place of retained pipe culvert as positive variation under change of scope.
(ii) RE-CONSTRUCTION INTO HUME PIPE CULVERT						
1)	54+369	-	-	Reconstruction with Hume Pipe culvert of 1 X 1200 mm dia	The existing pipe culvert was settled and damaged hence reconstruction is recommended. Reconstructed Hume Pipe culvert of 1x1200 mm dia with 15 width is Positive variation under change of scope	Committee agreed with recommendation of IE for reconstruction of pipe culvert 1x1200mm dia with 15m width as positive variation under change of scope.
2)	55+545	-	-	Reconstruction with Hume Pipe culvert of 1 X 1200 mm dia	Due to damage in the pipes observed, reconstruction with 1x1200mm dia HPC is recommended. Reconstruction of Hume Pipe culvert of 1x1200 mm dia with 15 width is Positive variation under change of scope	Committee agreed with recommendation of IE for reconstruction of pipe culvert 1x1200mm dia with 15m width as positive variation under change of scope.

Sr. No.	Chainage	Existing Detail as per Schedule A	Development Proposal as per Schedule "B"	Proposal of Concessionaire as per site condition	Reasons and Recommendation by Independent Engineer	Decision of Committee
3)	82+260 (As per site 60+725)	Home Pipe Culvert of 1x1000 mm dia with 12.5 m width	Retained	Reconstruction with Home Pipe culvert of 2 X 1200 mm dia at Km 82+725.	The condition of culvert was poor i.e. few pipes were damaged and sagging in barrel observed, more over local inquiry revealed the over-lapping of present culvert, hence reconstruction with increased capacity HPG of size 2x1200 mm dia with 15m width is recommended. Reconstruction of pipe culvert in place of retained pipe culvert is Positive variation under change of scope	Committee agreed with recommendation of IE for reconstruction of pipe culvert 2x1200mm dia with 15m width as positive variation under change of scope
4)	74+500 (As per site 73+195)	Home Pipe Culvert of 1x1000 mm dia with 12.5 m width.	Retained	Re construction with Home Pipe culvert of 1 X 1200 mm dia at KM 73+195 with 12.5m width.	The pipes were found damaged and no head walls were provided. Hence reconstruction of pipe culvert of size 1x1200 mm dia with 12.5m width in place of retained pipe culvert recommended which is Positive variation under change of scope	Committee agreed with recommendation of IE for reconstruction of pipe culvert 1x1200mm dia with 12.5m width as positive variation under change of scope.

Sr. No.	Chainage	Existing Detail as per Schedule A	Development Proposal as per Schedule "B"	Proposal of Concessionaire as per site condition	Reasons and Recommendation by Independent Engineer	Decision of Committee
5)	74+700 (As per site 73+255)	Hume Pipe Culvert of 2x1200 mm dia with 12.5m width	Retained	Re construction with Hume Pipe-culvert of 1 X 1200 mm dia at KM 73+255 with 12.5 m width	At site existing structure was HPC of 1x1000 mm dia, the pipes were damaged and no head walls were provided hence reconstruction is recommended. Reconstruction of pipe culvert of size 1x1200 mm dia 12.5m width in place of retained pipe culvert recommended which is Positive variation under change of scope	Committee agreed with recommendation of IE for reconstruction of pipe culvert 1x1200mm dia with 12.5m width as positive variation under change of scope.
6)	75+480 (As per site 73+814)	Hume Pipe Culvert of 1x1000 mm dia with 12.5 m width	Retained	Re construction with Hume Pipe culvert of 2 X 1200 mm dia at KM 73+814 with 15 m width	In Schedule A 1 X 1000 dia pipe culvert is indicated but on site FCW was available which could be replaced with 2 X 1200 dia Pipe-Culvert. Reconstruction of pipe culvert of size 2x1200 mm dia 15m width in place of FCW is Positive variation under change of scope	Committee agreed with recommendation of IE for reconstruction of pipe culvert 2x1200mm dia with 15m width as positive variation under change of scope.

Sr No.	Change	Existing Detail as per Schedule A	Development Proposal as per Schedule "B"	Proposal of Concessionaire as per site condition	Reasons and Recommendation by Independent Engineer	Decision of Committee
(iii)	WIDENING					
7a	10+33+4			Both side Widening with 10mm Pipe culvert from 10m to 15m	Though the structure was not included in Schedule A or B but a size HPC of 800mm with 10.0 width is in existence, due to raising of FRL/change in alignment the present barrel length was not enough as per X-sectional requirement, the existing pipes were found in good condition, hence widening of 5m is recommended. Widening is Positive variation under change of scope	Committee agreed with recommendation of IE for widening of 5m of 1 No of Pipe Culverts as positive variation under change of Scope
7b	43+558 (12.5m), 63+200 (12.5m), 85+442 (18m), 88+248 (12.5m), 75+232 (12.5m)			One side/Both side Widening with 10mm Pipe Culvert: 43+558 (17.5m), 63+200 (17.5m), 85+442 (15m), 88+248 (15.5m), 75+232 (17.5m)	Though the structure was not included in Schedule A or B but at site HPC of 1000mm with 10.0 to 12.5m width is in existence, due to raising of FRL/change in alignment the present barrel length was not enough as per X-sectional requirement, the existing pipes were found in good condition, hence 5m widening for 5 Nos. is recommended. Widening is Positive variation under change of scope	Committee agreed with recommendation of IE for widening for 5m of 5 Nos of Pipe Culverts as positive variation under change of Scope

Sr. No.	Chainage	Existing Detail as per Schedule A	Development Proposal as per Schedule "B"	Proposal of Concessionaire as per site condition	Reasons and Recommendation by Independent Engineer	Decision of Committee
1c	65+140			One side Widening with Hume Pipe culvert from 12.5 to 15m	Though the structure was not included in Schedule A or B but at site HPC of 1200mm with 12.5m width is in existence. due to raising of FRL/change in alignment the present barrel length was not enough as per X-sectional requirement, the existing pipes were found in good condition, hence widening for 2.5m is recommended. Widening is Positive variation under change of scope.	Committee agreed with recommendation of IE for widening for 2.5m of 1 No of Pipe Culverts as positive variation under change of Scope
2a	32+300(31+526), 38+500(37+618), 38+600(37+899), 66+450(64+674), 67+100(65+280), 67+800(66+062)	Hume Pipe culverts 1 row with 1000 mm dia. With 10.0 m width.	Retained	One side/Both side Widening with Hume Pipe culvert. 32+300-15m, 38+500-12.5m, 38+900-12.5m, 66+450-15m, 67+100-15m, 67+800-15m	Though the structures were proposed to be retained in Schedule B but due to raising in FRL (Shifting of alignment) the barrel lengths were not enough as per X-sectional requirement hence widening for 5 m for 4 Nos and 2.5m for 2 Nos HPC is recommended. Widening is Positive variation under change of scope.	Committee agreed with recommendation of IE for widening for 5 m for 4 Nos and 2.5m for 2 Nos HPC as positive variation under change of Scope
2b	31+700(30+657), 48+200(47+291), 63+250(61+673), 63+600(62+038)	Hume Pipe culverts 1 row with 1000 mm dia. With 12.0 m width.	Retained	One side/Both side Widening with Hume Pipe culvert from 12m to 17m.	Though the structures were proposed to be retained in Schedule B but due to raising in FRL (Shifting of alignment) the barrel lengths were not enough as per X-sectional requirement hence widening for 5m of 4 Nos HPC is recommended. Widening is Positive variation under change of scope.	Committee agreed with recommendation of IE for widening for 5m of 4 Nos HPC as positive variation under change of Scope.

Sr. No.	Chainage	Existing Detail as per Schedule A	Development Proposal as per Schedule 'B'	Proposal of Concessionaire as per site condition	Reasons and Recommendation by Independent Engineer	Decision of Committee
2c	28+200(28+423), 29+500(29+174), 37+600(36+888), 37+900(36+875), 41+800(40+603), 41+900(40+894), 45+800(44+432)	Hume Pipe culverts 1 row with 1000 mm dia. With 12.5 m width	Retained	One side/Both side Widening with Hume Pipe culvert from 12.5m to 17.5m	Though the structures were proposed to be retained in Schedule B but due to raising in FRL (Shifting of alignment the barrel lengths were not enough as per X-sectional requirement hence widening of 5m for 7 Nos HPC is recommended, Widening is Positive variation under change of scope	Committee agreed with recommendation of IE for widening of 5m for 7 Nos HPC as positive variation under change of Scope.
3a	67+500(65+870), 75+600(74+088)	Hume Pipe culverts 2 rows with 1000 mm dia. With 10.0m width	Retained	One side/Both side Widening with Hume Pipe culvert from 10m to 15m	Though the structures were proposed to be retained in Schedule B but due to raising in FRL (Shifting of alignment the barrel lengths were not enough as per X-sectional requirement hence widening of 5m for 2 Nos HPC is recommended, Widening is Positive variation under change of scope	Committee agreed with recommendation of IE for widening of 5m for 2 Nos HPC as positive variation under change of Scope.
3b	38+800(34+994), 38+500(35+545), 43+400(42+337), 45+650(44+681)	Hume Pipe culverts 2 rows with 1000 mm dia. With 12.5m width	Retained	One side/Both side Widening with Hume Pipe culvert 35+900(17.5m), 36+500(17.5m), 43+400(20m), 45+650(20m)	Though the structures were proposed to be retained in Schedule B but due to raising in FRL (Shifting of alignment the barrel lengths were not enough as per X-sectional requirement hence widening of 5m for 2 Nos HPC and 7.5m of 2 Nos HPC is recommended, Widening is Positive variation under change of scope	Committee agreed with recommendation of IE for widening of 5m for 2 Nos HPC and 7.5m of 2 Nos HPC as positive variation under change of Scope.

Sl. No.	Chainage	Existing Detail as per Schedule A	Development Proposal as per Schedule "B"	Proposal of Concessionaire as per site condition	Reasons and Recommendation by Independent Engineer	Decision of Committee
4)	34+300(33+355)	Hume Pipe culverts 3 rows with 1000 mm dia. With 12.0 width	Retained	Both side Widening with Hume Pipe culvert from 12m to 17m.	Though the structures were proposed to be retained in Schedule B but due to raising in FRL /Shifting of alignment the barrel lengths were not enough as per X-sectional requirement hence widening of 5m is recommended. Widening is Positive variation under change of scope	Committee agreed with recommendation of IE for widening of 5m of 1 No of Pipe Culverts as positive variation under change of Scope
5)	67+200(55+572)	Hume Pipe culverts 4 rows with 1000 mm dia. With 10.0 m width	Retained	Both side Widening with Hume Pipe culvert from 10 to 15m.	Though the structures were proposed to be retained in Schedule B but due to raising in FRL /Shifting of alignment the barrel lengths were not enough as per X-sectional requirement hence widening of 5m is recommended. Widening is Positive variation under change of scope	Committee agreed with recommendation of IE for widening of 5m of 1 No of Pipe Culverts as positive variation under change of Scope
6)	31+000(30+155)	Hume Pipe culverts 1 row with 1200 mm dia. With 12.5m width	Retained	One side Widening with Hume Pipe culvert from 12.5m to 20.5m	Though the structures were proposed to be retained in Schedule B but due to raising in FRL /Shifting of alignment the barrel lengths were not enough as per X-sectional requirement hence widening of 7.5m is recommended. Widening is Positive variation under change of scope	Committee agreed with recommendation of IE for widening of 7.5m of 1 No of Pipe Culverts as positive variation under change of Scope
7)	28+400(27+651)	Hume Pipe culverts 2 rows with 1200 mm dia. With 12.5m width	Retained	One side Widening with Hume Pipe culvert from 12.5m to 17.5m.	Though the structures were proposed to be retained in Schedule B but due to raising in FRL /Shifting of alignment the barrel lengths were not enough as per X-sectional requirement hence widening of 5m is recommended. Widening is Positive variation under change of scope	Committee agreed with recommendation of IE for widening of 5m of 1 No of Pipe Culverts as positive variation under change of Scope

Sr. No.	Chainage	Existing Detail as per Schedule A	Development Proposal as per Schedule "B"	Proposal of Concessionaire as per site condition	Reasons and Recommendation by Independent Engineer	Decision of Committee
B)	22+300(21+720)	Hume Pipe culverts-3 rows with 1200 mm dia. With 12.5m width	Retained	One side Widening with Hume Pipe culvert from 12.5m to 17.5m.	Though the structures were proposed to be retained in Schedule B but due to raising in FRL. Shifting of alignment the barrel lengths were not enough as per X-sectional requirement hence widening of 5m is recommended. Widening is Positive variation under change of scope.	Committee agreed with recommendation of IE for widening of 5m of 1 No of Pipe Culverts as positive variation under change of Scope.
B)	22+700(22+131)	Hume Pipe culverts-5 rows with 1200 mm dia. With 12.5m width	Retained	One side Widening with Hume Pipe culvert from 12.5m to 20m.	Though the structures were proposed to be retained in Schedule B but due to raising in FRL. Shifting of alignment the barrel lengths were not enough as per X-sectional requirement hence widening of 7.5m is recommended. Widening is Positive variation under change of scope.	Committee agreed with recommendation of IE for widening of 7.5m of 1 No of Pipe Culverts as positive variation under change of Scope.

CHAPTER 1. INTRODUCTION

1.1 General

DBL SITAMAU SUWASARA TOLLWAYS LIMITED (herein after referred to as the “Concessionaire”) had augmented the existing road “Sitamau-Basai-Suwasara” section of MDR in the state of Madhya Pradesh, in accordance with the provisions of the Concession Agreement (CA) executed with Madhya Pradesh Road Development Corporation Limited (herein after referred to as the “MPRDCL”) on 5th December, 2011.

Project road starts at Sitamau (Km.0.000) and ends at Suwasara (Km.34.973) passing through Tilrod, Surjani, Belara and Basai in the state of Madhya Pradesh on Design, Build, Finance, Operate and Transfer (DBFOT) Toll + Annuity basis. Project Location map is given at Fig 1-1.

Figure 1.1: Project Location Map

SHREM ROADWAYS PRIVATE LIMITED (SRPL) acquired DBL SITAMAU SUWASARA TOLLWAYS LIMITED vide agreement dated 26th March 2018

SHREM FINANCIAL PRIVATE LIMITED (SFPL) appointed RUKY Projects Pvt. Ltd. as consultants for detailed Technical Due Diligence Services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the traffic potential and to estimate the projected Toll Collection etc.

1.2 Project Data:

The details of the Project are listed in the following table.

Table 1.1: Project Data

S. No.	Particulars	Details
1	Name of the project	Construction, Operation and Maintenance of Sitamau-Basai-Suwasara section of MDR on DBFOT (Design, Build, Finance, Operate and Transfer) on Toll plus Annuity basis.
2	Road Type	Major District Road (MDR)
3	Name of the Authority	Madhya Pradesh Road Development Corporation Limited
4	Name of the Concessionaire	DBL SITAMAU SUWASARA TOLLWAYS LIMITED
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Date of LOA	17.10.2011
7	Date of Agreement	05.12.2011
8	Design length as per Schedule B of CA	Approximately 34.973 Kms.
9	Length omitted under negative Change in Scope	-0.014 Kms.
10	Actual length constructed	34.959 Kms.
11	Project lane configuration	2 Lane
12	EPC cost	55.00 Cr
13	Nature of contract	BOT (Toll + Annuity)
14	Toll collected by	Concessionaire
15	Concession period	15 years from the appointed date
16	Appointed date	04.05.2012
17	Concession end date	03.05.2027
18	Construction period	730 days from the appointed date.
19	Schedule completion date	04.05.2014
20	Date of issuance of Provisional Certificate (Commercial operation date)	28.03.2013
21	Date of issuance of Completion Certificate	15.06.2013

S. No.	Particulars	Details
22	Annuity amount (every six months)	3.69 Cr
23	Total number of annuities payable	26 Nos.
24	First annuity payment date	28.09.2013
25	Total number of annuity paid	15 Nos.

1.3 Scope of consultancy services

The scope of work includes providing Due Diligence of the project road and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Collection of historic/past toll revenue data
- Collection of historic/past classified Traffic data from toll plaza and to estimate the projected traffic to arrive at revenue projections.
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout review of tolling system to evaluate the efficiency and functionality of tolling system and to identify and give suggestions to improve if any setbacks in the system.
- Carryout out road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per schedule B and Schedule C of the CA including Change of scope are listed in the following Table.

Table 2.1: Salient Features

S. No	Particulars	As per CA	As per COS	As per Site
1	Total project length	34.973 Kms.	-0.014 Kms.	34.959 Kms.
2	Four lane divided carriageway	0.550 m	---	0.550 Kms.
3	Two lane with paved shoulder	2.573 Kms.	-0.014 Kms.	2.559 Kms.
4	Bypass realignment	0.200 m	---	0.200 Kms.
5	Intermediate lane with granular shoulder	31.650 Kms.	---	31.650 Kms.
6	Rigid pavement-two lane with paved shoulder	2.123 Kms.	-0.014 Kms	2.109 Kms.
7	Flexible pavement	32.850 Kms.	---	32.850 Kms.
8	Toll plaza	1 No.	--	1 No.
9	Bus bays / Bus shelters	24 Nos.	--	24 Nos.
10	Truck lay bays	--	--	--
11	Major junction	1 No.	--	1 No.
12	Minor Junctions	11 no.	--	11 no.
13	Major Bridges	2 No.	--	2 No.
14	Minor Bridges	7 No.	--	7 No.
15	Pipe Culverts	25 Nos.	+1,-1	25 Nos.
16	Slab/Box Culverts	5 Nos.	--	5 Nos.

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Sections shown below as per schedule, during the construction.

Figure 2.1: (TCS 1) Intermediate Lane with Hard Shoulder

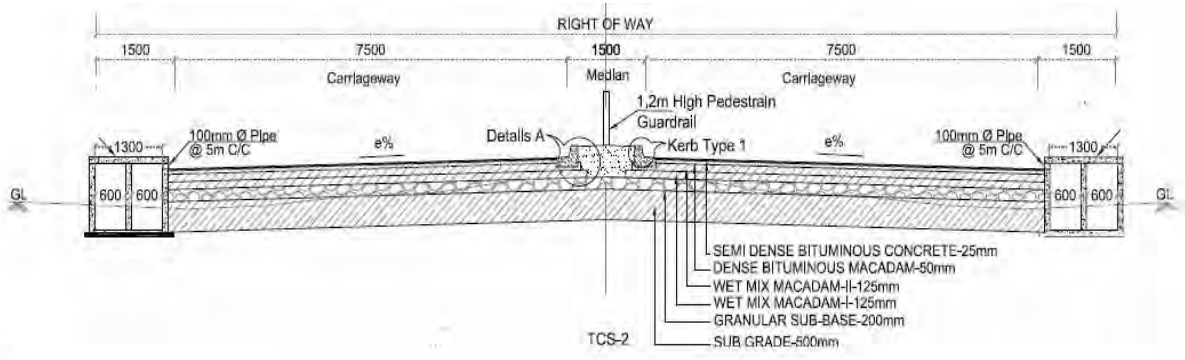

Figure 2.2: (TCS 2) 4-Lane Divided Carriageway with Footpath

Figure 2.3: (TCS 3) 2-Lane Flexible Pavement with Paved Shoulder

Figure 2.4: (TCS 4A) 2-Lane Rigid Pavement with Paved Shoulder

Figure 2.5: (TCS 4B) 2-Lane Rigid Pavement with Paved Shoulder

As built drawings are verified and the pavement crust is found in accordance with TCS. TCS schedule is provided below.

Table 2.2: TCS Schedule

S. No.	From (Km.)	To (Km.)	Length (Kms.)	Type of TCS
1	0+000	0+550	0.550	TCS 2
2	0+550	7+450	6.900	TCS 1
3	7+450	8+050	0.600	TCS 4A
4	8+050	9+600	1.550	TCS 1
5	9+600	9+800	0.200	TCS 4A
6	9+800	12+270	2.470	TCS 1
7	12+270	12+70	0.200	TCS 3
8	12+470	14+400	1.930	TCS 1
9	14+400	14+650	0.250	TCS 3
10	14+650	16+480	1.830	TCS 1
11	16+480	16+790	0.310	TCS 4A
12	16+790	21+770	4.980	TCS 1
13	21+770	21+970	0.200	TCS 4A
14	21+970	33+750	11.780	TCS 1
15	33+750	33+850	0.100	TCS 4B
16	33+850	33+960	0.110	TCS 3
17	33+960	34+000	0.040	TCS 4B
18	34+000	34+386	0.386	TCS 1
19	34+386	34+959	0.573	TCS 4B

Figure 2.6: Pictorial Diagram of TCS Lengths.

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from road side community on the Carriageway, RCC side drains are constructed along the main carriage way on both flanks as specified in Schedule B of the CA in strict adherence to the Standard Specifications set forth in Schedule D of the CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains in open and rural areas.

2.4 Service Roads:

Service roads are not provided along the entire stretch of the project road as per provisions of Schedule B of the CA.

2.5 Bypass/Realignment:

Realignment is constructed from Km 22+600 to Km 22+800 as per Provisions of Schedule B of the CA.

2.6 Intersections:

As per provisions of Schedule B of the CA, 1 Major Intersection and 11 Minor Intersections are provided. Details are given below.

Table 2.3: Summary of Junctions

S. No.	Chainage (Km.)	Type of junction	Type of Cross Road
Major Intersection			
1	0+000	T	SH 14
Minor Intersection			
1	0+600	T	Village Road
2	7+930	T	Village Road
3	12+338	X	Village Road
4	19+540	T	Village Road
5	22+800	T	Village Road
6	26+059	T	Village Road
7	26+120	T	Village Road
8	28+200	X	Village Road
9	33+245	X	Village Road
10	34+025	T	Village Road
11	34+973	X	MDR

2.7 Grade Separated Structures and underpasses:

There are no Grade separated structures in the Project, as per provisions of Schedule B of the CA.

2.8 Road Under Bridge:

There is one existing RUB, which was Retained at Km 33+911 as per provisions of Schedule B of the CA.

2.9 Summary of the Carriageway Details:

The details of Pavement and Carriageway type are shown in the following table.

Table 2.4: Summary of Carriageway Details

S. No.	Description	Flexible (Kms.)	Rigid (Kms.)	Remarks
1	2 Lane with Earthen shoulder	31.826		Fig 2.1 of Schedule D of CA
2	2 Lane with Paved shoulder	0.560	2.023	Fig 2.3 of Schedule D of CA
3	4 Lane	0.550	---	Fig 2.2 of Schedule D of CA
4	Total Length of the Project	34.959 Kms.	---	
TYPE OF ALIGNMENT				
5	New Alignment	---	---	
6	Realignment	0+200	---	
7	Strengthening	---	---	
8	Reconstruction	32.736	2.023	
9	Total Length of the Project	34.959 Kms.	---	

2.10 Summary of Structures

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.5: Summary of Structures

S. No.	Description	RUB	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts
1	Retained	1	2	---	3	---
2	Widening	---	---	3	3	4
3	Reconstruction	---	---	4	15	1
4	New	---	---	---	4	---
5	Improvement	---	---	---	---	---
	Total	1	2	7	25	5

2.11 Toll Plazas

As per Schedule C of the CA provisions, one Toll Plaza has been constructed at Ch. 4+500. Salient features of Toll Plaza are provided below.

- Each side comprises of, one normal lane and one extra wide lane.
- The lane width in normal lanes is 3.2 m and extra lane is of 4.5 m width.
- Single canopy is provided to cover the toll lanes.
- Toll plaza has been constructed as per standards set forth in Schedule D of CA having facilities like lighting, water supply and firefighting Arrangements.
- Closed circuit cameras are installed and monitored in administrative building.

2.12 Bus shelters

As per the provisions of Schedule C of the CA, 24 Nos. Bus shelters are provided in the entire length of Project. Details such as Chainage Location and Name of Village are listed in the following table.

Table 2.6: Bus shelters details

S. No.	Chainage (Km.)	Side*	Remarks	S. No.	Chainage (Km.)	Side*	Remarks
1	3+200	LHS	Palint	13	19+500	LHS	Kejadiya
2	3+300	RHS	Palint	14	19+600	RHS	Mandsaur
3	7+720	LHS	Titrod	15	22+650	LHS	Mandsaur
4	7+800	RHS	Titrod	16	22+500	RHS	Khamkhed
5	11+000	LHS	Devchiri	17	26+050	RHS	Khamkhed
6	11+200	RHS	Devchiri	18	26+150	LHS	Kantiya
7	12+280	LHS	Belara	19	28+150	RHS	Kantiya
8	12+380	RHS	Belara	20	28+250	LHS	Dhamniya
9	14+500	LHS	Belara	21	33+150	RHS	Dhamniya
10	14+600	RHS	Dhikaliya	22	33+320	LHS	Gangadhar
11	16+500	LHS	Dhikaliya	23	34+680	RHS	Gangadhar
12	16+650	RHS	Kejadiya	24	34+750	LHS	Suwasara

*Note: LHS-Left Hand Side, RHS-Right Hand Side

2.13 Other Project Facilities Provided as per Schedule C of the CA

- Roadside furniture: Sign boards, kilometer stones, road marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic safety devices: W beam crash barriers, parapet walls are provided as per the provisions of Schedule C of the CA.
- Landscaping: provided at toll plaza location and being maintained
- Medical Aid Post: Provided at toll plaza location and operational.
- Highway Lighting: Highway lighting is provided at Toll Plaza location and is functional.

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented below.

3.2 Road Inventory

Inventory of the project road was carried out physically and is summarized in the following table. Representative photographs are given below to have a clear picture of the Project.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain and Rolling Terrain
2	Land Use	Built Up 3 %, Agriculture 64% and Barren 22%
3	Two lane length	34.409 Kms.
4	Four lane length	0.550 kms.
5	Earthen shoulder	1.0 m to 1.5 m width on site
6	Realignment	200 m
7	Junctions	12 Nos.
8	Toll Plaza	Km. 4+500
9	Sign boards	Sign boards are provided as per requirement
10	Road Markings	Lane markings are provided as per requirement
11	Bus Bays /shelters	24 Nos.
12	Street Lighting	Highway lighting provided as per requirement
13	Avenue plantation	Provided

3.3 Pavement Condition:

Pavement Condition survey was carried out on the Project road, based on observations supplemented with simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm, sections with cracking exceeding 20% shall be treated as failed.

Pavement surface condition assessment is a key component of infrastructure asset management. The information is used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future Pavement Conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey

is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey:

The survey on general Pavement Condition was primarily undertaken by means of slow drive-over survey, and supplemented with measurements where ever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The Pavement Condition is measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of surface area)
 - Ravelling (% of surface area)
 - Potholes (% of surface area)
 - Patching (% of surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement Condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP 19 and is given in **ANNEXURE 1**. The summary of Pavement Condition is given below.

Table 3.2: Pavement condition summary

Chainage		Length (kms.)	Condition
From (km.)	To (km.)		
0+000	34+973	34.973	Good

Km. 2+200

Km. 11+400

Km. 8+400

Km. 16+200

Km. 27+800

Figure 3.1: Representative pavement condition photos

CHAPTER 4. INVENTORY AND CONDITION OF STRUCTURES

4.1 General Assessment and Condition of the Structures:

Inspection of existing structures on the Project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures :

The Inventory of the Structures at site is as follows.

Table 4.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	2 Nos.
2	Minor Bridge	7 Nos.
3	Pipe culverts	25 Nos.
4	Slab/Box Culverts	5 Nos.

The Super structure of Major bridges is of RCC Balanced cantilever type resting on RCC single/twin circular column type piers and abutments supported by well foundations. The Super structure of Minor Bridge is of RCC solid slab and the sub-structures are of RCC/PCC conventional wall type Piers and Abutments supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. The condition of most of the Culverts is fair. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges:

The total length of the major bridge at Km 20+879 is 110.0m with 4 spans. The superstructure consists of RCC Box girder built as balanced cantilever. Each pier consists of single RCC circular column with a hammer head capping beam whereas abutment is regular RCC wall type abutment. Well foundations have been constructed for all piers and abutments. Superstructure is seated on elastomeric bearings. Expansion joints are of Buried type. RCC railings have been provided on both sides of the deck.

The total length of the major bridge at Km 21+089 is 294.6m with 13 spans. The superstructure consists of RCC Box girder built as balanced cantilever. Each pier consists of twin RCC circular columns connected with a capping beam and abutments are of wall type with CRS Masonry. Well foundations have been constructed for piers and abutments. Superstructure is seated on elastomeric bearings. Expansion joints are of Buried type. RCC railings have been provided on both sides of the deck.

Table 4.2: List of Major Bridges

S. No.	Chainage	Span Arrangement	Total Length of Bridge (m)
1	Km.20+879	3x32m+1x14m.	110.0
2	Km.21+089	2x18.6m+11x23.4m.	294.6

The condition of the superstructure and substructure is good.

Km. 21+089

Figure 4.1: Representative photos of Major Bridge

4.4 Details of Minor Bridges

There are 7 minor bridges in the project stretch. The type of superstructure for minor bridges is RCC solid slab and the substructure is PCC conventional wall type supported on open foundations. Expansion joints are buried type and bearings are of Tar Paper and neoprene bearings. RCC crash barriers are provided on all structures.

Table 4.3: Inventory of Minor Bridges

S. No.	Chainage (Km.)	Span Arrangement	Total Length of Bridge (m)	Description
1	0+818	1x6.0 m	6.0	The structure has RCC solid slab superstructure supported on RCC wall type abutments. Other features are Tar paper Bearings and buried type expansion joints, RCC crash barrier, bituminous wearing coat.
2	1+596	2x3.65	7.3	The Minor Bridge has RCC solid slab superstructure supported on CRM/RCC wall type piers and abutments. Other features are Tar Paper Bearings and buried type expansion joints, Brick Masonry parapet, bituminous wearing coat.
3	4+030	1x6.6m	6.6	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type abutments. Other features are Tar Paper Bearings and buried type expansion joints, RCC crash barrier, bituminous wearing coat.
4	8+578	2x7.3m	14.6	The Minor Bridge has RCC solid slab superstructure supported on PCC/RCC wall type piers and abutments. Other features are Tar Paper Bearings and buried type expansion joints, RCC crash barrier, bituminous wearing coat.
5	10+083	2x7.7m	15.4	It has RCC solid slab superstructure supported on PCC/RCC wall type piers and abutments. Other features are Tar paper Bearings and

S. No.	Chainage (Km.)	Span Arrangement	Total Length of Bridge (m)	Description
				buried type expansion joints, RCC crash barrier, bituminous wearing coat.
6	12+656	1x6.7m	6.7	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type abutments. Other features are Tar paper Bearings and buried type expansion joints, Brick Masonry parapet, bituminous wearing coat.
7	21+650	1x8.4m	8.4	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type abutments. Other features are Tar paper Bearings and buried type expansion joints, Brick Masonry parapet wall, bituminous wearing coat.

Km. 4+030

Km. 10+083

Figure 4.2: Representative photos of minor bridges

4.5 Details of culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

General Description of the Slab/Box Culverts

The details of the culverts are given below.

Table 4.4: List of Slab/Box Culverts

S. No.	Chainage (Km.)	Span
1	7+660	1x 3.6m.
2	10+873	1 x 3.6m.
3	13+150	1 x 3.8m.
4	21+433	1x 2.0m.
5	22+070	1x 3.4m.

The general condition of above slab culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works if required etc.

Km: 21+433

Figure 4.3: Representative photo of Box Culvert

General Description of the Pipe Culverts

The details of the pipe culverts are as given below.

Table 4.5: List of Pipe Culverts

S. No.	Chainage (Km.)	No. of Rows & Dia (m)	Sl. No.	Chainage @Km.	No. of Rows & Dia(m)
1	0+400	1 x 1.0	14	16+715	1x1.2
2	2+890	1 x 1.2	15	16+780	2x1.2
3	3+060	2 x 1.2	16	16+870	1 x 1.2
4	9+693	1 x 1.2	17	18+388	1 x 1.0
5	11+792	2 x 0.9	18	19+736	1 x 1.0
6	11+950	1 x 1.2	19	19+898	1 x 1.0
7	12+638	1 x 1.2	20	19+995	1x1.2
8	13+400	1 x 1.2	21	22+790	1 x 1.2
9	14+455	1 x 1.2	22	23+427	1 x 1.2
10	14+630	1 x 1.2	23	24+980	1 x 1.2
11	14+737	1 x 1.2	24	25+350	1 x 1.2
12	15+215	2 x 1.0	25	26+560	1 x 1.2
13	16+489	1 x 1.2			

Condition of the Pipe Culverts

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULE

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2001 publication while the current publication is IRC: 37-2018.

Review of Pavement Design

The Pavement crust details as per the approved pavement design of the project are given below:

Table 5.1: Flexible Pavement Design summary

S. No.	Description/ Pavement layer	Design Parameters	Adopted values
1	Sub Grade CBR (%)	10%	10%
2	Design Life (Years)	8 years for BT 15 years for Granular	8 years for BT 15 years for Granular
3	Design Traffic (MSA)	4 MSA for BT 9 MSA for Granular	5 MSA for BT 10 MSA for Granular
4	Surface course (SDBC)	25 mm	25 mm
5	Binder course (DBM)	50 mm	50 mm
6	Base course (WMM)	250 mm	250 mm
7	Sub Base course (GSB)	150 mm	200 mm

5.3 Validation of Pavement design

The new pavement shall be designed in accordance with the IRC:37. "Guidelines for the Design of Flexible Pavements". Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. "Guidelines for the Design of Plain Jointed Rigid Pavements for Highways".

Pavement design validation is carried out as per actual traffic from COD. As per IRC 37, Vehicle Damage Factor (VDF), Distribution of commercial vehicles and growth rate values are 3.5, 0.75 and 5% respectively. Summary is given below.

Table 5.2: Real Time Traffic from COD and Projected Traffic Current years with 5% growth for CMSA

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2014	519	233	50	30	88	400	0.38	0.38	1	Actual
2015	922	343	61	46	143	593	0.57	0.95	2	Actual
2016	916	314	52	40	112	517	0.50	1.45	3	Actual
2017	849	343	52	37	133	565	0.54	1.99	4	Actual
2018	775	345	52	37	138	571	0.55	2.54	5	Actual
2019	971	429	55	41	145	670	0.64	3.18	6	Actual
2020	1127	387	56	43	139	625	0.60	3.78	7	Actual
2021	1183	407	58	45	146	657	0.63	4.41	8	Projected
2022	1243	427	61	48	154	690	0.66	5.07	9	Projected
2023	1305	449	64	50	161	724	0.69	5.76	10	Projected
2024	1370	471	67	52	169	760	0.73	6.49	11	Projected
2025	1439	495	71	55	178	798	0.76	7.25	12	Projected
2026	1510	519	74	58	187	838	0.80	8.06	13	Projected
2027	1586	545	78	61	196	880	0.84	8.90	14	Projected
2028	1665	572	82	64	206	924	0.89	9.79	15	Projected

Based on the above actual traffic, estimated MSA at 8 years and 15 years are 4.41,9.79 respectively. Traffic considered in pavement design(5MSA,10MSA) is more than estimated traffic based on above actual traffic. Hence the pavement design adopted is found in order.

Details of Pavement design for Rigid Pavement are as follows:

Table 5.3: Rigid Pavement Design for Toll Plaza

Description	Design/Adopted Thickness
CBR of sub grade	10 %
Design life in years	30
Pavement Quality Concrete (PQC) - mm	250/ 280
Dry Lean Concrete (DLC) - mm	150
Drainage Layer (GSB) - (mm)	150
Diameter of Dowel Bar (mm)	32
Length of Dowel Bar (mm)	500
Spacing of Dowel Bars (mm)	280
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	560

The Pavement crust has been designed according to IRC specification and found in order, the adopted/ Constructed pavement layer thickness is adequately provided than actual/ designed thickness.

5.4 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 5 MSA and 10 MSA for a design life of 8 years for Bituminous layers (up to end of the year 2020) and 15 years for granular layers respectively (up to the end of the year 2027), whereas the actual traffic is 4 MSA and 9 MSA for 8 years and 15 years

respectively. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation prior to end of concession period to evaluate the requirement of overlay.

5.5 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of SDBC. The detailed maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Proposed on or before 2020(However overlay was done in 2018). Next over lay is scheduled in 2025.

Periodic Maintenance for Rigid Pavement – re-texturing shall be done at least once in 10 years from construction (as per IRC 58-2015).

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety has multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special publication SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992

Table 6.1: Referred IRC Publications

IRC : 35	Code of Practice for Road Markings
IRC : 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC : 67	Code of Practice for Road signs
IRC : 73	Geometric Design standards for rural highways (non-urban)
IRC :103	Guidelines for Pedestrian Facilities
IRC : SP-15	Ribbon Development along highways and its prevention
IRC : SP-23	Vertical curves for highways
IRC : SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC : SP-55	Guidelines for safety in construction zones
IRC :SP- 88	Manual of Road Safety

6.2 Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 6.2: Safety Items

S. No.	Item Description		Status	Condition
1	Sign Boards	Chevron signs	Available	Good
		Village sign Board	Available	Good
		Informatory Boards	Available	Good
		Object Hazard Markers at culverts	Available	Good
2	Road Marking	Studs & Lane Marking	Available	Fair
3	Metal Beam Crash Barriers	At High Embankments	Available	Good

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

Few Observations on the road furniture in safety aspects for the project road are mentioned below:

- At few places reflectors were missing on the sign boards and few sign boards were also damaged.
- Retro Reflective stickers need to be provided for metal beam crash barriers for night time road users at all locations and damaged metal beam crash barriers requires maintenance regularly

Figure 6.1: Representative photos during road safety audit

6.3 Conclusion

Safety arrangements are done for road users along the project road and the same is found in conformity with project highway requirements and good industry practice. However, a continuous monitoring on safety arrangements is required during the operation and maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There is one toll plaza on the project road at Ch. 4+500. Each side comprises of 1 normal lanes, 1 extra wide lane. The lane width in normal lanes is 3.2 m and in extra wide lane is 4.5 m. The width of islands provided is 1.8 m. The single canopy is provided to cover the toll lanes. Toll plaza building is G+1 floor building which houses control room, UPS and Pantry.

7.2 Tolling Equipment and Control Room Equipment's

List of equipment provided at toll plaza and control room is given below.

Table 7.1: List of Equipment at toll plaza

S. No.	Description	No.
1	OHLS	4 Nos
2	LPIC	4 Nos
3	AVC	2 Nos
4	RFID	4 Nos
5	Printer	1 No
6	Booth camera	1 No
7	Intercom (Internal)	4 Nos
8	Voilation Alarm	4 Nos
9	UFD	1 No
10	Server	1 No
11	PoE switch	1 No
12	NVR	1 No
13	PTZ Camera	1 No

7.3 Vehicles

The list of vehicles, which were observed at site for operation of highway and toll plaza, is presented below.

Table 7.2: List of Vehicles

S. No.	Vehicle Type	No.
1	Patrol vehicle	1
2	Ambulance	1
3	Water tanker	1

Figure 7.1: Km. 4+500 Toll Plaza

CHAPTER 8. TRAFFIC CENSUS AND TOLL REVENUE

8.1 Traffic Census

In accordance with clause 22.1, the Concessionaire shall install, maintain and operate electronic/computerized traffic counters at each of the Toll Plazas and collect data relating to the number and types of vehicles using the Project Highway. A weekly statement of such data shall be compiled and furnished forthwith by the Concessionaire to MPRDC substantially in the form specified in Schedule N of CA.

Accordingly, the Concessionaire provided the details. Based on the data made available the summarized annual classified Traffic census details for the past five years are provided in Table 8.1 below. The Actual traffic data recorded below has been taken as a basis to calculate AACGR % (Average Annual Compound Growth Rate).

Table 8.1: Year wise Traffic (Vehicles) Details

FY Year	Car	LCV	Bus	Truck	MAV	Total Traffic
2016	335426	114816	19144	14569	40864	524819
2017	309738	125026	19049	13495	48666	515974
2018	282830	125810	19160	13383	50206	491389
2019	354433	156570	20231	14876	52806	598916
2020	412525	141817	20318	15765	50970	641395
AACGR* (%)						5.63%

*AACGR- Annual Average Compound Growth Rate

8.2 Actual Revenue Collection

In accordance with clause 19.5, "During the operation period, the Concessionaire shall furnish to MRPDC within 7 days of completion of each month, a statement of fee substantially in the form set forth in Schedule-M (Monthly fee statement)". As per provisions of CA the concessionaire submitted monthly fee statement and the summary of form submitted under Schedule M during the financial year 2019-20 is given under as Table 8-2.

Table 8.2: Summary of 2019-20 Tollable traffic and revenue collected at Toll Plaza

Description	Car	Car(pass)	LCV	Bus	Truck	MAV	Total
In Nos.	230861	2318	112395	18344	15123	50313	429354
Toll Revenue collection in Rs.	4617220	185407	5619750	1886605	1856775	12112205	26277962

The figures shown in Table 8-1 are as per the Real time traffic data on project road for the past five years and the growth rate is calculated to be 5.63%. It is pertinent to note that the figures given in table 8-1 are inclusive of exempted /non tollable traffic.

The figures shown in Table 8-2 are actual tollable traffic based on which the toll revenue collected and is excluding of exempted/non tollable traffic. For the realistic estimate of the traffic growth and projected revenue calculation actual traffic based on which FY 2019-20 revenue collected (**Table 8.2**) is

considered as a base year traffic and the projected traffic growth rate is restricted to 5% even though the growth as per **Table 8.1** is >5%.

Based on the base year traffic and growth rate as explained above traffic projections from year 2019-20 to till end of Concession period toll plaza wise are calculated and summarized below in **Table 8.3**.

Table 8.3: Projected traffic

FY Year	AADT in Vehicles					CVPD* (Veh.)	AADT in PCU					CVPD* (PCU)	Remarks
	Car	LCV	BUS	2-AT	MAV		Car	LCV	BUS	2-AT	MAV		
	PCU Factor						1	1.5	3	3	4.5		
2020	639	308	50	41	138	537	639	462	151	124	620	1357	Actual
2021	671	323	53	44	145	564	671	485	158	131	651	1425	Projected
2022	704	339	55	46	152	593	704	509	166	137	684	1496	Projected
2023	740	356	58	48	160	622	740	535	175	144	718	1571	Projected
2024	777	374	61	50	168	653	777	561	183	151	754	1650	Projected
2025	815	393	64	53	176	686	815	590	192	159	792	1732	Projected
2026	856	413	67	56	185	720	856	619	202	167	831	1819	Projected
2027	899	433	71	58	194	756	899	650	212	175	873	1910	Projected
2028	944	455	74	61	204	794	944	682	223	184	916	2005	Projected

*CVPD: Commercial vehicle per day (LCV+BUS+2 AT+MAV)

8.3 Toll Revenue Calculations

The toll revenue for horizon year is calculated based on the input from the above data, actual toll rates collected on base year (2019-20), with Traffic growth, WPI growth and toll efficiency has been assumed 5%, 4% and 100% respectively and other inputs considered in revenue calculations is given in **Table 8.4**

Table 8.4: Toll Revenue inputs

Particular	Toll plaza 1
Location	Km. 4+500
4 lane length in kms.	0
2 lane length in kms.	35
Agreement Date	05-12-2011
Appointed Date	04-05-2012
Concession period	15 years
Commercial operation date	15-06-2013
Concession End Date	03-05-2027
Traffic study year	2020
Vehicle Type	AADT (Veh.)
Car/Jeep/Van	639
2-axle Bus	308
LCV/LGV	50

Particular	Toll plaza 1
2A-Truck	41
MAV (2A-6A)	138
Growth Rate (%)	5%

The split trip type, based on the available toll data from Concessionaire is used to derive the annual toll collection for the plaza. The revenue estimated and presented below. Detailed toll revenue estimation is given in **ANNEXURE 4**.

Table 8.5: Toll Revenue Estimated (in Rs. lakhs)

Financial Year	Annual Revenue of TP1 @ Km. 4+500	Remarks
2019-20	262.780	Actual
2020-21	281.967	Projected
2021-22	309.631	Projected
2022-23	332.984	Projected
2023-24	378.761	Projected
2024-25	406.230	Projected
2025-26	434.642	Projected
2026-27	472.397	Projected
2027-28	45.754	33 Days

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of the Concession Agreement (CA), the Concessionaire will operate and maintain the Project road by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate, need (if any) for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to beginning of each accounting year during the operation period.

9.3 Operations

Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- 1 Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- 2 Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.
- 3 carrying out preventive and periodic maintenance of the Project road;
- 4 undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;

- 5 Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- 6 Functioning of the lighting system;
- 7 Functioning of the Patrolling System
- 8 Functioning of rescue and medical aid services
- 9 Ambulance as and when required
- 10 Functioning of the Project Facilities
- 11 Administrative, Operational and Maintenance Base Camp
- 12 Truck Lay byes
- 13 Pickup Bus stops / Bus Bays
- 14 Protection of the environment and provision of equipment and materials therefore;
- 15 Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- 16 Complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plaza

There are two lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the escrow account. In case of ETC system Toll collection is connected with Network system and directly deposited into the Escrow account

9.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year. Road maintenance can be carried out in four ways as listed below.

1. Preventive Maintenance
2. Routine Maintenance
3. Periodic Maintenance
4. Special repairs

Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period. Preventive Maintenance shall include the activities related to each element and the system as a whole of the Project Preventive Maintenance for Structures is estimated by the consultant. The condition data collected from site was used to arrive at the appropriate treatments and quantities. Rates from Schedule of Rates (SOR) of MP, was used to arrive at the cost.

The flexible pavement is in good condition and hence doesn't require any immediate or preventive interventions.

Routine Maintenance:

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road.

The details of periodic maintenance schedule are given below.

Table 9.1: Schedule and status of for Periodic Maintenance

S No.	Scheduled Major Maintenance	Year	Status at site
1	1st Periodic Maintenance	2018	Executed
2	2 nd Periodic Maintenance	2025	Scheduled

Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per Programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.6 Review of Test Reports:

Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of Sept 2020. As per Schedule K of the CA, If the value exceeds 3000mm in a KM, the stretch shall be rectified. No stretch exceeded the permissible limit of 3000 mm in the Project road.

Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement. The BBD test is to be conducted once in a year.

Concessionaire has conducted the test in Jan 2020. The test report has been verified and found within permissible limits as per IRC 81.

9.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 5**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance	Incidental maintenance	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	0.131	0.098		0.30	0.53
2021	0.135	0.101		0.31	0.55

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 Scope of Work (Article 2)

Article 2 provides the scope of work, which includes the following.

- Construction of the Project road on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of Project Facilities as specified in Schedule-C, and in conformity with the Specifications and Standards set forth in Schedule-D of the CA
- Operation and maintenance of the Project road in accordance with the provisions of Concession Agreement (CA)
- Performance and fulfillment of all other obligations of the Concessionaire in accordance with the provisions of this CA and matters incidental

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 6**.

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the CA

Conditions precedent to be fulfilled by the Concessionaire

Provide performance security to the Authority

- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of the CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfil its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the CA

10.5 Obligations relating to the Competing Roads (Clause 6.3)

Neither Authority nor any Governmental Instrumentality shall construct the Competing Road before 10th Anniversary of the Appointed Date.

10.6 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 20% of the Total Project Cost.

10.7 Provisional Completion Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA and after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of the CA. Provisional Completion Certificate given in **ANNEXURE 7**

10.8 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire. Completion Certificate given in **ANNEXURE 8**

10.9 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of scope, proposals were initiated during construction period and consented by the MPRDC. Details are provided in **ANNEXURE 10**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents.
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment

- Preventing any un authorized use of the Project road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations Period; the Project road conforms to the maintenance requirements set forth in Schedule K of the CA (the “**Maintenance Requirements**”).

10.13 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty) days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8):

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 0.5% (zero decimal five percent) of the Average Daily Fee, and
- 0.1% (zero point one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire,

Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Monthly Fee Statement (Clause 19.5)

During the Operations Period, the Contractor shall furnish to the Concessionaire and the Authority, if required by the Contractor, within 7 (seven) days of completion of each month, a statement of Fee substantially in the format set out in the CA (“Monthly Fee Statement”).

10.18 Annuity (Article 25)

The Annuity payment of Rs 3.69 Crores is due and payable by the Authority to the Concessionaire for each six months after COD as set forth in Clause 25.2.1 and Schedule Y of CA.

Table 10.1: Status of Annuity Payments

S. No.	Particulars	Paid on
1	1 st Annuity	08-Oct-13
2	2 nd Annuity	02-Apr-14
3	3 rd Annuity	04-Oct-14
4	4 th Annuity	31-Mar-15
5	5 th Annuity	03-Oct-15
6	6 th Annuity	04-Apr-16
7	7 th Annuity	05-Oct-16
8	8 th Annuity	03-Apr-17
9	9 th Annuity	07-Oct-17
10	10 th Annuity	17-Apr-18
11	11 th Annuity	04-Oct-18
12	12 th Annuity	30-Mar-19
13	13 th Annuity	30-Sep-19
14	14 th Annuity	21-Apr-20
15	15 th Annuity	28-Sep-20

10.19 Concession Fee (Article 26)

- In consideration of the grant of Concession the Concessionaire shall pay Concession Fee of Rs1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC

10.20 Toll fee (Clause 27.1.1)

Toll Fees Shall be revised annually in accordance with Clause 27.2.1.

10.21 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 Details of Insurance

As per clause 32.1 of the Concession Agreement (CA), the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Insurance copies are provided in **ANNEXURE 9**. Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Property
			From	To	
Civil Engineering Completed Risk	National Insurance Company Ltd	3213004419 10001985	27.03.2020	26.03.2021	Road & Structure: Toll Building & Toll Booths, TMS, HTMS, Office & IT equipment, Electronic Equipment, Road Furniture, Fixtures, electrical Poles Lighting & Fittings, Sign boards & Safety Barrier
Employees Compensation Insurance Policy	HDFC ERGO General Insurance Company Ltd	311420338 8604100000	19.05.2020	18.05.2021	All categories of Employees of the Contractor & sub-contractor engaged in the Project
EEL Policy	Oriental Insurance Company Limited	171200/44/ 2021/39	08.09.2020	07.09.2021	Electronic Equipment installed in the project road

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The overall project pavement condition is good. RCC drains are constructed in Built up locations and earthen drains in rural locations resulting in, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are getting cleared during regular maintenance period.

12.4 Traffic Growth

Based on real time traffic data collected from the submissions made as per Schedule N of the CA, the traffic growth observed is 5.63%. However, 5% only considered while estimating forecast of traffic volumes.

12.5 Project Facilities

Toll Plaza is located at Ch.4+500 and is operational. Toll Plaza is operated by ETC Toll collection system and connected by network system monitored in administrative building. Bus bays are in fair condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained. Highway lighting is provided at toll plaza locations and found functional.

12.6 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per site requirement. The condition of sign boards & other road appurtenances like metal beam crash barriers is fair.

12.7 Maintenance

- The routine maintenance being carried out by O&M contractor effectively. Based on documents reviewed, time to time observations made by client/Authority, being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance was carried out in 2018 and next MM is scheduled in 2025.

12.8 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

ANNEXURES

Annexure 1: Pavement Condition

CHAPTER 1. INTRODUCTION

1.1 General

DBL Mundi-Sanawad Tollways Limited (herein after referred to as the “Concessionaire”) had augmented the existing road from Km.0+000 (Mundi town East Nimar Dist.) to Km.64+400 (Sanawad town West Nimar Dist.) in the state of Madhya Pradesh, in accordance with the provisions of the Concession Agreement (CA) executed with Madhya Pradesh Road Development Corporation Limited (herein after referred to as the “MPRDC”) on 05.12.2011.

Project Highway starts at Mundi town in East Nimar District (Km. 0+000) and terminates at in Sanawad town in West Nimar Dist. Km.64+400) in the state of Madhya Pradesh. Length of existing project road is 64.400 Km and design length of project road is 67.633 Kms. which includes Punasa bypass.

Figure 1.1: Project Location Map

SHREM ROADWAYS PRIVATE LIMITED (SRPL) acquired DBL MUNDI SANAWAD TOLLWAYS LIMITED vide agreement dated 26.03.2018

SHREM FINANCIAL PRIVATE LIMITED (SFPL) appointed RUKY Projects Pvt. Ltd. as consultants for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriage way and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the traffic potential and to estimate the projected Toll Collection Etc.

1.2 The Project Data:

The details of the project are listed in the following table.

Table 1.1: The Project Data

S. No.	Particulars	Details
1	Name of the project	Development of Mundi-Punasa-Sulgaon-Sanawad (MDR) Road on BOT (Toll + Annuity) Basis
2	Road Type	Major District Road (MDR) in the State of Madhya Pradesh
3	Name of the Authority	Madhya Pradesh Road Development Corporation Limited
4	Name of the Concessionaire	DBL Mundi-Sanawad Toll ways Limited
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Date of LOA	17.10.2011
7	Date of Agreement	5.12.2011
8	Design length as per Schedule B of CA	67.633 Km.
9	Actual length constructed	67.633 Km.
10	Project lane configuration	2 Lane
11	EPC cost	120 Cr
12	Nature of contract	BOT (Toll + Annuity)
13	Toll collected by	Concessionaire
14	Concession period	15 years from the appointed date
15	Appointed date	19.03.2012
16	Concession end date	18.03.2027
17	Construction period	730 days from the appointed date.
18	Schedule completion date	18.03.2014
19	Date of issuance of provisional certificate (Commercial operation date)	15.05.2013
20	Date of issuance of completion certificate	8.07.2013
21	Annuity amount (every six months)	8.28 Cr
22	Total number of annuities payable	26 Nos.
23	First annuity payment date	15.11.2013

S. No.	Particulars	Details
24	Total number of annuity paid	15 Nos.

1.3 Scope of consultancy services

The scope of work includes providing due diligence of the project road and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Carryout review of various contractual documents
- Review of historic/past data on revenue collected
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition assessment by visual inspection of all elements like road, structures, embankment slope, plantation, road furniture, tolling system etc., of the project.
- Visual condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout review of tolling system to evaluate the tolling facility to provide efficient & reliable tolling system. Identify any loop holes in the system and provide any additional improvement required for the tolling system.
- Carryout out road safety audit of existing road and provide improvement suggestions.
- Provide BOQ and cost estimate for routine & periodic maintenance.
- Review any issues with Authority/ Independent Engineer related to design, drawing, works, and others.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of all project asset related insurances and statutory compliances.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features as per schedule B and Schedule C of Concession Agreement (CA) including Change of scope are listed in the following table.

Table 2.1: Salient Features

S. No.	Particulars	As per CA	As per COS	As per Site
1	Total Project Length	67.633 Kms.		67.633 Kms.
2	Total Length of 2Lane	65.397 Kms.	-	65.397 Kms.
3	Total Length of 4Lane	2.236 Kms.		2.236 Kms
4	Rigid Pavement 2 Lane	1.09 Kms.		1.09 km.
5	Bypass/Realignment 2 Lane	2.920 Km./1.35 Km.		2.920 Km./1.35 Km.
6	Toll Plaza	1 No.	-	1 No.
7	Bus Bays / Bus Shelters	56 Nos.	-	56 Nos.
8	Truck Lay Bys	Nil		Nil
9	Major Junction	1 Nos.	-	1 Nos.
10	Minor Junctions	20 Nos.	-	20 Nos.
11	ROB	-		-
12	Major Bridges	1 No.	-	1 No.
13	Minor Bridges	23 Nos.	+2,-1 Nos.	24 Nos.
14	Pipe Culverts	89 Nos.	+2,-3 Nos.	88 Nos.
15	Slab/Box Culverts	15 Nos.	1 No.	16 Nos.

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Sections shown below as per schedule during the construction.

Figure 2.1: (TCS.2.1 of Schedule D)

2-Lane Carriageway with hard Shoulders without service road (Open Country-Plain/rolling terrain)

Figure 2.2: (TCS.2.2 of Schedule D)
 4-Lane divided Carriageway with footpath (Built-up area)

Figure 2.3: (TCS.2.3 of Schedule D)
 2-Lane Carriageway with Paved Shoulder (Built-up area)

TCS schedule is provided below.

Table 2.2: TCS Schedule

S. No.	From Chainage (Km)	To Chainage(Km)	Length (Km)	TCS Type
1	0+000	0+875	0.875	TCS 2.2 of Schedule D of CA
2	0+875	2+335	1.460	TCS 2.3 of Schedule D of CA

4	2+695	2+945	0.250	TCS 2.3 of Schedule D of CA
5	2+945	9+720	6.775	TCS 2.1 of Schedule D of CA
6	9+720	10+105	0.385	TCS 2.3 of Schedule D of CA
7	10+105	20+790	10.685	TCS 2.1 of Schedule D of CA
8	20+790	20+995	0.205	TCS 2.3 of Schedule D of CA
9	20+995	28+250	7.255	TCS 2.1 of Schedule D of CA
10	28+250	28+465	0.215	TCS 2.3 of Schedule D of CA
11	28+465	30+960	2.495	TCS 2.1 of Schedule D of CA
12	30+960	31+290	0.330	TCS 2.3 of Schedule D of CA
13	31+290	33+980	2.690	TCS 2.1 of Schedule D of CA
14	33+980	34+225	0.245	TCS 2.3 of Schedule D of CA
15	34+225	34+530	0.305	TCS 2.1 of Schedule D of CA
16	34+530	34+790	0.260	TCS 2.3 of Schedule D of CA
17	34+790	45+925	11.135	TCS 2.1 of Schedule D of CA
18	45+925	46+125	0.200	TCS 2.3 of Schedule D of CA

S. No.	From Chainage (Km)	To Chainage(Km)	Length (Km)	TCS Type
19	46+125	54+065	7.940	TCS 2.1 of Schedule D of CA
20	54+065	54+800	0.735	TCS 2.2 of Schedule D of CA
21	54+800	63+150	8.350	TCS 2.1 of Schedule D of CA
22	63+150	63+776	0.626	TCS 2.2 of Schedule D of CA
23	63+776	67+633	3.857	TCS 2.1 of Schedule D of CA

Figure 2.4: Pictorial Diagram of TCS Lengths

2.3 Road Side Drainage:

- To facilitate quick disposal of storm water from the Carriage way and avoid accumulation of drainage from road side community on the Carriage way, RCC drains are constructed along the main carriage way on both flanks as specified in Schedule B of the Concession Agreement in strict adherence to the Standard Specifications set forth in Schedule D of the Concession Agreement
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains in open and rural areas.

2.4 Service Roads:

No service road is proposed along entire stretch of the Project Road.

2.5 Bypass/Realignment:

One Bypass in Punasa and Seven Realignments are provided as per provisions of Schedule B of the Concession Agreement

Table 2.3: Summary of Bypass/Realignment

S. No.	Chainage (Km.)		Length (Kms.)
	From	To	
Punasa Bypass			
1	21+550	24+470	2.920
Realignments			
1	11+775	11+930	0.155
2	38+380	38+630	0.250
3	41+530	41+700	0.170
4	42+885	43+100	0.215
5	47+530	47+720	0.190
6	59+580	59+800	0.220
7	63+000	63+150	0.150

2.6 Intersections:

As per provisions of Schedule B of the Concession Agreement, 1 Major Junction and 20 Minor Junctions are provided. Details are given below.

Table 2.4: Summary of Junctions

S. No.	Chainage(Km)	Type Junction	Location
Major			
1	63+776	T	LHS-Khandwa RHS-Indore
Minor			
1	0+000	T	Beer-Khandwa
2	1+785	T	Bid
3	7+455	T	Jamkota
4	9+928	T	Utavad
5	17+245	T	Chandel
6	18+225	T	Ajania
7	19+700	T	Strailya
8	24+943	T	Navalvil
9	30+960	T	Nadiyake
10	32+010	Y	Hantiya
11	34+132	T	Nana Kheda
12	38+770	+	LHS-Atur RHS-Kelva
13	42+600	T	Moondi
14	45+380	T	Boradi
15	47+900	T	Gol
16	54+360	T	Mathela
17	55+800	T	Sulgaon
18	57+245	T	Gosti

S. No.	Chainage(Km)	Type Junction	Location
19	58+525	+	Khangwad-Ghosata
20	62+500	T	Omkareshwar

2.7 Grade Separated Structures and underpasses:

Grade Separated structures and underpasses are not proposed along the entire stretch of the project road as per provisions of Schedule B of the Concession Agreement.

2.8 Road Over Bridge(ROB):

ROB's are not proposed in the project road. The existing railway crossing at Ch: 64+000 in Sanawad is proposed to be retained as per provisions of Schedule B of the Concession Agreement.

2.9 Summary of the Carriageway and pavement Details:

Table 2.5: Summary of Carriageway and pavement Details

S. No.	Description	Flexible (kms.)	Rigid (kms.)	TCS Type
1	Two lane Carriageway with hard shoulders.	61.847	---	TCS-2.1
2	Four lane Carriageway with footpath	2.236	---	TCS-2.2
3	Two lane Carriageway with Paved shoulder	2.460	1.090	TCS-2.3
4	Total length of the project	67.633		---
TYPE OF ALIGNMENT				
5	New alignment/bypass	2.92	---	---
6	Realignment	1.350	---	---
7	Strengthening	---	---	---
8	Reconstruction	63.363	---	---
9	Total length of the project	67.633	---	---

2.10 Summary of Structures:

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.6: Summary of Structures:

S. No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts
1	Widening + Repair and strength	-	17	15	02
2	Retained	01	02	18	05
3	Reconstruction	-	02	47	08
4	New Construction	-		08	
5	Existing Causeway is reconstructed as culvert			01	

S. No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts
6	Existing Causeway is reconstructed as minor bridge		02		
	Total	01	23	89	15

Details of the condition survey carried out on structures are provided at **ANNEXURE 2 & 3**

2.11 Toll Plazas

As per Schedule C of the CA provisions, one Toll Plaza has been constructed at Km. 59+400. Salient features of Toll Plaza are provided below.

- Each side comprises of 1 Normal Lanes, 1 extra wide lane and 1 bike lane.
- The lane width in normal lanes is 3.20m.
- The lane width in extra wide lane is 4.5m
- The width of islands provided is 1.8m.
- Toll plaza building is G+1 floor building which houses control room, UPS and Pantry.

2.12 Bus shelters and truck lay byes

As per the provisions of Schedule C of the CA bus shelters are provided at 56 locations. Details provided in table below.

Table 2.7: Bus shelters details

S. No.	Chainage (Km.)	Side	Location	S. No	Chainage(Km)	Side	Location
1	0+000	LHS	Mundi	29	30+900	LHS	Nadiyake
2	0+000	RHS	Mundi	30	31+000	RHS	Nadiyake
3	0+500	LHS	Devala	31	31+950	LHS	Hantiya
4	0+600	RHS	Devala	32	32+020	RHS	Hantiya

26	25+000	RHS	Navalvil	54	62+500	RHS	Omkareshwar
27	28+300	LHS	Bikri	55	63+550	LHS	Sanawad
28	28+400	RHS	Bikri	56	63+550	RHS	Sanawad

Km. 0+150 – Median Rail

Km. 18+500 – Bus Bay

Figure 2.5: Median Rail & Bus Bay Photos

2.13 Other Project Facilities Provided as per Schedule C of CA:

- Roadside furniture: Sign boards, kilometer stones, road marking, Overhead sign boards and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic safety devices: W beam crash barriers, parapet walls are provided as per the provisions of Schedule C of the CA.
- Landscaping: provided at toll plaza location and being maintained
- Tree plantation: Tree plantation is provided on both sides, for the full length of project corridor and being maintained.
- Medical Aid Post: Provided at toll plaza location and in operational
- Highway Lighting: Highway lighting is provided at Toll Plaza locations and is functional.

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General:

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented below.

3.2 Road Inventory:

Inventory of the project road was carried out physically and the same is summarized in the following table. Couple of representative photographs, are given below to have a clear picture of the Project.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain & Rolling and at few locations Hilly
2	Land Use	Built Up, Agriculture
3	Two lane length	65.397 Km
4	Four lane length	2.236 Km
5	Earthen shoulder	1.0 m to 1.5 m width on site
6	Bypass/Realignment	2.920 Km./1.350 Km.
7	Junctions	21 Nos (Major-1Nos., Minor -20Nos.)
8	Toll Plaza	Km.59+400
9	Sign boards	Sign boards are provided as per requirement
10	Road Markings	Lane markings are provided as per requirement
11	Bus Bays /shelters	56 Nos.
12	Street Lighting	Highway lighting provided as per requirement
13	Avenue plantation	Provided

3.3 Pavement Condition

Pavement condition survey was carried out on the project road based on observations supplemented by simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Road Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Assessment of the condition of Pavement surface is a key component of infrastructure asset management. The information is used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of

pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey

The survey on general pavement condition was primarily undertaken by means of slow drive- over survey, and supplemented with measurements wherever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of surface area)
 - Ravelling (%of surface area)
 - Potholes (%of surface area)
 - Patching (%of surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement condition of the Project road in the above manner, it is observed that the pavement condition of project road is good. The field measurements of the Pavement Condition survey is tabulated in the standard proforma as per IRC: SP-19 and is given in **ANNEXURE 1**. The summary of Pavement condition is given below.

Table 3.3: Pavement condition summary

From (km.)	To (km.)	Length (kms)	Condition
0+000	67+633	67.633 Km.	Good

Km. 1+750

Km. 318+500

Km. 50+200

Figure 3.1: Representative photos for pavement condition

CHAPTER 4. INVENTORY AND REVIEW OF STRUCTURES

4.1 General Assessment and Condition of the Structures:

Inspection of existing structures on the Project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

The details of the Structures along the project highway are listed below

Table 4.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	1 No
2	Minor Bridge	24 Nos.
3	Pipe culverts	88 Nos.
4	Slab/Box Culverts	16 Nos.

There is one major bridge on the project road. The superstructure is of RCC T beam and slab, resting on RCC wall type piers and abutments supported by Open/Pile foundations. The Super structure of minor bridges is precast RCC T-Beam, cast in situ deck slab &RCC solid slab and the substructures are of PCC conventional wall type, supported on open foundations and CR Masonry/RCC wall type with open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. The condition of most of the Culverts is fair. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges

There is one Major bridge in the project stretch. The total length of the bridge is 80.0m with 4 spans of 20.0m. The superstructure is of RCC, T beam and deck slab. The substructure is of RCC wall type piers and abutments resting on open/pile foundations. Elastomeric/Neoprene bearings are used. Expansion joints are of strip seal type and RCC crash barrier has been provided.

Table 4.2: List of Major Bridge

S. No.	Chainage (Km)	Span	Total Length of Bridge (m)
1	41+698	4 x 20.0m	80.0

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, drainage spouts and strip seal expansion joints are to be carried out.

4.4 Description of Minor Bridges

The type of superstructure for 24 minor bridges is RCC solid slab and precast RCC, T-Beam, cast in situ deck slab (5-girder system) and RCC Box cell structure. The substructures are of PCC conventional wall type supported with open foundations and CR Masonry wall type and RCC wall type with open foundations.

Table 4.3: Inventory of Minor Bridges

S. No.	Chainage (Km)	Span	Total Length of Bridge (m)	Description
1	Km.2+320	38.8m.	26.4	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type piers and abutments It has Abutment Wall type. Other features are bituminous wearing coat, and RCC crash barrier.
2	Km.3+217	1X10.2m.	10.2	The Minor Bridge has precast RCC T-Beam superstructure supported on RCC wall type piers and abutments. It has Abutment Wall type. Other features are bituminous wearing coat and RCC crash barrier.
3	Km.5+376	2X6.9m.	13.8	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type piers and abutments. It has Abutment Wall type. Other features are bituminous wearing coat and RCC crash barrier.
4	Km.7+073	1x8.9m.	8.9	The Minor Bridge has RCC solid slab superstructure supported on PCC wall type abutments. Other features are bituminous wearing coat, and RCC crash barrier.
5	Km.14+461	1x5.7m.	5.7	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type. Other features are bituminous wearing coat, and RCC crash barrier.
6	Km.15+987	1X10.4m.	10.4	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type abutments. Other features are bituminous wearing coat and RCC crash barrier.

14	42+285	4x2.2+2x3.0	14.8	The Minor Bridge is of RCC Box type with six vents. Other features are bituminous wearing coat and RCC crash barrier.
15	45+334	2x9.6	19.2	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type abutments. Other features are bituminous wearing coat and RCC crash barrier.
16	45+466	1x8.2	8.2	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type abutments. Other features are bituminous wearing coat and RCC crash barrier.
17	47+786	4x2.2+2x3.0	14.8	The Minor Bridge is of RCC Box type with six vents. Other features are bituminous wearing coat and RCC crash barrier.
18	53+769	2x5.0	10	The Minor Bridge is of RCC Box type with two vents. Other features are bituminous wearing coat and RCC crash barrier.
19	54+496	1x9.7	9.7	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type abutments. Other features are bituminous wearing coat and RCC crash barrier.
20	54+792	2X7.0	14	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type abutments. Other features are bituminous wearing coat and RCC crash barrier.
21	57+140	1x 6.8	6.8	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type abutments. Other features are bituminous wearing coat and RCC crash barrier.
22	59+360	2X 6.9	13.8	The Minor Bridge has RCC solid slab superstructure supported on masonry wall type piers and abutments. Other features bituminous wearing coat and RCC crash barrier.
23	59+336	1x8.0	8	The Minor Bridge is RCC Box type superstructure with single vent. Other features are bituminous wearing coat and RCC crash barrier.

S. No.	Chainage (Km)	Span	Total Length of Bridge (m)	Description
24	62+732	3x 6.0	18	The Minor Bridge has RCC solid slab superstructure supported on RCC wall type piers and abutments. Other features are bituminous wearing coat and RCC crash barrier.

Km. 33+179

Km. 47+786

Figure 4.1: Representative photos for minor bridges

4.5 General Description of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.5.1. General Description of the Slab/Box Culverts

The details of the culverts along the project highway are as given below.

Table 4.4: List of Slab Culverts

S. No.	Chainage @Km.	Span (m)	Vent Size (m)
1	2+721	1 x 5.0	2.30
2	9+348	1 x 2.1	1.80

Figure 4.3: Representative photos of Pipe Culverts

Condition of the Pipe Culverts

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon, for vent clearance, Protection works etc.

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2001 publication while the current publication is IRC: 37-2018.

Review of Pavement Design

As per the pavement design approved in the project, the following conclusions are given.

Table 5.1: Pavement design validation

S. No.	Description/ Pavement layer	Design/Adopted Parameters	
1	Sub Grade CBR (%)	10%	
2	Design Life (Years)	15 years	
3	Design Traffic* (MSA)	5 MSA Adopted	8 years for BT
		10 MSA Adopted	15 years For Granular
4	Surface course (SDBC)	25 mm	
5	Binder course (DBM)	50 mm	
6	Base course (WMM)	250 mm	
7	Sub Base course (GSB)	200 mm	

5.3 Validation of Pavement design

The new pavement shall be designed in accordance with the IRC:37. "Guidelines for the Design of Flexible Pavements". Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. "Guidelines for the Design of Plain Jointed Rigid Pavements for Highways".

Pavement design validation is carried out as per actual traffic from COD. As per IRC 37, Vehicle Damage Factor (VDF), Distribution of commercial vehicles and growth rate values are 3.5, 0.75 and 5% respectively. Summary is given below.

Table 5.2: Real Time Traffic from COD and Projected Traffic from Current years with 5% growth for CMSA

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA*	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2014	690	270	12	73	30	385	0.37	0.37	2	Actual
2015	577	259	9	32	10	310	0.30	0.67	3	Actual
2016	609	254	8	27	9	298	0.29	0.95	4	Actual
2017	586	248	8	28	12	297	0.28	1.24	5	Actual
2018	617	248	6	30	19	303	0.29	1.53	6	Actual
2019	649	242	5	35	36	318	0.30	1.83	7	Actual
2020	897	297	8	52	61	418	0.40	2.23	8	Actual
2021	942	312	8	55	64	439	0.42	2.65	9	Projected
2022	989	327	8	58	68	461	0.44	3.09	10	Projected
2023	1038	344	9	61	71	484	0.46	3.56	11	Projected
2024	1090	361	9	64	75	508	0.49	4.04	12	Projected
2025	1145	379	10	67	78	534	0.51	4.56	13	Projected
2026	1202	398	10	70	82	560	0.54	5.09	14	Projected
2027	1262	418	11	74	86	589	0.56	5.66	15	Projected

*Cumulative MSA

Based on the above actual traffic, estimated MSA at 8 years and 15 years are 2.23 MSA, 5.66 MSA respectively.

Traffic considered in pavement design is more than estimated traffic based on actual traffic. Hence the pavement design adopted is found in order.

Details of the Pavement design for rigid pavement are as follows:

Table 5.3: Rigid Pavement Design for Toll Plaza

Description	Design/Adopted Thickness
CBR of sub grade	10 %
Design life in years	30
Pavement Quality Concrete (PQC) – (mm)	280
Dry Lean Concrete (DLC) – (mm)	150
Drainage Layer (GSB) - (mm)	150
Separation membrane b/t PQC & DLC – (micron)	125
Diameter of Dowel Bar (mm)	32
Length of Dowel Bar (mm)	500
Spacing of Dowel Bars (mm)	300
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	500

The Pavement crust has been designed according to IRC specification and found in order, the adopted/ Constructed pavement layer thickness is adequately provided than actual/ designed thickness.

5.4 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 5 MSA & 10 MSA for Bituminous layer (8 years) and for base and sub base (15 years) respectively (up to 2027), whereas the actual cumulative traffic is 2 MSA & 5.08 MSA in the year of 2020 and 2027 respectively. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation before the end of Stage-I of design life (as per pavement design report) and prior to end of concession period to evaluate the requirement of overlay.

5.4.1. Maintenance / Overlay Schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of SDBC as per specifications. The maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – on or before 2021. As the road condition is good planned for 2021.

Periodic Maintenance for Rigid Pavement – re-texturing shall be done at least once in 10 years from construction (as per IRC-58-2015).

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals. Type Designs for Intersections on National Highways, 1992

Table 6.1: Referred IRC Publications

IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety

6.2 Existing Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 6.2: Safety Items

S. No	Item Description		Status	Condition
1	Sign Boards	Chevron Signs	Available as per site requirement	Good
		Village sign boards	Available as per site requirement	Good
		Cautionary sign boards	Available as per site requirement	Good
		Information boards	Available as per site requirement	Good
		Object Hazard Markers at culverts	Available as per site requirement	Good
2	Road Marking	Studs & Lane Marking	Available as per site requirement	Fair
3	Metal Beam Crash Barriers	At High Embankments	Available as per site requirement	Fair

This Project Section is part of an important corridor. It is the Concessionaire's duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

Few Observations on the road furniture in safety aspects for the project road are mentioned below:

- At few places reflectors were missing on the sign boards and few sign boards were also damaged.
- Retro Reflective stickers need to be provided for metal beam crash barriers for night time road users at all locations and damaged metal beam crash barriers requires maintenance regularly
- Speed mitigation measures shall be provided at junction to reduce the speed, and adequate visibility shall be maintained at junctions in part of routine maintenance.
- The object hazard markers are placed only on one side of Head walls/parapet walls of all structures, whereas it is to be installed on both sides at structures.

6.3 Conclusion

Safety arrangements are done for road users along the project road and the same is found in conformity with project highway requirements and good industry practice. However, a continuous monitoring on safety arrangements is required during the operation and maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There is one toll Plazas on the project road at Km. 59+400. Each side comprises of 1 Normal Lanes, 1 extra wide lane and bike lane. Only one lane in each direction is operational. The lane width in normal lanes was 3.20m. The width of islands provided is 1.8m. The single canopy is provided to cover the toll lanes. Toll plaza building is G+1 building which houses control room, UPS and Pantry. Other rooms are vacant and used by Toll collectors.

Toll Plaza

1	Patrol Vehicle	TVS Bike	1
2	Ambulance	Mahindra Genio	1

CHAPTER 8. TRAFFIC CENSUS AND TOLL REVENUE

8.1 Traffic Census

In accordance with clause 22.1, the Concessionaire shall install, maintain and operate electronic/computerized traffic counters at each of the Toll Plazas and collect data relating to the number and types of vehicles using the Project Highway. A weekly statement of such data shall be compiled and furnished forthwith by the Concessionaire to MPRDC substantially in the form specified in Schedule N of CA.

Accordingly, the Concessionaire provided toll plaza wise details. Based on the data made available the summarized annual classified Traffic census details for the past five years are provided in Table 8.1 below. The Actual traffic data recorded below has been taken as a basis to calculate AACGR % (Annual Average Compound Growth Rate).

Table 8.1: Year wise Traffic (Vehicles) Details as per schedule N of CA

FY Year	Car	LCV	Bus	Truck	MAV	Total Traffic
2016	222996	93032	2934	9726	3471	332159
2017	213976	90691	2853	10265	4519	322304
2018	225043	90608	2335	10778	6796	335560
2019	236726	88304	1723	12857	13178	352788
2020	328314	108645	2787	19174	22470	481390
AACGR (%)						10.68%

*AACGR- Annual Average Compound Growth Rate

8.2 Actual Revenue Collection

In accordance with clause 19.5, “During the operation period, the Concessionaire shall furnish to MRPDC within 7 days of completion of each month, a statement of fee substantially in the form set forth in Schedule-M (Monthly fee statement)”. As per provisions of CA the concessionaire submitted monthly fee statement and the summary of form submitted under Schedule M during the financial year 2019-20 is given under as Table 8.2.

Table 8.2: Summary of 2019-20 Tollable traffic and revenue collected at Toll Plaza

Description	Car	Car(pass)	LCV	Bus	Truck	MAV	Total
In Nos.	199283	44824	82583	2556	16522	20584	366352
Toll Revenue collection in Rs.	7971320	3585930	7660020	500420	3891310	9683095	33292095

The figures shown in Table 8.1 are Real time traffic data on project road for the past five years and the growth rate is calculated to be 10.68%. It is pertinent to note that the figures given in table 8.1 are inclusive of exempted /non-tollable traffic.

The figures shown in Table 8.2 are actual tollable traffic based on which the toll revenue collected and is excluding of exempted/non tollable traffic. For the realistic estimate of the traffic growth and

projected revenue calculation actual traffic based on which FY 2019-20 revenue collected (table 8.2) is considered as a base year traffic and the projected traffic growth rate is restricted to 5%.

Based on the base year traffic and growth rate as explained above traffic projections from year 2019-20 to till end of Concession period toll plaza wise are calculated and summarized below in Table 8.3.

Table 8.3: Projected traffic

FY Year	AADT in Vehicles					CVPD* (Veh.)	AADT in PCU					CVPD* (PCU)	Remarks
	Car	LCV	BUS	2-AT	MAV		Car	LCV	BUS	2-AT	MAV		
	PCU Factor						1	1.5	3	3	4.5		
2020	669	226	7	45	56	335	669	339	21	136	254	750	Actual
2021	702	238	7	48	59	352	702	356	22	143	266	787	Projected
2022	737	249	8	50	62	369	737	374	23	150	280	827	Projected
2023	774	262	8	52	65	388	774	393	24	157	294	868	Projected

2025	854	289	9	58	72	427	854	433	27	173	324	957	Projected
2026	896	303	9	61	76	449	896	455	28	182	340	1005	Projected
2027	941	318	10	64	79	471	941	478	30	191	357	1055	Projected

*CVPD: Commercial vehicle per day (LCV+BUS+2 AT+MAV)

8.3 Toll Revenue Calculations

The toll revenue for horizon year is calculated based on the input from the above data, actual toll rates collected on base year (2019-20), with Traffic growth, WPI growth and toll efficiency has been assumed 5%, 4% and 100% respectively and other inputs considered in revenue calculations is given in table 8-4

Table 8.4: Toll Revenue inputs

Particular	Toll plaza 1
Location	Km. 59+400
4 lane length in km	0
2 lane length in km	67.63
Agreement Date	05-12-2011
Appointed Date	19.03.2012
Concession period	15
Commercial operation date	15.05.2013
Concession End Date	18-Mar-27
Traffic study year	2020
Vehicle Type	AADT
Car/Jeep/Van	669
2-axle Bus	226
LCV/LGV	7

Particular	Toll plaza 1
2A-Truck	45
MAV (2A-6A)	56
Growth Rate (%)	5%

The split trip type based on the available toll data from Concessionaire is used to derive the annual toll collection for each plaza. The revenue estimated and presented below. Detailed toll revenue estimation is given in **ANNEXURE 4**.

Table 8.5 Toll Revenue Estimated (in Rs. lakhs)

Financial Year	Annual Revenue of TP1 @ Km.59+400	Remarks
2019-20	332.921	Actual
2020-21	363.902	Projected
2021-22	404.118	Projected
2022-23	432.687	Projected
2023-24	469.212	Projected
2024-25	517.273	Projected
2025-26	559.554	Projected
2026-27	573.368	352 Days

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of the Concession Agreement (CA), the Concessionaire will operate and maintain the Project Highways by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required occasionally. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to beginning of each accounting year during the operation period.

9.3 Operations

9.3.1. Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project Highway and Project Facilities.

- 1 Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- 2 Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.
- 3 Carrying out preventive and periodic maintenance of the Project Highway;
- 4 Undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;

- 5 Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- 6 Functioning of the lighting system;
- 7 Functioning of the Patrolling System
- 8 Functioning of rescue and medical aid services
- 9 Ambulance as and when required
- 10 Functioning of the Project Facilities
- 11 Administrative, Operational and Maintenance Base Camp
- 12 Truck Parking Lay bays
- 13 Pickup Bus stops / Bus Bays
- 14 protection of the environment and provision of equipment and materials therefor;
- 15 Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project Highway
- 16 complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plaza

One lane in each direction is currently operational and the extra wide lane is opened for wide vehicles. The cash collected is deposited on daily basis to the escrow account. In case of ETC system Toll collection is connected with Network system and directly deposited into the Escrow account

9.5 Maintenance of Project Highway

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year. Road maintenance can be carried out in four ways as listed below.

1. Preventive Maintenance
2. Routine Maintenance
3. Periodic Maintenance
4. Special repairs

9.5.1. Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period. Preventive Maintenance shall include the activities related to each element and the system as a whole of the Project Preventive Maintenance for Structures is estimated by the consultant. The condition data collected from site was used to arrive at the appropriate treatments and quantities. Rates from Schedule of Rates (SOR) of MP, was used to arrive at the cost.

The flexible pavement is in good condition and hence doesn't require any immediate or preventive interventions.

9.5.2. Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

9.5.3. Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road.

The details of periodic maintenance schedule are given below.

Table 9.1 : Schedule and status of for Periodic Maintenance

S No.	Scheduled Major Maintenance	Year	Status at site
1	1st Periodic Maintenance-Phase-1	2021	25km Planned to execute
2	1st Periodic Maintenance-Phase-2	2022	43km Planned to execute
3	2nd Periodic Maintenance	2027	68Km Planned to execute

9.5.4. Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project Highway shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.6 Review of Test Reports:

9.6.1. Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of October 2020. As per Schedule K of the CA, If the value exceeds 3000mm in a KM, the stretch shall be rectified. No stretch exceeded the permissible limit of 3000 mm in the Project road.

9.6.2. Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

Concessionaire has conducted the test in October 2020. The test report has been verified and found within permissible limits as per IRC 81.

9.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 5**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance (In crores)	Incidental maintenance (In crores)	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	0.238	0.181		0.47	0.89
2021	0.245	0.186	3.15	0.48	4.06
2022	0.253	0.192	7.36	0.50	8.31
2023	0.260	0.198		0.51	0.97
2024	0.268	0.203		0.53	1.00
2025	0.276	0.210		0.55	1.03
2026	0.284	0.216		0.56	1.06
2027	0.283	0.222	11.73	0.58	12.81
Total	2.11	1.61	22.24	4.18	30.14

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 General: Scope of Work (Article 2 of CA)

Article 2 provides the scope of work which includes the following.

- construction of the Project Highway on the Site set forth in Schedule-A of CA and as specified in Schedule-B of CA together with provision of Project Facilities as specified in Schedule-C of CA, and in conformity with the Specifications and Standards set forth in Schedule-D of CA
- operation and maintenance of the Project Highway in accordance with the provisions of Concession Agreement (CA)
- performance and fulfillment of all other obligations of the Concessionaire in accordance with the provisions of this CA and matters incidental

10.2 Letter of Award (LOA)

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. A copy of LOA is enclosed at **ANNEXURE-6**.

10.3 Conditions precedent (Article 4 of CA)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the CA

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1 of CA)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfil its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project Highway upon termination of the CA

10.5 Obligations relating to the Competing Roads (Clause 6.3 of CA)

Neither Authority nor any Governmental Instrumentality shall construct the Competing Road before 10th Anniversary of the Appointed Date.

10.6 Performance Security (Article 9 of CA)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 20% of the Total Project Cost.

10.7 Provisional Completion Certificate (Clause 14.3 of CA)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B of CA, C and D of CA and after determining successful completion of tests, the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA. A copy of PCC attached at Annexure -7

10.8 Completion Certificate (Clause 14.4 of CA)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire. A copy of CC enclosed at Annexure -8

10.9 Commercial Operation Date (COD) (clause 15.1 of CA)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16 of CA)

List of Change of scope proposals initiating during construction period and consented by the MPRDC are enclosed at **Annexure 10**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1 of CA)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project Highway
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any un authorized use of the Project Highway.

- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2 of CA)

The Contractor shall procure that at all times during the Operations Period; the Project Highway conforms to the maintenance requirements set forth in Schedule K of CA (the “**Maintenance Requirements**”).

10.13 Maintenance Manual (Clause 17.3 of CA)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Lanning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4 of CA)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8 of CA)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 0.5% (zero decimal five percent) of the Average Daily Fee, and
- 0.1% (zero point one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1 of CA)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Monthly Fee Statement (Clause 19.5 of CA)

During the Operations Period, the Contractor shall furnish to the Concessionaire and the Authority, if required by the Contractor, within 7 (seven) days of completion of each month, a statement of Fee substantially in the format set out in the CA (“Monthly Fee Statement”).

10.18 Annuity (Clause 25.1.1 of CA)

The Authority agrees and undertakes to pay the Concessionaire for each annuity Payment period on each annuity payment date as set forth in schedule Y of CA the sum of Rs 8.28 Crores.

As per Clause 25.2.1, In case the COD is different from the Schedule Y of CA, then the annuity payment schedule shall be suitably modified to be a period of 6 months from the preceding Annuity Payment date.

Table 10.1 Status of Annuity Payments

S. No.	Particulars	Payment Paid on
1	1st Annuity	24-Dec-13
2	2nd Annuity	27-May-14
3	3rd Annuity	21-Nov-14
4	4th Annuity	22-May-15
5	5th Annuity	18-Nov-15
6	6th Annuity	18-May-16
7	7th Annuity	28-Nov-16
8	8th Annuity	19-May-17
9	9th Annuity	8-Dec-17
10	10th Annuity	29-May-18
11	11th Annuity	16-Nov-18
12	12th Annuity	28-May-19
13	13th Annuity	20-Nov-19
14	14th Annuity	22-May-20
15	15th Annuity	17-Nov-20

10.19 Concession Fee (Article 26)

- In consideration of the grant of Concession the Concessionaire shall pay Concession Fee of Rs1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC

10.20 Toll fee (Clause 27.1.1)

Toll Fees Shall be revised annually in accordance with Clause 27.2.1.

10.21 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 General

As per clause 32.1 of the Concession Agreement (CA), the Concessionaire shall affect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Property
			From	To	
Civil Engineering Completed Risk	National Insurance Company Ltd	321300441910001986	27.03.2020	26.03.2021	Road & Structure: Toll Building & Toll Booths, TMS, HTMS, Office & IT equipment, Electronic Equipment, Road Furniture, Fixtures, electrical Poles Lighting & Fittings, Sign boards & Safety Barrier
Electronic Equipment Insurance Policy	Oriental Insurance Company Limited	171200/44/2021/41/001	8.09.2020	7.09.2021	IT equipment, Electronic Equipment
Employees Compensation Insurance Policy	HDFC ERGO General Insurance Company Ltd	311420338774890000	19.05.2020	18.05.2021	All categories of Employees of the Contractor & sub-contractor engaged in the Project

CHAPTER 12. CONCLUSION

12.1 General

Based on the above information over all condition of the Project is provided below.

12.2 Pavement Condition

Pavement condition is good. Drainage system is effective along the project road as the RCC drains constructed in built up locations and earthen drains in rural locations. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are getting cleared during regular maintenance period.

12.4 Traffic Growth

Based on real time, traffic data was extracted from Schedule N of CA, the traffic growth observed is 10.68%, where as 5% growth is considered while evaluating forecast of traffic volumes.

12.5 Project Facilities

Toll Plaza is located at Km. 59+400 and is operational. Toll Plaza is operated by ETC Toll collection system and connected by network system monitored in administrative building. Bus bays are in good condition. Medical Aid posts found in functional condition. Avenue plantation and landscaping at Toll Plaza is provided and being maintained. Highway lighting is provided at toll plaza locations and found functional.

12.6 Road safety

Pavement marking is in good condition and number of sign boards are provided as per IRC SP 73-2007. The condition of sign boards is good Other road appurtenances like metal beam crash barriers and Kerb are intact.

12.7 Maintenance

A dedicated team is appointed for routine maintenance works and working effectively. Major maintenance (MM) /Periodic maintenance was carried out recently and next MM is scheduled in 2021

12.8 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work is being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

ANNEXURES
