Annexure 4: Estimation of Toll Revenue

1. Toll Plaza: Tollable Traffic considered for Toll Revenue in No.s (AADT):

Table-1: Details of Tollable Traffic (Base Year 2019-20)

Vehicle Type	Traffic (AADT)
	Km.59+400
Car/Taxi/Van	669
LCV	226
Bus	7
Truck	45
MAV	56

2. Traffic Growth Rates

Table-2: Details of Growth rates adopted

Year	Car	LCV	BUS	Truck	MAV
2019-25	5.00	5.00	5.00	5.00	5.00
2025-30	5.00	5.00	5.00	5.00	5.00

3. Trip Distribution Ratio as per the Toll Data.

Table-3: Details of Trip Distribution (Base Year 2019-20)

Vehicle Type	Single Trip	Local Pass	Total
Car/Taxi/Van	82%	18%	100%
LCV	100%	0%	100%
Bus	100%	0%	100%
Truck	100%	0%	100%
MAV	100%	0%	100%

4. Toll Rates :

Table-4: Details of Toll Fee (Base Year 2019-20)

Vehicle Type	Toll Fee at Km.59+400
Car/Taxi/Van	40
LCV	95
Bus	195
Truck	235
MAV	470

Toll Plaza-1 Revenue:

Years	Car/Jeep	Car/Jeep (local pass)	LCV	Bus	Trucks	MAV	Total in RS	Total in Lakh.	Cumulative (in Lacs)

				Total	₹ 22,24,62,570	22.24

Major Maintenance BOQ

S. No.	Description	Unit	Quantity	Rate	Amount
Pavement (Asphalt & Concrete)					
1	Providing and applying tack coat with Rapid Setting Bitumen Emulsion using emulsion pressure distributor on the prepared bituminous/granular surface cleaned with mechanical broom, Ref. to Technical specification 503.			-	
(a)	On Bituminous surface @ 2.0 kg to 3.0 kg/10 sq.m.	Sqm	4,91,069.00	14.00	68,74,966
2	Providing and laying bituminous concrete using a batch type Hot Mix Plant using crushed aggregates of size (table 500-17), premixed with VG Grade Bitumen and filler, transporting the hot mix to work site, laying with a hydrostatic paver finisher with sensor control to the required grade, level and alignment, rolling with smooth wheeled, vibratory and tandem rollers, Pneumatic Tyre Rollers to achieve the desired compaction as per Technical specification clause No. 507 and mix design conforming the IRC -111 and IRC 37.	Cum	-	7,480.00	
	Providing and laying Semi dense bituminous concrete using a batch type Hot Mix Plant using crushed aggregates of size		6,138.36	6,800.00	4,17,40,865
	Micro surfacing		2,45,534.50	160.00	3,92,85,520
3	Repair of joint Grooves with Epoxy Mortar Repair of spalled joint grooves of contraction joints, longitudinal joints and expansion joints in concrete pavements using epoxy mortar or epoxy concrete)	MTRS	872.00	250.00	2,18,000
4	Texturing of Rigid pavement (considering 50% for 7 years)	Sqm	545.00	130.00	70,850
Total					8,81,90,201
Junctions, Traffic Signs Marking and Other Appurtenances					
1	Providing and laying of cement concrete kerb without channel (M-20 Grade) over WMM foundation using kerb laying machine & proper curing complete, as per drawing & technical specification clause no.409, 1700 and as per the instructions of Employer's representative. - Consider 5% for construction period.	Rmt	-	380.00	
2	Providing and laying lane markings of hot applied thermoplastic compound 2.5 mm thick including reflectorizing glass beads @ 250 gms per sqm area, thickness of 2.5 mm is exclusive	Sqm	16,048.43	516.00	82,80,992

S. No.	Description	Unit	Quantity	Rate	Amount
	of surface applied glass beads as per IRC:35 .The finished surface to be level, uniform and free from streaks and holes, Ref. to Technical specification 803.				
3	Road Studs	Nos	-	750.00	
			Total	-	82,80,992
			Grand Total		9,64,71,193

Bhopal (M.P.)

PROVISIONAL CERTIFICATE

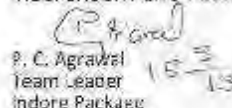

1. I Team Leader Vaidya Organisation Indore, acting as Independent Engineer, under and in accordance with the concession agreement dated 05.12.2011 (The "Agreement") for development of the Mundi - Punasa - Sulgaon - Sanawad Road section (km 0+000 to 6+500) of MDR the "Project Highway" on build, operate and transfer BOT (Toll + Annuity) basis, through M/s DBL Mundi – Sanawad Tollways Ltd, hereby certify that the test specification in Article 14 and Schedule-I of the agreement have been undertaken to determine compliance of the Project Highway with the provisions of the Agreement.
2. Construction works that were found to be incomplete and/ or deficient have been specified in the punch list appended hereto, and the Concessionaire has agreed and accepted that it shall complete and /or rectify all such works in the time and manner set forth in the agreement. (Some of the incomplete works have been delayed as a result of reason attributable to the MPREC or due to Force Majeure and the Provisional Certificate cannot be withheld on this account. Through the remaining incomplete works have been delayed as a result of reason attributable to the Concessionaire). I am satisfied that having regard to the nature and extent of such incomplete works, it would not be prudent to withhold commercial operation of the Project Highway pending completion thereof.
3. In view of the foregoing, I am satisfied that the Project Highway can be safely and reliably placed in commercial service of the Users thereof, and in terms of the Agreement, the Project Highway is hereby provisionally declared fit for entry into commercial operation on this the day of May 15, 2013.

DBL MUNDI SANAWAD TOLLWAY LTD

PLOT NO. 5, GOVIND NARAYAN SINGH GATE,
CHUNA BHATTI, BHOPAL,
BHOPAL,
MADHYA PRADESH, 462016.

Dear Customer,

Sub: Employees Compensation Insurance Policy No: 3114203387748900000

We thank you for having preferred us for your Insurance requirements. We at HDFC ERGO General Insurance believe "Insurance" as not only to be an assurance to indemnify in the event of unfortunate circumstances, but one that signifies protection and support, which you can count on when you need it most.

The Insurance Policy enclosed herewith is a written agreement providing confirmation of our responsibility towards you that puts insurance coverage into effect against stipulated perils.

Please note that the policy has been issued based on the information contained in the proposal form and / or documents received from you or your representative / broker.

Name of the Intermediary : GLOBAL INSURANCE BROKERS PVT LTD

Intermediary Code : 200113159801

Where the proposal form is not received, information obtained from you or your representative /broker, whether orally or otherwise, is captured in the policy document.

If you wish to contact us in reference to your existing policy and /or other general insurance solutions offered by us, you may write to our correspondence address as mentioned below. Alternatively, you may visit our website www.hdfcoergo.com. To enable us to serve you better, you are requested to quote your Policy Number in all correspondences.

Thanking you once again for choosing HDFC ERGO General Insurance Company Limited and looking forward to many more years of association.

Yours sincerely,

Authorised Signatory

DISCLAIMER AND CONSENT FOR USE

This report has been prepared for the benefit of SHREM FINANCIAL PRIVATE LIMITED (SFPL), the investment Manager of Shrem InvIT (Trust), for and in connection with initial offer of units representing an undivided beneficial interest in the Trust. In Preparing this report, RUKY Projects Pvt Ltd has relied, in whole or in part, on data and information provided by SFPL and **DBL UCHERA-NAGOD TOLLWAYS LIMITED** which RUKY Project Pvt Ltd has assumed to be accurate, complete, reliable and correct.

This report may be reproduced and included in the preliminary placement memorandum, placement memorandum and any other documents prepared in connection with the aforesaid initial offer of units of the Trust and may be made available for inspection in the manner specified therein. In connection with the report, the following details in relation to the Technical Consultant may be included in preliminary placement memorandum and the placement memorandum and any other documents prepared in connection with the aforesaid initial offer of units of the Trust.

Technical Consultant:
RUKY PROJECTS PRIVATE LIMITED
Flat No. 1403A, 14th Floor,
Manjeera Trinity Corporate,

CHAPTER 1. INTRODUCTION

1.1 General

DBL UCHERA-NAGOD TOLLWAYS LIMITED (herein after referred to as the “Concessionaire”) had augmented the existing road “Uchera-Nagod-Singhpur-Kalinjer” section of SH in the state of Madhya Pradesh, in accordance with the provisions of the Concession Agreement (CA) executed with Madhya Pradesh Road Development Corporation Limited (herein after referred to as the “MPRDC”) on 24th September, 2012.

The project Highway starts at Km.32+000 and ends at Km 87+000 Near UP Border on Design, Build, Finance, Operate and Transfer (DBFOT) Toll + Annuity basis. Project Location map is given at **Figure 1.1.**

Figure 1.1: Project Location Map

SHREM ROADWAYS PVT. LTD. (SRPL) acquired DBL UCHERA NAGOD TOLLWAYS LIMITED vide agreement dated 26.03.2018.

SHREM FINANCIAL PVT. LTD. (SFPL) appointed RUKY Projects Pvt. Ltd. as consultants for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the traffic potential and to estimate the projected Toll Collection Etc.

1.2 Salient features of the Project

Table 1.1: Project Data

S. No.	Particulars	Details
1	Name of the project	Development of Uchera Nagod Kalinjar (SH-56) Road of SH-56 in the State of Madhya Pradesh on BOT (Toll + Annuity) basis.
2	Road Type	State Highway.
3	Name of the Authority	Madhya Pradesh Road Development Corporation Limited
4	Name of the Concessionaire	DBL Uchera - Nagod Tollways Ltd.
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Design Length as per Schedule B of CA	55.600 Km.
7	Date of LOA	08.08.2012
8	Date of Agreement	24.09.2012
9	EPC Cost	Rs. 97.85 Cr.
10	Nature of contract	BOT (Toll + Annuity)
11	Toll collected by	Concessionaire
12	Concession Period	15 years from the Appointed date
13	Appointed date	20.11.2012
14	Concession end date	19.11.2027
14	Construction Period	730 days from the Appointed date.
15	Schedule Completion Date	19.11.2014
16	Date of issuance of Provisional Certificate (Commercial Operation Date)	15.05.2014
17	Date of issuance of Completion Certificate	5.08.2014
18	Annuity Amount (every six months)	Rs 8.46 Cr
19	Total Number of Annuities payable	26 Nos.
20	First Annuity Payment Date	15.11.2014
21	Total Number of Annuities Paid	13 Nos

1.3 Scope of Consultancy services

The scope of work includes providing Technical Due Diligence of the Project Highway and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Collection of historic/past toll revenue data
- Collection of historic/past classified Traffic data from toll plaza and to estimate the projected traffic to arrive at revenue projections.
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout review of tolling system to evaluate the efficiency and functionality of tolling system and to identify and give suggestions to improve if any setbacks in the system.
- Carryout road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project:

The salient features as per schedule B and Schedule C of CA including Change of scope are given in the following table.

Table 2.1: Salient Features

S. No.	Particulars	As per CA	COS*	As per Site
1	Total Length	55.600 Kms.	---	55.600 Kms.
2	Length of 2-Lane without paved shoulder	51.800 kms.	---	51.800 Kms.
3	Length of 2-Lane with paved shoulder	3.800 Kms.	---	3.800 Kms.
4	Length of Nagod Bypass	1.700 Kms.	---	1.700 Kms.
5	Toll Plaza	1 No.	---	1 No.
6	Bus Bays / Bus Shelters	7 Nos.	---	7 Nos.
7	Truck Lay Bays	1 Nos.	---	1 No.
8	Major Junction	4 Nos.	---	4 Nos.
9	Minor Junctions	9 Nos.	---	9 Nos.
10	Major Bridges	0 Nos.	2 Nos.	2 Nos.
11	Minor Bridges	7 Nos.	3 Nos.	10 Nos.
12	Box/Slab Culverts	35 Nos.	(+6, -11) Nos.	30 Nos.
13	Pipe Culverts	58 Nos.	(+45, -11) Nos.	92 Nos.

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Sections shown below as per schedule D of CA, during the construction.

Figure 2.1: TCS 2.1 2 Lane with Granular Shoulder. (Cross Section in Open Country)

Figure 2.2: TCS 2.3 The Carriageway shall be 7.0 m with Paved shoulder (In Built up Areas)

TCS Schedule is provided below.

Table 2.2: TCS Schedule

S. No.	From Chainage (Km.)	To Chainage (Km.)	Type of TCS
1	0+000	1+700	TCS 2.1
2	33+100	34+400	TCS 2.1
3	34+400	35+600	TCS 2.3
4	35+600	54+900	TCS 2.1
5	54+900	55+300	TCS 2.3
6	55+300	67+400	TCS 2.1
7	67+400	68+400	TCS 2.3
8	68+400	69+000	TCS 2.1
9	69+000	69+800	TCS 2.3
10	69+800	85+200	TCS 2.1
11	85+200	85+600	TCS 2.3
13	85+600	87+000	TCS 2.1

Figure 2.3: Pictorial Diagram of TCS Lengths.

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from the Carriageway, drains are accommodated along the main carriage way on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are in open and rural areas.

2.4 Service Roads

Service roads are not provided along the entire stretch of the project road as per provisions of Schedule B of the Concession Agreement.

2.5 Bypass/Realignment

Bypass is constructed for a length of 1.7 Km as per the provisions of Schedule B of the Concession Agreement.

2.6 Intersections

As per Schedule B of the Concession Agreement 4 Major Junctions and 9 Minor Junctions are developed. Details are given below

Table 2.3: Summary of Junctions

S. No.	Chainage (Km.)	Side	Type	Major /Minor
1	32+000	BHS	T	Major
2	33+100	BHS	T	Major
3	35+500	RHS	T	Minor
4	38+100	LHS	T	Minor
5	47+200	LHS	T	Minor
6	48+800	LHS	T	Major
7	50+500	RHS	T	Major
8	50+800	LHS	T	Minor
9	66+700	RHS	T	Minor
10	67+100	LHS	T	Minor
11	67+500	RHS	T	Minor
12	70+000	RHS	T	Minor
13	79+300	RHS	T	Minor

2.7 Grade Separated Structures and Underpasses

There are no Grade separated structures in the Project, as per provisions of Schedule B of the Concession Agreement.

2.8 Road Over Bridge

There are no Road Over Bridge in the Project, as per provisions of Schedule B of the Concession Agreement.

2.9 Summary of the Carriageway and pavement Details

The details of Pavement are shown in the following table.

Table 2.4: Summary of Carriageway and Pavement Details

S. No.	Description	Flexible (Km.)	TCS Type
1	2 Lane with Earthen shoulder	51.800	TCS 2.1 of Schedule D
2	2 Lane with Paved shoulder	3.800	TCS 2.3 of Schedule D
3	Bypass Length	1.700	
4	Total Length of the Project	55.600	
5	New Alignment	-	
6	Realignment	-	
7	Strengthening	-	
8	Reconstruction	55.600	
9	Total Length of the Project	55.600	

2.10 Summary of Structures

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.5: Summary of Structures

S. No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts
1	Retained	-	-	-	-
2	Widening	-	2	30	14
3	Reconstruction	-	5	9	21
4	New	-	-	19	-
5	Improvement	-	-	-	-
Total		-	7	58	35

2.11 Toll Plaza

As per Schedule C provisions of the Concession Agreement one Toll Plaza has been constructed at Km. 47+950. Salient features of Toll Plaza are provided below.

- Each side comprises of 1 Normal Lanes, 1 extra wide lane and bike lane.
- The lane width in normal lanes is 3.20m.
- The width of islands provided is 1.8m.
- The single canopy is provided to cover the toll lanes.
- Toll plaza building is G+1 building which houses control room, UPS and Pantry.

Figure 2.4: Toll Plaza at Km. 47+950

2.12 Bus shelters and truck lay byes

As per the provisions of Schedule C of the Concession Agreement (CA), 7 Nos. bus shelters and 1 No truck lay bye are provided in the entire length of Project. Details such as Chainage Location are listed in the following table.

Table 2.6: List of Bus shelter & Truck Lay bays

S. No.	Chainage (Km.)	Bus shelter/Truck lay bye
1	40+000	Bus shelter
2	44+600	Bus shelter
3	55+000	Bus shelter
4	67+900	Bus shelter
5	69+500	Bus shelter
6	85+500	Bus shelter
7	55+000	Bus shelter
8	86+500	Truck lay bye

2.13 Other Project Facilities Provided as per Schedule C of CA

- Roadside furniture: Sign Boards, KM. stones, Road Marking and Object/Hazard Markers are provided in accordance with IRC-SP: 73-2007.
- Traffic safety devices: W Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of CA.
- Landscaping: Provided at Toll Plaza location and being maintained
- Tree Plantation: Tree plantation is provided on both sides of the Project Corridor all along the way and is being maintained.
- Medical Aid Post: Provided at Toll Plaza location and is operational
- Highway Lighting: Highway lighting is provided at Toll Plaza and is functional.

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented below.

3.2 Road Inventory

Inventory of the project road was carried out physically and is summarized in Error! Not a valid bookmark self-reference. and few representative photographs are given below.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain Rolling and Hilly Terrain
2	Land Use	Built Up, Agriculture and Forest
3	Total length of the Road	55.600 km
4	Earthen shoulder	1.0 m to 1.5m Width on site
5	Bypasses	1 Nos
6	Junctions	13 Nos.
7	Toll Plaza	Km.47+950
8	Sign boards	Sign boards are provided as per requirement
9	Road Markings	Lane markings are provided as per requirement
10	Bus Bays /shelters	07 Nos.
11	Truck Lay bye	01 Nos.
12	Street Lighting	Highway lighting provided as per requirement
13	Avenue plantation	Provided along the Project Corridor

3.3 Pavement Condition

Pavement condition survey was carried out on the project road, based on observations supplemented by simple measurements. The criteria adopted for the classification of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement condition Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Assessment of the condition of Pavement surface is a key component of infrastructure asset management. The information used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of

pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey

The survey on general pavement condition was primarily undertaken by means of slow drive- over survey, and supplemented with measurements wherever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of Surface area)
 - Ravelling (% of Surface area)
 - Potholes (% of Surface area)
 - Patching (% of Surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP 19 and is given in **ANNEXURE 1**. The summary of Pavement condition is given below.

Table 3.3: Pavement Condition Summary

From (Km.)	To (Km.)	Length (Km)	Condition
Km. 0+000	Km. 1+700	55.600	Good
Km. 33+100	Km. 87+000		

Km.35+900

Km. 48+500

Km.72+400

Km. 73+250

Figure 3.1: Representative Photos of Pavement Condition.

CHAPTER 4. INVENTORY AND CONDITION OF STRUCTURES

4.1 General Assessment and Condition of the structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

There are 02 Nos. Major Bridge, 10 Nos. Minor Bridges, 92 Nos. Pipe culverts and 30 Nos. Slab/ Box culverts are there along this project road.

Table 4.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	2 Nos
2	Minor Bridge	10 Nos
3	Pipe culverts	92 Nos
4	Slab/Box Culverts	30 Nos

For major bridges the superstructure is PSC T beam with RCC wall type piers and abutments resting on Open foundation. For minor bridges the superstructure is RCC solid slab and the substructures are of CR masonry wall type resting on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Condition of most of the culverts is fair except in few locations. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges

The total length of the major bridge at Km 0+274 is 60.0m with 2 spans. The superstructure consists of PSC T Beam with RCC column type piers and wall type abutments resting on open foundations. The Superstructure is seated on elastomeric / Neoprene bearings. Expansion joints are of strip seal type. RCC crash barrier have been provided on both sides of the deck.

The total length of the major bridge at Km 82+263 is 100.0m with 4 spans. The superstructure consists PSC T Beam with RCC column type piers and wall type abutments resting on Open / Pile foundations. Superstructure is seated on elastomeric / Neoprene bearings. Expansion joints are of strip seal type. RCC crash barrier have been provided on both sides of the deck.

Table 4.2: List of Major Bridges

S. No.	Chainage (Km)	Span	Total Length of Bridge (m)
1	Km. 0+274	2 x 30.0	60.0
2	Km. 82+263	4 x 25.0	100.0

The condition of the superstructure and substructure is good.

Km.82+263

Km.0+274

Figure 4.1: Representative photos of Major Bridges

4.4 Details of Minor Bridges

There are 10 minor bridges in the project stretch. The type of superstructure for minor bridges is RCC solid slab and the substructure is PCC conventional wall type, supported on open foundations. Expansion joints are buried type and bearings are tar paper and neoprene bearings. RCC crash barriers are provided on all structures.

Table 4.3: Inventory of Minor Bridges

S. No.	Chainage (Km)	Span	Total Length of Bridge (m)	Description
1	Km. 6+000	3 x 10	30	The Minor bridge has RCC solid slab superstructure supported on RCC wall type piers and abutments resting on open foundations.
2	Km. 16+950	3x15.0	45.0	The Minor bridge has girder type superstructure supported on RCC wall type piers and abutments resting on open foundations. It has RCC crash barrier with elastomeric bearings and buried type expansion joints.
3	Km. 21+600	5x7.5	37.5	The Minor bridge has arch type superstructure supported on CRM wall type abutment and piers resting on open foundations.
4	Km. 30+900	3x7.0	21.0	The Minor bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
5	Km. 42+600	3x15.0	45.0	The Minor bridge has RCC girder type superstructure supported on PCC / RCC wall type piers and abutments resting on open foundations. It has RCC railing, Elastomeric Bearings and buried type expansion joints.
6	Km. 48+787	1x10.0	10.0	The Minor bridge has RCC solid slab superstructure supported on RCC wall type abutments resting on open foundations. It has RCC crash barrier with Tar Paper Bearings and buried type expansion joints.
7	Km. 59+013	1x10.0	10.0	The Minor bridge has RCC solid slab superstructure supported on RCC wall type abutments resting on open foundations. It has RCC crash barrier with Tar Paper Bearings and buried type expansion joints.

S. No.	Chainage (Km)	Span	Total Length of Bridge (m)	Description
8	Km. 69+000	3x20.0	60.0	The minor bridge has RCC girder type superstructure supported on PCC / RCC wall type piers and abutments resting on open foundations. It has RCC crash barrier with Elastomeric Bearings and buried type expansion joints.
9	Km. 69+779	3x6.0	18.0	The Minor bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
10	Km. 80+100	1x10.0	10.0	The minor bridge has RCC solid slab superstructure supported on RCC wall type abutments resting on open foundations. It has RCC crash barrier with Tar Paper Bearings and buried type expansion joints.

Km. 30+900

Figure 4.2: Representative photos for minor bridges

4.5 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.5.1. Slab/Box Culverts

There are 30 No's of slab / box culverts present in the project stretch. The details of the culverts are as given below.

Table 4.4: List of Slab/Box Culverts

S. No.	Chainage (Km)	Span (m)	Vent Size (m)
1	Km. 34+173	1 x 2.0	4.5
2	Km. 35+200	1 x 3.0	3.0
3	Km. 36+100	1 x 2.0	3.0

90	80+992	1 x 1.2
91	81+582	1 x 1.2
92	84+616	1 x 1.0

4.5.4. Condition of the Pipe Culverts

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

The culverts are in fair condition and can be retained in the present condition with following repairs/rehabilitation measures.

- Chocked culverts must be cleared.
- Debris and garbage near outside the vents must be removed.

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General

Review of Pavement design report, providing insights on design life of pavement, crust thickness, history of overlays over the existing pavement etc., Based on pavement condition and Concession Agreement (CA) provisions recommendation for the upcoming renewal cycles.

5.2 Pavement design validation

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2001 publication while the current publication is IRC: 37-2018.

Pavement design (Crust Thickness)

The new pavement shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”. Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. “Guidelines for the Design of Plain Jointed Rigid Pavements for Highways”.

Pavement design validation as per actual traffic from COD. As per IRC 37, Vehicle Damage Factor (VDF), Distribution of commercial vehicles and growth rate values are 3.5, 0.75 and 5% respectively. Summary is given below.

Table 5.1: Real Time Traffic from COD and Project Traffic Current years with 5% growth for CMSA

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2015	204	52	5	14	77	150	0.14	0.14	3	Actual
2016	273	73	9	12	107	200	0.19	0.33	4	Actual
2017	235	78	7	15	94	194	0.19	0.52	5	Actual
2018	395	140	16	21	101	278	0.27	0.79	6	Actual
2019	455	142	12	33	231	419	0.40	1.19	7	Actual
2020	422	97	16	50	255	418	0.40	1.59	8	Actual
2021	443	102	17	53	267	439	0.42	2.01	9	Projected
2022	465	107	18	56	281	461	0.44	2.45	10	Projected
2023	488	112	19	58	295	484	0.46	2.92	11	Projected
2024	513	118	20	61	309	508	0.49	3.40	12	Projected
2025	538	124	21	64	325	534	0.51	3.91	13	Projected
2026	565	130	22	68	341	560	0.54	4.45	14	Projected
2027	594	136	23	71	358	588	0.56	5.02	15	Projected

Pavement crust thickness in the pavement design report for flexible pavement is as follows: -

Table 5.2: Flexible Pavement Design summary

S. No.	Description/ Pavement layer	Design Parameters
1	Sub Grade CBR (%)	7%
2	Design Life (Years)	15 years
3	Design Traffic (MSA)	1.59 MSA for 8 Years 5.86 MSA for 15 Years 10 MSA Adopted
4	Surface course (BC)	40 mm
5	Binder course (DBM)	60 mm
6	Base course (WMM)	250 mm
7	Sub Base course (GSB)	230 mm

MSA has been adopted based on existing crust as per IRC 37 (Back Calculations)

Pavement crust thickness in the pavement design report for rigid pavement is as follows: -

Table 5.3: Rigid Pavement Design for Toll Plaza

Description	Designed Parameters
CBR of sub grade	7 %
Design life in years	30
Pavement Quality Concrete (PQC) - mm	250
Dry Lean Concrete (DLC) - mm	150
Drainage Layer (GSB) - (mm)	150
Diameter of Dowel Bar (mm)	32
Length of Dowel Bar (mm)	450
Spacing of Dowel Bars (mm)	300
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	600

The Pavement crust has been designed according to IRC specification and found in order, the adopted/ designed traffic is more than the actual traffic. Hence pavement crust is safe

5.3 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 10 MSA for a design life of 15 years (up to end of the year 2027) as discussed in **Table 5.2**, whereas the actual traffic is 1.59 MSA and 5.86 MSA for 8 years and 15 years respectively. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation before the end of stage-I of design life (as per pavement design report) and prior to end of concession period to evaluate the requirement of overlay.

5.4 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of SDBC. The detailed maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Proposed on or before 2021.

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction (as per IRC 58-2015).

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRR) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 6.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety Audit

6.2 Existing Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 6.2: Road Safety Audit

S. No.	Item Description		Status	Condition
Road Furniture				
1	Sign Boards	Chevron Signs	Available as per site requirement	Good
		Village sign boards		
		Information Boards		

S. No.	Item Description		Status	Condition
		Other Sign Boards		
		Gantry Sign Boards		
2	Road Marking	Studs & Lane marking	Available as per site requirement	Fair
3	Metal Beam Crash Barriers	At High embankments	Available as per site requirement	Fair

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

6.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is required during the operation and maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There is one Toll Plaza on the project road at Km.47+950. Each side comprises of 1 normal lane, 1 extra wide lane. The lane width in normal lanes was 3.2 m and extra wide lane was 4.5 m. The width of islands provided is 1.8 m. The single canopy is provided to cover the toll lanes. Toll plaza building is G+1 floor building which houses control room, UPS and Pantry.

7.2 Tolling Equipment and Control Room Equipment

List of equipment provided at toll plaza and control room is given below.

Table 7.1: List of Equipment's at toll plaza and control room

S. No	Description	Normal Lanes	Extra Wide Lanes	Total
1	Toll Lane Controller	2	2	4
2	AVC Controller	2	2	4
3	Height Sensor	2	2	4
4	Toll Collector keyboard	2	2	4

CHAPTER 8. TRAFFIC CENSUS AND TOLL REVENUE

8.1 Traffic Census

In accordance with clause 22.1, the Concessionaire shall install, maintain and operate electronic/computerized traffic counters at each of the Toll Plazas and collect data relating to the number and types of vehicles using the Project Highway. A weekly statement of such data shall be compiled and furnished forthwith by the Concessionaire to MPRDC substantially in the form specified in Schedule N of CA.

Accordingly, the Concessionaire provided toll plaza details. Based on the data made available the summarized annual classified Traffic census details for the past five years are provided in Table 8.1 below. The Actual traffic data recorded below has been taken as a basis to calculate AACGR % (Annual Average Compound Growth Rate).

Table 8.1: Year wise Traffic (Vehicles) Details

FY Year	Car	LCV	Bus	Truck	MAV	Total Traffic
2016	99821	26544	3354	4227	39007	172889
2017	85854	28358	2691	5330	34390	156320
2018	144158	51160	5970	7624	36845	245862
2019	165918	52005	4544	12121	84368	329044
2020	154420	35459	6003	18459	93150	300705
AACGR* (%)						18.23%

*AACGR- Annual Average Compound Growth Rate

8.2 Actual Revenue Collection

In accordance with clause 19.5, “During the operation period, the Concessionaire shall furnish to MPRDC within 7 days of completion of each month, a statement of fee substantially in the form set forth in Schedule-M (Monthly fee statement)”. As per provisions of CA the concessionaire submitted monthly fee statement and the summary of form submitted under Schedule M during the financial year 2019-20 is given under as Table 8.2.

Table 8.2: Summary of 2019-20 Tollable traffic and revenue collected at Toll Plaza

Description	Car	Car(pass)	LCV	Bus	Truck	MAV	Total
In Nos.	84519	739	22096	4365	13659	90509	215887
Toll Revenue collection in Rs.	2535570	59101	1657200	681360	2563085	33707815	41204131

The figures shown in Table 8-1 are Real time traffic data on project road for the past five years and the growth rate is calculated to be 18.23%. It is pertinent to note that the figures given in table 8.1 are inclusive of exempted /non tollable traffic.

The figures shown in Table 8.2 are actual tollable traffic based on which the toll revenue collected and is excluding of exempted/non tollable traffic. For the realistic estimate of the traffic growth and projected revenue calculation actual traffic based on which FY 2019-20 revenue collected (table 8.2) is considered as a base year traffic and the projected traffic growth rate is restricted to 5%.

Based on the base year traffic and growth rate as explained above traffic projections from year 2019-20 to till end of Concession period toll plaza wise are calculated and summarized below in Table 8.3.

Table 8.3: Projected traffic

FY Year	AADT in Vehicles					CVPD* (Veh.)	AADT in PCU					CVPD* (PCU)	Remarks
	Car	LCV	BUS	2- AT	MAV		Car	LCV	BUS	2- AT	MAV

8.3 Toll Revenue Calculations

The toll revenue for horizon year is calculated based on the input from the above data, actual toll rates collected on base year (2019-20), with Traffic growth, WPI growth and toll efficiency has been assumed 5%, 4% and 100% respectively and other inputs considered in revenue calculations is given in **Table 8.4**

Table 8.4: Toll Revenue inputs

Particular	Toll plaza 1
Location	Km.47+950
4 lane length in km	0
2 lane length in km	53.8
Agreement Date	24-09-2012
Appointed Date	20-11-2012
Concession period	15
Commercial operation date	05-08-2014
Concession End Date	19-11-2027
Traffic study year	2020
Vehicle Type	AADT
Car/Jeep/Van	234
2-axle Bus	61
LCV/LGV	12
2A-Truck	37
MAV (2A-6A)	248
Growth Rate (%)	5%

The split trip type based on the available toll data from Concessionaire is used to derive the annual toll collection for each plaza. The revenue estimated and presented below. Detailed toll revenue estimation is given in **ANNEXURE 4**.

Table 8.5 Toll Revenue Estimated (in Rs. lakhs)

Financial Year	Annual Revenue of TP1 Km.47+950	Remarks
2019-20	412.041	Actual
2020-21	450.294	Projected
2021-22	489.704	Projected
2022-23	537.1	Projected
2023-24	582.361	Projected
2024-25	631.297	Projected
2025-26	684.928	Projected
2026-27	745.416	Projected
2027-28	514.957	233 Days

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of the Concession Agreement, the Concessionaire will operate and maintain the Project Highways by itself or through O&M Contractors and comply with specification and standards, and other requirements set forth in this Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate, need (if any) for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

9.3 Operations

Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project Highway and Project Facilities.

- 1 Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- 2 Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.
- 3 Carrying out preventive and periodic maintenance of the Project Road;
- 4 Undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- 5 Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;

- 6 Functioning of the lighting System
- 7 Functioning of the Patrolling System
- 8 Functioning of rescue and medical aid services
- 9 Ambulance as and when required
- 10 Functioning of the Project Facilities
- 11 Administrative, Operational and Maintenance Base Camp
- 12 Truck Lay bays
- 13 Pickup Bus stops / Bus Bays
- 14 Protection of the environment and provision of equipment and materials therefor;
- 15 Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project Road.
- 16 Complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plaza

There are two lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the escrow account. In case of ETC system Toll collection is connected with Network system and directly deposited into the Escrow account.

9.5 Maintenance of Project Highway

The maintenance methodology and yearly maintenance Programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This Programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year. Road maintenance can be carried out in four ways as listed below.

1. Preventive Maintenance
2. Routine Maintenance
3. Periodic Maintenance
4. Special repairs

Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence doesn't require any immediate or preventive interventions.

Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road. The details of periodic maintenance schedule are given below.

Table 9.1: Schedule and status of for Major Maintenance

Description	Schedule of Major Maintenance	Status of Major Maintenance
1st Major Maintenance - Highway Phase 1	18 Km- 2018	18 Km-Executed with micro surfacing
1st Major Maintenance - Highway Phase 2	26 Km- 2019	26 Km-Executed with BC Overlay
1st Major Maintenance - Highway Phase 3	13 Km- 2021	Scheduled
1st Major Maintenance - Highway Phase 4	15 Km- 2022	Scheduled
2nd Major Maintenance - Highway	56 km- 2028	Scheduled

Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project Highway shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.6 Review of Test Reports

9.6.1. Bump Integrator Test (BI)

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in October 2020. As per Schedule K, If the value exceeds 3000 mm in a KM, the stretch shall be rectified. No stretch exceeded the permissible limit of 3000 mm in the Project road.

9.6.2. Benkelman Beam Deflection (BBD)

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

As per the Concession Agreement (CA) BBD tests shall be conducted every year after rainy season which falls during month of October to May. Concessionaire has conducted test in November 2020. The values of deflection are within the limits as per laid down specifications. Hence overlay is not required.

9.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA and project corridor. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 5**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance (In crores)	Incidental maintenance (In crores)	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	0.215	0.313		0.47	0.99
2021	0.221	0.323	1.87	0.48	2.89
2022	0.228	0.333	5.79	0.49	6.84
2023	0.235	0.343		0.51	1.09
2024	0.242	0.353		0.52	1.12
2025	0.249	0.363		0.54	1.15
2026	0.257	0.374		0.56	1.19
2027	0.264	0.385	4.53	0.57	5.75
2028	0.174	0.253	4.64	0.38	5.44
Total	2.08	3.04	16.83	4.52	26.47

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 Scope of Work (Article 2)

Article 2 provides the scope of work which includes the following.

- Construction of the Project Highway on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of Project Facilities as specified in Schedule-C, and in conformity with the Specifications and Standards set forth in Schedule-D;
- Operation and maintenance of the Project Highway in accordance with the provisions of Concession Agreement (CA)
- Performance and fulfillment of all other obligations of the Concessionaire in accordance with the provisions of this Concession Agreement (CA) and matters incidental

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 6**.

10.3 Conditions precedent (Article 4):

Conditions precedent to be fulfilled by the Authority:

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement (CA)

Conditions precedent to be fulfilled by the Concessionaire:

Provide performance security to the Authority

- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfill its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project Highway upon termination of the Contract Agreement (CA)

10.5 Obligations relating to the Competing Roads (Clause 6.3)

Neither Authority nor any Governmental Instrumentality shall construct the Competing Road before 10th Anniversary of the Appointed Date.

10.6 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 20% of the Total Project Cost.

10.7 Provisional Completion Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D and after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of the Concession Agreement (CA).

A copy of PCOD is enclosed in **Annexure-7**.

10.8 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire. A copy of Completion Certificate is enclosed in **Annexure-8**.

10.9 Commercial Operation Date (COD) (Clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of Scope Proposal during Construction period and consented by the Authority are given in **ANNEXURE 10**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any unauthorized use of the Project road.

- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations Period; the Project Highway conforms to the maintenance requirements set forth in Schedule K (the “Maintenance Requirements”).

10.13 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Lanning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “Maintenance Manual”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual programme of preventive, urgent and the schedule maintenance. The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8)

In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of this Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.

- 0.5% (zero decimal five percent) of the Average Daily Fee, and
- 0.1% (zero point one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly Status Reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Monthly Fee Statement (Clause 19.5)

During the Operations Period, the Contractor shall furnish to the Concessionaire and the Authority, if required by the Contractor, within 7 (seven) days of completion of each month, a statement of Fee substantially in the format set out in the Concession Agreement (“Monthly Fee Statement”).

10.18 Annuity (Clause 25.1.1)

The Authority agrees and undertakes to pay the Concessionaire for each annuity Payment period on each annuity payment date as set forth in schedule Y the sum of Rs 8.46 Crores.

As per Clause 25.2.1, In case the COD is different from the Schedule Y, then the annuity payment schedule shall be suitably modified to be a period of 6 months from the preceding Annuity Payment date. Total annuity nos. during the concession period are 26.

Table 10.1: Status of Annuity Payments

S. No.	Particulars	Payment Paid on
1	1st Annuity	1-Dec-14
2	2nd Annuity	28-May-15
3	3rd Annuity	30-Nov-15
4	4th Annuity	8-Jun-16
5	5th Annuity	22-Nov-16
6	6th Annuity	29-May-17
7	7th Annuity	17-Feb-18
8	8th Annuity	29-May-18
9	9th Annuity	29-Nov-18
10	10th Annuity	21-May-19
11	11th Annuity	20-Nov-19
12	12th Annuity	22-May-20
13	13th Annuity	18-Nov-20

10.19 Concession Fee (Article 26)

- In consideration of the grant of Concession the Concessionaire shall pay Concession Fee of Rs. 1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC

10.20 Toll Fee (Clause 27.1.1)

Toll Fees Shall be revised annually in accordance with Clause 27.2.1.

10.21 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 Details of Insurance

As per clause 32.1 of the Concession Agreement, the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks. The copies of Insurance are attached in **Annexure-9**.

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Policy
			From	To	
Civil Engineering Completed Risk Policy	Aspire Insurance Brokers Pvt Ltd	321300441910001988	27.3.2020	26.3.2021	Road and structure, Toll Building & Booths, Road furniture, Sign Boards
Employees Compensation Policy	HDFC ERGO General Insurance Co Ltd	3114203387691200000	19.05.2020	18.05.2021	Employees compensation
Electronic Equipment Insurance Policy Schedule	The Oriental Insurance Company Limited	171200/44/2021/37	08.09.2020	07.09.2021	EEl Equipment installed in the Project Highway

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The overall project pavement condition is good. RCC drains are constructed in built up locations and earthen drains in rural locations resulting in, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are getting cleared during regular maintenance period.

12.4 Traffic Growth

Based on real time, traffic data was extracted from Schedule N of CA, the traffic growth observed is 18.23%, however 5% growth is considered while evaluating forecast of traffic volumes.

12.5 Project Facilities:

Toll Plaza is located at Km. 47+950 and is operational. Toll Plaza is operated by ETC Toll collection system and connected by network system monitored in administrative building. Truck lay byes/Bus bays are in good condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained. Highway lighting is provided at truck laybys and toll plaza locations and found functional.

12.6 Road safety

Pavement marking is in good condition and number of sign boards are provided as per IRC SP 73-2007. The condition of signboards & other road appurtenances like metal beam crash barriers is fair.

12.7 Maintenance

- The routine maintenance being carried out by O&M contractor effectively, based on documents reviewed, time to time observations made by client/Authority, being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance will be carried out in 2021 and 2028.

12.8 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work is being carried out timely and effectively to keep the road in traffic worthy and safe at all time.

Annexure 1: Pavement Condition

Condition: G=Good, F=Fair, P=Poor & VP=Very poor Rutting: M=Moderate & S=Severe Drain: LD=Lined open Drain, ULD=Unlined Drain, CD=Covered Drain, NO=No drain, PF=Partial Function, F= Functional

Annexure 4: Toll Revenue Calculations

Toll Plaza-I:

1. Tollable Traffic considered for Toll Revenue in No.s (AADT):

Table-1: Details of Tollable Traffic (Base Year 2019-20)

Vehicle Type	Traffic (AADT)
	Km.47.950
Car/Taxi/Van	234
LCV	61
Bus	12
Truck	37
MAV	248

2. Traffic Growth Rates

Table-2: Details of Growth rates adopted

Year	Car	LCV	BUS	Truck	MAV
2019-25	5.00	5.00	5.00	5.00	5.00
2025-30	5.00	5.00	5.00	5.00	5.00

3. Trip Distribution Ratio as per the Toll Data.

Table-3: Details of Trip Distribution (Base Year 2019-20)

Vehicle Type	Single Trip	Local Pass	Total
Car/Taxi/Van	99%	1%	100%
LCV	100%	0%	100%
Bus	100%	0%	100%
Truck	100%	0%	100%
MAV	100%	0%	100%

4. Toll Rates :

Table-4: Details of Toll Fee (Base Year 2019-20)

Vehicle Type	Toll Fee at Km. 47+950
Car/Taxi/Van	30
LCV	75
Bus	155
Truck	190
MAV	375

								78,120	
1	Patrolling vehicle	Monthly	Nos	12			150000	0	(1500000 is the cost of vehicle, considering 10% Rental per year) including maintenance

S. No.	Item		Unit	No	Frequency per year	Quantity	Rate	Amount	Remarks
2	Ambulance	Monthly	Nos	12		1	10000	10000	(1200000 is the cost of vehicle, considering 10% Rental per year) including maintenance (1 Ambulance/toll plaza)
3	Tow away trucks and Crane	Monthly	Nos	12		1	20000	20000	(2000000 is the cost of vehicle, considering 10% Rental per year) including maintenance
4	Consumables for Medical Aid Post and Ambulance	Monthly	Nos	12		1	500	6000	2500 Per month for per set (Per set - Per toll plaza)
5	Consumables for Route Patrolling & Crane	Monthly	Nos	12		1	500	6000	2500 Per month for per set (Per set - Per toll plaza)
								42,000	
								2,149,066.00	

Incidental cost for 1 year

	Item		Unit	No	Frequency	Quantity	Rate	Amount	Remarks
1	Road marking	Half yearly	Sqm.	1	1	4368	516	22,53,888	10 % of Total Project length on B/S for 1 year
2	Carriageway Maintenance (Pot Holes etc)	Yearly	Sqm.	1	1	295	168	49,560	5% of Flexible Pavement
3	Maintenance of Earthen Shoulder	Half yearly	Cum.	1	3	834	225	5,62,950	5% of total Shoulder length throughout the project
4	Sign Board	Quarterly	Km.	1	1	13	4000	52,000	2.5 % of Total sign boards per half year (considered 500 nos)
5	MBCB	Monthly	RMT			37.5	2400	90,000	2.5% of Total qty per year - (considered 2400 per number)
6	Mile Stone (KM Stone/ HM Stone / ROW stone etc.)	Quarterly	Nos.	55.6	4	14	2250	1,26,000	5 % of total stones per year (unable to understand the backup)
7	ROW Fencing (If available)	Quarterly	Km.		4			-	10 % of total ROW fencing per year
8	Kerb	Yearly	Km.	5895	1	0.0	250	-	2 % of total Kerbings per year
9	Electrical Poles	Yearly	Nos.	0	1	0	55000	-	3 % of total poles per year
10	Replacement of Rigid pavement Panels	Yearly	Ls.	1	1	0.00	4000	-	Considered 1% of the total volume
11	Providing Reinforced cement concrete crash barrier at the edges of the bridge structures constructed with M-40 grade concrete with HYSD-Fe 500 TMT reinforcement concrete per Rmt conforming to IRC:21 and fixing with dowel bars 16 mm dia to old concrete using epoxy grout as per drawing and	Yearly	Rmt.	0		0	3985	-	3% of Length replacement in every 5 years (Quantity to be estimated)

Technical Specifications and as directed by the Engineer.									
Total amount for 1 Year							31,34,398		

Operational Expenses

S. No.	PARTICULARS	Amount
1	Man Power	₹ 2,976,000
2	Fuel for Generator & Vehicles	₹ 1,236,000
3	Electricity	₹ 330,000
4	Stationary	₹ 10,000
5	Replacement of Electrical Fixtures	₹ 30,080
6	Refurbishment of Toll Plaza Equipment	₹ 75,000
	Total Amount	₹ 4,657,080

Major Maintenance BOQ

S. No.	DESCRIPTION	Unit	QUANTITY	RATE	AMOUNT	QUANTITY	RATE	AMOUNT
	Pavement (Asphalt & Concrete)							
1	Providing and applying tack coat with Rapid Setting Bitumen Emulsion using emulsion pressure distributor on the prepared bituminous/granular surface cleaned with mechanical broom, Ref. to Technical specification 503.			-			-	
(a)	On Bituminous surface @ 2.0 kg to 3.0 kg/10 sq.m.	Sqm	-	14.00		-	14.00	
2	Providing and laying bituminous concrete using a batch type Hot Mix Plant using crushed aggregates of size (table 500-17), premixed with VG Grade Bitumen and filler, transporting the hot mix to work site, laying with a hydrostatic paver finisher with sensor control to the required grade, level and alignment, rolling with smooth wheeled, vibratory and tandem rollers, Pneumatic	Cum	-	7,480.00		-	7,480.00	

S. No.	DESCRIPTION	Unit	QUANTITY	RATE	AMOUNT	QUANTITY	RATE	AMOUNT
	Tyre Rollers to achieve the desired compaction as per Technical specification clause No. 507 and mix design conforming the IRC - 111 and IRC 37.							
3	Providing and laying bituminous concrete using a batch type Hot Mix Plant using crushed aggregates of size	Cum	5,171.25	6,800.00	3,51,64,500	5,171.25	6,800.00	3,51,64,500

SR. NO.	CHARGE		EXISTING DETAILS AS PER SCHEDULE A	PROVISION AS PER SCHEDULE B	CONSTRUCTION PROPOSED BY CONFESIONAL AS PER SCHEDULE C	REASONS & RECOMMENDATION BY INDEPENDENT ENGINEER	Decision of consultant
	EXISTING	DESIGN					
1		Development of Existing Road Near Nagod Town at The Right of Way Road From Km 0+000 to Km 1+200 in Four Lane configuration	Nil	Nil	During visit of chief engineer (M/RDC) on dated 11.05.2013 it was decided to reconstruct old Nagod banyer road to four lane configuration as per IRC-38-73 (115-122) 2 nd road width (Nagod) from the existing junction of NH-75 towards bypass towards Kalinjar side which have approximately 33+170. The entire work local abeyta jama and beyond the present scope of work as per the CA. The work shall be treated as a change of scope of work.	Site inspection carried out by us and observed that Kalinjar road to bypass Nagod city from chainage 31+470 to 31+675 and meet at chainage 33+170 as Kalinjar bypass. NH-75 is crossing through Kalinjar city and old existing four lane road starts from the junction in Kalinjar it meets at bypass road on chainage 33+170. The old existing four lane road in deteriorated condition and needs reconstruction as 200+200' between 204 m height under span passage. While it may be treated as DBFOT may be considered as requirement. It is proposed and recommended to reconstruct four lane in the length of 4200m as per (IRC-38-73, IRC-2-2-1). It is recommended to reconstruct same and refer to the verbal instruction of chief engineer M/RDC of dated 11.05.2013. Since the proposed work is not at scope of agreement, it is not mentioned in schedule B. It may be treated as a change of scope work (positive variation). The actual cost shall be worked out by the concessionaire under positive change of scope.	Reasons & recommendation of IE is accepted for reconstruction of 1200m four lane road in a contract described by item as per IRC-38-73 (IRC-2-1) under Positive Change of scope as additional work. This will be form part of the project length. Actual financial implications may be worked out.
2			No Provision	No Provision in Schedule B	One Major bridge is proposed for reconstruction as per the proposal of I.E. M/RDC vide letter No. 3139 Under Nagod Kalinjar (40 km) 01/2012 dated 18.05.2012 under positive change of scope.	With reference to letter of M/RDC Shrem dated 18.05.2012 one Major bridge under positive change of scope is proposed and recommended for reconstruction as per the requirement based on design approved as per structural and structural provisions. Actual cost of structure accordingly be worked out.	It is recommended that it is accepted for proposed to construct one Major bridge under Positive change of scope. Actual financial implications may be worked out accordingly.
3	6+000	5+000	Type of Structure - canopy No. of spans - 01 Span length - 24m C/W - 5.0 metre Over all width - 34 m with Condition of structure - upper structure - poor sub structure - fair	Detail of proposed structure Reconstruction of minor bridge (36.50) met in 12 mtr width	Existing structure Under no. 8 being 8 mtr span of 24m. The structure is in good condition having carrying capacity of 10 mt and over all width of 34 mtr. This section of road does not fall in present Right of Way. It is a proposed to reconstruct Minor bridge (36.50) met in 12 mtr width. For the condition of structure as per the CA and work may be treated as per IRC-38-73 or M/RDC letter No. 3139 Under Nagod Kalinjar (40 km) 01/2012 dated 18.05.2012 under positive change of scope.	Inspection of existing structure carried out by us and observed as follows: (1) Existing semi-masonry arch structure measured as 2 mtr span of 24 mtr in good condition. (2) Existing carriageway width and overall width of structure measured 7.8 mtr and 4 mtr respectively. (3) It is observed that the condition of structure shows poor, to fair condition. It is proposed to reconstruct Minor bridge (36.50) met in width of 12 mtr. (4) For the Existing masonry arch structure found in good condition and safe for traffic movement hence it is proposed and recommended to repair the structure, and proposed reconstruction of minor bridge (36.50) met in 12 mtr width as per schedule B shall be under change of scope of Negative variation. Actual financial implications shall be worked out by concessionaire.	Reasons & recommendation of IE is accepted for repairing of the existing structure proposed of Minor bridge (36.50) met in 12 mtr width as per schedule B is taken as Negative change of scope. Financial implication may be worked out.

Sl. No.	EXISTING	DESIGN	EXISTING DETAILS AS PER SCHEDULE A	PROVISION AS PER SCHEDULE B	CONCEPTION PROPOSED BY CONCESSIONAIRE AS PER SITE CONDITION	REASONS & RECOMMENDATION BY INDEPENDENT ENGINEER	Decision of committee
17	SS-530	SS-505	Type of structure- HPC No. of pipe-01 Dia of pipe-1000 C/W 6.5 mtr Cover of 10/15/17.5 mtr Condition of structure D/E-As Road wall-As Return wall-As	Type of Structure- HPC (1x1.0) mtr Proposed widening 12mtr width	During the survey existing structure (1000) HPC is found to be badly fixed in poor condition. It is not suitable for reconstruction as per schedule A. A proposed width (12.0) HPC up to 12 mtr width. There is a difference in existing structure and proposed structure in width of 6.5 mtr. Hence 1000 dia pipe HPC is proposed to reconstruct in this change to 12 mtr width.	Site inspection carried out by us. Agreed with the conception of concessionaire. Since the existing HPC and proposed HPC as schedule B is not permitted as per schedule A. It is proposed to reconstruct to minimum (12.0) mtr HPC in width of 12 mtr which is more economical than compare to existing structure. (1) Structure proposed to construct shall be under change of scope of positive variation. (2) The proposed and reconstructed structure shall be under change of scope of positive variation. (3) The proposed and reconstructed structure shall be under change of scope of positive variation. (4) The actual cost of structure shall be worked out by concessionaire for financial implication.	Reasons & recommendation of IE is accepted for proposed structure in schedule B, widening of HPC (12.0) mtr in 17 mtr width. Given as Negative variation and reconstruction of (10.0) mtr HPC in 12 mtr width as positive variation. Not allowed for variation may be worked out accordingly.
18	SS-531	SS-506	Not Mentioned in schedule A	No proposal in Schedule B	In temporary existing structure (1000) mtr HPC in width of 6.5 mtr found in poor condition. No per schedule A & B structure is not proposed. Existing width of this change location is required to provide larger in this location. Also been capacity regarding flow of water during rainy season which overtop the existing structure. Therefore existing the location of structure is proposed to reconstruct (12.0) HPC in width of 12 mtr.	Inspection carried out by us. Agreed with the conception of concessionaire. Structure is not mentioned in schedule A and there is no provision of structure in schedule B. Local enquiry made that the concessionaire develop the existing structure in rainy season. Hence it is proposed and recommended to reconstruct (12.0) mtr HPC in 12 mtr width which is more economical area to reconstruct for the existing structure. (1) The proposed and reconstructed structure shall be under change of scope of positive variation. (2) The proposed and reconstructed structure shall be under change of scope of positive variation. (3) The actual cost of structure shall be worked out by concessionaire for financial implication.	Reasons & recommendation of IE is accepted for reconstruction in (12.0) mtr HPC in 12 mtr width taken as positive variation. Actual financial implication may be worked out accordingly.
19	SS-532	SS-507	Not Mentioned in schedule A	No proposal in Schedule B	In temporary existing structure (1000) mtr in this location in poor condition. Details of existing structure given below: Length- 6.5 mtr, Width- 6.5 mtr, Height- 0.8 mtr. As per schedule A & B structure is not proposed. But structure is required for the location for safety and traffic of road. Hence it is proposed to reconstruct (12.0) mtr HPC in 12 mtr width.	Inspection carried out by us. Agreed with the conception of concessionaire. Structure is not mentioned in schedule A and there is no provision of structure in schedule B. Since as per site condition (1000) mtr HPC in width of 6.5 mtr which is proposed to reconstruct in more economical area to reconstruct for the existing structure. (1) The proposed and reconstructed structure shall be under change of scope of positive variation. (2) The proposed and reconstructed structure shall be under change of scope of positive variation. (3) The actual cost of structure shall be worked out by concessionaire for financial implication.	Reasons & recommendation of IE is accepted for reconstruction in (12.0) mtr HPC in 12 mtr width taken as positive variation. Actual financial implication may be worked out accordingly.
20	SS-533	SS-508	Not Mentioned in schedule A	No proposal in Schedule B	In temporary existing structure (1000) mtr in this location in poor condition. Details of existing structure given below: Length- 6.5 mtr, Width- 6.5 mtr, Height- 1.0 mtr. As per schedule A & B structure is not proposed. But structure is required for the location for safety and traffic of road. Hence it is proposed to reconstruct (12.0) mtr HPC in 12 mtr width.	Inspection carried out by us. Agreed with the conception of concessionaire. Structure is not mentioned in schedule A and there is no provision of structure in schedule B. Hence as per site condition (1000) mtr HPC in width of 6.5 mtr which is proposed to reconstruct in more economical area to reconstruct for the existing structure. (1) The proposed and reconstructed structure shall be under change of scope of positive variation. (2) The proposed and reconstructed structure shall be under change of scope of positive variation. (3) The actual cost of structure shall be worked out by concessionaire for financial implication.	Reasons & recommendation of IE is accepted for reconstruction in (12.0) mtr HPC in 12 mtr width taken as positive variation. Actual financial implication may be worked out accordingly.
21	SS-534	SS-509	Not Mentioned in schedule A	No proposal in Schedule B	In temporary existing structure (1000) mtr in this location in poor condition. Details of existing structure given below: Length- 6.5 mtr, Width- 6.5 mtr, Height- 1.0 mtr. As per schedule A & B structure is not proposed. But structure is required for the location for safety and traffic of road. Hence it is proposed to reconstruct (12.0) mtr HPC in 12 mtr width.	Inspection carried out by us. Agreed with the conception of concessionaire. Structure is not mentioned in schedule A and there is no provision of structure in schedule B. Hence as per site condition (1000) mtr HPC in width of 6.5 mtr which is proposed to reconstruct in more economical area to reconstruct for the existing structure. (1) The proposed and reconstructed structure shall be under change of scope of positive variation. (2) The proposed and reconstructed structure shall be under change of scope of positive variation. (3) The actual cost of structure shall be worked out by concessionaire for financial implication.	Reasons & recommendation of IE is accepted for reconstruction in (12.0) mtr HPC in 12 mtr width taken as positive variation. Actual financial implication may be worked out accordingly.

Sl. NO.	DRAINAGE		EXISTING DETAILS AS PER SCHEDULE A	PROVISION AS PER SCHEDULE B	CONSTRUCTION PROVISIONS BY CONCESSIONAIRE FOR SITE CONDITION	REASON & RECOMMENDATION BY INDEPENDENT ENGINEER	Decision of committee
	EXISTING	DESIGN					
22	Can	SH-66	Not Mentioned in schedule A	No proposal in Schedule B	In temporary existing structure (100.72) concrete slab board in poor condition. Details of existing structure given below: Length - 23.00m, Width/Type - 4.00m, Height - 1.00m. As per schedule A & B structure is not proposed. Reconstruction is proposed at 20% variation for safety and hydraulic condition. Hence it is proposed to reconstruct (100.72) mtr R/W in 12 mtr width.	Inspection carried out by us. Agreed with the comments of independent engineer. Structure is reconstructed in schedule A and B as per schedule A & B structure is not proposed. The proposed and recommended structure shall be under change of scope of positive variation. The actual cost of structure shall be worked out by concessionaire for financial implication.	Reason & recommendation of IE is accepted for reconstruction to (100.72) mtr R/W in 12 mtr width taken as positive variation. Actual financial implication may be worked out accordingly.
23	Can	SH-66	Not Mentioned in schedule A	No proposal in Schedule B	In temporary existing structure (100.72) concrete slab board in poor condition. Details of existing structure given below: Length - 7mtr, Width/Type - 1.50mtr, Height - 1.00m. As per schedule A & B structure is not proposed. Reconstructing details of this drainage location, and flow of water during rainy season. It is suggested to provide larger cross sectional area. Hence it is proposed to reconstruct (100.72) mtr R/W in 12 mtr width.	Inspection carried out by us. Agreed with the comments of independent engineer. As per schedule A & B structure is not proposed. Local steady flow shall be during rainy season to reduce water coverage at this location. Hence as per site condition (100.72) mtr R/W in 12 mtr width shall be reconstructed in accordance to the existing structure. The proposed and recommended structure shall be under change of scope of positive variation. The actual cost of structure shall be worked out by concessionaire for financial implication.	Reason & recommendation of IE is accepted for reconstruction to (100.72) mtr R/W in 12 mtr width taken as positive variation. Actual financial implication may be worked out accordingly.
24	Can	SH-66	Type of Structure - Arch No of span - 03 Span length - 10mtr C/W - 6.00mtr Overall width - 7.50mtr Condition of Structure - sub - D Level of water table - 1mtr below in well / parapet - 10mtr	Type of Structure - RCC slab (in R) in concrete Proposal - reconstruction to (100.72) mtr R/W in 12.0 mtr width.	In temporary existing structure (100.72) concrete slab board in poor condition. Details of existing structure given below: Length - 10mtr, Width/Type - 1.50mtr, Height - 1.00m. As per schedule A & B structure is not proposed. Reconstructing details of this drainage location, and flow of water during rainy season. It is suggested to provide larger cross sectional area. Hence it is proposed to reconstruct (100.72) mtr R/W in 12 mtr width.	Inspection carried out by us. Agreed with the comments of independent engineer. The existing structure is located in densely urban area where there is possibility of high water table during rainy season. Hence it is suggested to reconstruct (100.72) mtr R/W in 12 mtr width. (i) Structure mentioned in schedule A shall be under change of scope of positive variation. (ii) Proposed and recommended structure shall be under change of scope of positive variation. The actual cost of structure shall be worked out by concessionaire for financial implication.	Reason & recommendation of IE is accepted for reconstruction to (100.72) mtr R/W in 12 mtr width proposed in schedule B taken as positive variation and proposal for reconstruction of (100.72) mtr R/W in 12 mtr width as positive variation. Net financial implication may be worked out accordingly.
25	Can	SH-66	Not Mentioned in schedule A	No proposal in schedule B	In temporary existing structure (100.72) concrete slab board in poor condition. Details of existing structure given below: Length - 23.00m, Width/Type - 4.00m, Height - 1.00m. As per schedule A & B structure is not proposed. Reconstruction is proposed at 20% variation for safety and hydraulic condition. Hence it is proposed to reconstruct (100.72) mtr R/W in 12 mtr width.	Inspection carried out by us. Agreed with the comments of independent engineer. It is proposed that in rainy season water coverage shall be at this location. Hence as per site condition (100.72) mtr R/W in 12 mtr width shall be reconstructed in accordance to the existing structure. The proposed and recommended structure shall be under change of scope of positive variation. The actual cost of structure shall be worked out by concessionaire for financial implication.	Reason & recommendation of IE is accepted for reconstruction to (100.72) mtr R/W in 12 mtr width taken as positive variation. Actual financial implication may be worked out accordingly.
26	Can	SH-66	Not Mentioned in schedule A	No proposal in schedule B	In temporary existing structure (100.72) concrete slab board in poor condition. Details of existing structure given below: Length - 23.00m, Width/Type - 4.00m, Height - 1.00m. As per schedule A & B structure is not proposed. Reconstruction is proposed at 20% variation for safety and hydraulic condition. Hence it is proposed to reconstruct (100.72) mtr R/W in 12 mtr width.	Inspection carried out by us. Agreed with the comments of independent engineer. Local steady flow shall be during rainy season to reduce water coverage at this location. Hence as per site condition (100.72) mtr R/W in 12 mtr width shall be reconstructed in accordance to the existing structure. The proposed and recommended structure shall be under change of scope of positive variation. The actual cost of structure shall be worked out by concessionaire for financial implication.	Reason & recommendation of IE is accepted for reconstruction to (100.72) mtr R/W in 12 mtr width taken as positive variation. Actual financial implication may be worked out accordingly.

SR. NO.	CHANGAGE		EXISTING DETAILS AS PER SCHEDULE A	PROVISION AS PER SCHEDULE B	CONSTRUCTION PROPOSED BY CONCESSIONAIRE AS PER SITE CONDITION	REASONS & RECOMMENDATION BY INDEPENDENT ENGINEER	Division of committee
	EXISTING	DESIGN					
31	00000	00000	Type of Structure-Beam Road Span-20m Span length-12m C/W 6 m. Over all width 16.7 m. Foundation of Structure shall be by head wall/Abutment/Retaining wall/Support etc.	Type of Structure-Structural column (12.0) m. Proposed-Recommendation in 12.0m width.	Over all width existing structure (12.0) m. Foundation of Structure shall be by head wall/Abutment/Retaining wall/Support etc. Proposed-Recommendation in 12.0m width. To provide R & R in proposed construction (12.0) m. To provide foundation and construction of people system (24.0) m. Retaining wall 14.0 m. width is proposed.	The mentioned change is proposed by and Agreed with the committee of concessionaire. Since it is located at this location, concessionaire will ensure that the proposed construction (12.0) m. width is not higher than the existing structure to water flow. After the condition (20.0) m. in H.C. in addition 12.0 m. in width is proposed by drainage of water at this location. Hence it is proposed that recommendation is correct (24.0) m. Retaining wall 14.0 m. width. (a) Structure proposed in 12.0 m. width shall be worked out by concessionaire. (b) Structure proposed and recommended to recommend shall be worked out by concessionaire. The actual cost of structure shall be worked out by concessionaire.	Reasons & recommendation of IE is accepted for reconstruction of (12.0) m. width in 12.0 m. width. Proposed in schedule B taken as positive variation. and proposal for reconstruction of (24.0) m. Retaining wall 14.0 m. width as positive variation. Actual financial implications may be worked out accordingly.
32	00000	00000	Not mentioned in schedule A.	No provision in schedule B.	Drainage structure is proposed at this location in this project. It is observed that water drainage road is not provided in schedule A & B. Therefore a provision for the water drainage road is proposed. Hence it is proposed. New construction (12.0) m. width in 12.0 m. width.	Agreed with the committee of concessionaire. There is no provision in schedule A & B. Hence it is proposed in 12.0 m. width. Hence it is proposed in 12.0 m. width. The actual cost of structure shall be worked out by concessionaire. (a) The proposed and recommended structure shall be worked out by concessionaire. (b) The actual cost of structure shall be worked out by concessionaire.	Reasons & recommendation of IE is accepted for reconstruction of (12.0) m. Retaining wall 14.0 m. width in 12.0 m. width. Actual financial implications may be worked out accordingly.
33	00000	00000	Not mentioned in schedule A.	No provision in Schedule B.	(i) Inventory existing structure (24.0) m. Retaining wall 14.0 m. width. Details of existing structure is given below. Length-7 m. Width-20 m. Height-10 m. (ii) To provide R & R in proposed construction (24.0) m. Retaining wall 14.0 m. width. To provide foundation and construction of people system (24.0) m. Retaining wall 14.0 m. width. Hence it is proposed to reconstruct (24.0) m. Retaining wall 14.0 m. width.	The mentioned change is proposed by and Agreed with the committee of concessionaire. Structure is not mentioned in schedule A & B. Hence it is proposed in 12.0 m. width. Hence it is proposed in 12.0 m. width. The actual cost of structure shall be worked out by concessionaire. (a) The proposed and recommended structure shall be worked out by concessionaire. (b) The actual cost of structure shall be worked out by concessionaire.	Reasons & recommendation of IE is accepted for reconstruction of (24.0) m. Retaining wall 14.0 m. width in 12.0 m. width. Actual financial implications may be worked out accordingly.
34	00000	00000	Not mentioned in schedule A.	No provision in Schedule B.	Drainage structure is proposed at this location in this project. It is observed that water drainage road is not provided in schedule A & B. Therefore a provision for the water drainage road is proposed. Hence it is proposed. New construction (12.0) m. width in 12.0 m. width.	The mentioned change is proposed by and Agreed with the committee of concessionaire. Structure is not mentioned in schedule A & B. Hence it is proposed in 12.0 m. width. Hence it is proposed in 12.0 m. width. The actual cost of structure shall be worked out by concessionaire. (a) The proposed and recommended structure shall be worked out by concessionaire. (b) The actual cost of structure shall be worked out by concessionaire.	Reasons & recommendation of IE is accepted for reconstruction of (12.0) m. Retaining wall 14.0 m. width in 12.0 m. width. Actual financial implications may be worked out accordingly.
35	00000	00000	Not mentioned in schedule A.	No provision in Schedule B.	Drainage structure is proposed at this location in this project. It is observed that water drainage road is not provided in schedule A & B. Therefore a provision for the water drainage road is proposed. Hence it is proposed. New construction (12.0) m. width in 12.0 m. width.	The mentioned change is proposed by and Agreed with the committee of concessionaire. Structure is not mentioned in schedule A & B. Hence it is proposed in 12.0 m. width. Hence it is proposed in 12.0 m. width. The actual cost of structure shall be worked out by concessionaire. (a) The proposed and recommended structure shall be worked out by concessionaire. (b) The actual cost of structure shall be worked out by concessionaire.	Reasons & recommendation of IE is accepted for reconstruction of (12.0) m. Retaining wall 14.0 m. width in 12.0 m. width. Actual financial implications may be worked out accordingly.

SL. NO.	CLEARANCE		EXISTING DETAILS AS PER SCHEDULE A	PROVISION AS PER SCHEDULE B	CONSTRUCTION PROPOSED BY CONCESSIONAIRE AS PER SITE CONDITION	REASONS & RECOMMENDATION BY INDEPENDENT ENGINEER	Decision of committee
	EXISTING	DESIGN					
26	11m	24.75m	Not Mentioned in schedule A	No proposal in schedule B	Demography existing structure (1X1.2) mtr. Above rd to top of structure (1.80m). Detail of existing structure is given below: Length: 5.0m width: 1.2m. Height: 1.80m. As per schedule A & B structure is not proposed. Change of slope at this drainage location is not likely to occur during life span hence no need for the existing structure at this loc. In proposed HPC structure, as per schedule A & B structure is proposed to construct (2x1.0) mtr HPC in 12 mtr width.	The proposed change suggested by us is agreed with the consent of concessionaire. Structure is as per provision (A) in schedule A and this is an improvement of structure as schedule B. Structure is proposed & recommended as per (A) condition to reconstruct (1.0) mtr HPC with 1.2 mtr width. (A) condition is not likely to occur during life span hence no need for the existing structure at this loc. In proposed HPC structure, as per schedule A & B structure is proposed to construct (2x1.0) mtr HPC in 12 mtr width.	Reasons & recommendation of IE is accepted for reconstruction of (1x1.0) mtr HPC in 12 mtr width taken as positive variation.
27	7.50m	19.14m	Type of Structure- Stone No of pipes-01 Span length-1.5m C/W-5.0 mtr Over all width-5.5 mtr Condition of structure- old pipe Hand wall/wing wall - none return wall / parapet wall	Type of Structure- RCC (1x1.2) mtr slab Proposed- Reconstruction in (2x1.2) mtr width	Existing temporary existing structure (1.0) mtr. Above rd to top of structure (1.80m). Detail of existing structure is given below: Length: 1.5m width: 0.5 mtr. Height: 1.80m. (1) In schedule A it is proposed to reconstruct (1.0) mtr slab in 12 mtr width. Change of slope at this drainage location is not likely to occur during life span hence no need for the existing structure at this loc. In proposed HPC structure, as per schedule A & B structure is proposed to construct (2x1.2) mtr HPC in 12 mtr width.	The mentioned change suggested by us is agreed with the consent of concessionaire. As per the provision (A) in schedule A and this is an improvement of structure as schedule B. Structure is proposed & recommended as per (A) condition to reconstruct (1.0) mtr HPC with 1.2 mtr width. (A) condition is not likely to occur during life span hence no need for the existing structure at this loc. In proposed HPC structure, as per schedule A & B structure is proposed to construct (2x1.2) mtr HPC in 12 mtr width.	Reasons & recommendation of IE is accepted for reconstruction of (1x1.0) mtr slab in 12 mtr width. Proposed in schedule B taken as negative variation and proposal for reconstruction of (2x1.2) mtr HPC in 12 mtr width as positive variation. No financial implication may be worked out accordingly.
28	7.50m	19.14m	Type of Structure- Stone No of pipes-01 Span length-1.0 mtr C/W-5.7 mtr Over all width-6.7 mtr Condition of structure- old pipe Hand wall/wing wall - none return wall / parapet wall	Type of Structure- RCC (1x1.2) mtr slab Proposed- Reconstruction in (2x1.2) mtr width	Existing temporary existing structure (1.0) mtr. Above rd to top of structure (1.80m). Detail of existing structure is given below: Length: 1.0 mtr width: 0.5 mtr. Height: 1.80m. (1) In schedule A it is proposed to reconstruct (1.0) mtr slab in 12 mtr width. Change of slope at this drainage location is not likely to occur during life span hence no need for the existing structure at this loc. In proposed HPC structure, as per schedule A & B structure is proposed to construct (2x1.2) mtr HPC in 12 mtr width.	The mentioned change suggested by us is agreed with the consent of concessionaire. As per the provision (A) in schedule A and this is an improvement of structure as schedule B. Structure is proposed & recommended as per (A) condition to reconstruct (1.0) mtr HPC with 1.2 mtr width. (A) condition is not likely to occur during life span hence no need for the existing structure at this loc. In proposed HPC structure, as per schedule A & B structure is proposed to construct (2x1.2) mtr HPC in 12 mtr width.	Reasons & recommendation of IE is accepted for reconstruction of (1x1.0) mtr slab in 12 mtr width proposed in schedule B taken as negative variation and proposal for reconstruction of (2x1.2) mtr HPC in 12 mtr width as positive variation. No financial implication may be worked out accordingly.
29	10.50m		Not Mentioned in schedule A	Type of structure- HPC (1x1.2) mtr HPC Proposed- Reconstruction in (2x1.2) mtr width	Existing temporary existing structure as existing structure. Detail of existing structure is given below: (1) In schedule A it is proposed to reconstruct (1x1.2) mtr HPC with 12 mtr width. As per schedule B it is proposed to reconstruct (2x1.2) mtr HPC with 12 mtr width. Change of slope at this drainage location is not likely to occur during life span hence no need for the existing structure at this loc. In proposed HPC structure, as per schedule A & B structure is proposed to construct (2x1.2) mtr HPC in 12 mtr width.	The mentioned change suggested by us is agreed with the consent of concessionaire. As per the provision (A) in schedule A and this is an improvement of structure as schedule B. Structure is proposed & recommended as per (A) condition to reconstruct (1x1.2) mtr HPC with 12 mtr width. (A) condition is not likely to occur during life span hence no need for the existing structure at this loc. In proposed HPC structure, as per schedule A & B structure is proposed to construct (2x1.2) mtr HPC in 12 mtr width.	Reasons & recommendation of IE is accepted for reconstruction of (1x1.2) mtr HPC in 12 mtr width as positive change of slope. Financial implication may be worked out accordingly.
30	7.50m	7.50m	Type of Structure- HPC No of pipes-01 Dia of pipe-100mm C/W-6.5 mtr Over all width-8.5 mtr Condition of structure- old pipe Hand wall / wing wall - none return wall etc.	Type of Structure- HPC (1x1.0) mtr Proposed- widening up to 12 mtr width	Existing temporary existing structure (1.0) mtr. Above rd to top of structure (1.80m). Detail of existing structure is given below: Length: 7.50 mtr width: 0.5 mtr. As per schedule A it is proposed to reconstruct (1x1.0) mtr HPC in 12 mtr width. Since the existing HPC is in poor condition, hence it is proposed to reconstruct (1x1.0) mtr HPC in 12 mtr width.	The mentioned change suggested by us is agreed with the consent of concessionaire. As per the provision (A) in schedule A and this is an improvement of structure as schedule B. Structure is proposed & recommended as per (A) condition to reconstruct (1.0) mtr HPC with 12 mtr width. (A) condition is not likely to occur during life span hence no need for the existing structure at this loc. In proposed HPC structure, as per schedule A & B structure is proposed to reconstruct (1.0) mtr HPC with 12 mtr width.	Reasons & recommendation of IE is accepted for widening of (1x1.0) mtr HPC in 12 mtr width proposed in schedule B taken as positive variation and proposal for reconstruction of (1x1.0) mtr HPC in 12 mtr width as positive variation. No financial implication may be worked out accordingly.

SR. NO	CULVRIDGE		EXISTING DETAILS AS PER SCHEDULE A	PROVISION AS PER SCHEDULE B	CONSTRUCTION PROPOSED BY CONCESSIONAIRE AS PER SITE CONCEPTION	REASONS & RECOMMENDATION BY INDEPENDENT ENGINEER	Decision of committee
	EXISTING	DESIGN					
41	70x90		Not Mentioned in schedule A	Type of structure - RPC (1x1.2) mtr Proposed reconstruction of 12.0 mtr width	During inventory no structure found at existing site. As per schedule B it is proposed to reconstruct (1x1.2) mtr RPC upto 12 mtr width. As per site observation, structure level is higher than ground level.	The mentioned change is proposed by the contractor and approved by the concessionaire. As per schedule B, reconstruction is required in existing site. Hence it is proposed to reconstruct (1x1.2) mtr RPC upto 12 mtr width. (a) Structure proposed in schedule B shall be change of scope of positive variation. Actual cost of structure shall be worked out by concessionaire. (b) Financial implication.	Reasons & recommendation of IE is accepted for reconstruction of RPC (1x1.2) mtr in 12 mtr width taken as positive change of scope. Financial implication may be worked out.
42	70x20	70x20	Type of Structure - RPC No. of spans - 05 Dia of pipe - 1000 C.W - 55 mm Over all width - 8.2 mtr CONDITIONAL HEIGHTS - Pipe Top Road wall, Side Retain wall - 5.0	Type of Structure - RPC (1x1.2) mtr Proposed widening of RPC in 12 mtr width	During inventory existing structure (1x1.2) mtr RPC is found in poor condition. Dia of existing structure is given below. Length of span - 20 mtr Dia - 1000 As per schedule B it is proposed to reconstruct (1x1.2) mtr RPC in 12 mtr width. Since the existing RPC is in poor condition, hence it is proposed to reconstruct (1x1.2) mtr RPC in 12 mtr width.	The mentioned change is proposed by the contractor and approved by the concessionaire. Hence it is proposed to reconstruct (1x1.2) mtr RPC in 12 mtr width. (a) Structure proposed in schedule B shall be under change of scope of negative variation. (b) Structure proposed and recommended (1x1.2) mtr RPC in 12 mtr width, by concessionaire shall be under change of scope of positive variation. (c) Actual cost of structure shall be worked out by the concessionaire for financial implication.	Reasons & recommendation of IE is accepted for widening of (1x1.2) RPC in 12 mtr width as positive variation and proposal for reconstruction of (1x1.2) mtr RPC in 12 mtr width as positive variation. No financial implication may be worked out accordingly.
43	100x	70x90	Not Mentioned in schedule A	No proposal in Schedule B	During inventory existing structure (2x1.0) mtr RPC is found in poor condition. Dia of existing structure is given below. Length - 2 mtr, width - 1.0 mtr (two side road). As per schedule B it is proposed to reconstruct (1x1.2) mtr RPC in 12 mtr width. Hence it is proposed to reconstruct (1x1.2) mtr RPC upto 12 mtr width.	The mentioned change is proposed by the contractor and approved by the concessionaire. The structure is under observation in schedule A. No proposal is provided in schedule B. Hence it is proposed to reconstruct (1x1.2) mtr RPC in 12 mtr width. Since the existing structure is in poor condition, hence it is proposed to reconstruct (1x1.2) mtr RPC in 12 mtr width. (a) Structure proposed and recommended (1x1.2) mtr RPC in 12 mtr width, by concessionaire shall be under change of scope of positive variation. The actual cost of structure shall be worked out by concessionaire for financial implication.	Reasons & recommendation of IE is accepted for reconstruction of (1x1.2) mtr RPC in the width of 12 mtr taken as positive variation. Actual financial implication may be worked out.
44	80x	70x90	Not Mentioned in schedule A	No proposal in Schedule B	During inventory existing structure (1x1.0) mtr RPC is found in poor condition. Dia of existing structure is given below. Length - 2 mtr, width - 1.0 mtr. As per schedule A & B it is proposed to reconstruct (1x1.2) mtr RPC upto 12 mtr width. Hence it is proposed to reconstruct (1x1.2) mtr RPC upto 12 mtr width.	The mentioned change is proposed by the contractor and approved by the concessionaire. Structure is not mentioned in schedule A and there is no provision of structure in schedule B. Hence it is proposed and recommended to reconstruct (1x1.2) mtr RPC upto 12 mtr width. Since the existing structure is in poor condition, hence it is proposed to reconstruct (1x1.2) mtr RPC upto 12 mtr width. (a) Structure proposed and recommended (1x1.2) mtr RPC in 12 mtr width, by concessionaire shall be under change of scope of positive variation. The actual cost of structure shall be worked out by concessionaire for financial implication.	Reasons & recommendation of IE is accepted for reconstruction of (1x1.2) mtr RPC in the width of 12 mtr taken as positive variation. Actual financial implication may be worked out.
45	80x	70x90	Not Mentioned in schedule A	No proposal in Schedule B	During inventory existing structure (1x1.0) mtr RPC is found in poor condition. Dia of existing structure is given below. Length - 2 mtr, width - 1.0 mtr. As per schedule A & B it is proposed to reconstruct (1x1.2) mtr RPC upto 12 mtr width. Hence it is proposed to reconstruct (1x1.2) mtr RPC upto 12 mtr width.	The mentioned change is proposed by the contractor and approved by the concessionaire. Structure is not mentioned in schedule A and there is no provision of structure in schedule B. Hence it is proposed and recommended to reconstruct (1x1.2) mtr RPC upto 12 mtr width. Since the existing structure is in poor condition, hence it is proposed to reconstruct (1x1.2) mtr RPC upto 12 mtr width. (a) Structure proposed and recommended (1x1.2) mtr RPC in 12 mtr width, by concessionaire shall be under change of scope of positive variation. The actual cost of structure shall be worked out by concessionaire for financial implication.	Reasons & recommendation of IE is accepted for reconstruction of (1x1.2) mtr RPC in the width of 12 mtr taken as positive variation. Actual financial implication may be worked out.

SR. NO.	CHANGE		EXISTING DETAILS AS PER SCHEDULE A	PROVISION AS PER SCHEDULE B	COMMENT/TEAM PROPOSED BY CONCESSIONAIRE AS PER TECHNOLOGY	REASONS & RECOMMENDATION BY INDEPENDENT ENGINEER	Decision of committee
	EXISTING	DESIGN					
61	80m	75-80	Not Mentioned in schedule A	No proposal in schedule B	During inventory existing structure (2305) in present state is found in poor condition. Detail of existing structure is given below. Length - 4.2m, width 0.8, height - 0.3mtr. (2 nos. each). In schedule B it is not proposed. As per site condition and safety of road, structure is required in this change location. There it is proposed to reconstruct (2x1.0) mtr HPC span 12 mtr width.	The proposed change requested by us. Agreed with the comments of concessionaire. Structure is not proposed in schedule B and there is no provision of structure in schedule B. Hence it is proposed and recommended to reconstruct (2x1.0) mtr HPC span 12 mtr width whose cross-sectional area is equivalent to the existing structure. (1) The proposed and recommended structure shall be under change of scope of positive variation. The actual cost of structure shall be worked out by concessionaire for financial implication.	Decision & recommendation of IE is accepted for reconstruction of (2x1.0) mtr HPC in the width of 12 mtr takes as positive variation. Actual financial implication may be worked out.
62	80m	75-80	Not Mentioned in schedule A	No proposal in schedule B	During inventory existing structure (2309) in present state is found in poor condition. Detail of existing structure is given below. Length - 6.5mtr, width 0.8, height - 0.3mtr. (2 nos. each). In schedule B it is not proposed. As per site condition and safety of road, structure is required in this change location. There it is proposed to reconstruct (2x1.0) mtr HPC span 12 mtr width.	The proposed change requested by us. Agreed with the comments of concessionaire. Structure is not proposed in schedule B and there is no provision of structure in schedule B. Hence it is proposed and recommended to reconstruct (2x1.0) mtr HPC span 12 mtr width whose cross-sectional area is equivalent to the existing structure. (1) The proposed and recommended structure shall be under change of scope of positive variation. The actual cost of structure shall be worked out by concessionaire for financial implication.	Reasons & recommendation of IE is accepted for reconstruction of (2x1.0) mtr HPC in the width of 12 mtr takes as positive variation. Actual financial implication may be worked out.
63	80m	75-80	Not Mentioned in schedule A	No proposal in schedule B	During inventory existing structure (2310) in present state is found in poor condition. Detailed drawing structure is given below. Length - 2.1mtr, width 0.6, height - 0.15mtr. In schedule A & B it is not proposed. As per site condition and safety of road, structure is required in this change location. Hence it is proposed to reconstruct (1x1.0) mtr HPC span 12 mtr width.	The proposed change requested by us. Agreed with the comments of concessionaire. Structure is not mentioned in schedule B and there is no provision of structure in schedule B. Hence it is proposed and recommended to reconstruct. (1) (2x1.0) mtr HPC span 12 mtr width whose cross-sectional area is equivalent to the existing structure. (2) The proposed and recommended structure shall be under change of scope of positive variation. The actual cost of structure shall be worked out by concessionaire for financial implication.	Reasons & recommendation of IE is accepted for reconstruction of (1x1.0) mtr HPC in the width of 12 mtr takes as positive variation. Actual financial implication may be worked out.
64	80m	75-80	Type of Structure - Minor Bridge No. of span - 01 Span length - 0.8mtr C/W - 7.5mtr Over all width - 5.5 mtr Condition of structure - super structure - poor sub structure - poor	Type of structure - minor bridge (2x1.0) mtr minor bridge Proposed - Reconstruction in 12.0 mtr width	(1) As per site inventory existing structure in these bridge (2x1.0) mtr in good condition. The change may not be allowed if structure is 12.0 mtr and 6.5mtr respectively. (2) schedule B it is proposed to reconstruct (2x1.0) mtr minor bridge in 12 mtr width. Here it is included during site visit of (1) MPTC (d. 21.06.2013), to reconstruct structure in good condition with minor regular. Hence it is proposed to reconstruct the structure.	The proposed change requested by us. Agreed with the comments of concessionaire. Structure is not mentioned in schedule B and there is no provision of structure in schedule B. Hence it is proposed and recommended to reconstruct (2x1.0) mtr HPC span 12 mtr width whose cross-sectional area is equivalent to the existing structure. (1) The proposed and recommended structure shall be under change of scope of positive variation. The actual cost of structure shall be worked out by concessionaire for financial implication.	Reasons & recommendation of IE is accepted for proposed reconstruction in schedule B. (2x1.0) mtr minor bridge span 12 mtr width takes under Negative change of scope. Financial implication may be worked out.
65	80m	75-80	Type of Structure - Slab No. of span - 01 Span length - 1mtr C/W - 6.5 mtr Over all width - 7.5 mtr Condition of structure - slab - poor head wall/abutment wall - poor foundation/structure - poor	Type of structure - Slab (1x1.0) mtr Proposed - Reconstruction in 12.0 mtr width	During inventory existing structure (2312) mtr HPC in present state is found in poor condition. Detail of existing structure is given below. Length - 4.4mtr, Over all width - 1.2 mtr. (1) schedule B it is proposed to reconstruct (1x1.0) mtr in 12 mtr width. Following a survey is held, with change location and flow of water during rainy season it is required to provide structure, to safeguard road and traffic. Proposed structure in schedule B may be changed at our responsibility in poor condition. Hence it is proposed to reconstruct (2x1.2) mtr HPC in 12 mtr width.	Structure is covered under us. Agreed with the comments of concessionaire. As per condition (2x1.2) mtr HPC suitable for change of location at this location. Hence it is proposed to reconstruct (2x1.2) mtr HPC in 12 mtr width as follows: (a) Structure proposed in schedule B shall be under change of scope of positive variation. (2) Structure proposed and recommended to reconstruct shall be under change of scope of positive variation. Hence cost shall be worked out by concessionaire for financial implication.	IE recommendation is accepted for reconstruction of (2x1.2) mtr slab in 12 mtr width. Structure proposed in schedule B takes as positive variation and proposal for reconstruction of (2x1.2) mtr HPC in 12 mtr width as positive variation. Hence financial implication may be worked out accordingly.

Sl. No.	DRAINAGE		EXISTING DETAILS AS PER SCHEDULE A	PROVISION AS PER SCHEDULE B	CONSTRUCTION PROPOSED BY CONSTRUCTIONAL FIRM SITE CONDITION	REASONS & RECOMMENDATION BY INDEPENDENT ENGINEER	Decision of committee
	EXISTING	DESIGN					
66	66/94	66-04	Type of Structure- Stone No of spans-01 Span length- 2.0 mtr C/W- 5.5 mtr Dia of pipe- 6.5 mtr Condition of structure- slab-poor head wall/wing wall-poor return wall/parapet-poor	Type of Structure- RCC slab (1X1.0) mtr Proposed -Reconstruction in 12.0 mtr width	During necessary existing structure (10X7) mtr slab shall be found in poor condition Detail of existing structure is given below: Length- 4.2 mtr, width/Spans- 2.0 mtr, Height- 3.72 mtr (1.2 mtr slab + 0.8 mtr parapet + 1.72 mtr dia to 1.2 mtr width) Observing a severe Negative variation in the change of slope of structure, in 50% of parapet and slab c/c Proposed structure is suitable & may be changed as per requirement of site condition. Hence it is proposed to reconstruct (1X1.2) mtr HPC in 12 mtr width.	Inspection is carried out by us. Agreed with the comments of consultant. As per site condition (1X1.2) HPC upto 12 mtr width is sufficient for change of water at this location hence it is recommended to reconstruct (1X1.2) mtr in 12 mtr width as follows: (1) Structure proposed is suitable & shall be changed as per of Negative variation. (2) Structure proposed is recommended to reconstruct shall be change of slope of positive variation. Hence it shall be proposed as per requirement of consultant accordingly.	Reasons & recommendation of IE is accepted for design of reconstruction of (1X1.2) mtr slab in 12 mtr width structure proposed in schedule B taken as negative variation and proposal for widening of (1X1.2) mtr slab-cum in 12 mtr width as per requirement. Not financial implication may be worked out accordingly.
67	67-04	71-04	Type of Structure- Stone No of spans-01 Span length- 2.0 mtr Overall width- 7.5 mtr Dia of pipe of structure- 6.5 mtr Condition of structure- slab-poor head wall/wing wall-poor return wall/parapet-poor	Type of Structure- RCC slab (1X3.0) mtr Proposed -Reconstruction in 12.0 mtr width	During necessary existing structure (1X1.0) mtr slab shall be found in poor condition Detail of existing structure is given below: Length- 7.5 mtr, width/Spans- 1.0 mtr, Height- 6.30 mtr (3) mtr slab + 3.3 mtr parapet + 3.0 mtr dia to 1.2 mtr width) Observing a severe Negative variation in the change of slope of structure, in 50% of parapet and slab c/c Proposed structure is suitable & may be changed as per requirement of site condition. Hence it is proposed to reconstruct (1X1.2) mtr HPC in 12 mtr width.	Inspection is carried out by us. Agreed with the comments of consultant. As per site condition (1X1.2) HPC upto 12 mtr width is sufficient for change of water at this location hence it is recommended to reconstruct (1X1.2) mtr in 12 mtr width as follows: (1) Structure proposed is suitable & shall be changed as per of Negative variation. (2) Structure proposed is recommended to reconstruct shall be change of slope of positive variation. Hence it shall be proposed as per requirement of consultant accordingly.	Reasons & recommendation of IE is accepted for design of reconstruction of (1X1.2) mtr slab in 12 mtr width structure proposed in schedule B taken as negative variation and proposal for widening of (1X1.2) mtr slab-cum in 12 mtr width as per requirement. Not financial implication may be worked out accordingly.
68	68/99	80-04	Type of Structure- HPC No of spans-01 Dia of pipe- 1000mm C/W- 6.5 mtr Overall width- 6.2 mtr Condition of Structure- slab-poor head wall-poor Return wall-poor	Type of Structure- HPC (1X1.2) mtr Proposed -Reconstruction in 12 mtr width	During necessary existing structure (1X1.2) mtr slab shall be found in poor condition Detail of existing structure is given below: Length- 6.2 mtr, width/Spans- 1.2 mtr, Height- 3.1 mtr Existing slab width is sufficient for change of water at this location. The slab condition is found fair. In schedule B it is proposed to reconstruct (1X1.2) mtr HPC upto 12 mtr width. Since the condition of existing slab is fair, the structure widening of slab-cum with existing slab (1X1.2) mtr is proposed (upto 3 mtr width).	Inspection is carried out by us. Agreed with the comments of consultant provided and recommended to widen the existing (1X1.2) mtr width HPC upto 12 mtr height as follows: (1) In schedule B proposed HPC shall be change of slope of Negative variation. (2) Proposed and recommended for widening of slab shall be change of slope of positive variation. Hence it shall be proposed as per requirement of consultant accordingly.	Reasons & recommendation of IE is accepted for design of reconstruction of (1X1.2) mtr HPC in 12 mtr width structure proposed in schedule B taken as negative variation and proposal for widening of (1X1.2) mtr slab-cum in 12 mtr width as per requirement. Not financial implication may be worked out accordingly.
69	69-00	69/92	Type of Structure- Stone No of spans-01 Span length- 2.0 mtr C/W- 6 mtr Dia of pipe- 7.5 mtr Condition of structure- slab-poor head wall/wing wall-poor return wall/parapet-poor	Type of Structure- slab-cum (1X1.0) mtr Proposed -Reconstruction in 12.0 mtr width	During necessary existing structure (10X7) mtr HPC shall be found in poor condition Detail of existing structure is given below: Length- 4 mtr, Dia of pipe- 1.0 mtr (1) mtr dia, 8" is proposed to reconstruct (1X1.2) mtr in 12 mtr width Observing a severe Negative variation in the change of slope of structure, in 50% of parapet and slab c/c Proposed structure is suitable & may be changed as per requirement of site condition. Hence it is proposed to reconstruct (1X1.2) mtr HPC in 12 mtr width.	Inspection is carried out by us. Agreed with the comments of consultant. As per site condition (1X1.2) HPC upto 12 mtr width is sufficient for change of water hence it is proposed and recommended to reconstruct (1X1.2) mtr in 12 mtr width as follows: (1) Structure proposed is suitable & shall be changed as per of Negative variation. (2) Structure proposed is recommended to reconstruct shall be change of slope of positive variation. Hence it shall be proposed as per requirement of consultant accordingly.	Reasons & recommendation of IE is accepted for design of reconstruction of (1X1.2) mtr slab-cum in 12 mtr width structure proposed in schedule B taken as negative variation and proposal for widening of (1X1.2) mtr slab-cum in 12 mtr width as per requirement. Not financial implication may be worked out accordingly.

SR. NO	CHANGING		EXISTING DETAILS AS PER SCHEDULE A	PROVISION AS PER SCHEDULE B	CONSTRUCTION PROPOSED BY CONTRACTOR AS PER SITE CONDITION	REASON & RECOMMENDATION BY INDEPENDENT ENGINEER	Decision of committee
	EXISTING	DESIGN					
70	RI-102	RI-143	Type of Structure- R/C No of spans-1 Dia of pipe-1000mm C/W-6.5 mtr Over all width-7.5 mtr Condition of structure- As per site Hand wall open Return wall open	Type of Structure- R/C (1x1) mtr Proposed - Reinforcement 12 mtr/wide	During the survey of SH-56 structure of (1x1) mtr slab is found in the condition. Detail of existing structure is given below. Length-8.0mtr, width-6.5mtr, height-2.2mtr Reinforcement is provided for drainage of water in the structure. The slab condition is found like in schedule B ii) or proposed reinforcement of 12 mtr/wide R/C, open 12 mtr width. Since the condition of existing structure is like provision of width of slab cover with existing span (1x1) mtr is proposed in 12 mtr width.	Site inspection carried out by IE. Accepted with the comments of committee. Considering the above condition of structure and structure is proposed and recommended to widen the bridge upto 12 mtr length as follows: (1) In schedule B mentioned R/C shall be under change of scope of Negative variation. (2) Proposed R/C is considered for widening of slab shall be under change of scope of positive variation. Material of structure shall be worked out by the consultant for financial implication.	Reasons & recommendation of IE is accepted for the construction of (1x1) mtr R/C slab over 12 mtr width proposed in schedule B taken as negative variation and proposal for widening of (1x1) mtr slab cover in 12 mtr width as positive variation. No financial implications to be worked out accordingly.
71	RI-4	RI-152	Not Mentioned in schedule A	No proposal in schedule B	During the survey it is found a buried pipe in the road course on the location of the drainage is proposed drainage system on the side of the road and road structure is proposed in concrete (1x1) mtr R/C.	R/C structure is carried out by IE. Accepted with the comments of committee. Structure is not mentioned in schedule A and therefore provision of structure in schedule B. Hence, the proposed above mentioned structure in (1x1) mtr R/C in width of 12 mtr. (1) Proposed and recommended to work out the under change of scope of positive variation. Actual cost of structure shall be worked out by consultant for financial implication.	Reasons & recommendation of IE is accepted for proposal of construction (1x1) mtr R/C in 12 mtr width taken as positive variation. Actual financial implication may be worked out accordingly.
72	RI-100	RI-101	Type of Structure- R/C No of spans-2 Dia of pipe-1000mm C/W-6.5 mtr Over all width-7.5 mtr Condition of structure- As per site Hand wall (1x1) Return wall (1x1)	Type of Structure- R/C (1x1) mtr Proposed - widening up to 12 mtr	During the survey of SH-56 structure of (1x1) mtr slab is found in the condition. Detail of existing structure is given below. Length-8.0mtr, width-6.5mtr, height-2.2mtr Reinforcement is provided for drainage of water in the structure. The slab condition is found like in schedule B ii) or proposed reinforcement of 12 mtr/wide R/C, open 12 mtr width. Since the condition of existing structure is like provision of width of slab cover with existing span (1x1) mtr R/C, open 12 mtr width.	Site inspection carried out by IE. Accepted with the comments of committee. Structure is not mentioned in schedule A and therefore provision of structure in schedule B. Hence, the proposed above mentioned structure in (1x1) mtr R/C in width of 12 mtr. (1) Proposed and recommended to work out the under change of scope of positive variation. (2) Proposed structure in schedule B shall be under change of scope of negative variation. Actual cost of structure shall be worked out by consultant for financial implication.	Reasons & recommendation of IE is accepted for proposal of construction of (1x1) mtr R/C in 12 mtr width taken as positive variation. And structure proposed in schedule B as Nagod in variation. No financial implications to be worked out accordingly.
73	RI-100	RI-103	Type of Structure- R/C No of spans-1 Dia of pipe-1000mm C/W-7 mtr Over all width-6.4 mtr Condition of structure- Slab - fair Hand wall (1x1) mtr Return wall (1x1) mtr	Type of Structure- R/C (1x1) mtr No of spans-1 length of span-1x1.0mtr C/W-6.5 mtr Over all width-6.5 mtr Condition of structure- Substructure fair Super structure fair Proposed width- 7 mtr/wide upto 12 mtr width (ii) (1x1) mtr R/C is proposed for new concrete addition.	During the survey of SH-56 structure of (1x1) mtr slab is found in the condition. Detail of existing structure is given below. Length-6.0mtr, width-6.5mtr, height-2.2mtr Reinforcement is provided for drainage of water in the structure. The slab condition is found like in schedule B ii) or proposed reinforcement of 12 mtr/wide R/C, open 12 mtr width. (1) (1x1) mtr R/C is proposed for widening up to 12 mtr width. (2) (1x1) mtr R/C is proposed for new concrete addition. Since R/C is proposed for the above structure the proposed reinforcement.	Site inspection carried out by IE. Accepted with the comments of committee. Structure is not mentioned in schedule A and therefore provision of structure in schedule B. Hence, the proposed above mentioned structure in (1x1) mtr R/C in width of 12 mtr. (1) Proposed and recommended to work out the under change of scope of positive variation. (2) Proposed structure in schedule B shall be under change of scope of negative variation. Actual cost of structure shall be worked out by the consultant for financial implication.	Reasons & recommendation of IE is accepted to (1x1) mtr R/C has structure mentioned in schedule B under Negative variation.

CHAPTER 1. INTRODUCTION

1.1 General

DBL Sardarpur Badnawar Tollways Limited (herein after referred to as the “Concessionaire”) had augmented the existing road from Km 0+000 to Km 43+300 (43 Kms) on Sardarpur– Badnawar Road section to 2 laning on DBFOT (Design, Build, Finance, Operate and Transfer) in the state of Madhya Pradesh, in accordance with the provisions of the Concession Agreement (CA) executed with Madhya Pradesh Road Development Corporation Limited (herein after referred to as the “MPRDC”) on 29th June, 2011.

Project highway starts at Sardarpur (Km.0.000) and ends at Bhelosa Chauraha (Km.43.300) passing through Bola, Bidya, Labaria, Rajod, Nipavali in the state of Madhya Pradesh on Design, Build, Finance, Operate and Transfer (DBFOT) Toll + Annuity basis. Project Location map is given at Fig 1-1.

SHREM ROADWAYS PRIVATE LIMITED (SRPL) acquired DBL Sardarpur Badnawar Tollways Limited vide agreement dated 26 March 2018.

SHREM FINANCIAL PRIVATE LIMITED (SFPL) appointed RUKY Projects Pvt. Ltd. as consultants for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriage way and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the traffic potential and to estimate the projected Toll Collection Etc.

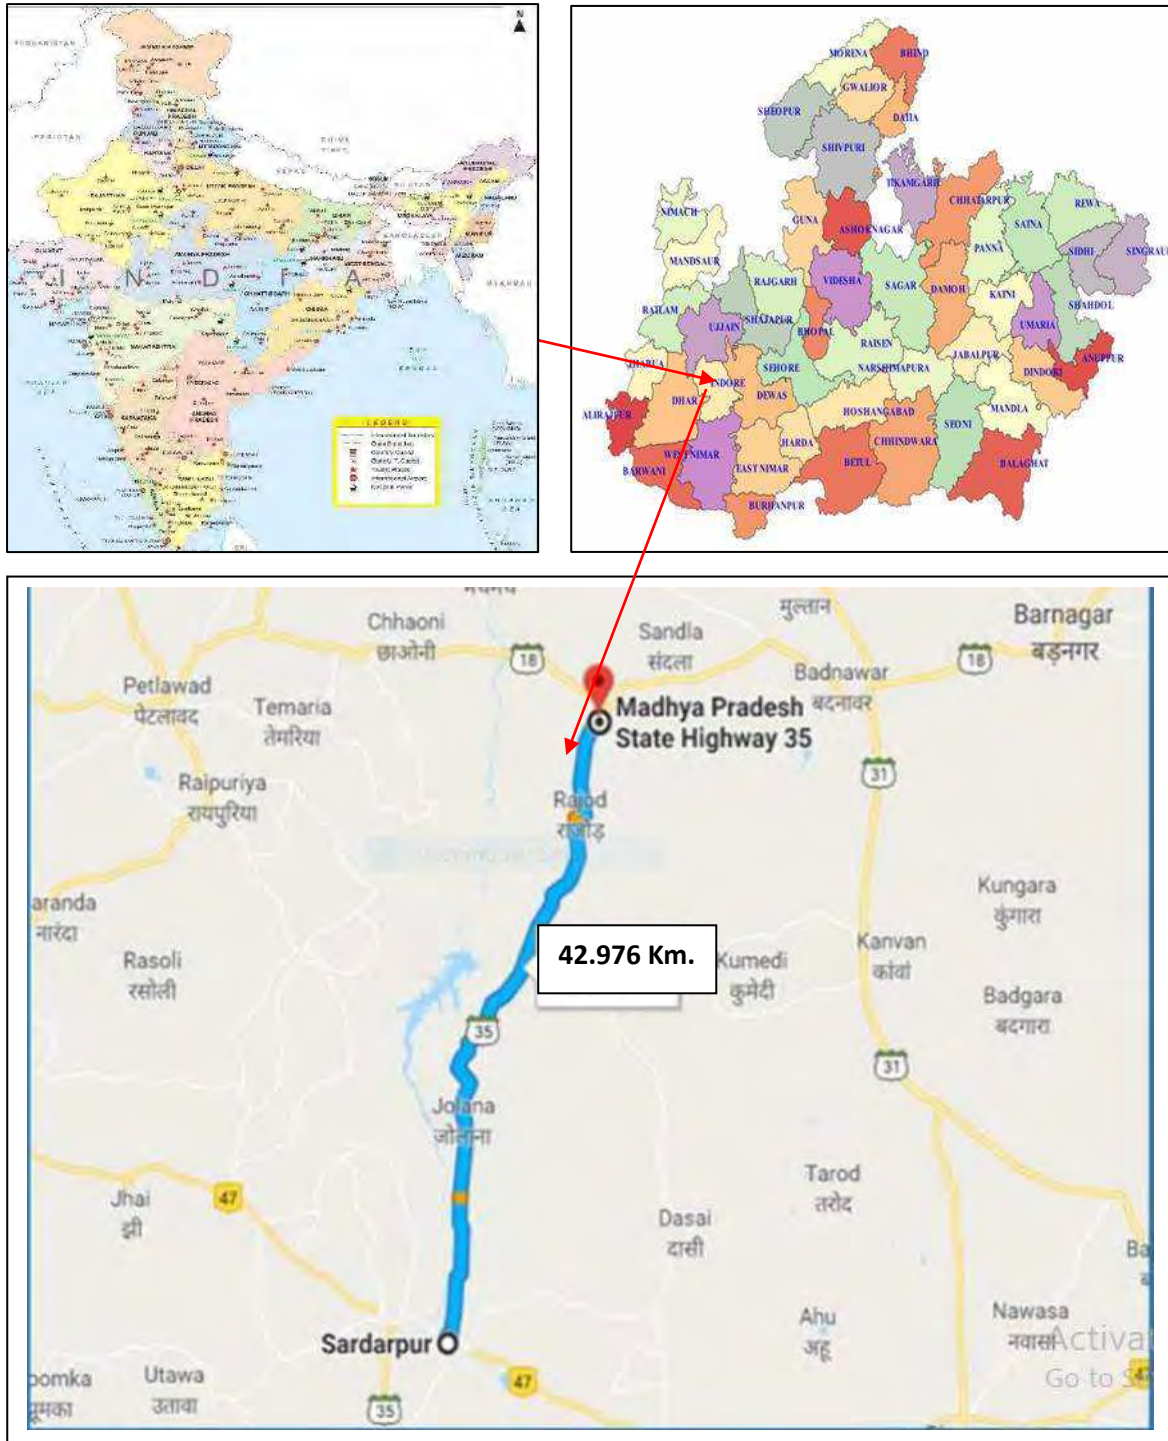

Figure 1.1: Project Location Map

1.2 Project Data:

The details of the Project are listed in the following table.

Table 1.1: The Project Data

S. No.	Particulars	Details
1	Name of the project	Construction, Operation and maintenance from 0+000 to 43+300 on Sardarpur - Badnawar Road section of SH-34 on DBFOT (Design, Build, Finance, Operate and Transfer) on Toll + Annuity Basis.
2	Road Type	State Highway
3	Name of the Authority	Madhya Pradesh Road Development Corporation Limited
4	Name of the Concessionaire	DBL Sardarpur BadnawarTollways Limited
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Date of LOA	15.04.2011
7	Date of Agreement	29.06.2011
8	Design length as per Schedule B of CA	42.976 Km
9	Actual length constructed	42.976 Km
10	Project lane configuration	2 Lane
11	EPC cost	81.70 Cr
12	Nature of contract	BOT (Toll + Annuity)
13	Toll collected by	Concessionaire
14	Concession period	15 years from the appointed date
15	Date of Letter of Award	15.04.2011
16	Appointed date	16.12.2011
17	Concession end date	15.12.2026
18	Construction period	730 days from the appointed date.
19	Schedule completion date	16.12.2013
20	Date of issuance of provisional certificate (Commercial operation date)	9.06.2012
21	Date of issuance of completion certificate	05.09.2012
22	Annuity amount (every six months)	4.71 Cr
23	Total number of annuities payable	26 No
24	First annuity payment date	09.12.2013
25	Total number of annuity paid	17 No

1.3 Scope of consultancy services

The scope of work includes providing due diligence of the project road and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Collection of historic/past toll revenue data
- Collection of historic/past classified Traffic data from toll plaza and to estimate the projected traffic to arrive at revenue projections.
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout review of tolling system to evaluate the efficiency and functionality of tolling system and to identify and give suggestions to improve if any setbacks in the system.
- Carryout road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features described in the following table to be developed as per schedule B and Schedule C of Concession Agreement (CA) including Change of scope.

Table 2.1: Salient Features

S.No.	Particulars	As per CA	As per COS	As per Site
1	Total Length of 2 Lane with earthen shoulder	38.731 Km	---	38.731 Km
2	Total Length of 2 Lane with Paved shoulder	4.245	---	4.245
3	Reconstruction	32.692 Km	(-)-1.450 Km	31.242 Km
4	Realignment/Bypass	10.284 Km	1.450 Km	11.734 Km
5	Toll Plaza	Km 9+250	Change in Location	Km8+600
6	Bus Bays / Bus Shelters	16 Nos.	---	16 Nos.
7	Truck Lay Bays	01 No.	---	01 No.
8	Major Junction	02 Nos.	---	02 Nos.
9	Minor Junctions	12 Nos.	---	12 Nos.
10	Major Bridges Retained	01 No.	---	01 No.
11	Total Minor Bridges	17 Nos.	---	17 Nos.
12	Total Pipe Culverts	22 Nos.	---	22 Nos.
13	Total Slab Culverts	24 Nos.	---	24 Nos.

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Sections shown below as per schedule, during the construction.

Figure 2.1: (TCS 2.1 of Schedule D of CA) -2 Lane Carriageway

Figure 2.2: (TCS 2.3 of Schedule D) - 2 Lane with Paved Shoulder. (Cross Section in Open Country)

As built drawings are verified and found in accordance with TCS.

TCS schedule is provided below.

Table 2.2: TCS Schedule

S. No	From Chainage (Km)	To Chainage (Km)	Length (m)	Type of TCS
1	0.000	0.200	0.200	TCS.2.3 of Schedule D
2	0.200	6.200	6.000	TCS.2.1 of Schedule D
3	6.200	7.145	0.945	TCS.2.3 of Schedule D
4	7.145	13.100	5.955	TCS.2.1 of Schedule D
5	13.100	13.870	0.770	TCS.2.3 of Schedule D
6	13.870	19.220	5.350	TCS.2.1 of Schedule D
7	19.220	19.620	0.400	TCS.2.3 of Schedule D
8	19.620	24.400	4.780	TCS.2.1 of Schedule D
9	24.400	25.100	0.700	TCS.2.3 of Schedule D
10	25.100	36.440	11.340	TCS.2.1 of Schedule D
11	36.440	36.600	0.160	TCS.2.3 of Schedule D
12	36.600	37.700	1.100	TCS.2.1 of Schedule D
13	37.700	38.200	0.500	TCS.2.3 of Schedule D
14	38.200	39.800	1.600	TCS.2.1 of Schedule D
15	39.800	40.370	0.570	TCS.2.3 of Schedule D
16	40.370	42.976	2.606	TCS.2.1 of Schedule D

Figure 2.3: Typical Cross Section followed in the Project road

2.3 Road Side Drainage:

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from road side community on the Carriageway, RCC side drains are constructed along the main carriage way on both flanks as specified in Schedule B of the CA in strict adherence to the Standard Specifications set forth in Schedule D of the CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains in open and rural areas.

2.4 Service Roads

Service roads are not provided along the entire stretch of the project road as per provisions of Schedule B of the Concession Agreement.

2.5 Bypass/Realignment

Realignment of 11.734 Km has been constructed as per Schedule B of the Concession Agreement and COS.

2.6 Intersections

As per provisions of Schedule B of the Concession Agreement 2 Major Junctions and 12 Minor Junctions are provided. Details are given below.

Table 2.3: Summary of Junctions

S. No	Chainage	Side
Major Intersection		
1	0.000	Cross
2	42.976	Cross
Minor Intersection		
1	3.756	LHS
2	6.990	LHS
3	7.280	RHS
4	8.900	RHS
5	10.150	LHS
6	14.300	LHS
7	24.700	RHS
8	29.400	RHS
9	32.000	RHS
10	34.063	Cross
11	35.400	LHS
12	37.600	LHS

2.7 Grade Separated Structures and underpasses

There are no grade-separated structures in the Project, as per provisions of Schedule B of the Concession Agreement.

2.8 Road Under Bridge

There is no RUB in the Project, as per provisions of Schedule B of the Concession Agreement.

2.9 Summary of the Carriageway Details

The details of Pavement are shown in the following table.

Table 2.4: Summary of Carriageway Details

S. No.	Description	Flexible (km)	Rigid (km)	TCS Type
1	2 Lane with earthen shoulder	38.731	---	Fig 2.1 of Schedule D of CA
2	2 Lane with paved shoulder	4.245	---	Fig 2.3 of Schedule D of CA
3	4 Lane	---	---	Fig 2.2 of Schedule D of CA
4	Total length of the project	42.976	---	---
TYPE OF ALIGNMENT				
5	New alignment	---	---	---
6	Realignment	11.734	---	---
7	Strengthening	---	---	---
8	Reconstruction	31.242	---	---
9	Total length of the project	42.976	---	---

2.10 Summary of Structures:

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.5: Improvement Proposal of Structures

S. No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts
1	Retained	1	13	10	---
2	Widening	---	---	5	---
3	Reconstruction	---	04	7	24
4	New	---	---	---	---
5	Improvement	---	---	---	---
6	Total	1	17	22	24

Details of the condition survey carried out on structures are provided at **ANNEXURE-2 & 3**

2.11 Toll Plazas

As per Schedule C of the CA provisions and COS, one Toll Plaza has been constructed at Km. 8+600. Salient features of Toll Plaza are provided below.

- Each side comprises of one normal lane, one extra wide lane and one bike lane.
- The lane width in normal lanes is 3.20m and extra lane is of 4.5 m width.
- Single canopy is provided to cover the toll lanes.
- Toll plaza has been constructed as per standards set forth in Schedule D of CA having facilities like lighting, water supply and firefighting arrangements.

Figure 2.4: Toll Plaza at Km. 8+600

2.12 Bus shelters and truck lay byes

As per the provisions of Schedule C of the CA, 16 Nos. Bus shelters and 1 No truck lay bye is provided in the entire length of Project. Details such as Chainage Location and Name of Village are listed in the following table.

Table 2.6: Bus Shelters and Truck Lay Byes details

S. No.	Chainage	Side	Location
Bus Shelters			
1	0.100	LHS	Sardarpur
2	0.300	RHS	Sardarpur
3	6.200	LHS	Bola Village
4	6.400	RHS	Bola Village
5	13.200	LHS	Jalona Village
6	13.500	RHS	Jalona Village
7	19.400	LHS	Bodiya Village
8	19.700	RHS	Bodiya Village

10	25.300	RHS	Labaria Village
11	35.000	LHS	Rajad 1village
12	36.500	RHS	Rajad 1village
13	38.300	LHS	Nipavali Village
14	38.550	RHS	Nipavali Village
15	40.000	LHS	Dharsi kheda Village
16	40.600	RHS	Dharsi kheda Village
Truck lay bay			
1	42.600	Cross	Dharsi kheda Village

2.13 Other Project Facilities Provided as per Schedule C of CA

- Roadside furniture: Sign boards, kilometer stones, road marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic safety devices: W beam crash barriers, parapet walls are provided as per the provisions of Schedule B of the CA
- Landscaping: provided at toll plaza location and being maintained
- Tree plantation: Tree plantation is provided on both sides of the project corridor all along the way and being
- Medical Aid Post: Provided at toll plaza location and is operational
- Highway Lighting: Highway lighting is provided at Toll Plaza and truck lay bay locations and is functional.

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented below.

3.2 Road Inventory

Inventory of the project road was carried out physically and is summarized in the following table. Couple of representative photographs are given below to have a clear picture of the Project.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain, rolling and hilly Terrain
2	Land Use	Built Up 25 %, Agriculture 53%, Hilly 2%and Barren 20%
3	Earthen shoulder	1.0 m to 1.5m Width on site
4	Junctions	14 Nos.
5	Toll Plaza	Km.8+600
6	Sign boards	Sign boards are provided as per requirement
7	Road Markings	Lane markings are provided as per requirement
8	Bus Bays /shelters	16 Nos.
9	Truck Lay bye	1 Nos.
10	Street Lighting	Highway lighting provided as per requirement
11	Tree plantation	Provided

Km. 7+030

Km. 14+400

Figure 3.1: Existing Road Features

3.3 Pavement Condition

Pavement condition survey was carried out on the project road, based on observations supplemented with simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm, sections with cracking exceeding 20% shall be treated as failed.

Pavement surface condition assessment is a key component of infrastructure asset management. The information is used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey:

The survey on general pavement condition was primarily undertaken by means of slow drive- over survey, and supplemented with measurements where ever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, pot holes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition is measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of surface area)
 - Ravelling (%of surface area)
 - Potholes (%of surface area)
 - Patching (%of surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are

tabulated in the standard proforma as per IRC: SP-19 and is given in ANNEXURE 1. The summary of Pavement condition is given below.

Table 3.3: Pavement condition summary

From (km.)	To (km.)	Length (km.)	Condition
0+000	42+976	42.976	Good

Km. 19+400

Km. 29+200

Figure 3.2: Representative Photo of pavement Condition

CHAPTER 4. INVENTORY AND REVIEW OF STRUCTURES

4.1 General Assessment and Condition of the Existing structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

The details of structures along the project highway is described below.

Table 4.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	1 Nos.
2	Minor Bridge	17 Nos.
3	Pipe culverts	22 Nos.
4	Slab/Box Culverts	24 Nos.

For major bridge superstructure is of RCC Box Girder with RCC wall type piers and abutments resting on well/pile foundations. There are 17 minor bridges in which some are RCC solid slab type bridges, some are precast RCC T-Beam bridges with wall type abutments resting on open foundations. Also there are some RCC box type minor bridges. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. The condition of most of the culverts is fair. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges

There is one Major bridge in the project stretch. The total length of the bridge is 99.6m with 4 spans of 24.9m. The superstructure is of RCC Box girder. the substructure is of RCC wall type piers and abutments resting on well/pile foundations. Elastomeric/Neoprene bearings are provided. Expansion joints are of buried type and RCC railing has been provided.

Table 4.2: List of Major Bridges

S. No.	Chainage (Km)	Span	Total Length of Bridge (m)
1	21+878	4 x 24.9	99.60

The condition of the superstructure and substructure is good. The RCC wall type substructure is also in good condition. Certain minor maintenance operations such as quadrant pitching, reflector plates, drainage spouts and strip seal expansion joints are to be carried out.

Figure 4.1: Overall view of the major bridge at Km 21+878

4.4 Details of Minor Bridges

The details of Minor bridges in the project highway are listed below. The type of superstructure for minor bridges are RCC solid slab, Precast RCC T-Beam and cast in situ deck slab (5-girder system), RCC Box type structure.

The substructures are of PCC conventional wall type supported with open foundations, RCC wall type with open foundations.

Expansion joints are of Buried type and bearings are Tar Paper and Neoprene bearings. RCC railing and RCC crash barriers are provided on bridge deck.

Table 4.3: Inventory of Minor Bridges

S. No.	Chainage Km.	Span	Total Length of Bridge (m)	Description
1	0+607	2x5.4m.	10.8	The Minor Bridge has RCC solid slab superstructure supported on conventional PCC wall type piers and abutments resting on open foundations.
2	3+650	1x6.2+1x6.9+1x7.2m.	20.3	The Minor Bridge has RCC solid slab superstructure supported on conventional PCC wall type piers and abutments resting on open foundations.

Figure 4.2: Representative photos for minor bridges

4.5 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.5.1 General Description of the Slab/Box Culverts

There are 24 no's of slab / Box culvert in the project stretch. The details of the culverts are as given below.

Table 4.4: List of Slab/Box Culverts

Sl. No.	Chainage @Km.	Span (m)	Vent Size (m)
1	0+185	1 x 2.4	1.5
2	1+345	1 x 2.4	1.8
3	2+595	1 x 3.0	2
4	3+215	1 x 3.2	1.9
5	5+415	1 x 4.8	2.2
6	7+705	1 x 3.4	2.1
7	9+605	1 x 2.4	2.3
8	11+353	1 x 2.4	2.1
9	11+894	1 x 3.4	1.8
10	12+585	1 x 2.4	2.9
11	13+858	1 x 3.2	1.8
12	14+652	1 x 5.5	1.8
13	15+223	1 x 5.5	4
14	15+967	1 x 3.4	2.2
15	20+813	1 x 2.4	2.1
16	23+052	1 x 2.4	2
17	24+782	1 x 2.4	1.8
18	25+156	1 x 5.4	1.5
19	26+128	1 x 3.4	1.7
20	27+188	1 x 2.4	2.1
21	31+773	1 x 3.4	1.8
22	38+172	1 x 3.4	2.5
23	38+894	1 x 3.4	2.1
24	42+243	1 x 3.4	2.1

The general condition of above slab culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

Km. 1+345

Km. 5+415

Km. 11+353

Km. 15+967

Figure 4.3: Representative photos of Slab Culverts

4.5.2 General Description of the Pipe Culverts

There are 22 Nos of pipe culverts in the project stretch. The details of the culverts are as given below.

Table 4.5: List of Pipe Culverts

S. No.	Chainage	Span	S. No.	Chainage	Span
1	1+120	1 x 0.9	12	23+362	1 x 1.2
2	1+330	1 x 0.9	13	23+865	1 x 0.9
3	4+376	1 x 0.9	14	26+218	1 x 0.9
4	4+738	1 x 0.9	15	26+890	1 x 0.9
5	5+832	1 x 1.2	16	28+495	1 x 0.9
6	6+600	1 x 1.2	17	32+598	1 x 0.9
7	8+163	1 x 0.9	18	36+344	1 x 0.9
8	10+875	1 x 1.2	19	37+325	2 x 1.2
9	12+218	1 x 1.2	20	38+562	2 x 1.2
10	13+400	1 x 1.2	21	39+343	2 x 1.2
11	20+015	1 x 1.2	22	42+085	2 x 1.2

The general condition of above pipe culverts is good. Some of the culverts are choked and needs clearance as some debris/garbage was found in the vents.

Km. 37+325

Km. 42+085

Figure 4.4: Representative photos of Pipe Culverts

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design:

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2001 publication while the current publication is IRC: 37-2018.

Review of Pavement Design

As per the pavement design approved in the project, the following conclusions are given.

Table 5.1: Flexible Pavement Design summary

S. No.	Description/ Pavement layer	Design Parameters
1	Sub Grade CBR (%)	10%
2	Design Life (Years)	8 years for BT 15 years for Granular
3	Design Traffic (MSA)	5 MSA for BT 10 MSA for Granular
4	Surface course (SDBC)	25 mm
5	Binder course (DBM)	50 mm
6	Base course (WMM)	250 mm
7	Sub Base course (GSB)	200 mm

5.3 Validation of Pavement design:

The new pavement shall be designed in accordance with the IRC:37. "Guidelines for the Design of Flexible Pavements".

Pavement design validation is carried out as per actual traffic from COD. As per IRC 37, Vehicle Damage Factor (VDF), Distribution of commercial vehicles and growth rate values are 3.5, 0.75 and 5% respectively. Summary is given below.

Table 5.2: Flexible Pavement Design Traffic Validation

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2014	231	106	45	34	22	207	0.20	0.20	3	Actual
2015	263	99	46	23	18	187	0.18	0.38	4	Actual
2016	312	104	49	26	19	199	0.19	0.57	5	Actual
2017	357	109	44	27	26	207	0.20	0.77	6	Actual
2018	370	129	42	31	33	236	0.23	0.99	7	Actual
2019	373	125	41	32	35	233	0.22	1.21	8	Actual
2020	424	153	50	39	78	319	0.31	1.52	9	Actual
2021	445	160	52	41	82	335	0.32	1.84	10	Projected
2022	467	168	55	43	86	352	0.34	2.18	11	Projected
2023	490	177	58	45	90	369	0.35	2.53	12	Projected
2024	515	186	61	47	95	388	0.37	2.90	13	Projected
2025	541	195	64	49	100	407	0.39	3.29	14	Projected
2026	568	205	67	52	104	428	0.41	3.70	15	Projected

Based on the above actual traffic, estimated MSA at 8 years and 15 years are 1.21 and 3.70 respectively. Traffic considered in pavement design (5MSA for 8 Years and 10MSA for 15 Years) is more than estimated traffic based on above actual traffic. Hence the pavement design adopted is found in order.

5.4 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 5 MSA and 10 MSA for a design life of 8 years for Bituminous layers (up to end of year 2019) and 15 years for granular layers respectively (up to end of year 2026), whereas the actual traffic is 1.21 MSA and 3.7 MSA for 8 years and 15 years respectively. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation before the end of Stage-I of design life (as per pavement design report) and prior to end of concession period to evaluate the requirement of overlay.

5.5 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of SDBC. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Next Major Maintenance Proposed on or before 2026.

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety has a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special publication SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals. Type Designs for Intersections on National Highways, 1992

Table 6.1: Referred IRC Publications

IRC : 35	Code of Practice for Road Markings
IRC : 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC : 67	Code of Practice for Road signs
IRC : 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC:SP- 88	Manual of Road Safety

6.2 Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 6.2: Safety Items

S. No.	Item Description		Status	Condition
1	Sign Boards	Chevron signs	Available as per site requirement	Good
		Village sign Board	Available as per site requirement	Good
		Informatory Boards	Available as per site requirement	Good
		Object Hazard Markers at culverts	Available as per site requirement	Good
2	Road Marking	Studs & Lane Marking	Available as per site requirement	Fair
3	Metal Beam Crash Barriers	At High Embankments	Available as per site requirement	Good

This Project Section is part of an important corridor. It is the Concessionaire's duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

Few Observations on the road furniture in safety aspects for the project road are mentioned below:

- At few places reflectors were missing on the sign boards and few sign boards were also damaged.
- Retro Reflective stickers need to be provided for metal beam crash barriers for night time road users at all locations and damaged metal beam crash barriers requires maintenance regularly
- Speed mitigation measures shall be provided at junction to reduce the speed, and adequate visibility shall be maintained at junctions in part of routine maintenance.
- The object hazard markers are placed only on one side of Head walls/parapet walls of all structures, whereas it is to be installed on both sides at structures.

Km. 0+200 Over head sign

Km. 4+00 Chevron signs on the curve section

Km. 10+600 Village sign

Km. 29+900 Crash barrier at bridge section

Figure 6.1: Representative photos during road safety audit

6.3 Conclusion

Safety arrangements are done for road users along the project road is found to be in conformity with project highway requirements and good industry practice. However, a continuous monitoring on safety arrangements is highly appreciated during the operation and maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There is one toll Plaza on the project road at Km. 8+600. Each side comprises of 3 Normal Lanes and One extra wide lane. The third lane on both sides is presently used for Bikes. The lane width in normal lanes was 3.20m. The width of islands provided is 1.8m. The single canopy is provided to cover the toll lanes. . Toll plaza building is G+1 floor building which houses control room, UPS and Pantry.

7.2 Tolling Equipment and Control Room Equipment

List of equipment provided at toll plaza and control room is given below.

Table 7.1:List of Equipment at Toll Plaza and Control Room

CHAPTER 8. TRAFFIC CENSUS AND TOLL REVENUE

8.1 Traffic Census

In accordance with clause 22.1, the Concessionaire shall install, maintain and operate electronic/computerized traffic counters at each of the Toll Plazas and collect data relating to the number and types of vehicles using the Project Highway. A weekly statement of such data shall be compiled and furnished forthwith by the Concessionaire to MPRDC substantially in the form specified in Schedule N of CA.

Accordingly, the Concessionaire provided toll plaza wise details. Based on the data made available the summarized annual classified Traffic census details for the past six years are provided in Table 8.1 below. The Actual traffic data recorded below has been taken as a basis to calculate AACGR % (Average Annual Compound Growth Rate).

Table 8.1: Year wise Traffic (Vehicles) Details

FY Year	Car	LCV	Bus	Truck	MAV	Total Traffic
2015	95868	36124	16919	8561	6723	164195
2016	114271	38124	17817	9670	7053	186935
2017	130186	39639	16232	9981	9633	205671
2018	135022	47098	15391	11434	12118	221063
2019	136219	45509	14930	11648	12839	221145
2020	155073	55909	18235	14129	28534	271880
AACGR (%)						10.87%

*AACGR- Annual Average Compound Growth Rate

8.2 Actual Revenue Collection

In accordance with clause 19.5, “During the operation period, the Concessionaire shall furnish to MRPDC within 7 days of completion of each month, a statement of fee substantially in the form set forth in Schedule-M (Monthly fee statement)”. As per provisions of CA the concessionaire submitted monthly fee statement and the summary of form submitted under Schedule M during the financial year 2019-20 is given in the following table.

Table 8.2: Summary of 2019-20 Tollable traffic and revenue collected at Toll Plaza

Description	Car	Car(pass)	LCV	Bus	Truck	MAV	Total
In Nos.	103681	2877	48527	16099	14081	28515	213780
Toll Revenue collection in Rs.	2592025	230125	2911620	1978005	2085790	8553585	18351150

The figures shown in Table 8-1 are Real time traffic data on project road for the past six years and the growth rate is calculated to be 10.87%. It is pertinent to note that the figures given in table 8-1 are inclusive of exempted /non tollable traffic.

The figures shown in Table 8-2 are actual tollable traffic based on which the toll revenue collected and is excluding of exempted/non tollable traffic. For the realistic estimate of the traffic growth and projected revenue calculation actual traffic based on which FY 2019-20 revenue collected (table 8-2) is considered as a base year traffic and the projected traffic growth rate is restricted to 5%.

Based on the base year traffic and growth rate as explained above traffic projections from year 2019-20 to till end of Concession period toll plaza wise are calculated and summarized below in Table 8-3.

Table 8.3: Projected traffic

FY Year	AADT in Vehicles					CVPD* (Veh.)	AADT in PCU					CVPD* (PCU)	Remarks
	Car	LCV	BUS	2-AT	MAV		Car	LCV	BUS	2-AT	MAV		
	PCU Factor						1	1.5	3	3	4.5		
2020	292	133	44	39	78	294	292	199	132	116	352	799	Actual
2021	307	140	46	41	82	308	307	209	139	122	369	839	Projected
2022	322	147	49	43	86	324	322	220	146	128	388	881	Projected
2023	338	154	51	45	90	340	338	231	153	134	407	925	Projected
2024	355	162	54	47	95	357	355	242	161	141	427	971	Projected
2025	373	170	56	49	100	375	373	255	169	148	449	1020	Projected
2026	391	178	59	52	105	394	391	267	177	155	471	1071	Projected
2027	411	187	62	54	110	413	411	281	186	163	495	1124	Projected

*CVPD: Commercial vehicle per day (LCV+BUS+2 AT+MAV)

8.3 Toll Revenue Calculations

The toll revenue for horizon year is calculated based on the input from the above data, actual toll rates collected on base year (2019-20), with Traffic growth, WPI growth and toll efficiency has been assumed 5%, 4% and 100% respectively and other inputs considered in revenue calculations is given in table 8-4

Table 8.4: Toll Revenue inputs

Particular	Toll plaza
Location	8.600
4 lane length in km	0
2 lane length in km	42.976
Agreement Date	29-06-2011
Appointed Date	16.12.2011
Concession period	15
Commercial operation date	09-06-2012

Particular	Toll plaza
Concession End Date	15-12-2026
Traffic study year	2020
Vehicle Type	AADT
Car/Jeep/Van	292
2-axle Bus	133
LCV/LGV	44
2A-Truck	39
MAV (2A-6A)	78
Growth Rate (%)	5%

The split trip type based on the available toll data from Concessionaire is used to derive the annual toll collection for each plaza. The revenue estimated and presented below. Detailed toll revenue estimation is given in **ANNEXURE 4**.

Table 8.5: Toll Revenue Estimated (in Rs. lakhs)

Financial Year	Annual Revenue of TP @ Km. 8.600	Remarks
2019-20	183.512	Actual
2020-21	197.692	Projected
2021-22	216.612	Projected
2022-23	239.460	Projected
2023-24	261.570	Projected
2024-25	280.199	Projected
2025-26	303.482	Projected
2026-27	231.875	259 Days

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of the Concession Agreement (CA), the Concessionaire will operate and maintain the Project Highways by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate, need (if any) for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to the commencement of the month in which maintenance is to be carried out.

9.3 Operations

Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project Highway and Project Facilities.

- 1 Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- 2 Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.

- 3 Carrying out preventive and periodic maintenance of the Project Highway;
- 4 Undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- 5 Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- 6 Functioning of the lighting system;
- 7 Functioning of the Patrolling System
- 8 Functioning of rescue and medical aid services
- 9 Ambulance as and when required
- 10 Functioning of the Project Facilities
- 11 Administrative, Operational and Maintenance Base Camp
- 12 Truck Parking Lay bays
- 13 Pickup Bus stops / Bus Bays
- 14 Protection of the environment and provision of equipment and materials therefore;
- 15 Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project Highway
- 16 Complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plaza

One lane in each direction is currently operational and the extra wide lane is opened only for wide vehicles. The tolling is manned by two people per direction per shift with a day having two shifts. Toll Manager takes care of the daily operation and carries out the task of patrolling on bike. The cash collected is deposited on daily basis to the escrow account. In case of ETC system Toll collection is connected with Network system and directly deposited into the Escrow account

9.5 Maintenance of Project Highway

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year. Road maintenance can be carried out in four ways as listed below.

1. Preventive Maintenance
2. Routine Maintenance
3. Periodic Maintenance
4. Special repairs

Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period. Preventive Maintenance shall include the activities related to each element and the system as a whole of the Project Preventive Maintenance for Structures is estimated by the consultant. The condition data collected from site was used to arrive at the appropriate treatments and quantities. Rates from Schedule of Rates (SOR) of MP, was used to arrive at the cost.

The flexible pavement is in good condition and hence doesn't require any immediate or preventive interventions.

Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as "functional overlays," as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a "structural overlay" they are intended to increase load-carrying capabilities of the project road.

The details of periodic maintenance schedule is given below.

Table 9.1: Schedule and status of for Periodic Maintenance

S No.	Scheduled Major Maintenance	Year	Status at site
1	1st Periodic Maintenance	2019	BC Overlay is done
2	2nd Periodic Maintenance	2026	Planned to execute

9.6 Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project Highway shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and

e. Flood damage restoration works, etc.

9.7 Review of Test Reports:

Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of May, 2020. As per Schedule K of the CA, If the value exceeds 3000mm in a KM, the stretch shall be rectified. No stretch exceeded the permissible limit of 3000 mm in the Project road.

Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

Concessionaire has conducted the test in Nov, 2020. The test report has been verified and found within permissible limits as per IRC 81.

9.8 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 5**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance (In crores)	Incidental maintenance (In crores)	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	0.177	0.119		0.34	0.64
2021	0.182	0.123		0.35	0.66
2022	0.187	0.127		0.36	0.68
2023	0.192	0.130		0.37	0.70
2024	0.199	0.134		0.38	0.72
2025	0.205	0.138		0.39	0.74
2026	0.211	0.143	6.58	0.41	7.34
2027	0.154	0.104		0.30	0.56

Total	1.51	1.02	6.58	2.91	12.01
--------------	-------------	-------------	-------------	-------------	--------------

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 General: Scope of Work (Article 2)

Article 2 provides the scope of work which includes the following.

- construction of the Project Highway on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of Project Facilities as specified in Schedule-C, and in conformity with the Specifications and Standards set forth in Schedule-D
- operation and maintenance of the Project Highway in accordance with the provisions of Concession Agreement (CA)
- performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this CA and matters incidental

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 6**.

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the CA

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfil its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project Highway upon termination of the CA

10.5 Obligations relating to the Competing Roads (Clause 6.3)

Neither Authority nor any Governmental Instrumentality shall construct the Competing Road before 10th Anniversary of the Appointed Date.

10.6 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 20% of the Total Project Cost.

10.7 Provisional Completion Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA and after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA. Provisional Completion Certificate given in **ANNEXURE 7**.

10.8 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire. Completion Certificate given in **ANNEXURE 8**.

10.9 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of scope proposals initiating during construction period and consented by the MPRDC. Details are provided in **ANNEXURE 10**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project Highway
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any un authorized use of the Project Highway.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations Period; the Project Highway conforms to the maintenance requirements set forth in Schedule K (the “**Maintenance Requirements**”).

10.13 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
 - 0.5% (zero decimal five percent) of the Average Daily Fee, and
 - 0.1% (zero point one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall

separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Monthly Fee Statement (Clause 19.5)

During the Operations Period, the Contractor shall furnish to the Concessionaire and the Authority, if required by the Contractor, within 7 (seven) days of completion of each month, a statement of Fee substantially in the format set out in the CA ("Monthly Fee Statement").

10.18 Annuity (Clause 25.1.1)

The Authority agrees and undertakes to pay the Concessionaire for each annuity Payment period on each annuity payment date as set forth in schedule Y the sum of Rs 4.71 Crores.

As per Clause 25.2.1, In case the COD is different from the Schedule Y, then the annuity payment schedule shall be suitably modified to be a period of 6 months from the preceding Annuity Payment date.

Table 10.1: Status of Annuity Payments

S. No.	Particulars	Payment Paid on
1	1st Annuity	1-Jan-13
2	2nd Annuity	18-Jun-13
3	3rd Annuity	17-Dec-13
4	4th Annuity	9-Jun-14
5	5th Annuity	18-Dec-14
6	6th Annuity	17-Jun-15
7	7th Annuity	17-Dec-15
8	8th Annuity	15-Jun-16
9	9th Annuity	17-Dec-16
10	10th Annuity	27-Jun-17
11	11th Annuity	28-Dec-17
12	12th Annuity	19-Jun-18
13	13th Annuity	13-Dec-18
14	14th Annuity	20-Jun-19
15	15th Annuity	10-Dec-19
16	16th Annuity	9-Jun-20
17	17th Annuity	18-Dec-20

10.19 Concession Fee (Article 26)

- In consideration of the grant of Concession the Concessionaire shall pay Concession Fee of Rs1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC

10.20 Toll fee (Clause 27.1.1)

Toll Fees Shall be revised annually in accordance with Clause 27.2.1.

10.21 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 Details of Insurance

As per clause 32.1 of the Concession Agreement (CA), the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Insurance copies are provided in **ANNEXURE 9**.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Policy
			From	To	
Standard Fire & Special Perils Policy	The Oriental Insurance Co Ltd	171200/11/2021/351	10.1.2021	9.1.2022	Constructed road from 0.00Km to 43.5 Km
EI	The Oriental Insurance Co Ltd	171200/44/2021/42	8.09.2020	7.09.2021	Electronic Equipment
Fire Industrial All Risk Policy	The Oriental Insurance Co Ltd	171200/11/2021/352	10.1.2021	9.1.2022	Roads and Bridges
Employees Compensation Insurance Policy	HDFC Ergo General Insurance Co Ltd	3114203387855600000	19.5.2020	18.5.2021	Insurance for Road paving, Tarring and Road making of employees of DBL and sub-Contractor engaged in DBL

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The overall project pavement condition is good. RCC drains are constructed in Built up locations and earthen drains in rural locations resulting in, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. Major structural defects are not noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are getting cleared during regular maintenance period.

12.4 Traffic Growth

Based on real time, traffic data was extracted from Schedule N of CA, the traffic growth observed is 10.87%, where as 5% growth is considered while evaluating forecast of traffic volumes.

12.5 Project Facilities

Toll Plaza is located at Km.8+600 and is operational. Toll Plaza is operated by ETC Toll collection system and connected by network system monitored in administrative building. Bus bays are in fair condition. Medical Aid posts found functional. Avenue plantation and landscaping at Toll Plaza is provided and being maintained. Highway lighting is provided at toll plaza locations and found functional.

12.6 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 73-2007. The condition of sign boards & other road appurtenances like metal beam crash barriers is fair.

12.7 Maintenance

- The routine maintenance being carried out by O&M contractor effectively, based on documents reviewed, time to time observations made by client/Authority, being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance was carried out in 2019 and next MM is scheduled in 2026.

12.8 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

ANNEXURES

Annexure 1: Pavement Condition

Condition: G=Good, F=Fair, P=Poor & VP=Very poor Rutting: M=Moderate & S=Severe Drain: LD=Lined open Drain, ULD=Unlined Drain, CD=Covered Drain, NO=No drain, PF=Partial Function, F= Functional

Annexure 10: Change of Scope

S. NO.	Chainage	Existing details	Provision as per schedule 'B'	Reasons & Recommendation of Independent Engineer	Decision of Committee
1	4+125	Existing Chainage 4+125, Minor bridge with Solid Slab (2x 6.8 m) span, Total Outer width of Bridge 8.3 m.	Widening repair & strengthening of minor bridge up to 12 m.	(i) Reinforcement fully rusted and bond with concrete of slab is very weak. Concrete is porous and disintegrated simply touching by hand. (ii) Abutment & piers of this minor bridge is made from stone masonry its condition is poor holes & plants have seen at many places in wall. (iii) Stone Masonry Foundation was damaged. (iv) Structure is very weak, So recommended for Reconstruction with span of 10 m. and 12 m width bridge in place of widening is completed. There will be positive change of scope of reconstruction 10 m, span & 12 m. width and widening of existing structure will be negative variation.	Committee is agree with the comments of IE and recommended for reconstruction (with 10 m. span & 12 m. width) under positive change of scope & negative variation for widening of existing structure. Net valuation of -ve & +ve variation may be worked out by IE.
2	7+000	Existing Chainage 7+000, Minor bridge with Solid Slab (6x 8.50 m) span, Total Outer width of Bridge 8.3 m	Widening of minor bridge repair & strengthening upto 12 m.	(i) Reinforcement fully rusted and bond with concrete of slab is very weak. Concrete of super structure is porous and disintegrated simply touching by hand. (ii) Stone masonry was having open joints so widening of structure with jacketing of existing this work is done as per scope of work hence no change of scope. (iii) widening has been done as per scope of work (iv) It is recommended to replace super structure slab of 8.3 m. width under +ve change of scope.	Committee is agree with the comments of IE and recommended for replacement of, super structure slab of 8.3 m. wide under +ve change of scope. Net valuation of -ve & +ve variation may be worked out by IE.

CHAPTER 1. INTRODUCTION

1.1 General

DBL PATAN REHLI TOLLWAYS LIMITED (herein after referred to as the “Concessionaire”) had augmented the existing road “Patan-Tendukheda-Rahli” section of SH-15 in the State of Madhya Pradesh, in accordance with the provisions of the Concession Agreement (CA) executed with Madhya Pradesh Road Development Corporation Limited (herein after referred to as the “MPRDC”) on 1st September, 2015.

Project Road starts at Rehli–Gorjhamar-Patan Chowk from Km 31+000 and cross the junction at Km 113+400 of Rehli Gourjhamar road including bypass of Rehli which is about 4.400 Kms and terminates at Km 38+100 on Sagar – Rehli State Highway (SH-15A) in the state of Madhya Pradesh on Design, Build, Finance, Operate and Transfer (DBFOT) Toll + Annuity basis. Project Location map is given at **Figure 1.1.**

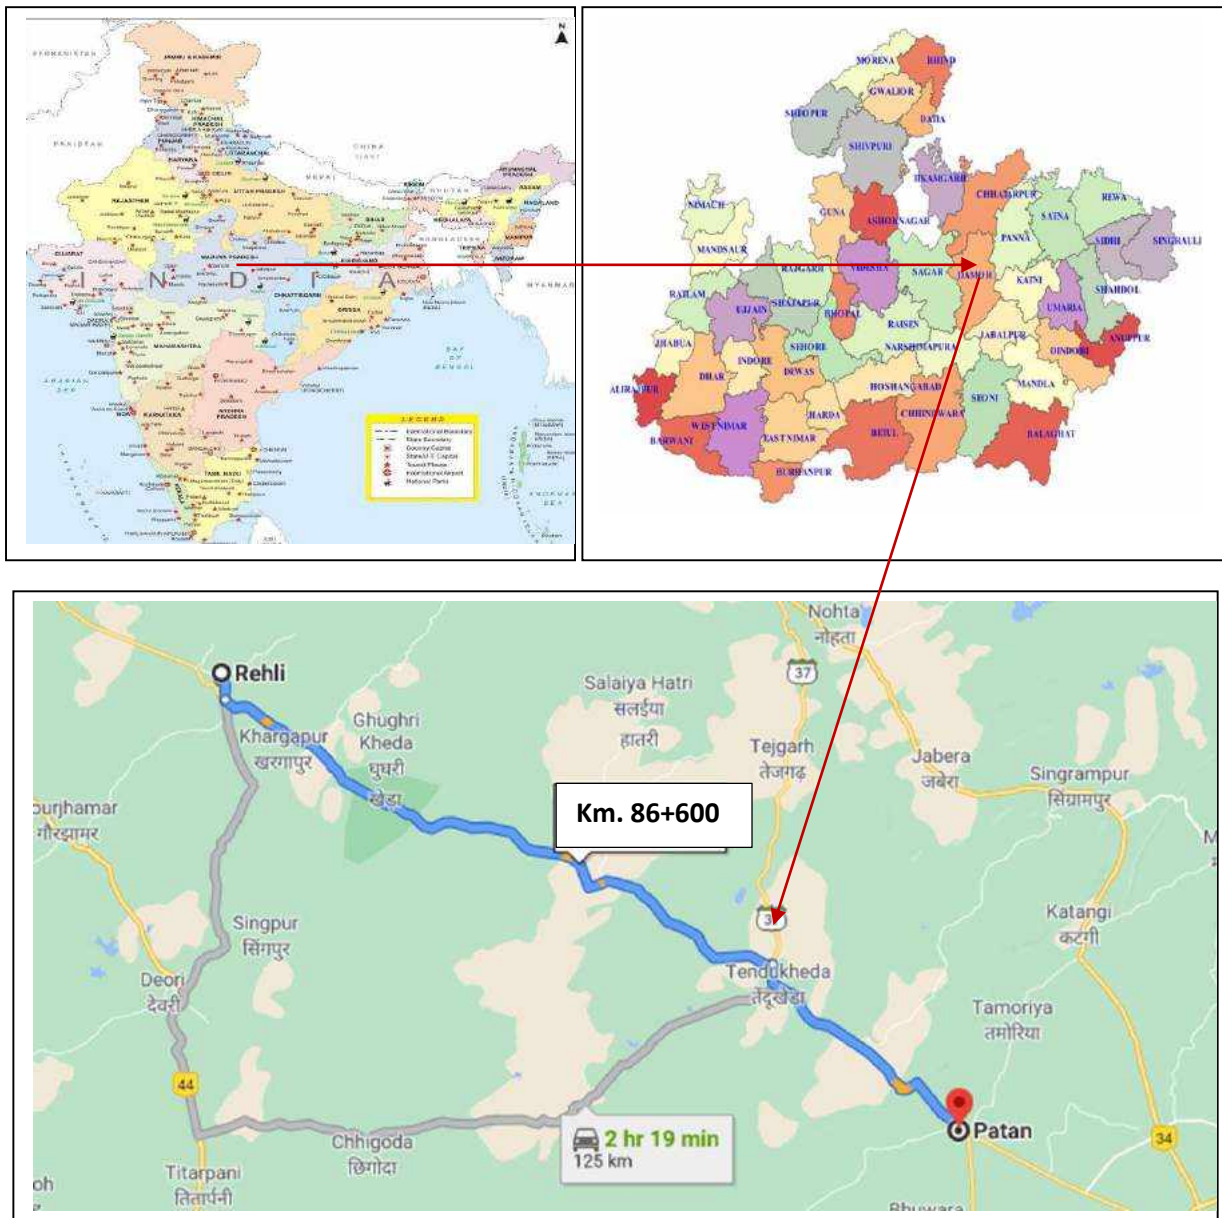

Figure 1.1: Project Location Map

SHREM ROADWAYS PRIVATE LIMITED (SRPL) acquired DBL PATAN REHLI TOLLWAYS LIMITED vide agreement dated 26.03.2018

SHREM FINANCIAL PRIVATE LIMITED (SFPL) appointed RUKY Projects Pvt. Ltd. as consultants for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the traffic potential and to estimate the projected Toll Collection Etc.

1.2 The Project Data

The details of the Project are listed in the following table.

Table 1.1: The Project Data

S No.	Particulars	Details
1	Name of the project	Construction, operation and maintenance of Two Laning of Patan– Tendukheda – Rehli Road in the state of Madhya Pradesh on BOT (Toll-Annuity) basis on design, build, finance, operate and transfer (DBFOT) on Toll Plus Annuity Basis in the State of Madhya Pradesh.
2	Road Type	State Highway (SH-15)
3	Name of the Authority	Madhya Pradesh Road Development Corporation Limited
4	Name of the Concessionaire	DBL Patan-Rehli Tollways Limited
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Date of LOA	08.07.2015
7	Date of Agreement	01.09.2015
8	Design length as per Schedule B of CA	Approximately 87.6 Kms
9	Actual length constructed	86.6 Kms
10	Project lane configuration	2 Lane
11	EPC Cost	225.02 Cr
12	Nature of contract	BOT (Toll + Annuity)
13	Toll collected by	Concessionaire
14	Concession period	15 years from the appointed date
15	Appointed date	10.04.2016
16	Concession End Date	09.04.2031
17	Construction period	730 days from the appointed date.
18	Schedule completion date	09.04.2018
19	Date of issuance of provisional certificate (Commercial operation date)	31.03.2017
20	Date of issuance of completion certificate	12.02.2018
21	Annuity amount (every six months)	17.64 Cr
22	Total number of annuities payable	26 Nos

S No.	Particulars	Details
23	First annuity payment date	31.09.2017
24	Total number of annuity paid	07 Nos

1.3 Scope of consultancy services

The scope of work includes providing Due Diligence of the project road and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Collection of historic/past toll revenue data
- Collection of historic/past classified Traffic data from toll plaza and to estimate the projected traffic to arrive at revenue projections.
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout review of tolling system to evaluate the efficiency and functionality of tolling system and to identify and give suggestions to improve if any setbacks in the system.
- Carryout road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per schedule B and Schedule C of the CA including Change of scope are listed in the following Table.

Table 2.1: Salient Features

S No.	Particulars	As per CA	As per COS	As per Site
1	Total project length	86.600 Kms	---	86.600 Kms
2	Four lane divided carriageway	2.200 Kms	---	2.200 Kms
3	Two lane with paved shoulder	4.300 Kms	---	4.300 Kms
4	Two lane with granular shoulder	54.300 Kms	---	54.300 Kms
5	Bypass	4.400 Kms	---	4.400 Kms
6	Single lane with granular shoulder	21.400 Kms	---	21.400 Kms
7	Flexible pavement	86.600 Kms	---	86.600 Kms
8	Toll plaza	2 Nos.	---	2 Nos.
9	Bus bays / Bus shelters	16 Nos.	---	16 Nos.
10	Truck lay bays	---	---	---
11	Major junction	06 Nos.	---	6 Nos.
12	Minor junction	14 Nos.	---	14 Nos.
13	ROB	---	---	---
14	Major Bridges	05 Nos.	---	05 Nos.
15	Minor Bridges	22 Nos.	-3 Nos.	19 Nos.
16	Box/Slab Culverts	19 Nos.	-1 Nos.	20 Nos*.
17	Pipe Culverts	85 Nos.	+13 Nos., -11 Nos.	78 Nos*.
18	CUP	Nil	+4 Nos.	4 Nos.

*2 additional Slab culverts were constructed as per site requirement and 9 Pipe culverts were not constructed as per site condition.

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Section schedule as shown below during the construction.

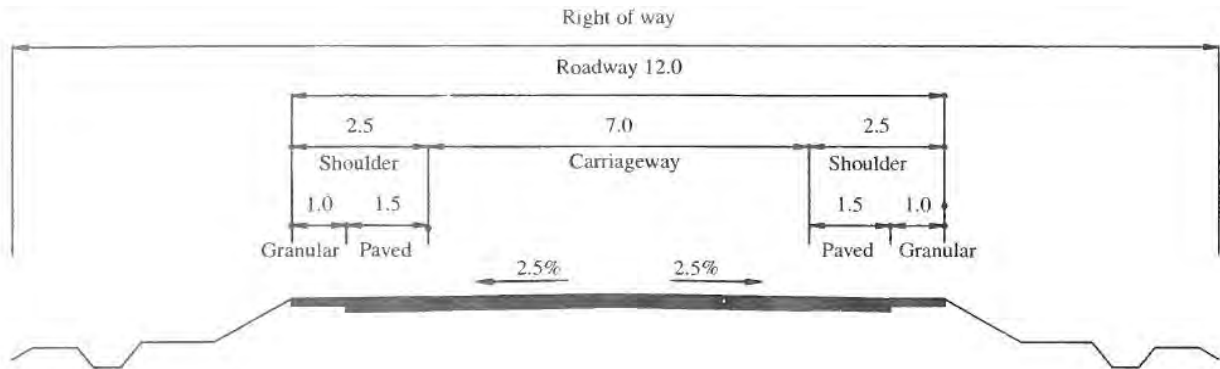

Figure 2.1: TCS. 2.1 of Schedule D of CA
 Two lane carriageways with 1.5m paved shoulder and 1m granular shoulder shall be applicable in Built-up area in plain/rolling terrain.

Figure 2.2: TCS. 2.2 of Schedule D of CA
 Four lane divided carriageway with footpath in Built-up area within Municipal limit.

Figure 2.3: TCS. 2.3 Of Schedule D of CA
 Two lane undivided highway with granular shoulder in Open Country

Figure 2.4: TCS. 2.4 of Schedule D of CA
Eccentrically placed shall be applicable for two lane new bypass in plain/rolling terrain

Figure 2.5: TCS. 2.6 of Schedule D of CA
Single lane with granular shoulder shall be applicable in sanctuary area in plain/rolling terrain

TCS schedule is provided below.

Table 2.2: TCS Schedule

S No.	From Chainage	To Chainage	length	Type of TCS
1	31+000	31+800	800	TCS.2.2 of Schedule D of CA
2	31+800	43+600	11800	TCS.2.3 of Schedule D of CA
3	43+600	43+800	200	TCS.2.1 of Schedule D of CA
4	43+800	50+700	6900	TCS.2.3 of Schedule D of CA
5	50+700	51+000	300	TCS.2.1 of Schedule D of CA
6	51+000	51+200	200	TCS.2.3 of Schedule D of CA
7	51+200	51+500	300	TCS.2.1 of Schedule D of CA
8	51+500	52+400	900	TCS.2.3 of Schedule D of CA
9	52+400	53+800	1400	TCS.2.2 of Schedule D of CA
10	53+800	57+500	3700	TCS.2.3 of Schedule D of CA
11	57+500	58+200	700	TCS.2.1 of Schedule D of CA
12	58+200	65+400	7200	TCS.2.3 of Schedule D of CA
13	65+400	65+700	300	TCS.2.1 of Schedule D of CA
14	65+700	75+000	9300	TCS.2.3 of Schedule D of CA
15	75+000	75+600	600	TCS.2.1 of Schedule D of CA

S No.	From Chainage	To Chainage	length	Type of TCS
16	75+600	76+700	1100	TCS.2.3 of Schedule D of CA
17	76+700	77+100	400	TCS.2.1 of Schedule D of CA
18	77+100	77+600	500	TCS.2.3 of Schedule D of CA
19	77+600	99+000	21400	TCS.2.6 of Schedule D of CA
20	99+000	100+600	1600	TCS.2.3 of Schedule D of CA
21	100+600	100+800	200	TCS.2.1 of Schedule D of CA
22	100+800	104+400	3600	TCS.2.3 of Schedule D of CA
23	104+400	105+300	900	TCS.2.1 of Schedule D of CA
24	105+300	109+500	4200	TCS.2.3 of Schedule D of CA
25	109+500	109+900	400	TCS.2.1 of Schedule D of CA
26	109+900	113+200	3300	TCS.2.3 of Schedule D of CA
27	0+000	4+400	4400	TCS.2.4 of Schedule D of CA for Bypass

Figure 2.6: Pictorial Representation of TCS Lengths

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage RCC side drains are constructed along the main carriage way on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains in open and rural areas.

2.4 Service Roads

Service roads are not provided along the entire stretch of the project road as per provisions of Schedule B of the Concession Agreement.

2.5 Bypass/Realignment

Bypass starts from Km 113+000 of Patan – Tendukheda Rehli Road & Joint at Km 38+100 of Sagar Rehli Road of 4.4 Kms length as per Provisions of Schedule B of CA

2.6 Intersections

As per Schedule B of CA requires developing 06 Nos Major Junctions and 14 Nos. Minor Junctions. Details are given below.

Table 2.3: Summary of Junctions

S No..	Chainage (Km)	Type of junction	Lead to
Major Junctions			
1	31+000	Y	Malikhedi
2	37+800	X	LHS: Podikala RHS: Jain temple
3	56+800	Y	Damoh
4	113+000	T	Rehli
5	115+800	X	Pandalpur
6	118+400	T	Sagar
Minor Junctions			
1	44+200	X	LHS: Singramopur RHS: SchaJganj
2	51+800	T	Nargua
3	52+600	T	Jharoli
4	54+800	Y	Tendukhera
5	55+800	Y	Ghanghor
6	73+400	X	LHS: Gunchi RHS: Jhalon
7	75+400	T	Magdupura
8	76+200	T	Sehri
9	78+800	Y	Damoh
10	94+800	X	LHS: Hinotiya Khapa RHS: Mohli
11	99+600	X	LHS: School RHS: Chandpur
12	110+200	X	LHS: Baleh RHS: Chandpur
13	110+400	T	Tikitoriya
14	110+600	T	Balch

2.7 Grade Separated Structures and underpasses

The Concessionaire has provided four numbers of CUP's as per COS.

Table 2.4: List of Grade Separated Structures (CUP's)

S No.	Chainage (Km.)	Span (m)
1	80+114	1x10x4
2	81+265	2x10x4
3	86+050	1x10x4
4	96+107	1x8x4

2.8 Road Under Bridge

There are no Road Under Bridge in the Project, as per provisions of Schedule B of the Concession Agreement

2.9 Carriageway Details

The details of Carriageway are shown in the following table.

Table 2.5: Summary of Carriageway Details

S. No.	Description	Flexible	Rigid	TCS Type
1	Four lane divided carriageway	2.200 Kms	---	TCS.2.2 of Schedule D of CA
2	Two lane with paved shoulder	4.300 Kms	---	TCS.2.1 of Schedule D of CA
3	Two lane with granular shoulder including Bypass	54.300 Kms	---	TCS.2.3 of Schedule D of CA
	Bypass	4.400	---	TCS.2.4 of Schedule D of CA
4	Single lane with granular shoulder	21.400 Kms	---	TCS.2.6 of Schedule D of CA
	Total length of the project	86.600 Kms	---	
5	TYPE OF ALIGNMENT			
6	New alignment	---	---	---
7	Realignment	---	---	---
8	Strengthening	---	---	---
9	Reconstruction	86.600 Kms	---	---
10	Total length of the project	86.600 Kms	---	---

2.10 Summary of Structures

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.6: Summary of Structures:

S. No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts
1	Retained-Repair & Strengthening	5	3	2	
2	Widening- Repair & Strengthening			13	

S. No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts
3	Reconstruction		17	42	19
4	New		2	28	
	Total	5	22	85	19

2.11 Toll Plazas

As per Schedule C of CA provisions, Two Toll Plazas have been constructed at Km34+100 & Km 110+400. Salient features of Toll Plazas are provided below.

Toll Plaza – Km 34+100

- Each side comprises of two normal lanes and one extra wide lane.
- The lane width in normal lanes is 3.20m; extra wide lane is 4.5m.
- Single canopy is provided to cover the toll lanes.
- Toll plaza has been constructed as per standards set forth in Schedule D of CA having facilities like lighting, water supply and firefighting Arrangements.
- CC Cameras are installed and monitored in administrative building.

Toll Plaza – Km 110+400

- Each side comprises of, one normal lane and one extra wide lane.
- The lane width in normal lanes is 3.20m, Extra wide lane is 4.5m.
- Single canopy is provided to cover the toll lanes.
- Toll plaza has been constructed as per standards set forth in Schedule D of CA having facilities like lighting, water supply and firefighting Arrangements.
- CCTV Cameras are installed and monitored in administrative building.

2.12 Bus shelters

As per the provisions of Schedule C of CA, 16 Nos. Bus Shelters are provided in the entire length of Project. Details as per Schedule C of CA and provided as per site condition are given below.

Table 2.7: Bus Shelters:

S. No.	Chainage (Km)	S. No.	Chainage (Km)
1	31+000	9	75+000
2	36+000	10	76+700
3	43+600	11	94+500
4	50+700	12	100+600
5	51+200	13	104+400
6	54+200	14	109+500
7	57+500	15	114+100
8	65+400	16	115+700

2.13 Other Project Facilities Provided as per Schedule C

- Roadside furniture: Sign boards, kilometer stones, road marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic safety devices: W beam crash barriers, parapet walls are provided as per the provisions of Schedule C of the CA
- Landscaping: provided at Toll plazas location and being maintained
- Tree plantation: Tree plantation is provided on both sides, for the full length of project corridor and being maintained.
- Medical Aid Post: Provided at toll plaza location and operational
- Highway Lighting: Highway lighting is provided at Toll Plazas locations and is functional.

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented below.

3.2 Road Inventory

Inventory of the project road was carried out physically and is summarized in Table 3.1 and few representative photographs are given below to have a clear picture of the Project.

Table 3.1: Road Inventory

S No.	Features	Remarks
1	Terrain	Plain, Rolling and Hilly Terrain
2	Land Use	Agriculture, Forest with Built up sections
3	Total Length	86.6Kms
4	Villages	13 Nos
5	Four lane divided carriageway	2.200 Kms
6	Two lane with paved shoulder	4.300 Kms
7	Two lane with granular shoulder	54.300 Kms
8	Bypass	4.400 Kms
9	Single lane with granular shoulder	21.400 Kms
10	Earthen shoulder	1.0 m to 2.5m width on either side
11	Junctions	20 Nos
12	Toll Plaza	1) Km34+100 2) Km 110+600
13	Sign boards	Sign boards are provided as per requirement
14	Road Markings	Lane Markings are provided as per requirement
15	Bus Bays /shelters	16 Nos.
16	Truck Lay bye	Nil
17	Street Lighting	Highway lighting provided as per requirement
18	Avenue plantation	Nil

3.3 Pavement Condition

Pavement condition survey was carried out on the project road based on observations supplemented by simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement Condition Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10 mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10 mm and 20 mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Pavement surface condition assessment is a key component of infrastructure asset management. The information is used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey

The survey on general Pavement Condition was primarily undertaken by means of slow drive- over survey, and supplemented with measurements where ever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, pot holes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The Pavement Condition is measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of surface area)
 - Ravelling (%of surface area)
 - Potholes (%of surface area)
 - Patching (%of surface area)
 - Rut depth
 - Pavement edge drop (mm)
- Road Side Drain (Non Existing/ Partially Functional/ Functional)

Upon verification of the Pavement Condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP-19 and is given in **ANNEXURE 1**. The summary of Pavement Condition is given below.

Table 3.3: Pavement condition summary

From (Km)	To (Km)	Length (kms)	Condition
31+000	113+200	82.200	Good
0+000	4+400	4.400	Good

Km 39+60

Km 52+200

Km 54+610

Km 55+400

CHAPTER 4. INVENTORY AND REVIEW OF STRUCTURES

4.1 General Assessment and Details of the Existing structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

There are 05 Nos. of Major Bridge, 19 Nos. of Minor Bridges, 78 Nos. Of Pipe culverts, 20 Nos. of Slab/ Box culverts and 4 Nos. of Cattle Under Passes are there along this project road.

Table 4.1 List of Structures

S No.	Type of Structure	Numbers
1	Major bridges	05 Nos.
2	Minor Bridge	19 Nos.
3	Pipe culverts	78 Nos.
4	Slab/Box Culverts	20 Nos.
5	CUP	04 Nos.

The superstructure for major bridges is of RCC solid slab type with RCC wall type piers and abutments resting on open foundation. The superstructure for Ominor bridges is of RCC solid slab type with RCC/PCC wall type piers and abutments restrung on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Structural condition of most of the culverts is fair. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges

The total length of the major bridge at Km 35+611 is 103.80m with 6 spans. The superstructure consists of RCC solid slab with RCC wall type piers and abutments resting on open foundations. Superstructure is seated on elastomeric bearings. Expansion joints are of Buried type. Steel railings has been provided on both sides of the deck.

The total length of the major bridge at Km 54+682 is 72.0m with 6 spans. The superstructure consists of RCC solid slab with RCC wall type piers and abutments resting on open foundations. Superstructure is seated on Tar paper bearings. Expansion joints are of Buried type. Steel railings has been provided on both sides of the deck.

The total length of the major bridge at Km 77+516 is 126.0m with 6 spans. The superstructure consists of Box girder with RCC wall type piers and abutments resting on open foundations. Superstructure is seated on elastomeric bearings. Expansion joints are of Strip seal type. Steel railings has been provided on both sides of the deck.

The total length of the major bridge at Km 113+554 is 62.50 m with 5 spans. The superstructure consists of RCC solid slab with RCC wall type piers and abutment resting on open foundations.

Superstructure is seated on Tar paper bearings. Expansion joints are of Buried type. Steel railings has been provided on both sides of the deck.

The total length of the major bridge at Km 114+323 is 102.40 m with 16 spans. The superstructure consists of RCC solid slab with circular type piers and regular RCC wall type abutment resting on open foundations. Superstructure is seated on Tar paper bearings. Expansion joints are of Buried type. Steel railings have been provided on both sides of the deck.

Table 4.2: List of Major Bridges

S No.	Chainage (Km.)	Span (m)	Total Length of Bridge (m)
1	35+611	6 x 17.3	103.800
2	54+682	6 x 12.0	72.000
3	77+516	6 x 21.0	126.000
4	113+554	5 x 12.5	62.500
5	114+323	16 x 6.40	102.400

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, drainage spouts and strip seal expansion joints are to be carried out.

Km 54+682

Figure 4.1 Overall view of the Major Bridge at Km 54+682

4.4 Details of Minor Bridges

There are 19 minor bridges in the project stretch. The type of superstructure for minor bridges is RCC solid slab and the substructure is PCC conventional wall type supported on open foundations. Expansion joints are buried type and bearings are tar paper and elastomeric bearings. RCC crash barriers are provided on all structures.

Table 4.3 Inventory of Minor Bridges

S No.	Chainage Km	Span (m)	Total Length of Bridge (m)	Description
1	31+792	1 x 8.2	9.50	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
2	32+291	1 x 8.4	9.70	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
3	35+031	2 x 5.0	11.10	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
4	36+639	2 x 5.0	11.10	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
5	51+062	3 x 11.6	34.80	Minor bridge is of RCC solid slab superstructure with RCC wall type piers and abutments resting on open foundations. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
6	52+241	3 x 13.4	40.20	Minor bridge is of RCC solid slab superstructure with RCC wall type piers and abutments resting on open foundations. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
7	63+305	2 x 10.2	22.50	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
8	67+640	4 x 10.0	42.80	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
9	70+843	4 x 5.0	21.70	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
10	75+848	2 x 10.0	22.10	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
11	100+047	4 x 12.2	48.80	Minor bridge is of RCC solid slab superstructure with RCC wall type piers and abutments resting on open foundations. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
12	100+973	3 x 10.0	30.00	Minor bridge is of RCC solid slab superstructure with CRM wall type piers and abutments resting on open foundations. Other features are Steel railing, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
13	101+344	2 x 6.8	13.60	Minor bridge is of RCC solid slab superstructure with PCC wall type piers and abutments resting on open foundations. Other features are Steel railing, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
14	106+175	2 x 10.3	22.70	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
15	106+398	1 x 9.7	11.20	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.

S No.	Chainage Km	Span (m)	Total Length of Bridge (m)	Description
16	107+958	1 x 7.7	8.80	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
17	108+162	2 x 9.0	18.00	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
18	109+663	1 x 7.6	8.70	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
19	112+383	1 x 8.0	9.30	Minor bridge is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.

Km 52+241

Figure 4.2: Representative photo for Minor Bridges

4.5 Details of CUP's

There are 4 No's of CUP's in the project stretch. The type of structure is RCC Box type structure. RCC crash barriers are provided on both sides.

Table 4.4 Inventory of CUP's

S No.	Chainage Km	Span (m)	Total Length (m)	Description
1	80+114	1 x 10 x 4.0	10.0	CUP is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
2	81+265	2 x 10 x 4.0	20.0	CUP is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
3	86+050	1 x 10 x 4.0	10.0	CUP is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
4	96+107	1 x 8 x 4.0	8.0	CUP is RCC Box structure. It has RCC crash barrier, bituminous wearing coat.

4.6 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

Details of the Slab/ Box Culverts

There are 20 nos. of slab/Box culvert in the project stretch. The details of the culverts are as given below.

Table 4.5: List of Slab/Box Culverts

S No.	Chainage Km	Span (m)	Vent Size (m)
1	35+870	1 x 3.0	2.50
2	40+006	2 x 3.0	2.60
3	50+395	1 x 3.0	3.00
4	51+425	1 x 3.2	3.20
5	61+251	2 x 3.0	2.60
6	70+252	1 x 3.5	3.1
7	70+676	2 x 3.0	2.60
8	72+038	2 x 3.0	2.60
9	72+284	1 x 5	2.00
10	72+817	1 x 4.5	4.0
11	73+690	2 x 3	3.0
12	74+027	1 x 5.5	3.1
13	77+336	2 x 3	3.0
14	80+270	1 x 3.8	2.10
15	83+070	1 x 3.3	2.10
16	104+088	1 x 3.0	2.00
17	104+530	1 x 7.0	3.00
18	106+783	1 x 7.0	2.10
19	107+407	1 x 4.7	2.10
20	111+636	2 x 3.0	2.50

The general condition of above Box/slab culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

There are 78 Nos of pipe culverts in the project stretch. The details of the culverts are as given below.

Table 4.6: List of Pipe Culverts

S No.	Chainage Km	No. of Rows X Dia (m)	Sl. No.	Chainage Km	No. of Rows X Dia (m)

30	60+140	1 x 1.2	69	99+002	1 x 1.2
31	61+686	1 x 1.2	70	99+431	1 x 1.2
32	63+450	1 x 1.2	71	102+265	1 x 1.2
33	63+995	1 x 1.2	72	103+285	1 x 1.2
34	64+490	1 x 1.2	73	104+300	1 x 1.2
35	64+686	1 x 1.2	74	109+316	1 x 1.2
36	65+381	1 x 1.2	75	110+475	1 x 1.2
37	66+765	1 x 1.2	76	110+966	1 x 1.0
38	68+172	1 x 1.2	77	111+359	1 x 1.0
39	32+885	1 x 1.2	78	112+902	1 x 1.0

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

The culverts are in fair condition and can be retained in the present condition with following repairs/rehabilitation measures.

- Chocked culverts must be cleared.
- Debris and garbage near outside the vents must be removed.

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design validation

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2012 publication while the current publication is IRC: 37-2018.

Review of Pavement Design

As per the pavement design approved in the project, the following conclusions are given.

Table 5.1: Flexible Pavement Design summary

S No.	Description/ Pavement layer	Design Parameters	Adopted values
1	Sub Grade CBR (%)	9%	9%
2	Design Life (Years)	15 years	15 years
3	Design Traffic (MSA)	1.98 MSA for HS-1 Actual 0.26 MSA for HS-2 Actual	5 MSA for HS-1 & HS-2
4	Surface course (BC/SDBC)	25 mm (SDBC)	30 mm (BC)
5	Binder course (DBM)	50 mm	50 mm
6	Base course (WMM)	250 mm	250 mm
7	Sub Base course (GSB)	150 mm	200 mm

Pavement design (Crust thickness)

The new pavement shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”. Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. “Guidelines for the Design of Plain Jointed Rigid Pavements for Highways”.

Pavement design validation is carried out as per actual traffic from COD. As per IRC 37, Distribution of commercial vehicles and growth rate values are 0.75 and 5% respectively. Vehicle Damage Factor (VDF) 0.7, 0.5, 2.5 and 4.11 for LCV, BUS, 2-AT and MAV respectively as per design report. Summary is given below.

Table 5.2: Flexible Pavement Design Traffic Validation (Patan)

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2018	637	271	35	32	71	409	0.16	0.16	2	Actual
2019	896	388	44	57	93	581	0.22	0.38	3	Actual
2020	1070	448	46	70	99	664	0.25	0.63	4	Actual
2021	1123	470	49	74	104	697	0.26	0.90	5	Projected
2022	1179	494	51	78	109	732	0.28	1.18	6	Projected
2023	1238	518	54	81	115	768	0.29	1.47	7	Projected
2024	1300	544	56	85	121	807	0.31	1.77	8	Projected
2025	1365	571	59	90	127	847	0.32	2.09	9	Projected
2026	1433	600	62	94	133	889	0.34	2.43	10	Projected
2027	1505	630	65	99	140	934	0.35	2.79	11	Projected
2028	1580	661	68	104	147	980	0.37	3.16	12	Projected
2029	1659	694	72	109	154	1029	0.39	3.55	13	Projected
2030	1742	729	75	115	162	1081	0.41	3.96	14	Projected
2031	1829	766	79	120	170	1135	0.43	4.39	15	Projected

Table 5.3: Flexible Pavement Design Traffic Validation (Rehli)

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2018	329	91	10	15	24	139	0.05	0.05	2	Actual
2019	519	156	15	29	38	238	0.09	0.14	3	Actual
2020	606	177	19	33	46	274	0.10	0.24	4	Actual
2021	636	186	19	34	48	288	0.11	0.35	5	Projected
2022	668	195	20	36	51	302	0.11	0.46	6	Projected
2023	702	205	21	38	53	317	0.12	0.57	7	Projected
2024	737	215	23	40	56	333	0.12	0.70	8	Projected
2025	774	226	24	42	59	350	0.13	0.83	9	Projected
2026	812	237	25	44	61	367	0.14	0.96	10	Projected
2027	853	249	26	46	65	385	0.14	1.11	11	Projected
2028	896	261	27	48	68	405	0.15	1.26	12	Projected
2029	940	274	29	50	71	425	0.16	1.41	13	Projected
2030	987	288	30	53	75	446	0.17	1.58	14	Projected
2031	1037	303	32	56	78	468	0.17	1.75	15	Projected

Based on the above projected traffic, estimated MSA at 8 years and 15 years are 1.77, 4.39 of TP1 respectively. Similarly estimated MSA at 8 years and 15 years of TP2 are 0.70, 1.75 respectively.

Traffic considered in pavement design is more than projected traffic based on actual traffic. Hence the pavement design adopted is found in order.

Rigid Pavement

Pavement crust thickness in the pavement design report for rigid pavement is as follows: -

Table 5.4: Rigid Pavement Design for Toll Plaza

Description	Design/Adopted Thickness
CBR of sub grade	9%
Design life in years	30
Pavement Quality Concrete (PQC) - mm	250
Dry Lean Concrete (DLC) - mm	150
Drainage Layer (GSB) - (mm)	150
Diameter of Dowel Bar (mm)	32
Length of Dowel Bar (mm)	450
Spacing of Dowel Bars (mm)	400
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	710

The Pavement crust has been designed according to IRC specification and found in order, the adopted/constructed pavement layer thickness is adequately provided than actual/designed thickness.

5.3 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 5 MSA for a design life of 15 years for Bituminous layers and Granular layer (up to 2031), whereas the actual traffic is 1.98 MSA and 0.26 MSA for HS-1 and HS-2 respectively for 15 years. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation before the end of Stage-I of design life (as per pavement design report) and prior to the end of concession period to evaluate the requirement of overlay.

5.4 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of SDBC. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Next periodic renewal proposed on or before 2024.

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction (as per IRC 58-2015).

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals. Type Designs for Intersections on National Highways, 1992

Table 6.1: Referred IRC Publications

IRC : 35	Code of Practice for Road Markings
IRC : 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC : 67	Code of Practice for Road signs
IRC : 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC:SP- 88	Manual of Road Safety Audit

6.2 Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 6.2: Safety Items

S. No.	Item Description		Status	Condition
1	Sign Boards	Chevron signs Village sign Board Informatory Boards Object Hazard Markers at culverts	Available as per site requirement	Good
2	Road Marking	Studs & Lane Marking	Available as per site	Good

S. No.	Item Description		Status	Condition
			requirement	
3	Metal Beam Crash Barriers	At High Embankments	Available as per site requirement	Good

This Project Section is part an important corridor. It is the Concessionaire’s duty and responsibility to provide a safety and thorough fare for the road users by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

Few Observations on the road furniture in safety aspects for the project road are mentioned below:

- At few places, reflectors were missing on the signboards and few sign boards were also damaged.
- The object hazard markers are placed only on one side of Head walls/parapet walls of all structures, whereas it is to be installed on both sides at structures.

W Beam at approaches of MNB at Km 51+070

Speed Limit Board and Direction Chevron Boards

Safety before the Head wall of Box Culvert at 54+610

Figure 6.1: Representative photos during road safety audit

6.3 Conclusions

Safety arrangements are made for road users along the project road are found to be in conformity with Project Road requirements and good industry practice. However, a continuous monitoring on safety arrangements is required during the operation and maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There are two toll Plazas at Km 34+100 and Km 110+400.

- Each side comprises of two normal lanes and one extra wide lane.
- The lane width in normal lanes is 3.20m; extra wide lane is 4.5m.
- Single canopy is provided to cover the toll lanes.

7.2 Tolling Equipment's and Control Room Equipment's

List of equipment provided at toll plaza and control room is given below.

Table 7.1: List of Tolling Equipment in toll plaza @34+100

CHAPTER 8. TRAFFIC CENSUS AND TOLL REVENUE

8.1 Traffic Census

In accordance with clause 22.1, the Concessionaire shall install, maintain and operate electronic/computerized traffic counters at each of the Toll Plazas and collect data relating to the number and types of vehicles using the Project Highway. A weekly statement of such data shall be compiled and furnished forthwith by the Concessionaire to MPRDC substantially in the form specified in Schedule N of CA.

Accordingly, the Concessionaire provided toll plaza wise details. Based on the data made available the summarized annual classified Traffic census details for the past Two years are provided in Table 8.1 below. The Actual traffic data recorded below has been taken as a basis to calculate AACGR % (Average Annual Cumulative Growth Rate).

Table 8.1: Year wise Traffic (Vehicles) Details as per schedule N of CA

A) Patan Toll Plaza

FY Year	Car	LCV	Bus	Truck	MAV	Total Traffic
Apr 2018-Mar 2019	327023	141460	16025	20702	33791	539001
Apr 2019-Mar 2020	391470	163839	16953	25728	36344	634334
AACGR* (%)						17.69%

B) Raheli Toll Plaza

FY Year	Car	LCV	Bus	Truck	MAV	Total Traffic
Apr 2018-Mar 2019	189572	57093	5393	10594	13840	276492
Apr 2019-Mar 2020	221839	64757	6789	11908	16786	322079
AACGR* (%)						16.49%

*AACGR- Annual Average Compound Growth Rate

8.2 Actual Revenue Collection

In accordance with clause 19.5, “During the operation period, the Concessionaire shall furnish to MRPDC within 7 days of completion of each month, a statement of fee substantially in the form set forth in Schedule-M (Monthly fee statement)”. As per provisions of CA the concessionaire submitted monthly fee statement and the summary of form submitted under Schedule M during the financial year 2019-20 is given under as Table 8-2.

Table 8.2: Summary of 2019-20 Tollable traffic and revenue collected at Toll Plaza

A) Patan Toll Plaza:

Description	Car	Car(pass)	LCV	Bus	Truck	MAV	Total
In Nos.	279437	1180	142142	16908	25445	36139	501251
Toll Revenue collection in Rs.	6985925	94368	7817810	1991405	3514380	10075995	30479883

B) Rahelli Toll Plaza:

Description	Car	Car(pass)	LCV	Bus	Truck	MAV	Total
In Nos.	170525	623	43683	6742	11789	16652	250014
Toll Revenue collection in Rs.	4263125	49850	2839395	895905	1923430	5406705	15378410

The figures shown in Table 8-1 are Real time traffic data on project road for the past two years and the growth rate is calculated to be 17.69%, 16.49% in TP-1 & TP-2 respectively. It is pertinent to note that the figures given in table 8-1 are inclusive of exempted /non tollable traffic.

The figures shown in Table 8-2 are actual tollable traffic based on which the toll revenue collected and is excluding of exempted/non tollable traffic. For the realistic estimate of the traffic growth and projected revenue calculation actual traffic based on which FY 2019-20 revenue collected (table 8-2) is considered as a base year traffic and the projected traffic growth rate is restricted to 5%.

Based on the base year traffic and growth rate as explained above traffic projections from year 2019-20 to till end of Concession period toll plaza wise are calculated and summarized below in Table 8.3.

Table 8.3: Projected traffic

A) Patan Toll Plaza:

FY Year	AADT in Vehicles					CVPD* (Veh.)	AADT in PCU					CVPD* (PCU)	Remarks
	Car	LCV	BUS	2-AT	MAV		Car	LCV	BUS	2-AT	MAV

8.3 Toll Revenue Calculations

The toll revenue for horizon year is calculated based on the input from the above data, actual toll rates collected on base year (2019-20), with Traffic growth, WPI growth and toll efficiency has been assumed 5%, 4% and 100% respectively and other inputs considered in revenue calculations is given in table 8-4

Table 8.4: Toll Revenue inputs

Particular	Toll plaza 1	Toll plaza 2
Location	Km 34+100	Km 110+400
4 lane length in Kms	0	0
2 lane length in Kms	40	46.6
Agreement Date	01-09-2015	01-09-2015
Appointed Date	10-04-2016	10-04-2016
Concession period	15	15
Commercial operation date	12-02-2018	12-02-2018
Concession End Date	09-04-2031	09-04-2031
Traffic study year	2020	2020
Vehicle Type	AADT	AADT

Particular	Toll plaza 1	Toll plaza 2
Car/Jeep/Van	769	469
LCV/LGV	389	120
2A-Bus	46	18
2A-Truck	70	32
MAV (2A-6A)	99	46
Growth Rate (%)	5%	5%

The split trip type based on the available toll data from Concessionaire is used to derive the annual toll collection for each plaza. The revenue estimated and presented below. Detailed toll revenue estimation is given in **ANNEXURE 4**.

Table 8.5: Toll Revenue Estimated (in Rs. lakhs)

Financial Year	Annual Revenue of TP1 @ Km 34+100	Annual Revenue of TP1 @ Km 110+400	Total	Remarks
2019-20	304.7988	153.7841	458.5829	Actual
2020-21	327.0265	164.9138	491.9403	Projected
2021-22	357.5165	176.6606	534.1771	Projected
2022-23	400.3364	201.8828	602.2192	Projected
2023-24	436.0128	215.1583	651.1711	Projected

2030-31	751.0599	371.1441	1122.204	Projected
2031-32	19.70102	9.724974	29.426	9 Days

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of CA, the Concessionaire will operate and maintain the Project roads by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual Inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz. pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

9.3 Operations

9.3.1. Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project Road and Project Facilities.

- 1 Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- 2 Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.
- 3 Carrying out preventive and periodic maintenance of the Project Road;
- 4 Undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;

- 5 Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- 6 Functioning of the lighting System
- 7 Functioning of the Patrolling System
- 8 Functioning of rescue and medical aid services
- 9 Ambulance as and when required
- 10 Functioning of the Project Facilities
- 11 Administrative, Operational and Maintenance Base Camp
- 12 Truck Lay bays
- 13 Pickup Bus stops / Bus Bays
- 14 Protection of the environment and provision of equipment and materials therefore;
- 15 Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project Road.
- 16 Complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plaza

There are two lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the escrow account. In case of ETC system Toll collection is connected with Network system and directly deposited into the Escrow account.

9.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year. Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

9.5.1. Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence doesn't require any immediate or preventive interventions.

9.5.2. Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

9.5.3. Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road.

The details of periodic maintenance schedule are given below.

Table 9.1: Schedule and status of for Periodic Maintenance

S No.	Scheduled Major Maintenance	Year	Status at site
1	1st Periodic Maintenance	2024	Planned to execute
2	2nd Periodic Maintenance	2031	Planned to execute

9.5.4. Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project Highway shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.6 Review of Test Reports

9.6.1. Bump Integrator Test (BI):

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of March, 2020. As per Schedule K of CA, if the stretch exceeds 3000mm in a Km shall be rectified. No stretch exceeds the permissible limit.

9.6.2. Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

Concessionaire has conducted the test in Dec 2019. The test report has been verified and found within permissible limits as per IRC 81.

9.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA and project corridor. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 5**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance (In crores)	Incidental maintenance (In crores)	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	0.291	0.253		0.83	1.37
2021	0.299	0.260		0.85	1.41
2022	0.308	0.268		0.88	1.46
2023	0.318	0.276		0.91	1.50
2024	0.327	0.285	12.17	0.93	13.71
2025	0.337	0.293		0.96	1.59
2026	0.347	0.302		0.99	1.64
2027	0.357	0.311		1.02	1.69
2028	0.368	0.320		1.05	1.74
2029	0.379	0.330		1.08	1.79
2030	0.391	0.340		1.11	16.01
2031	0.402	0.350	14.17	1.15	1.90
2032	0.010	0.009		0.03	0.05
Total	4.13	3.60	26.34	11.78	45.86

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 Scope of Work (Article 2)

Article 2 provides the scope of work which includes the following.

- Construction of the Project Highway on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of Project Facilities as specified in Schedule-C, and in conformity with the Specifications and Standards set forth in Schedule-D;
- Operation and maintenance of the Project Highway in accordance with the provisions of Concession Agreement (CA)
- Performance and fulfillment of all other obligations of the Concessionaire in accordance with the provisions of this Concession Agreement (CA) and matters incidental

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 6**.

10.3 Conditions precedent (Article 4)

Conditions of precedent to be fulfilled by the Authority:

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement (CA)

Conditions of precedent to be fulfilled by the Concessionaire:

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfil its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project Highway upon termination of the CA

10.5 Obligations relating to the Competing Roads (Clause 6.3)

Neither Authority nor any Governmental Instrumentality shall construct the Competing Road before 10th Anniversary of the Appointed Date.

10.6 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 20% of the Total Project Cost.

10.6.1. Tests (Clause 13.3)

For determining that the Project, conforms to the Maintenance Requirements, the Independent Engineer shall require the Concessionaire (Concessionaire shall in turn require the Contractor) to carry out, or cause to be carried out, tests specified by it in accordance with Good Industry Practice. One half of the costs incurred on such tests, and to the extent certified by the Independent Engineer as reasonable, shall be reimbursed by the Authority to the Concessionaire

10.7 Provisional Completion Certificate (Clause 14.3)

Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA and after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA. Copy of the Provisional Completion Certificate is provided at **ANNEXURE-7.**

10.8 Completion Certificate (Clause 14.4)

Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire. Copy of the Completion certificate is provided at **ANNEXURE-8.**

10.9 Commercial Operation Date (COD) (Clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of Scope proposal initiated and consented by the Authority are provided at Annexure 10.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimising the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any un authorized use of the Project road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations Period; the Project Highway conforms to the maintenance requirements set forth in Schedule K (the “**Maintenance Requirements**”).

10.13 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Lanning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.14 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 0.5% (zero decimal five percent) of the Average Daily Fee, and
- 0.1% (zero point one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Monthly Fee Statement (Clause 19.5)

During the Operations Period, the Contractor shall furnish to the Concessionaire and the Authority, if required by the Contractor, within 7 (seven) days of completion of each month, a statement of Fee substantially in the format set out in the Concession Agreement (“Monthly Fee Statement”).

10.18 Annuity (Clause 25.1.1)

The Authority agrees and undertakes to pay the Concessionaire for each annuity Payment period on each annuity payment date as set forth in schedule Y the sum of Rs 17.64 Crores.

As per Clause 25.2.1, In case the COD is different from the Schedule Y, then the annuity payment schedule shall be suitably modified to be a period of 6 months from the preceding Annuity Payment date.

Table 10.1: Status of Annuity Payments

S No.	Particulars	Paid on
1	1st Annuity	13-Oct-17
2	2nd Annuity	8-May-18
3	3rd Annuity	16-Oct-18
4	4th Annuity	2-Apr-19
5	5th Annuity	1-Oct-19
6	6th Annuity	22-Apr-20
7	7th Annuity	30-Sep-20

10.19 Concession Fee (Article 26):

- In consideration of the grant of Concession the Concessionaire shall pay Concession Fee of Rs1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC

10.20 Toll Fee (Clause 27.1.1)

Toll Fees Shall be revised annually in accordance with Clause 27.2.1.

10.21 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 Details of Insurance

As per clause 32.1 of the Concession Agreement, the Concessionaire shall affect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Copy of the Insurance are provided at **ANNEXURE-9**.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Remarks
			From	To	
Civil Engineering Completed Risk	National Insurance Company Limited	321300441910 001994	27.03.2020	27.03.2021	Road and Structure Toll Building & Booths, TMS, HTMS, Office & It Equipment, Electronic. Equipment, Road Furniture, Fixtures, Electrical Poles, Lighting & Fittings, Signboards & Safety Barrier.
Employees Compensation Insurance Policy	HDFC ERGO General Insurance Company Ltd	311420367716 2100000	05.10.2020	04.10.2021	All categories of Employees of the Contractor & sub-contractor engaged in the Project

CHAPTER 12. CONCLUSION

12.1 General:

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The overall project pavement condition is good. RCC drains are constructed in built up locations and earthen drains in rural locations resulting in, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are getting cleared during regular maintenance period.

12.4 Traffic Growth

Based on real time traffic data extracted from Schedule N of CA, the traffic growth observed about 17% in both toll plazas. However, 5% growth rate only considered as taken in financial model while estimating forecast of traffic volumes.

12.5 Project Facilities

Two Toll Plazas are located at Km 34+100 & Km 110+400 and are operational. Toll Plaza is operated by ETC Toll collection system and connected by network system monitored in administrative building. Truck lay byes/Bus bays are in Good condition. Medical Aid posts found in functional condition. Avenue plantation and landscaping at Toll Plaza is provided and being maintained. Highway lighting is provided at truck laybys and toll plaza locations and found functional.

12.6 Road safety

Pavement marking is in good condition and number of sign boards are provided as per IRC SP 73-2007. The condition of signboards & other road appurtenances like metal beam crash barriers is fair.

12.7 Maintenance

- The routine maintenance being carried out by O&M contractor effectively, based on documents reviewed, time to time observations made by client/Authority, being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance was carried out recently and next MM is scheduled in 2024.

12.8 Epilogue

The project is well designed and constructed as per the stipulated specifications besides maintenance work is being carried out effectively and keeping the road traffic worthy, smooth, safe at all times.

Annexure 4:Toll Revenue Calculations

Toll Plaza-I & 2:

1. Tollable Traffic considered for Toll Revenue in No.s (AADT):

Table-1: Details of Tollable Traffic (Base Year 2019-20)

Vehicle Type	Traffic (AADT)	Traffic (AADT)
	Km 34.100	Km 110.400
Car/Taxi/Van	769	469
LCV	389	120
Bus	46	18
Truck	70	32
MAV	99	46

2. Traffic Growth Rates

Table-2: Details of Growth rates adopted

Year	Car	LCV	BUS	Truck	MAV
2019-25	5.00	5.00	5.00	5.00	5.00
2025-32	5.00	5.00	5.00	5.00	5.00

3. Trip Distribution Ratio as per the Toll Data.

Table-3: Details of Trip Distribution (Base Year 2019-20)

Vehicle Type	Single Trip	Local Pass	Total
Car/Taxi/Van	99.6%	0.4%	100%
LCV	100%	0%	100%
Bus	100%	0%	100%
Truck	100%	0%	100%
MAV	100%	0%	100%

4. Toll Rates :

Table-4: Details of Toll Fee (Base Year 2019-20)

Vehicle Type	Toll Fee at Km 34.100	Toll Fee at Km 110.400
Car/Taxi/Van	25	25
LCV	55	65
Bus	120	135
Truck	140	165
MAV	280	325

Dear Customer,

Sub: Employees Compensation Insurance Policy No: 3114203677162100000

We thank you for having preferred us for your Insurance requirements. We at HDFC ERGO General Insurance believe "Insurance" as not only to be an assurance to indemnify in the event of unfortunate circumstances, but one that signifies protection and support, which you can count on when you need it most.

The Insurance Policy enclosed herewith is a written agreement providing confirmation of our responsibility towards you that puts insurance coverage into effect against stipulated perils.

Please note that the policy has been issued based on the information contained in the proposal form and / or documents received from you or your representative / broker.

Name of the Intermediary : GLOBAL INSURANCE BROKERS PVT LTD
Intermediary Code : 200113159601

Where the proposal form is not received, information obtained from you or your representative /broker, whether orally or otherwise, is captured in the policy document.

If you wish to contact us in reference to your existing policy and /or other general insurance solutions offered by us, you may write to our correspondence address as mentioned below. Alternatively, you may visit our website www.hdfcergo.com. To enable us to serve you better, you are requested to quote your Policy Number in all correspondences.

Thanking you once again for choosing HDFC ERGO General Insurance Company Limited and looking forward to many more years of association.

Yours sincerely,

Authorised Signatory

HDFC ERGO General Insurance Company Limited

EMPLOYEES COMPENSATION INSURANCE

POLICY WORDINGS

WHEREAS the Insured by a Proposal which shall be the basis of this Contract and deemed to be incorporated herein, has applied to HDFC ERGO General Insurance Company Limited (hereinafter called "the Company") for the insurance hereinafter contained for the Business described in the Schedule and has paid or agreed to pay the premium stated in the Schedule as consideration for such insurance.

NOW THIS POLICY WITNESSETH, subject to the terms exceptions and conditions contained herein or endorsed hereon, that if at any time during the Period of Insurance any Employee or Employees of the Insured shall sustain Injury by accident arising out of and in the course of his employment in the Business, for which the Insured is liable to pay compensation under any Law(s) specified in the Schedule, then the Company shall indemnify the Insured up to the Limit of Indemnity against all sums for which the Insured shall be so liable, including costs and expenses for defending any such claim incurred with the Company's consent.

PROVIDED ALWAYS that in the event of any change in the Law(s) or the substitution of other legislation therefore, this Policy shall remain in force but the liability of the Company shall be limited to such sum as the Company would have been liable to pay if the Law(s) had remained unaltered.

DEFINITIONS

This Policy, the Schedule and any Clauses thereon shall be considered one document and any word or expression to which a specific meaning has been attached in Definitions bears that specific meaning wherever it appears in this Policy in bold typeface.

Business means the Business of the Insured as specified in the Schedule in respect of which this Policy is issued.

Injury means physical bodily injury including death resulting from such injury arising out of an accident but does not include any mental sickness, disease, Occupational Disease, unless caused by such physical bodily injury.

Insured means the person or organization specified in the Policy Schedule but does not include their Contractors or Sub Contractors.

Occupational Disease means any occupational disease or illness including but not limited to the diseases listed under Schedule III of the Employees' Compensation Act, 1923 contracted by an Employee due to employment in the Business.

Wages means the remuneration payable to an Employee by the Insured for the employment in the Business and includes any privilege or benefit which is capable of being estimated in money other than a travelling allowance or the value of any travelling concession or a contribution paid by the employer of an employee towards any pension or provident fund or a sum paid to an employee to cover any special expenses entailed on him by the nature of his employment.

Employee or Employees means such person or persons in direct employment under the Insured in the Business, but shall not include any person employed under a Contractor or Sub-Contractor of the Insured unless specifically shown as covered in the Schedule and by an endorsement.

Schedule means the Schedule attached to and forming part of this Policy.

Period of Insurance means the period for which this insurance is availed by the Insured as specified in the Schedule, unless cancelled earlier.

HDFC ERGO General Insurance Company Limited

Limit of Indemnity means the maximum amount of indemnity as specified in the **Schedule** that will be provided under this Policy by the Company in respect of

- any particular claim by an **Employee** and
- all claims arising out of all accidents for any number of **Employees** during the **Period of Insurance**.

EXCLUSIONS

This Policy shall not cover liability of the **Insured**:

- For **Injury** caused to **Employee** by accident directly or indirectly caused by or arising from or in consequence of or attributable to war, invasion, act of foreign enemy, hostilities (whether war be declared or not) civil war, mutiny, insurrection, rebellion, revolution or military or usurped power, nuclear weapons material, ionising radiations or contamination by radioactivity from any nuclear fuel or from any nuclear waste from the combustion of nuclear fuel.
- Accident occurring at any other place than the Place or Places of Employment specified in the **Schedule**, unless the **Employee** was at such other place whilst on duty for the purpose of the **Business** and on the directions of the **Insured** or any of its official authorized to exercise control and supervision over the **Employee**.
- For **Occupational Diseases** contracted by an **Employee**.
- For interest and/or penalty imposed on the **Insured** under any law or otherwise.
- Under any Law for medical expenses in connection with treatment of any **Injury** sustained by an **Employee**
- For persons employed in the **Business** under a **Contractor** or **Sub-Contractor** of the **Insured** unless specifically covered in the **Schedule**
- For **Injury** sustained by person whilst in the employ of the **Insured** otherwise than in the **Business** and/or who has is not declared for insurance under this Policy.
- Assumed by agreement which would not have attached in the absence of such agreement.
- For any sum which the **Insured** would have been entitled to recover from any party but for an agreement between the **Insured** and such party.
- For any accident occurring whilst the **Employee** is under the influence of intoxicating liquor or drugs.
- For any incapacity or death of an **Employee** resulting from his/her deliberate self-injury or the deliberate aggravation of an accidental **Injury**.

CONDITIONS

- The Contract:** This Policy and the **Schedule** shall be read together as one contract and any word defined herein and shown in bold shall bear such specific meaning wherever it may appear in the **Policy** or the **Schedule**.
- Due Observance:** The due observance and fulfilment of the terms, conditions and endorsements of this **Policy** so far as they relate to anything to be done or not to be done by the **Insured** shall be condition precedent to any liability of the Company to make any payment under this **Policy**.
- Mis-representation/Non-Disclosure:** This **Policy** shall be void in the event of any mis-representation or non-disclosure in the **Proposal** and the **Insured** is deemed to warrant the truth and accuracy of the statements and answers in the **Proposal** which form the basis of this **Policy**.
- Written Communication:** Every notice or communication to be given or made under this **Policy** shall be delivered in writing to the Company.
- Safeguards:** The **Insured** shall take reasonable precautions to prevent accidents and disease and shall comply with all statutory obligations, manufacturer's recommendations and other safety regulations in conduct of the **Business**.

HDFC ERGO General Insurance Company Limited

6. **Claim Intimation:** In the event of any occurrence which may give rise to a claim under this Policy the Insured shall as soon as possible, and in any case within a period of thirty days of such occurrence, give notice thereof to the Company in writing with full particulars. Every letter claim writ summons and process shall be notified to the Company immediately on receipt. Notice shall also be given to the Company immediately the Insured shall have knowledge of any impending prosecution inquest or fatal enquiry in connection with any such occurrence as aforesaid.
7. **Company's Rights After Loss:** No admission offer promise or payment shall be made by or on behalf of the Insured without the consent of the Company which shall be entitled, without being obliged to do so, if it so desires to take over and conduct in his name the defence or settlement of any claim or to prosecute in his name for its own benefit any claim for indemnity or damages or otherwise and shall have full discretion in the conduct of any proceedings and in the settlement of any claim and the Insured shall give all such information and assistance as the Company may require.
8. **Declaration of Employees and Wages:** It is clearly agreed and Understood that the Insured shall be bound at all times to declare all Employees and Wages payable in respect of such Employees on the basis of which the Premium for this Policy is calculated.
- In case of increase in Employees or Wages subsequent to insurance, Insured shall keep the Company intimated and obtain Endorsement by payment of necessary additional premium.
- The Insured shall as and when require by the Company permit inspection of its records to verify the Wages and Employees and shall also provide duly authenticated copies thereof if so required the Company.
9. **Average:** Notwithstanding anything contained hereinabove,
- (i) a) If the number of Employees (whether on duty or otherwise) employed by the Insured on the date of accident is higher than the number covered under this Policy, the Company shall indemnify Insured's liability arising out of such accident, only in such proportion that the number of Employees covered bears to the Employees found employed on the date of accident.
- b) If the amount of Wages declared for this insurance for all Employees is less than the actual Wages paid until date of accident, the Company shall be liable to indemnify on any claim only in proportion that the Wages declared bears to the Wages paid. For the purpose of this clause, the Wages declared shall be calculated proportionately for the period from commencement of Policy until date of accident for comparison with the actual wages paid during such period to determine applicability of this clause.
- c) If the liability of the Insured for any claim by an Employee is determined on the basis of Wages higher than covered under this Policy, the Company shall be liable to indemnify only in proportion that the Wages covered under the Policy for the Employee/Employees bears to the Wages on the basis of which Insured is held liable. For the purpose of this clause, the Wages covered in respect of any Employee shall be deemed to be the average wage per Employee in the category under which the Employee falls as specified in the Schedule, unless actual Wages paid at the time of accident is substantiated by submission of documentary evidence to the Company.
- (ii) If more than one of the above clauses is found applicable in respect of a claim, only such clause under which the liability of the Company is least shall be applied.
10. **Maintenance of record of Employees/Wages:** The Insured undertakes to maintain an accurate record of the Employees and Wages in respect of the Business throughout the Period of Insurance, in compliance with all statutory requirements or otherwise, and allow the Company to inspect such records during or upon expiry of this Policy.

HDFC ERGO General Insurance Company Limited

11. **Contribution:** If at the time of the happening of an accident covered by this Policy there shall be any other insurance covering the same risk in respect of the Employee whether or not effected by the Insured, then the Company shall not be liable to contribute more than its rateable proportion of the amount that would otherwise be payable under this Policy.
12. **Cancellation:** The Insured may cancel this Policy by sending at least 15 days written notice to the Company and in such event the premium shall be adjusted in accordance with Condition 8 above.

Company also reserves the right to cancel this Policy immediately upon becoming aware of any mis-representation, fraud, non-disclosure of material facts or non-cooperation by or on behalf of the Insured; the Company is not obliged to refund the premium already paid under the Policy.

Notice of cancellation will be mailed to the Insured last known address. If notice of cancellation is mailed, proof of mailing will be sufficient proof of notice.

Company shall have no obligation to give notice that the Policy is due for renewal or renew this Policy upon expiration or cancellation.
13. **Forfeiture:** If the Insured shall make any claim or connive in the making of any claim, knowing the claim to be false or fraudulent, the Policy shall become void and all claims will stand forfeited.
14. **Subrogation:** In the event of any payment under this Policy, the Company shall be subrogated to the extent of such payment to all the Insured's rights of recovery and the Insured shall execute all papers required and shall do everything necessary to secure and preserve such rights, including the execution of such documents necessary to enable the Company effectively to bring suit in the name of each Insured.
15. **Alteration and Assignment:** No change in, modification of, or assignment of interest under this Policy shall be effective except when made by a written endorsement to this Policy which is signed by an authorised employee of the Company.
16. **Premium Payment:** It is hereby agreed that, as a condition precedent to any liability under this Policy, any premium due must be paid and actually received by the Company in full. However, where the remittance made by the Insured is not realised by the Company the Policy shall be treated as void-ab-inito
17. **Arbitration:**
 - a) If any dispute or difference shall arise as to the quantum to be paid under this Policy (liability being otherwise admitted) in respect of any claim, such difference shall independently of all other question be referred to the decision of a sole arbitrator to be appointed in writing by the parties to or if they cannot agree upon a single arbitrator to a panel of three arbitrators to be appointed in accordance with the provisions of the Arbitration and Conciliation Act, 1996. The arbitration shall be governed by Indian law. The venue of arbitration shall be within India.
 - b) It is clearly agreed and understood that no reference to arbitration can be made if the Company has either not admitted or has disputed liability in respect of any claim under or in respect of this Policy.
 - c) In the event that these arbitration provisions shall be held to be invalid then all such disputes or differences shall be referred to the exclusive jurisdiction of the Indian Courts.
 - d) It is further expressly agreed and declared that if the Company shall disclaim liability in respect of any claim and is not within 12 calendar months from the date of such disclaimer be made the subject matter of a suit or proceeding before a Court of law or any other forum, it shall for all purposes be deemed to have been abandoned and shall not thereafter be recoverable hereunder.
18. **Law and Jurisdiction:** It is hereby declared and agreed that this contract of insurance and all claims there under shall be governed by Indian Law and any legal proceeding in respect thereof shall be raised a competent court of India. All claims shall be paid in Indian Rupees only.

EXCLUSION - COMMUNICABLE DISEASE

1. Notwithstanding any provision, clause or term of this Insurance Contract to the contrary, this Insurance Contract excludes any loss, cost, damage, liability, claim, fines, penalty or expense or any other amount of whatsoever nature, whether directly or indirectly and/or in whole or in part, related to, caused by, contributed to by, resulting from, as a result of, as a consequence of, attributable to, arising out of, arising under, in connection with, or in any way involving (this includes all other terms commonly used and/or understood to reflect or describe nexus and/or connection from one thing to another whether direct or indirect):
 - 1.1. a Communicable Disease and/or the fear or threat (whether actual or perceived) of a Communicable Disease and/or the actual or alleged transmission of a Communicable Disease regardless of any other cause or event contributing and/ or occurring concurrently or in any sequence thereto, and
 - 1.2. a pandemic or epidemic, as declared by the World Health Organisation or any governmental authority.
2. As used herein, Communicable Disease means: any infectious, contagious or communicable substance or agent and/or any infectious, contagious or communicable disease which can be caused and/or transmitted by means of substance or agent where:
 - 2.1. the disease includes, but is not limited an illness, sickness, condition or an interruption or disorder of body functions, systems or organs, and
 - 2.2. the substance or agent includes, but is not limited to, a virus, bacterium, parasite, other organism or other micro-organism (whether asymptomatic or not); including any variation or mutation thereof, whether deemed living or not, and
 - 2.3. the method of transmission, whether direct or indirect, includes but not limited to, airborne transmission, bodily fluid transmission, transmission through contact with human fluids, waste or the like, transmission from or to any surface or object, solid, liquid or gas or between organisms including between humans, animals, or from any animal to any human or from any human to any animal, and
 - 2.4. the disease, substance or agent is such:
 - 2.4.1. that causes or threatens damage or can cause or threaten damage to human health or human welfare, or
 - 2.4.2. that causes or threatens damage to or can cause or threaten damage to, deterioration to, contamination of, loss of value of, loss of marketability of or loss of use or usefulness of, tangible or intangible property.

For avoidance of doubt, Communicable Disease includes but is not limited to Coronavirus Disease 2019 (Covid -19) and any variation or mutation thereof.

MINUTES OF MEETING

A meeting of Advisory Committee was held on 22.08.2017 in MPRDC, Bhopal to discuss the Change of Scope proposal of Patan-Tendukheda-Rehli Road Project (Toll+Annuity). Following Officials were present in the meeting.

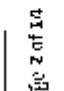

1. Shri A.S. Chendke, Technical Advisor, MPRDC, Bhopal.
2. Shri Anil Chansoria, E-in-C, MPRDC, Bhopal.
3. Shri Sunil Mukati, General Manager (BOT), MPRDC, Bhopal.
4. Shri R.K. Tiwari, Team Leader, E M/s MC Consulting Engineers Pvt. Ltd., Sagat.
5. Shri Nitin Shrivastava, Authorized Signatory of Concessionaire, M/s DBL Patan Rehli Tollways Ltd., Bhopal.

S. No	Particular of Item	Provisions as per Schedule - A	Provisions as per Schedule - B	As proposed by the Concessionaire	Reason/Recommendation of the IE	Decision of the Committee
1	Reduction in formation width from 8.75 mtr. to 7.6 mtr. With reduction from Km 77+600 to Km 99+000 (Nauradehi WLS) = 21.40 Km		Single layering (3.75 mtr.) with 2.5 mtr. granular shoulder formation width 8.75 mtr. (Fig-2.6 as per Schedule - D)	Reduction in formation width from 8.75 mtr. to 7.6 mtr. and carriage-way width from 3.75 mtr. to 3.6 mtr. with formation width of 7.6 mtr. from Km 77+600 to Km 99+000 (Nauradehi WLS) = 21.40 Km	Agree with the justification of the Concessionaire that, the WTS permitted development in 7.6 mtr formation width only in Nauradehi WLS from Km 77+600 to Km 99+000 for a length of 21.40 Km. The work done with 7.6 mtr formation width and 3.60 mtr carriage-way width shall be treated as positive COB & work with 8.75 mtr formation width and 3.75 mtr carriage-way width shall be treated as negative COB.	Agree with the recommendation of the IE that, the work done with 7.6 mtr formation width and 3.60 mtr carriage-way width shall be treated as positive COB & work with 8.75 mtr formation width and 3.75 mtr carriage-way width shall be treated as negative COB.
2	Construction of retaining walls at following locations as per approaches of cattle under-inhancement.			To protect the high embankment due to restricted ROW of 7.6m in Secondary Area in the approaches of cattle underpasses, Concessionaire has constructed retaining wall	Concessionaire has constructed retaining walls in following locations due to restricted ROW of 7.6m in Secondary Area- 1. Ch. 81+134 2. Ch. 81+262 3. Ch. 86+045 Total 796.553m retaining wall	Agree with the recommendation of the IE that, retaining wall in a length of approximate 796.553m is consider under positive Change of Scope and provision of the wall and pitching on slopes in all the above

S. No	Particular of Item	Provisions as per Schedule - A	Provisions as per Schedule - B	As proposed by the Concessionaire	Reason/Recommendation of the I.E	Decision of the Committee
3	Retaining of existing 7.0017 wide PCC in a length of 200m with both side 4 mtr widening with flexible pavement from Ch. Chainage 52+600 to 54+200 = 0.7 Km length in Tendukheda town.		Re-construction to four lanes with flexible pavement from Km 52+600 to 551300 = 0.7 Km in Tendukheda town.	Retaining with 200m BC overlay existing 7 mtr wide PCC in a length of 200 mtr with both side 4 mtr widening with flexible pavement from chainage 52+600 to 54+200 = 0.7 Km in Tendukheda town.	<p>constructed on approaches of 03 nos. cable under passes on locations as mentioned above.</p> <p>As per scope of the project, Concession has to construct 83.10m length in Minor Bridges proposed in the scope. However, remaining 713.45m additional length of retaining wall may be treated as positive Change of Scope. It is recommended to consider additional length of retaining walls i.e. approximate 713.45m under positive Change of Scope and provision of toe wall and pitching on slope in all the above three locations treated as negative Change of Scope. Also reduction in shoulders width will be treated as negative Change of Scope.</p>	<p>three location treated as negative Change of Scope. Also reduction in shoulders width is consider as negative Change of Scope.</p>
						<p>Agree with the justification of the Concessionaire that, the condition of existing rigid pavement (7.0m wide) was satisfactory and to be retained with bituminous overlay by 40mm BC with both side 4.0 mtr widening with flexible pavement. Therefore the reconstruction to four lanes with flexible pavement from Km. 52+600 to 54+200 = 0.7 Km in Tendukheda town shall be treated as negative COG and the overlay with 40 mm BC over 7.0 mtr wide retained PCC, both side 4 mtr widening with flexible pavement shall be treated as positive COG.</p>

S. No	Particular of Item	Provisions as per Schedule - A	Provisions as per Schedule - B	As proposed by the Concessionaire	Reason/Recommendation of the IE	Decision of the Committee
4	Deletion of 14 nos. Pipe Culverts as below :-					
1.	Ch. 44/1		New Construction with 1X1000 HPCD to 12 mt. formation width.	Deletion	Agree with the justification of the Concessionaire that as per topography the CD is not required. This shall be treated as negative COG.	Agree with the recommendation of the IE that, this shall be treated as negative COG.
2.	Ch. 47/2	HPCD 1X1000 formation width, 10 mt.	Widening with 1X1000 HPCD to 12 mt. formation width.	Deletion	Agree with the justification of the Concessionaire that the existing CD not found on spot. This shall be treated as negative COG.	Agree with the recommendation of the IE that, this shall be treated as negative COG.
3.	Ch. 50/2		New Construction with 1X1000 HPCD to 12 mt. formation width.	Deletion	Agree with the justification of the Concessionaire that, as per topography the CD is not required. This shall be treated as negative COG.	Agree with the recommendation of the IE that, this shall be treated as negative COG.
4.	Ch. 51/6a	HPCD 1X900mm	Reconstruction with 2X1200 mt. pipe to 12 mt. formation width.	Deletion	Agree with the justification of the Concessionaire that, the existing CD not found on spot. This shall be treated as negative COG.	Agree with the recommendation of the IE that, this shall be treated as negative COG.
5.	Ch. 55/10	HPCD 1X1000mm	Reconstruction with 1X1200 mt. pipe in 4 lane portion.	Deletion	Agree with the justification of the Concessionaire that, the existing CD has been blocked and buried functional and is redundant. This shall be treated as negative COG.	Agree with the recommendation of the IE that, this shall be treated as negative COG.
6.	Ch. 62/7		New Construction with 1X1000 HPCD to 12 mt. formation width.	Deletion	Agree with the justification of the Concessionaire that, as per topography the CD is not required. This shall be treated as negative COG.	Agree with the recommendation of the IE that, this shall be treated as negative COG.

7.	Ch. 76/9	HPCD 1X1000mm	Reconstruction with 1X1200 mm pipe to 12 mtr formation width	Deletion	Agree with the justification of the Concessionaire that the existing CD not found on spot. This shall be treated as negative COS.	Agree with the recommendation of the IE that, this shall be treated as negative COS.
8.	Ch. 85/3	-	New Construction with 1X1000 LFCP to 12 mtr. formation width.	Deletion	Agree with the justification of the Concessionaire that, as per topography the CD is not required. This shall be treated as negative COS.	Agree with the recommendation of the IE that, this shall be treated as negative COS.
9.	Ch. 88/8	HPCD 1X900mm	Reconstruction with 1X1200 mm pipe to 12' mtr formation width	Deletion	Agree with the justification of the Concessionaire that the existing CD not found on spot. This shall be treated as negative COS.	Agree with the recommendation of the IE that, this shall be treated as negative COS.
10.	Ch. 92/6	LFCP 1X1000mm	Reconstruction with 1X1200 mm pipe to 12' mtr formation width.	Retaining of existing LFCP 1X1300 with 8 mtr formation width in Nauradehi W.S.	Agree with the justification of the Concessionaire that, the condition of the existing HPCD with 1X1000 mm with 8 mtr formation width is satisfactory and can be retained for single lane road in Nauradehi W.S. This shall be treated as negative COS.	Agree with the recommendation of the IE that, this shall be treated as negative COS.
11.	Ch. 113/8	-	New Construction with 1X1200 LFCP to 12 mtr. formation width.	Deletion	Agree with the justification of the Concessionaire that, as per topography the CD is not required. This shall be treated as negative COS.	Agree with the recommendation of the IE that, this shall be treated as negative COS.
12.	Ch. 113/4	-	New Construction with 1X1000 HPCD to 12 mtr. formation width.	Deletion	Agree with the justification of the Concessionaire that, as per topography the CD is not required. This shall be treated as negative COS.	Agree with the recommendation of the IE that, this shall be treated as negative COS.

5. New construction of Pipe cutouts at following locations:-

S. No	Particular of Item	Provisions as per Schedule - A	Provisions as per Schedule - B	As proposed by the Concessionnaire	Reason/Recommendation of the IR	Decision of the Committee
	Formation width at Ch. 81+265 in Nauradehi Sanctuary area in place of Minor Bridge (2x10.0m)		height 2.0 mtr at Ch. 81+180 with formation width of 12 mtr.	width at Ch. 81+180 Nauradehi with WLS.	2.0 mtr. to 4.0 mtr. in Nauradehi WLS (hence, reduction in formation width from 12.0m to 7.6m shall be treated as negative variation under COG with increase in height from 2.0 mtr to 4.0 mtr shall be treated as positive COG.	Formation width from 12.0m to 7.6m shall be treated as negative variation under COG with increase in height from 2.0 mtr to 4.0 mtr shall be treated as positive COG.
12	Construction of Cattle Underpass (CUL) with 7.6 mtr. formation width at Ch. 84+100 in Nauradehi Sanctuary area in place of Slab culvert (1x10m).	H/C at (2x1000) km 88/710	Reconstruction of Slab Culvert (1x4.0 mtr.) height 2 mtr at Ch. 84+100 with formation width of 12 mtr.	Construction of CUL (2x10m) with formation width at Ch. 85-950 within Nauradehi WLS.	Agree with the justification that the formation width is restricted to 7.6 mtr. and increase in height from 2.0 mtr. to 4.0 mtr. in Nauradehi WLS Hence, reduction in formation width from 12.0m to 7.6m shall be treated as negative variation under COG with increase in height from 2.0 mtr to 4.0 mtr shall be treated as positive COG.	Agree with the recommendation of the IR that, reduction in formation width from 12.0m to 7.6m shall be treated as negative variation under COG with increase in height from 2.0 mtr to 4.0 mtr shall be treated as positive COG.
18	Construction of Cattle Underpass (CUL) with 7.6 mtr. formation width at Ch. 94+107 in Nauradehi Sanctuary area in place of Minor Bridge (1x8.0m).	ICW at Km 87/8	Re-construction of Minor Bridge (1x8.0 mtr.) height 3.6 mtr with formation width of 12 mtr.	Construction of Cattle Underpass (CUL) of (2x8 mtr) with 7.6 mtr. formation width in Nauradehi Sanctuary area.	Agree with the justification that the formation width is restricted to 7.6 mtr. and increase in height from 3.6 mtr. to 4.0 mtr. in Nauradehi WLS Hence, reduction in formation width from 12.0m to 7.6m shall be treated as negative variation under COG with increase in height from 3.6 mtr to 4.0 mtr shall be treated as positive COG.	Agree with the recommendation of the IR that, reduction in formation width from 12.0m to 7.6m shall be treated as negative variation under COG with increase in height from 3.6 mtr to 4.0 mtr shall be treated as positive COG.

S. No	Particular of Item	Provisions as per Schedule - A	Provisions as per Schedule - B	As proposed by the Concessionaire	Reason/Recommendation of the IE	Decision of the Committee
14	Reduction in formation width from 12m to 7.6m in box culvert (1X2.50m) at Ch. 80+370 in Nauradehi Sanctuary area.	Slab Culvert (1X1) at Km 87/3	Re-construction of Culvert (1X4.0) at Ch. 80+300 with formation width of 12 mtrs.	Reduction in formation width from 12 mtr. to 7.6 mtr in Box Culvert (1X4) at Ch. 80+370 in Nauradehi Sanctuary area.	Agree with the justification that the formation width is restricted to 7.6 mtr. in Nauradehi WLS Hence, reduction in formation width from 12.0m to 7.6m shall be treated as negative variation under change of scope.	Agree with the recommendation of the IE that, this shall be treated as negative COS.
15	Reduction in formation width from 12m to 7.6m in box culvert (1X3.5m) at Ch. 80+070 in Nauradehi Sanctuary area.	Slab Culvert (1X1) at Km 89/10	Re construction of slab Culvert (1X3.5) at Ch. 82+900 with formation width of 12 mtrs	Reduction in formation width from 12 mtr. to 7.6 mtr in Box Culvert (1X3.5) at Ch. 83+070 in Nauradehi Sanctuary area.	Agree with the justification that the formation width is restricted to 7.6 mtr. in Nauradehi WLS Hence, reduction in formation width from 12.0m to 7.6m shall be treated as negative variation under change of scope.	Agree with the recommendation of the IE that, this shall be treated as negative COS.
16	Widening of MNB at ch. 108+400	MNB Slab (8.4 wide) at Km 108/7H	Revised 108+020, Width-8.20m	Widening of MNB 2X8 mtr, RCC slab at ch. 108+100 from 8.4 mtr to 12 mtr. width	Agree with the justification that the formation width of the road is 12 mtr, therefore, it was essential to increase the width of the existing 2X8 mtr RCC slab bridge to 12 mtr to match with the formation width of road. Therefore, widening of MNB 2X8 mtr RCC slab from 8.4m to 12m shall be treated as positive change of scope.	Agree with the recommendation of the IE that, this shall be treated as positive COS.

CHAPTER 1. INTRODUCTION

1.1 General

DBL TIKAMGARH-NOWGAON TOLLWAYS LIMITED (herein after referred to as the “Concessionaire”) had augmented the existing road from Y-Junction “Tikamgarh - Malchara” section of SH-10 and Tikamgarh - Nowgaon (NH-76) in the State of Madhya Pradesh, in accordance with the provisions of the Concession Agreement executed with Madhya Pradesh Road Development Corporation Limited (herein after referred to as the “MPRDCL”) on 12th November, 2013 on Design, Build, Finance, Operate and Transfer (DBFOT) on Toll plus Annuity Basis.

Project Road starts at Y-Junction at Km.10+800 at Tikamgarh - Malehra road (SH-10) and ends in Km. 107+000 of Jhansi - Nowgaon (NH-76) road. Design length of road is 76.400 Kms.

SHREM ROADWAYS PRIVATE LIMITED acquired DBL TIKAMGARH NOWGAON TOLLWAYS LIMITED vide agreement dated 26.03.2018

SHREM FINANCIAL PRIVATE LIMITED (SFPL) appointed RUKY Projects Pvt. Ltd. as consultants for Detailed Technical Due Diligence Services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the traffic potential and to estimate the projected Toll Collection etc.

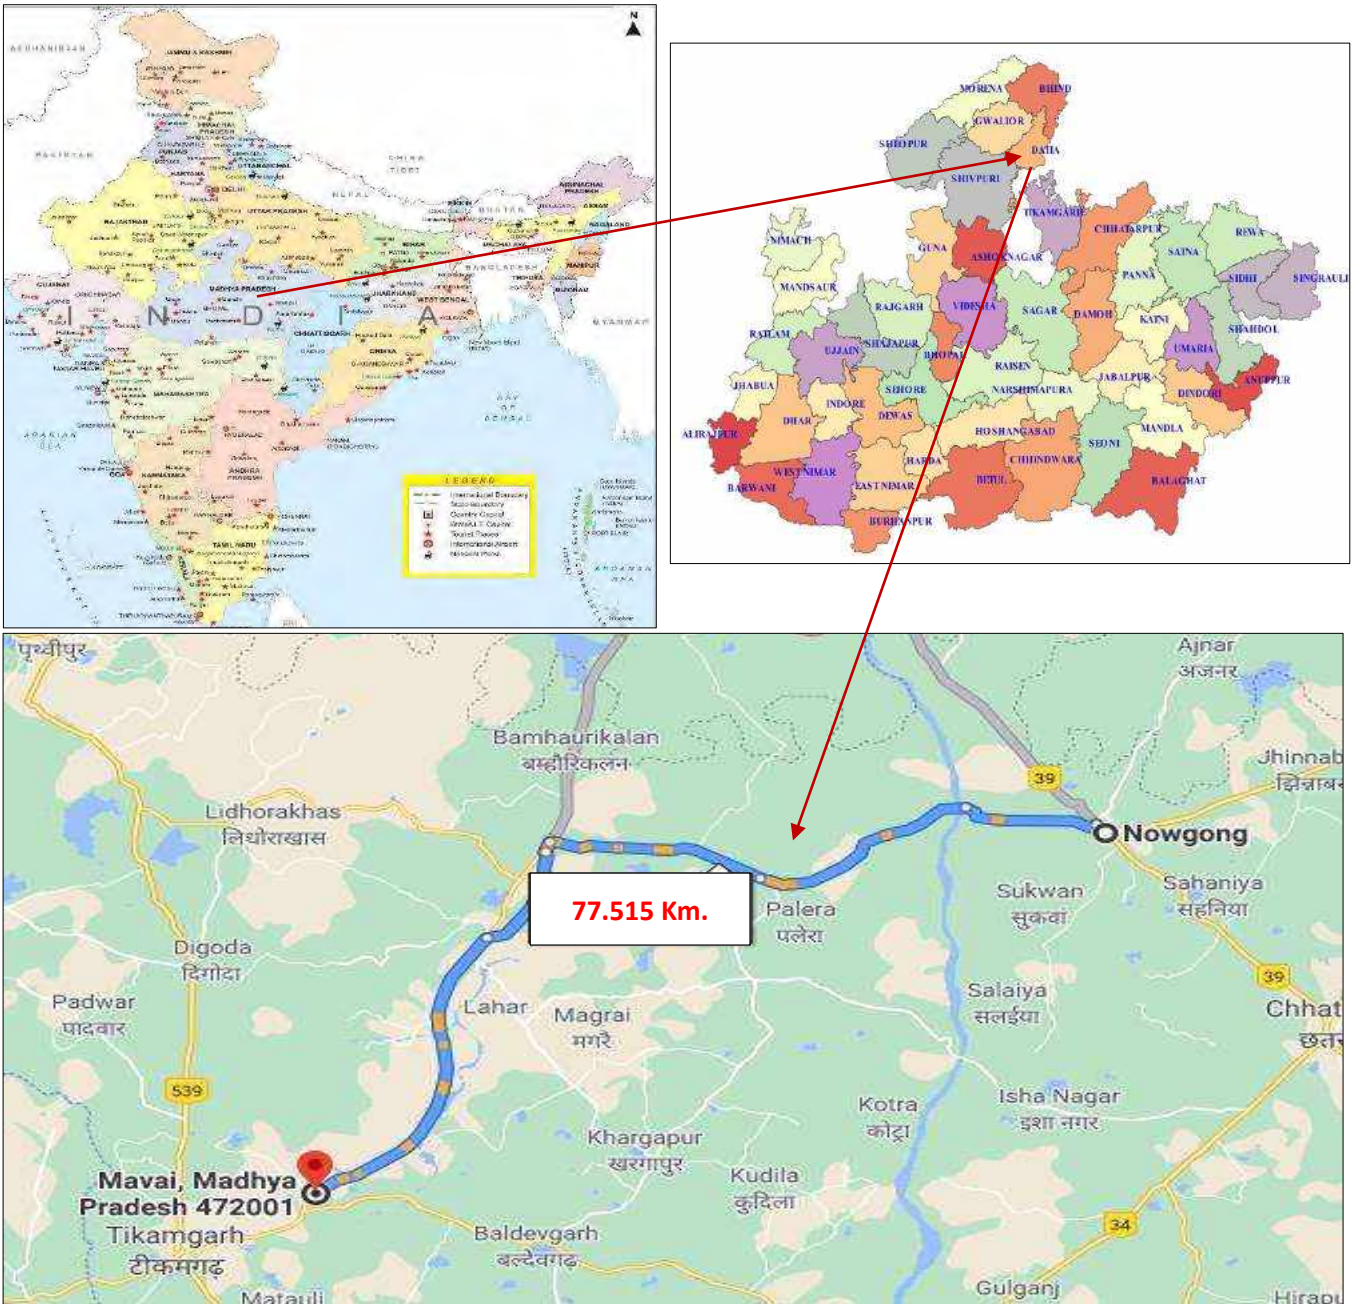

Figure 1.1: Project Location Map

1.2 Project Data:

The details of the Project are listed in the following Table 1.1.

Table 1.1: Project Data.

S. No.	Particulars	Details
1	Name of the project	Development of Tikamgarh (Dhajrai) – Jatara – Palera - Nowgaon MDR from Y-Junction at Tikamgarh to Jhansi Nowgaon on Build, Operate and Transfer (BOT) on Toll + Annuity Basis.
2	Road Type	Major District Road (MDR)
3	Name of the Authority	Madhya Pradesh Road Development Corporation Limited
4	Name of the Concessionaire	DBL Tikamgarh-Nowgaon Tollways Limited
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Design Length as per Schedule B of CA	76.400 Kms.
7	Date of LOA	27.09.2013
8	Date of Agreement	12.11.2013
9	EPC Cost	116.53 Cr
10	Nature of contract	DBFOT (Toll + Annuity)
11	Toll collected by	MPRDCL
12	Concession Period	15 years from the Appointed date
13	Appointed date	08.08.2014
14	Concession end date	07.08.2029
15	Construction Period	730 days from the Appointed date
16	Schedule Completion Date	06.08.2016
17	Date of issuance of Provisional Certificate (Commercial Operation Date)	26.05.2015
18	Date of issuance of Completion Certificate	13.08.2015
19	Annuity Amount (every six months)	Rs 8.91 Cr
20	Total Number of Annuities payable	26 Nos.
21	First Annuity Payment Date	26.11.2015
22	Total Number of Annuity Paid	11 Nos.

1.3 Scope of Consultancy Services

The scope of work includes providing Technical Due Diligence of the project road and providing estimate of the anticipated maintenance works. Scope of the work as defined in the Consultancy work order is listed below:

- Review of various contractual documents
- Collection of historic/past toll revenue data
- Collection of historic/past classified Traffic data from toll plaza and to estimate the projected traffic to arrive at revenue projections.
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout review of tolling system to evaluate the efficiency and functionality of tolling system and to identify and give suggestions to improve if any setbacks in the system.
- Carryout road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project:

The salient features as per schedule B and Schedule C of Concession Agreement (CA) including Change of scope are given in the following **Table 2.1**.

Table 2.1: Salient Features

S. No.	Particulars	As per Schedule B of CA	COS	As per Site
1	Total Length	76.400 Kms.	1.115 Kms.	77.515 Kms.
2	Length of 2-Lane with Granular shoulder	63.000 Kms.	1.115 Kms.	64.115 Kms.
3	Length of 2-Lane with paved shoulder	10.000 Kms.	---	10.000 Kms.
4	Length of 4-Lane road	3.400 Kms.	---	3.400 Kms.
5	Length of Jatara Bypass	8.400 Kms.	---	8.400 Kms.
6	Toll Plaza	2 Nos.	---	2 Nos.
7	Bus Shelters	8 Nos.	---	8 No
8	Truck Lay Bays	Nil	---	Nil
9	Major Junction	6 Nos.	---	6 Nos.
10	Minor Junctions	14 Nos.	---	14 Nos.
11	Major Bridges	2 Nos.	+1	3 Nos.
12	Minor Bridges	9 Nos.	(+4,-1) Nos.	12 Nos.
13	Box/Slab Culverts	34 Nos.	(+17,-6) Nos.	36* Nos.
14	Pipe Culverts	55 Nos.		60* Nos.

*As per site condition, 9 Slab culverts are not constructed and 5 additional Hume Pipe Culverts are constructed as per requirement.

2.2 Typical Cross Section (TCS) Schedule:

The Concessionaire has followed the Typical Cross Section shown below as per Schedule during the Construction.

**Figure 2.1: (TCS 2.1) Two Lane with Granular Shoulder.
(Cross Section in Open Areas & Rural Areas)**

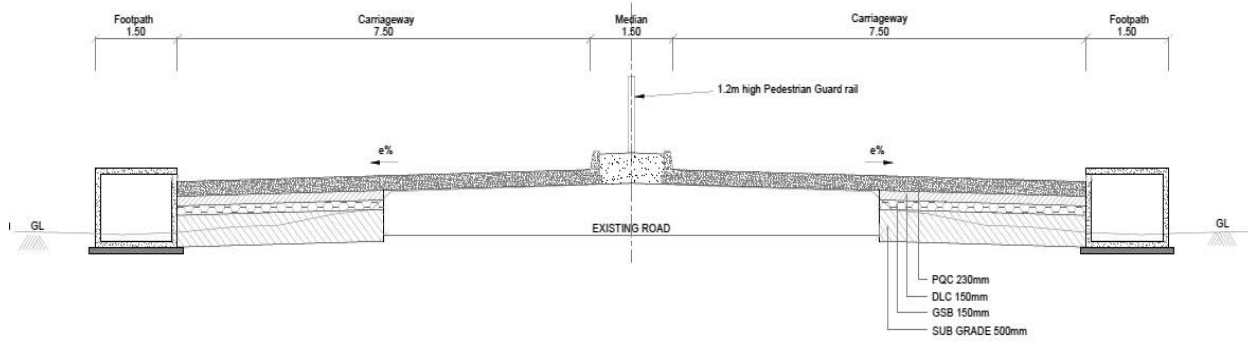

Figure 2.2: (TCS 2.2) Widening to 4 Lane divided Carriageway with footpath Built up area

Figure 2.3: (TCS 2.3) Two Lane Carriageway (7.0 m) with Paved shoulder (In Built up Areas)

TCS Schedule is provided below.

Table 2.2: TCS Schedule

S. No.	From Chainage (Km.)	To Chainage (Km.)	Length (Kms.)	Type of TCS
1	0+000	0+400	0.400	TCS.2.3
2	0+400	2+420	2.020	TCS.2.1
3	2+420	5+020	2.600	TCS.2.3
4	5+020	9+700	4.680	TCS.2.1
5	9+700	10+720	1.020	TCS.2.3
6	10+720	17+700	6.980	TCS.2.1
7	17+700	18+700	1.000	TCS.2.3
8	18+700	38+420	19.720	TCS.2.1
9	38+420	40+420	2.000	TCS.2.3
10	40+420	52+500	12.080	TCS.2.1
11	52+500	55+900	3.400	TCS.2.2
12	55+900	63+240	7.340	TCS.2.1
13	63+240	64+240	1.000	TCS.2.3
14	64+240	68+240	4.000	TCS.2.1
15	68+240	69+240	1.000	TCS.2.3
16	69+240	76+560	7.320	TCS.2.1
17	76+560	77+515	0.955	TCS.2.3

Figure 2.4: Pictorial Diagram of TCS Lengths

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the carriage way and to avoid accumulation of drainage. Side drains are constructed along the main carriage way on both flanks as specified in Schedule B of the Concession Agreement in strict adherence to the Standard Specifications set forth in Schedule D of the Concession Agreement
- Accordingly, Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains in open and rural areas.

Service Roads:

Service roads are not provided along the entire stretch of the project road as per provisions of Schedule B of the Concession Agreement.

2.5 Bypass/Realignment:

Bypass constructed from Km. 38+400 to Km. 46+800 of length 8.400 Kms. as per Provisions of Concession agreement Schedule B of Concession Agreement.

Intersections:

As per Schedule B of the Concession Agreement 6 Major Junctions and 14 Minor Junctions are developed. Details are given below.

Table 2.3: Summary of Junctions

S. No.	Chainage (Km.)	Side	Type of Junction	Junction category
1	1+200	RHS	T	Major
2	5+100	LHS	Y	Minor
3	11+200	LHS	Y	Minor
4	11+200	LHS	T	Minor

S. No.	Chainage (Km.)	Side	Type of Junction	Junction category
5	12+200	LHS	T	Minor
6	13+200	LHS	Y	Minor
7	14+400	LHS	T	Minor
8	18+600	LHS	T	Minor
9	20+100	LHS	T	Major
10	20+600	RHS	T	Minor
11	22+200	LHS	T	Minor
12	22+200	RHS	T	Minor
13	28+600	LHS	T	Minor
14	29+400	RHS	Y	Minor
15	32+200	RHS	T	Minor
16	35+600	RHS	T	Major
17	37+100	LHS	T	Major
18	38+400	LHS	T	Minor
19	43+100	LHS	Y	Major
20	47+400	LHS	T	Major

2.7 Grade Separated Structures and underpasses:

Vehicular underpasses are not proposed on the Project road.

2.8 Road Over Bridge(ROB):

ROBs are not proposed in the project road.

2.9 Summary of the Carriageway Details:

Table 2.4: Summary of Carriageway Details

S. No.	Description	Flexible (Kms.)	Rigid (Kms.)	Remarks
1	2 Lane with Granular shoulder	64.14	---	TCS 2.1 of Schedule D of CA
2	2 Lane with Paved shoulder	9.975	---	TCS 2.3 of Schedule D of CA
3	4 Lane	---	3.4	TCS 2.2 of Schedule D of CA
4	Total Length of the Project	74.115	3.4	
5	Total Length of the Project	77.515		
6	TYPE OF ALIGNMENT			
7	New Alignment	---	---	
8	Realignment	---	---	
9	Strengthening	---	---	
10	Reconstruction	74.115	---	
11	Widening	---	3.4	
12	Total Length of the Project	74.115	3.4	
13	Total Length of the Project	77.515		

Summary of Structures and Culverts:

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.5: Summary of Structures

S. No.	Description	Major Bridges (Nos.)	Minor Bridges (Nos.)	Pipe Culverts (Nos.)	Box/Slab Culverts (Nos.)
1	Retained	2	3	06	8
2	Reconstruction	0	6	49	26
3	Repair and strengthening	0	0	0	0
4	New	0	0	0	0
	Total	2	9	55	34

2.10 Toll Plazas:

As per Schedule C provisions of the Concession Agreement Two Toll Plazas have been constructed at site one at Km. 12+000 and second one at Km. 75+900(Existing Chainage). Salient features of Toll Plazas are provided below.

- Each side of toll plaza comprises of 1 Normal Lane and 1 extra wide lane.
- The lane width in normal lanes is 3.200m and extra lane is 4.500m width.
- The width of islands provided is 1.800m.
- Single canopy is provided to cover the toll lanes.
- Each Toll plaza building is G+1 floor building which houses Control room, UPS, Accounts and Pantry

Km. 12+000

Km. 75+900

Figure 2.5: Representative Photographs of Toll Plazas

2.11 Bus shelters:

As per the provisions of Schedule C of the CA, 8 Nos. Bus shelters are provided. Details such as Chainage Location and Name of Village are listed in the following **Table 2.6**.

Table 2.6: List of Bus shelters

S. No.	Chainage (Km.)	Location
1	1+200	Nowgaon
2	11+100	Dhajrai Village
3	15+400	Mabai Village
4	20+600	Majna village
5	25+100	Palera Village
6	39+100	Jatara village
7	46+100	Dinau Village
8	66+100	Garroli village

2.12 Other Project Facilities Provided as per Schedule C of CA:

- Road side furniture: Sign Boards Kilometer stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic Safety Devices: Metal Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of the Concession Agreement.
- Landscaping: Provided at Toll Plaza location and being maintained
- Tree Plantation: Tree plantation is provided on both sides of the Project Corridor all along the way and being maintained.
- Medical Aid Post: Provided at Toll Plaza locations and in operational
- Highway Lighting: Highway lighting is provided at Toll Plaza and is functional.

Km. 20+600

Km. 46+100

Km. 12+000

Figure 2.6: Representative Photographs of Project facilities

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections below:

3.2 Road Inventory

Inventory of the project road was carried out physically and is summarized in **Table 3.1**.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain Rolling and mild hilly
2	Land Use	Built Up 18 %, Agriculture 82%
3	Four lane length	3.400 Kms. (Palera Municipal area)
4	Two Lane length	74.115 Kms.
5	Earthen shoulder	1.0 m to 1.5m Width on site
6	Bypasses	8.400 Kms.
7	Junctions	06 Nos Major Junctions, 14Nos Minor Junctions
8	Toll Plaza	Km. 12+000 and Km. 75+900
9	Sign boards	Sign boards are provided as per highway requirements
10	Road Markings	Lane markings are provided as per highway requirements
11	Bus Bays /shelters	08 nos.
12	Street Lighting	Highway lightings are provided as per highway requirements
13	Avenue plantation	Provided along the Project road

3.3 Pavement Condition

Pavement condition survey was carried out on the project road based on observations supplemented by simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement Condition Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Pavement surface condition assessment is a key component of infrastructure asset management. The information is used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs;

Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey

The survey on general pavement condition was primarily undertaken by means of slow drive - over survey, and supplemented with measurements where ever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, pot holes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of Surface area)
 - Ravelling (% of Surface area)
 - Potholes (% of Surface area)
 - Patching (% of Surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good. The Summary of field measurements of the Pavement Condition survey is tabulated in the standard proforma as per IRC: SP-19 and is given in **ANNEXURE 1**.

Table 3.3: Pavement condition summary

From Chainage (Km.)	To Chainage (Km.)	Length (Kms.)	Condition
0+000	77+515	77.515	Good

Figure 3.1: Representative Photographs of Pavement Condition

CHAPTER 4. INVENTORY AND CONDITION OF STRUCTURES

4.1 General Assessment and Details of the Existing structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

There are 03 Nos Major Bridges, 12 Nos Minor Bridges, 60 Nos Pipe culverts and 36 Nos Slab/ Box culverts are there along this project road.

Table 4.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	03 Nos.
2	Minor Bridge	12 Nos.
3	Pipe culverts	60 Nos.
4	Slab/Box Culverts	36 Nos.

For Major bridges, the superstructure is of RCC solid type resting on CRM wall type piers and abutments with open foundation. For minor bridges, the superstructure is of RCC solid slab and the substructures are of CRM/PCC conventional wall type supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. The condition of most of the culverts is fair. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges:

The total length of the major bridge at Km 19+513 is 64.0m with 8 spans. The superstructure consists of RCC solid slab. Both pier and abutment are of conventional CRM wall type structures resting on open foundations. Tar paper bearings are provided. Buried type Expansion joints and Mild steel railings on both sides of the deck.

The total length of the major bridge at Km 48+433 is 143.0m with 11 spans. The superstructure consists of RCC solid slab. Both pier and abutment are of conventional CRM wall type structures resting on open foundations. Tar paper bearings are provided. Buried type Expansion joints and steel railings on both sides of the deck.

The total length of the major bridge at Km 67+764 is 435.0m with 29 spans. The superstructure consists of Arch slab. Both pier and abutment are of conventional CRM wall type structures resting on open foundations. Steel railings on both sides of the deck.

Table 4.2: List of Major Bridges

S. No.	Chainage (Km.)	Span (m.)	Total Length of Bridge (m)
1	19+513	8 x 8.0	70.400
2	48+433	11 x 13.0	143.000
3	67+764	29 x 15.0	435.000

The condition of the superstructure and substructure is good. Certain maintenance operations on quadrant pitching, reflector plates, drainage spouts, and strip seal expansion joints are to be carried out.

Km. 19+513

Km. 19+513

Figure 4.1: Representative photographs of Major Bridges

4.4 Details of Minor Bridges

There are 12 minor bridges in the project stretch. The type of superstructure for some minor bridges is RCC solid slab and the substructure is conventional CRM wall type supported on open foundations. Some are RCC box type bridges. Expansion joints are buried type and bearings are of tar paper and elastomeric bearings. for Solid Slab Super Structure RCC crash barriers are provided on all structures.

Table 4.3: Inventory of Minor Bridges

S. No.	Chainage @ Km.	Span (m)	Total Length of Bridge (m)	Description
1	5+255	3 x 5.0	16.400	The Minor Bridge has RCC Box structure, RCC crash barrier, bituminous wearing coat.
2	21+583	2 x 4.0	8.800	The Minor Bridge has RCC Box structure, RCC crash barrier, bituminous wearing coat.
3	23+951	2 x 4.5	10.300	The Minor Bridge has RCC Box structure, RCC crash barrier, bituminous wearing coat.
4	26+176	1 x 9.6m.	9.600	The Minor Bridge has RCC Box structure, RCC crash barrier, bituminous wearing coat.
5	30+366	3 x 6.0m.	1800	The Minor Bridge has RCC solid slab superstructure supported on CRM wall type piers and abutment. Other features are RCC parapet wall, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
6	40+251	2 x 4.0m.	9.100	The Minor bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
7	41+219	1 x 6.0m.	6.800	The Minor bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
8	47+755	3 x 7.0m.	21.000	The Minor Bridge has RCC solid slab superstructure supported on CRM wall type piers and abutment. Other features are steel railings, bituminous wearing coat, and Tar paper Bearings and buried type expansion

S. No.	Chainage @ Km.	Span (m)	Total Length of Bridge (m)	Description
				joints.
9	51+666	3 x 6.0m.	19.700	The Minor bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
10	52+697	2 x 4.0m.	9.400	The Minor bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
11	63+142	2 x 4.0m.	9.400	The Minor bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
12	74+378	2 x 4.0m.	9.400	The Minor bridge has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.

Km. 23+951

Km. 40+251

Figure 4.2: Representative photographs of Minor Bridges

4.5 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. Some of the pipe culverts need vent clearance. In general, the condition of all the structures is found satisfactory. The details of the same are given in the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.5.1. Details of the Slab/Box Culverts

There are 36 No's of slab/Box culvert in the project stretch. The details of the culverts are as given below.

Table 4.4: List of Slab/Box Culverts

S. No.	Chainage (Km.)	Span (m.)	Vent Size (m.)
1	2+145	1 x 6.00	3.500
2	8+030	1 x 1.00	2.000
3	14+209	1 x 4.00	4.000
4	14+637	1 x 4.00	4.000
5	15+720	1 x 2.80	2.700
6	15+895	1 x 2.10	2.100
7	17+017	1 x 4.00	4.000
8	19+437	1 x 4.00	4.000

S. No.	Chainage (Km.)	Span (m.)	Vent Size (m.)
9	20+430	1 x 3.00	2.000
10	21+182	1 x 4.00	4.000
11	27+697	1 x 6.00	4.500
12	32+026	1 x 1.00	1.000
13	32+174	1 x 1.60	2.000
14	32+774	1 x 2.00	2.100
15	35+687	1 x 3.80	2.100
16	36+096	1 x 2.00	2.000
17	36+527	1 x 3.00	2.000
18	43+444	1 x 2.50	2.100
19	45+182	1 x 4.70	2.100
20	49+972	1 x 4.00	4.500
21	54+188	1 x 1.50	1.500
22	55+588	1 x 6.00	3.100
23	56+999	1 x 3.00	3.000
24	57+950	1 x 3.00	2.800
25	58+688	1 x 2.00	2.900
26	60+140	1 x 3.00	3.000
27	61+489	1 x 4.00	4.000
28	63+656	1 x 4.00	2.500
29	64+279	1 x 6.00	4.000
30	64+778	1 x 4.00	4.000
31	65+586	1 x 3.80	2.100
32	66+359	1 x 6.00	4.000
33	68+132	1 x 4.00	3.500
34	72+777	1 x 4.00	3.500
35	75+766	1 x 4.00	3.500
36	77+448	1 x 4.00	3.500

The general condition of above slab culverts is good. Few of the culverts need Vent clearance, as some debris/garbage was found in the vent ways. Maintenance is to be carried out to most of the culverts in the form of vent clearance and Stone Pitching for Quadrants. All these activities are to be attended, before onset of monsoon every year under O&M.

26	24+345	1 x 1.2	56	67+356	1 x 1.2
27	25+414	1 x 1.2	57	69+221	1 x 1.2
28	29+305	1 x 1.2	58	69+516	1 x 1.2
29	29+471	1 x 1.2	59	71+754	1 x 1.2
30	30+778	1 x 1.2	60	76+886	1 x 1.2

The general condition of above pipe culverts is good. Few culverts are choked and need clearance as some debris/garbage was found in the ventways. All these activities are to be attended, before onset of monsoon every year under O&M.

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General:

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design:

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to see that no permanent deflections result in the Sub Grade, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the Top surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2001 publication while the current publication is IRC: 37-2018.

5.3 Review of Pavement Design

The project road has been divided into two homogeneous sections HS-I: Km. 0+000 to Km. 37+000 and HS-II: Km. 37+000 to 76+400. As per the pavement design approved in the project, the following conclusions are given.

Table 5.1: Flexible Pavement Design summary

S. No.	Description/ Pavement layer	HS-I Parameters	HS-II Parameters
1	Sub Grade CBR (%)	10%	10%
2	Design Life (Years)	15 years	15 years
3	Design Traffic* (MSA)	2.44 MSA actual 10MSA Adopted	9.61 MSA actual 10MSA Adopted
4	Surface course (BC)	40 mm	40 mm
5	Binder course (DBM)	-	50 mm
6	Crack relief layer (AIL)	100 mm	100 mm
7	Base course (CTB)	190 mm	200 mm
8	Sub Base course (GSB)	250 mm	200 mm

*Actual traffic arrived at pavement design stage for HS-1 and HS-II is 2.44 MSA and 9.61 MSA respectively which is less than the specified MSA in Schedule D of CA (10MSA). Hence 10 MSA is adopted in pavement design to evaluate the crust thickness.

5.4 Validation of Pavement design

The new pavement shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”. Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. “Guidelines for the Design of Plain Jointed Rigid Pavements for Highways”.

Pavement design validation as per actual traffic from COD. As per IRC-37, Vehicle Damage Factor (VDF), Distribution of commercial vehicles and growth rate values are 3.5, 0.75 and 5% respectively summary is given below.

Table 5.2: Real time traffic from COD and Project traffic and CMSA (For HS -I)

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2016	292	46	23	33	22	124	0.12	0.12	1	Actual
2017	336	68	19	53	27	167	0.16	0.28	2	Actual
2018	417	22	30	5	58	115	0.11	0.39	3	Actual
2019	707	60	41	10	60	171	0.16	0.55	4	Actual
2020	619	85	43	17	41	186	0.18	0.73	5	Actual
2021	650	89	45	18	43	195	0.19	0.92	6	Projected
2022	683	94	47	19	45	205	0.20	1.11	7	Projected
2023	717	98	50	20	47	215	0.21	1.32	8	Projected
2024	753	103	52	21	50	226	0.22	1.54	9	Projected
2025	790	108	55	22	52	237	0.23	1.76	10	Projected
2026	830	114	58	23	55	249	0.24	2.00	11	Projected
2027	871	119	60	24	57	261	0.25	2.25	12	Projected
2028	915	125	63	25	60	274	0.26	2.51	13	Projected
2029	960	132	67	27	63	288	0.28	2.79	14	Projected
2030	1008	138	70	28	66	303	0.29	3.08	15	Projected

Table 5.3: Real time traffic from COD and Project traffic and CMSA (For HS-II)

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2016	182	78	7	7	19	111	0.11	0.11	1	Actual
2017	293	128	8	10	57	203	0.19	0.30	2	Actual
2018	384	132	9	11	103	256	0.25	0.55	3	Actual
2019	429	134	12	10	78	234	0.22	0.77	4	Actual
2020	468	141	14	10	42	206	0.20	0.97	5	Actual
2021	491	148	14	10	44	216	0.21	1.17	6	Projected
2022	516	155	15	11	46	227	0.22	1.39	7	Projected
2023	541	163	16	11	48	238	0.23	1.62	8	Projected
2024	569	171	17	12	51	250	0.24	1.86	9	Projected
2025	597	180	17	12	53	262	0.25	2.11	10	Projected
2026	627	189	18	13	56	276	0.26	2.37	11	Projected
2027	658	198	19	14	59	289	0.28	2.65	12	Projected
2028	691	208	20	14	62	304	0.29	2.94	13	Projected
2029	726	218	21	15	65	319	0.31	3.25	14	Projected
2030	762	229	22	16	68	335	0.32	3.57	15	Projected

Based on the above actual traffic, estimated MSA at 8 years and 15 years are 1.32, 3.08 of TP1 respectively. Similarly estimated MSA at 8 years and 15 years of TP2 are 1.62 ,3.57 respectively. Traffic considered in pavement design(10MSA) is more than estimated traffic based on actual traffic. Hence the pavement design adopted is found in order.

Pavement crust thickness considered in the pavement design report for rigid pavement is as follows: -

Table 5.4: Rigid Pavement Design for Toll Plaza

Description	HS-I Parameters	HS-II Parameters
CBR of sub grade	10 %	10%
Design life in years	30	30
Pavement Quality Concrete (PQC) - mm	230	260
Dry Lean Concrete (DLC) - mm	100	100
Drainage Layer (GSB) - (mm)	150	150
Diameter of Dowel Bar (mm)	32	32
Length of Dowel Bar (mm)	450	450
Spacing of Dowel Bars (mm)	240	230
Diameter of Tie Bar (mm)	10 (Deformed)	10 (Deformed)
Length of Tie Bar (mm)	640	555
Spacing of Tie Bars (mm)	540	475

5.5 Overlay during operation and maintenance:

The pavement has been designed to cater traffic 10 MSA for entire project road (up to 2030), whereas the actual traffic is 5 MSA and 10 MSA for HS-I and HS-II respectively. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation before the end of Stage-I of design life (as per pavement design report) and prior to end of concession period to evaluate the requirement of overlay.

Based on the present available data It is envisaged that existing pavement require overlay (periodic renewal) in the year of 2022 and 2029, strengthening for the concession period. Nevertheless, the pavement shall be maintained to the desired level of performance by carrying out periodical renewals as mentioned in subsequent sections.

5.6 Maintenance/ Overlay schedule:

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC. The detailed maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement - Proposed in the year 2022 and 2030.

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done once in 10 years from construction.

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety has multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992

Table 6.1: REFERRED IRC PUBLICATIONS

IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety Audit.

6.2 Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following Table 6.2.

Table 6.2: Safety Items

S. No.	Item Description	Status	Condition	
1	Sign Boards	Chevron signs	Available as per site requirement	Good
		Village sign Board	Available as per site requirement	Good
		Informatory Boards	Available as per site requirement	Good
		Object Hazard Markers at culverts	Available as per site requirement	Good
2	Road Marking	Studs & Lane Marking	Available as per site requirement	Fair
3	W Beam Crash Barriers	At High Embankments	Available as per site requirement	Good

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide a safety and thorough fare for the road users by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

Few Observations on the road furniture in safety aspects for the project road are mentioned below:

- At few places’ reflectors were missing on the sign boards and few sig boards were also damaged.
- Retro Reflective stickers need to be provided for metal beam crash barriers for night time road users at all locations and damaged metal beam crash barriers requires maintenance regularly
- Speed mitigation measures shall be provided at junction to reduce the speed, and adequate visibility shall be maintained at junctions in part of routine maintenance.
- The object hazard markers are placed only on one side of Head walls/parapet walls of all structures, whereas it is to be installed on both sides at structures.

W Beam MCB at approaches of MJB at Km. 28+200

Road safety at Box Culvert at Km. 24+637

Curve Ahead sign board at Km. 48+000

Pedestrian Markings at Km. 48+200

Figure 6.1: Representative photographs during road safety audit

6.3 Conclusion

Safety arrangements done for road users along the project road are found in conformity with project highway requirements and good industry practice. However, a continuous monitoring on safety arrangements is required during the operation and maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There are two toll Plazas on the project road at Km. 12+000 (Toll Plaza 1) & Km. 75+900 (Toll Plaza 2). Toll Plaza 1 at Km. 12+000 comprises of 4 lanes. One lane in each direction is for 4-wheelers and the second lane is used as bike lane. Toll Plaza 2 at Km. 75+900 also comprises of lane configuration similar to Toll Plaza 1. The lane width in both the plazas is 3.20m. The width of islands provided is 1.8m. The single canopy is provided to cover the toll lanes.

Both the Toll plazas are provided with G+1 floor building which houses control room, UPS and Pantry.

7.2 Tolling Equipment's

List of equipment provided at toll plaza and control room is given below.

Table 7.1: Toll Plaza Assets

S. No.	Name	Qty.
1	Smart Card reader (TMS & HTMS)	2
2	Incidental Capture Camera (TMS & HTMS)	7
3	Barrier Controller PCB	1
4	Receiver PCB (AVC's RXPCB)	6
5	Manual Booth Controller	2
6	USB Extension Cable	16
7	RFID ETC Transceiver with accessories	4
8	Electronics Enclosure (TMS & HTMS)	4
9	Lane laser based AVC Profiler (TMS)	2
10	Lane AVC Controller	4
11	Operator monitor 18.8" (TMS & HTMS)	2
12	Manual Booth controller (TMS & HTMS)	4
13	PTZ CAMERA (TMS & HTMS)	1
14	IMAGE CAPTURE CAMERA	2
15	MLS MAGNETIC LOOP SENSOR	8
16	INTERCOM SLAVE UNIT (TMS & HTMS)	4
17	USER FARE DISPLAY (TMS & HTMS)	4
18	CUSTOMIZED KEYBOARD (TMS & HTMS)	4
19	HYBRID LANE SOFTWARE	4
20	CABLING/NETWORKING FOR LANE (TMS & HTMS)	4
21	HANDHELD RFID READER (TMS & HTMS)	2
22	PLAZA SERVER FOR ETC - TMS & HTMS	1
23	INTERCOM MASTER UNIT 10 CHANNEL	1
24	PLAZA SOFTWARE (TMS & HTMS)	1
25	LANE EXIT BARRIER WITH LOOPS & DETECTOR	2

7.3 Vehicles

The list of vehicles, which were observed at site, for operation of Highway and Toll Plaza are presented below.

Table 7.2: List of Vehicles

S. No.	Vehicle Type	Nos.

Toll Plaza at Km. 75+900

Figure 7.1: Representative Photographs of Toll Plaza

CHAPTER 8. TRAFFIC CENSUS AND TOLL REVENUE

8.1 Traffic Census

In accordance with clause 22.1, the Concessionaire shall install, maintain and operate electronic/computerized traffic counters at each of the Toll Plazas and collect data relating to the number and types of vehicles using the Project Highway. A weekly statement of such data shall be compiled and furnished forthwith by the Concessionaire to MPRDC substantially in the form specified in Schedule N of CA.

Accordingly, the Concessionaire provided toll plaza wise details. Based on the data made available the summarized annual classified Traffic census details for the past five years are provided in **Table 8.1** below. The Actual traffic data recorded below has been taken as a basis to calculate AACGR % (Average Annual Compound Growth Rate).

Table 8.1: Year wise Traffic (Vehicles) Details

(A) Mawai toll plaza

FY Year	Car	LCV	Bus	Truck	MAV	Total Traffic
Apr 2015-Mar 2016	90452	14331	7193	10111	6769	128856
Apr 2016-Mar 2017	122807	24981	6880	19202	9734	183604
Apr 2017-Mar 2018	152135	8051	11128	1659	21161	194134

AACGR* (%)						33.52%

*AACGR- Annual Average Compound Growth Rate

8.2 Actual Revenue Collection

In accordance with clause 19.5, “During the operation period, the Concessionaire shall furnish to MPRDC within 7 days of completion of each month, a statement of fee substantially in the form set forth in Schedule-M (Monthly fee statement)”. As per provisions of CA the concessionaire submitted monthly fee statement and the summary of form submitted under Schedule M during the financial year 2019-20 is given under as **Table 8.2**.

Table 8.2: Summary of 2019-20 Tollable traffic and revenue collected at Toll Plaza

(A) Mawai toll plaza

Description	Car	Car(pass)	LCV	Bus	Truck	MAV	Total
In Nos.	100471	1997	27055	14683	4763	12727	161696

Toll Revenue collection in Rs.	4902300	177035	4850760	897820	858595	7640225	19326735

The Table 8.1 represent Real time traffic data inclusive of exempted /non tollable traffic on project road for the past five years and the growth rate is calculated to be 26.30% and 33.52% in TP-1 and TP-2 respectively.

The figures shown in Table 8.2 are actual tollable traffic based on which the toll revenue collected and is excluding of exempted/non tollable traffic. For the realistic estimate of the traffic growth and projected revenue calculation actual traffic based on which FY 2019-20 revenue collected (Table 8.2) is considered as a base year traffic and the projected traffic growth rate is restricted to 5% even though the growth as per Table 8.1 is >5%.

Based on the base year traffic and growth rate as explained above traffic projections from year 2019-20 to till end of Concession period toll plaza wise are calculated and summarized below in Table 8.3.

Table 8.3: Projected traffic

8.3 Toll Revenue Calculations

The toll revenue for horizon year is calculated based on the input from the above data, actual toll rates collected on base year (2019-20), with Traffic growth, WPI growth and toll efficiency has been assumed 5%, 4% and 100% respectively and other inputs considered in revenue calculations is given in **Table 8.4**.

Table 8.4: Toll Revenue inputs

Particular	Toll plaza 1	Toll plaza 2
Location	Km. 12+000	Km. 75+900
4 lane length in Kms.	0	0
2 lane length in Kms.	76.400	76.400
Agreement Date	12-11-2013	12-11-2013
Appointed Date	08-08-2014	08-08-2014
Concession period	15	15
Commercial operation date	13-Aug-15	13-Aug-15
Concession End Date	07-Aug-29	07-Aug-29
Traffic study year	2020	2020
Vehicle Type	AADT	AADT
Car/Jeep/Van	281	305
2-axle Bus	74	123
LCV/LGV	40	11
2A-Truck	13	9
MAV (2A-6A)	35	39
Growth Rate (%)	5%	5%

The split trip type based on the available toll data from Concessionaire is used to derive the annual toll collection for each plaza. The revenue estimated and presented below. Detailed toll revenue estimation is given in **ANNEXURE 4**.

Table 8.5: Toll Revenue Estimated (in Rs. lakhs)

Financial Year	Annual Revenue of TP1 Km. 12+000	Annual Revenue of TP2 Km. 75+900	Total	Remarks
2019-20	190.710	193.267	383.978	Actual
2020-21	205.272	209.819	415.091	Projected

2022-23	246.757	251.737	498.494	Projected
2023-24	265.413	271.682	537.095	Projected
2024-25	292.539	297.630	590.169	Projected
2025-26	315.965	320.411	636.376	Projected
2026-27	347.039	352.235	699.274	Projected
2027-28	371.509	379.304	750.814	Projected
2028-29	399.132	407.414	806.546	Projected
2029-30	154.366	157.747	312.113	129 Days

Note: There are two toll plazas existing on the project road. One booth of the toll plaza in each direction is used for Toll Ticket issue & Checking as well.

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Article 17 of the Concession Agreement, the Concessionaire will operate and maintain the Project road by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in this Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

Visual Inspection: Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.

Detailed Inspection: Detailed Inspections often (require some measuring instruments) are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution

Thorough Inspection: Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to beginning of each accounting year during the operation period.

9.3 Operations:

Traffic Flow Operation & Traffic Management Plan:

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- 1 Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- 2 Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.
- 3 carrying out preventive and periodic maintenance of the Project road;
- 4 undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- 5 undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;
- 6 Functioning of the lighting system;

- 7 Functioning of the Patrolling System
- 8 Functioning of rescue and medical aid services
- 9 Ambulance as and when required
- 10 Functioning of the Project Facilities
- 11 Administrative, Operational and Maintenance Base Camp
- 12 Truck Parking Lay bays
- 13 Pickup Bus stops / Bus Bays
- 14 Protection of the environment and provision of equipment and materials therefore;
- 15 Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- 16 Complying with Safety Requirements in accordance with Article 18.

9.4 Operation of Toll Plaza:

One lane in each direction is operating at toll plaza and the extra wide lane is opened only for wide vehicles. The tolling is manned by two people per direction per shift with a day having two shifts. Toll Manager takes care of the daily operation and carries out the task of patrolling on bike. The cash collected is deposited on daily basis to the escrow account. In case of ETC system Toll collection is connected with Network system and directly deposited into the Escrow account.

9.5 Maintenance of Project Road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period. Preventive Maintenance shall include the activities related to each element and the system as a whole of the Project Preventive Maintenance for Structures is estimated by the consultant. The condition data collected from site was used to arrive at the appropriate treatments and quantities. Rates from Schedule of Rates (SOR) of MP, was used to arrive at the cost.

The flexible pavement is in good condition and hence doesn't require any immediate or preventive interventions.

Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road.

The details of periodic maintenance schedule are given below.

Table 9.1: Schedule and status of Periodic Maintenance

Description	Schedule	Status
1 st Periodic Maintenance	2022	Planned to Execute
2 nd Periodic Maintenance	2030	Planned to Execute

Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.6 Review of Test Reports

Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of Nov 2020. As per Schedule K of CA, If the roughness value stretch exceeds in a 3000mm in a KM the surface is the stretch shall be rectified. No stretch exceeded the permissible limit in the Project Road.

Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

Concessionaire has conducted the test in Nov 2020. The test report has been verified and found within permissible limits as per IRC 81.

9.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA and project corridor. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 5**.

Table 9.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance	Incidental maintenance	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	0.428	0.204		0.84	1.47
2021	0.441	0.211		0.86	1.52
2022	0.454	0.217	12.15	0.89	13.71
2023	0.468	0.223		0.92	1.61
2024	0.482	0.230		0.95	1.66
2025	0.496	0.237		0.97	1.71
2026	0.511	0.244		1.00	1.76
2027	0.526	0.251		1.03	1.81
2028	0.542	0.259		1.06	1.86
2029	0.558	0.267		0.39	15.30
2030	0.203	0.0097	14.57	0.40	15.27
Total	5.11	2.17	26.72	9.31	57.68

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 General: Scope of Work (Article 2)

Article 2 provides the scope of work which includes the following.

- construction of the Project road on the Site set forth in Schedule-A of CA and as specified in Schedule-B of CA together with provision of Project Facilities as specified in Schedule-C of CA, and in conformity with the Specifications and Standards set forth in Schedule-D of CA;
- operation and maintenance of the Project road in accordance with the provisions of this Agreement;
- performance and fulfilment of all other obligations of the Concessionaire in accordance with the **provisions of this Agreement and matters incidental.**

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 6.**

10.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority:

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire:

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

10.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfil its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the Contract Agreement

10.5 Obligations relating to the Competing Roads (Clause 6.3):

Neither Authority nor any Governmental Instrumentality shall construct the Competing Road before 10th Anniversary of the Appointed Date.

Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction, an Aggregate sum, not less than 20% of the Total Project Cost.

10.7 Provisional Completion Certificate (Clause 14.3)

Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on successful completion, the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of the Concession Agreement. Copy of the Provisional Completion Certificate issued is enclosed at **Annexure 7**

10.8 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Completion Certificate, Completion Certificate shall be issued to the Concessionaire.
- Copy of the Completion Certificate issued is enclosed at **Annexure 8**.

10.9 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

10.10 Change of scope (Article 16)

Change of scope proposals were initiated during construction period and consented by the MPRDC and the same are given in **ANNEXURE 10**.

10.11 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials

- Complying with safety Requirements in accordance with the provisions of the Contract Agreement.

10.12 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations Period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (the “**Maintenance Requirements**”).

10.13 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.15 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of this Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 0.5% (zero decimal five percent) of the Average Daily Fee, and
- 0.1% (zero point one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

10.16 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.17 Monthly Fee Statement (Clause 19.5)

During the Operations Period, the Contractor shall furnish to the Concessionaire and the Authority, if required by the Contractor, within 7 (seven) days of completion of each month, a statement of Fee substantially in the format set out in the Concession Agreement (“Monthly Fee Statement”).

10.18 Annuity (Clause 25.1.1)

The Authority agrees and undertakes to pay the Concessionaire for each annuity Payment period on each annuity payment date as set forth in schedule Y of CA, the sum of Rs 8.91 Crores.

As per Clause 25.2.1, In case the COD is different from the Schedule Y of CA, then the annuity payment schedule shall be suitably modified to be a period of 6 months from the preceding Annuity Payment date. The Status of Annuity Payments is Listed below.

Table 10.1: Status of Annuity Payments

S. No.	Particulars	Paid on
1	1 st Annuity	8-Dec-15
2	2 nd Annuity	1-Jun-16
3	3 rd Annuity	2-Dec-16
4	4 th Annuity	31-May-17
5	5 th Annuity	11-Dec-17
6	6 th Annuity	4-Jun-18
7	7 th Annuity	4-Dec-18
8	8 th Annuity	31-May-19
9	9 th Annuity	4-Dec-19
10	10 th Annuity	2-Jun-20
11	11 th Annuity	27-Nov-20

All the annuities are being paid regularly by the Authority.

10.19 Concession Fee (Article 26)

- In consideration of the grant of Concession the Concessionaire shall pay Concession Fee of Rs1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC

10.20 Toll fee Clause (27.1.1)

Toll Fees Shall be revised annually in accordance with Clause 27.2.1.

10.21 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 11. INSURANCE

11.1 Details of Insurance

As per clause 32.1 of the Concession Agreement (CA), the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 11.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Property
			From	To	
Civil Engineering Completed Risk	National Insurance Company Ltd	3213004419 10001992	27.03.2020	26.03.2021	Road & Structure: Toll Building & Toll Booths, TMS, HTMS, Office & IT equipment, Electronic Equipment, Road Furniture, Fixtures, electrical Poles Lighting & Fittings, Sign boards & Safety Barrier
Employees Compensation Insurance Policy	HDFC ERGO General Insurance Company Ltd	3114203387 673800000	19.05.2020	18.05.2021	All categories of Employees of the Contractor & sub-contractor engaged in the Project
Electronic Equipment Insurance Policy Schedule	Oriental Insurance Company Ltd	171200/44/ 2021/47	08.09.2020	07.09.2021	EI Equipment installed in the Project Highway

Copy of the effective insurances are enclosed at **Annexure 9**.

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

- Pavement condition is good.
- Drainage system is effective along the project road as the RCC drains constructed in built up locations and earthen drains in rural locations.
- Shoulder condition is fair.

12.3 Condition of Structures

- General condition of Bridges is good.
- No major structural defects were noticed
Condition of Culverts is good.
- Observed vegetation growth in vents of Box and Hume Pipe culverts and they are getting cleared during regular maintenance period.

12.4 Traffic Growth

Based on real time, traffic data was extracted.

The traffic growth observed is 26.30% and 33.52% in TP-1 and TP-2 respectively, where as 5% growth is considered while evaluating forecast of traffic volumes.

12.5 Project Facilities

- Two Toll Plaza are constructed one at Km.12+000 & the other at Km.75+900. Both operational condition.
- Toll Plazas are operated by ETC Toll collection system and connected by network system monitored in administrative building.
- Bus shelters are in good condition.
- Medical Aid post is functional
- Avenue plantation and landscaping is provided at Toll Plaza and being maintained.
- Highway lighting is provided at toll plaza and functional.

12.6 Road safety

- Pavement marking is in good condition and number of sign boards are provided as per Highway requirement. The condition of sign boards is good.
- Other road appurtenances like metal beam crash barriers and Kerb are intact

12.7 Maintenance

- The routine maintenance being carried out by O&M contractor effectively, based on documents reviewed, time to time observations made by client/Authority, being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance 7 years after COD is to be carried out to be in 2022 as a good industry practice.

12.8 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work is being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

ANNEXURES

Annexure 1: Pavement Condition

Annexure 4: Toll Revenue Calculations

1. Tollable Traffic considered for Toll Revenue in No.s (AADT):

Table.1: Details of Tollable Traffic (Base Year 2019-20)

Vehicle Type	Traffic (AADT) Km. 12+000	Traffic (AADT) Km. 75+900
Car/Taxi/Van	281	305
LCV	74	123
Bus	40	11
Truck	13	9
MAV	35	39

2. Traffic Growth Rates

Table.2: Details of Growth rates adopted

Year	Car	LCV	BUS	Truck	MAV
2019-25	5.00	5.00	5.00	5.00	5.00
2025-30	5.00	5.00	5.00	5.00	5.00
2021-22	5.00	5.00	5.00	5.00	5.00
2022-23	5.00	5.00	5.00	5.00	5.00
2023-24	5.00	5.00	5.00	5.00	5.00

3. Trip Distribution Ratio as per the Toll Data.

**Table.3: Details of Trip Distribution (Base Year 2019-20)
Mawai & Bela:**

Vehicle Type	Single Trip	Local Pass	Total
Car/Taxi/Van	98%	2%	100%
LCV	100%		100%
Bus	100%		100%
Truck	100%		100%
MAV	100%		100%

4. Toll Rates :

Table.4: Details of Toll Fee (Base Year 2019-20)

Vehicle Type	Toll Fee at Km. 12+000 & Km. 75+900
Car/Taxi/Van	45
LCV	110
Bus	225
Truck	270
MAV	540

Note: There are two numbers of toll plazas existing on the project road. One booth of the toll plaza in each direction is used for Toll Ticket issue & Checking as well.

Toll Plaza-1 Revenue:

Annexure 5: Operation & Maintenance Cost

Routine Maintenance cost for 1 year

S No.	Item		Unit	No	Frequency per year	Quantity	Rate	Amount	Remarks
1	General Cleaning in Carriageway & Shoulders Rural area	Monthly	Km.	76.4	12	4	350	12,83,520	04 nos of Labour
2	General Cleaning in Carriageway & Shoulders Urban area	Twice in a month	Kms	15.5	24	4	350	5,20,800	04 nos of Labour
3	Watering in Median Plants	Once in Week	Km.	15.5	52	1	1939	15,62,834	01 nos of Labour
4	ROW Cleaning	Half yearly	Km.	38.2	2	5	350	1,33,700	5 Nos of labour per KM (50% of the Project length)
5	Cleaning of Culverts	Half yearly	Nos	96	2	2	650	2,49,600	3 nos of Labour along with JCB or Excavator
6	Road Furniture Cleaning	Quarterly	Km.	76.4	4	1	350	1,06,960	02 nos of Labour
7	Maintenance of Bus shelters	Monthly	Nos	8	6	1	350	16,800	2 nos/ Bus shelter/month
8	General Cleaning in Building & Facilities	Daily	Nos	1.00	6	15	350	31,500	02 nos of Labour for 30 days
9	Bridges	Half yearly	Nos	12	2	2	350	16,800	02 nos of Labour for removal of vegetation/Structure
								39,22,514	
	EQUIPMENT SUPPLY							-	
1	TRUCK TIPPER 6-8 CUM CAPACITY	Monthly	Nos	1	12	1	15000	15,000	(2000000 is the cost of vehicle, considering 10% Rental per year) including maintenance
2	Grass cutter	Monthly	Nos	3.2	12	0	12000	1,920	(12000/year)

S No.	Item		Unit	No	Frequency per year	Quantity	Rate	Amount	Remarks
3	Bikes	Monthly	Nos	2	12	0	2500	4,000	Per Supervisor/Per Month
4	Toll plaza AMC	Yearly	Nos		12	1	5000	60,000	10000/month
								65,920	

1	Patrolling vehicle	Monthly	Nos	12			150000	150000	(1500000 is the cost of vehicle, considering 10% Rental per year) including maintenance
2	Ambulance	Monthly	Nos	12		2	10000	20000	(1200000 is the cost of vehicle, considering 10% Rental per year) including maintenance (1 Ambulance/toll plaza)
3	Consumables for Medical Aid Post and Ambulance	Monthly	Nos	12		1	5000	60000	2500 Per month for per set (Per set - Per toll plaza)
4	Consumables for Route Patrolling & Crane	Monthly	Nos	12		1	5000	60000	2500 Per month for per set (Per set - Per toll plaza)
								2,90,000	
								42,78,434.00	

Incidental cost for 1 year

S. No.	Item		Unit	No	Frequency	Quantity	Rate	Amount	Remarks
--------	------	--	------	----	-----------	----------	------	--------	---------

S. No.	Item		Unit	No	Frequency	Quantity	Rate	Amount	Remarks
1	Road marking	Half yearly	Sqm.	1	1	1857	516	9,58,212	10 % of Total Project length on B/S for 1 year
2	Maintenance of Earthen Shoulder	Half yearly	Cum.	1	3	1146	225	7,73,550	5% of total Shoulder length throughout the project
3	Sign Board	Quarterly	Km.	1	1	13	4000	52,000	2.5 % of Total sign boards per half year (considered 500 Nos.)
4	MBCB	Monthly	RMT.			37.5	2400	90,000	2.5% of Total qty per year - (considered 2400 per number)
5	Mile Stone (KM Stone/ HM Stone / ROW stone etc.)	Quarterly	Nos.	76.4	4	19	2250	1,71,000	5 % of total stones per year (unable to understand the backup)
Total amount for 1 Year								20,44,762	

Operational Expenses

S. No.	Particulars	Amount
1	Man Power	₹ 49,92,000
2	Fuel for Generator & Vehicles	₹ 29,52,000
3	Electricity	₹ 3,30,000
4	Stationary	₹ 10,000
5	Replacement of Electrical Fixtures	₹ 37,760
6	Refurbishment of Toll Plaza Equipment	₹ 75,000
	Total Amount	₹. 83,96,760

Summary of Major Maintenance

Description	Due date	Base cost	Esc Period	Escalation Rate per Year	Cost of MMR on due date @ 5% Escalation	In crores
Date of Estimation	20-01-2021

Annexure 10: Change of Scope

**Development of Tikamgarh (Dhajrai)-Jatara-Palera-Nowgaon Road (MDR) on BOT (Toll+Annuity) basis
Road width in Built up areas.**

Sr.No.	Provision as per Schedule-B					Construction proposed by Concessionaire as per site condition				Reasons & recommendation by Independent Engineer	Decision of Committee
	Village Name	Chainage From	Chainage To	Length in mtr	Width to be paved drain to drain (mtr.)	From	To	Length in mtr.	Width to be paved drain to drain (mtr.)		
1	2	3	4	5	6	7	8	9	10	11	12
	Project Length			76.400 Km				77.515 Km		This project has been developed in BOT (Toll+Annuity) scheme. Toll rights of increased length 1.115 Km has been given to the concessionaire. Necessary decision regarding increased length as change of scope may be taken by the Advisory committee as per provision of Concession Agreement.	
1	Dhajrai	0	400	400	15.00	0	400	400	15.00	In the schedule B, article 2.2 table B-2 on page 20, the width to be paved in built up areas is proposed as per fig. 2.3 of schedule D i. e. 12m. drain to drain in available ROW. The paved width was adopted as per schedule 1 & 12m. drain to drain.	
2	Mawai	2420	5020	2600	15.00	2418	4949	2531	15.00		
3	Majna	9720	10720	1000	15.00	9731	10723	992	15.00		
4	Lar-Khurd	17700	18700	1000	15.00	17710	18748	1038	15.00		

3	Dhara (Khaigupera)	56950	37950	5000	15.00	36945	37900	955	15.00	(Excluding drains) Hence it is recommended to consider 102m. Reduced length as negative change of scope.	
6	Sitara Road	38420	40420	2000	15.00	38264	40350	2089	15.00		
7	Laxmi (Anlamper)	63230	64250	1000	15.00	63219	64387	968	15.00		
8	Garoli	68240	69240	1000	15.00	68160	69145	985	15.00		
9	Dharampura (Nowgaon Tigaria)	76415	77515	1000	15.00	76575	77515	940	15.00		
Total				11000				10898	102		
1	Sitara Town	-	-	-	-	32620	33500	880	BHS	The single cell open drain was constructed by concessionaire as per the requirement and as per the directions given by the Divisional Manager, MPRIIC, Sagar on complaint of villagers through CM helpline. Hence the total length of 1657m of drain may be considered as positive change of scope.	
2	Baran Village	-	-	-	-	42875	43276	401	BHS

Sr. No.	Provisional per Schedule-II					Construction proposed by Concessionaire as per the condition				Reasons & recommendation by Independent Engineer	Decision of Committee

1	2	3	4	5	6	7	8	9	10	11	12	13	
10	Jatara Town	29900	31009	3109	3.5	(a) 29900	31200	1300	10	Intermediate lane was proposed in Jatara Town portion, but the stretch comes under built up reach. Two lane paved shoulder was constructed in Jatara Town portion except stretch from Ch. 31200 to 32000 where availability of ROW was only 6 mtr. Stretch from chainage 321454 to chainage 331009 passes through the bank of pond one side and hill at another side. Existing carriageway in this reach was rigid pavement of 3.5 m-1 mtr width, which was considered as DMC and the road was widened to 10 mtr. It is recommended to consider difference of cross as positive change of slope.			
						(b) 31200	32000	800	6				
						(c) 32000	33454	454	10				
						(d) 33454	33009	555	10 (Rigid Pavement)				

11	Palera (Four Lane)	32500	32500	3100	1.7 mtr. median	45000	35000	3100	4 Lane Road	There was existing rigid pavement of approx. 3-5 mtr. width, no median with median of regular width and in damaged condition in Palera Town portion. Four lane rigid pavement has been constructed with reconstruction of 1.5 mtr. median. Existing carriageway of rigid pavement was considered as DLC and the road is widened to four lane of rigid pavement. It is recommended to consider difference of cost as change of scope.

Two lane private drain for drain in station. Commissionaire has submitted the plan-section of two cell drain shown in the table.

Due to lesser length (750mtr) of Drain Constructed. It is recommended to consider as (-) negative change of scope. In fig. 2.2 of schedule-D for four lane section there was no mention of drain. As per clause 2.6 of schedule-B states - Drainage - The drainage in open country and built up area shall be as per manual of standard and specification for two lane with written shoulder schedule-B. In built up area covered and pipe drains with main holes at suitable interval the pipes should be provided. Such drains shall be accumulated below the footpath if additional land is not available. Only one side drain providing which does not required additional land.

Commissionaire has not constructed any drainage in four lane section of Palera Town portion which comes under built up area and drainage should be provided by the commissionaire as per clause 2.6 of schedule-B. Commissionaire will provide...

Development of TT (Tikamgarh - Dhajrai) - Jatara - Palera - Nowgaon Road (N&D) on BOT (Toll+Annuity) basis

CHAPTER 1. INTRODUCTION

1.1 General

DBL Nadiad Modasa Tollways Limited (herein after referred to as the “**Concessionaire**”) had augmented the existing two lane road of Nadiad- Modasa section of SH-59 in the State of Gujarat, in accordance with the provisions of the Concession Agreement executed on 5th January 2012 with Roads and Buildings Department of the Government of Gujarat (herein after referred to as the “**R&BD, GOG**”) on DBFOT Annuity basis.

The Project Highway starts at Km. 0+600 and ends at Km. 109+000 passing through Nadiad, Kathlal, Kapadvanj, Bayad, Dhansura and Modasa in the state of Gujarat on Design, Build, Finance, Operate & Transfer (DBFOT)Annuity basis. Project location map is provided at **Figure 1.1**.

SHREM ROADWAYS PRIVATE LIMITED (SRPL) acquired DBL Nadiad Modasa Tollways Limited vide agreement dated 26.03.2018.

SHREM FINANCIAL PRIVATE LTD (SFPL). appointed RUKY Projects Pvt. Ltd. as consultants for detailed Technical Due Diligence Services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period and additional road safety requirements, if any.

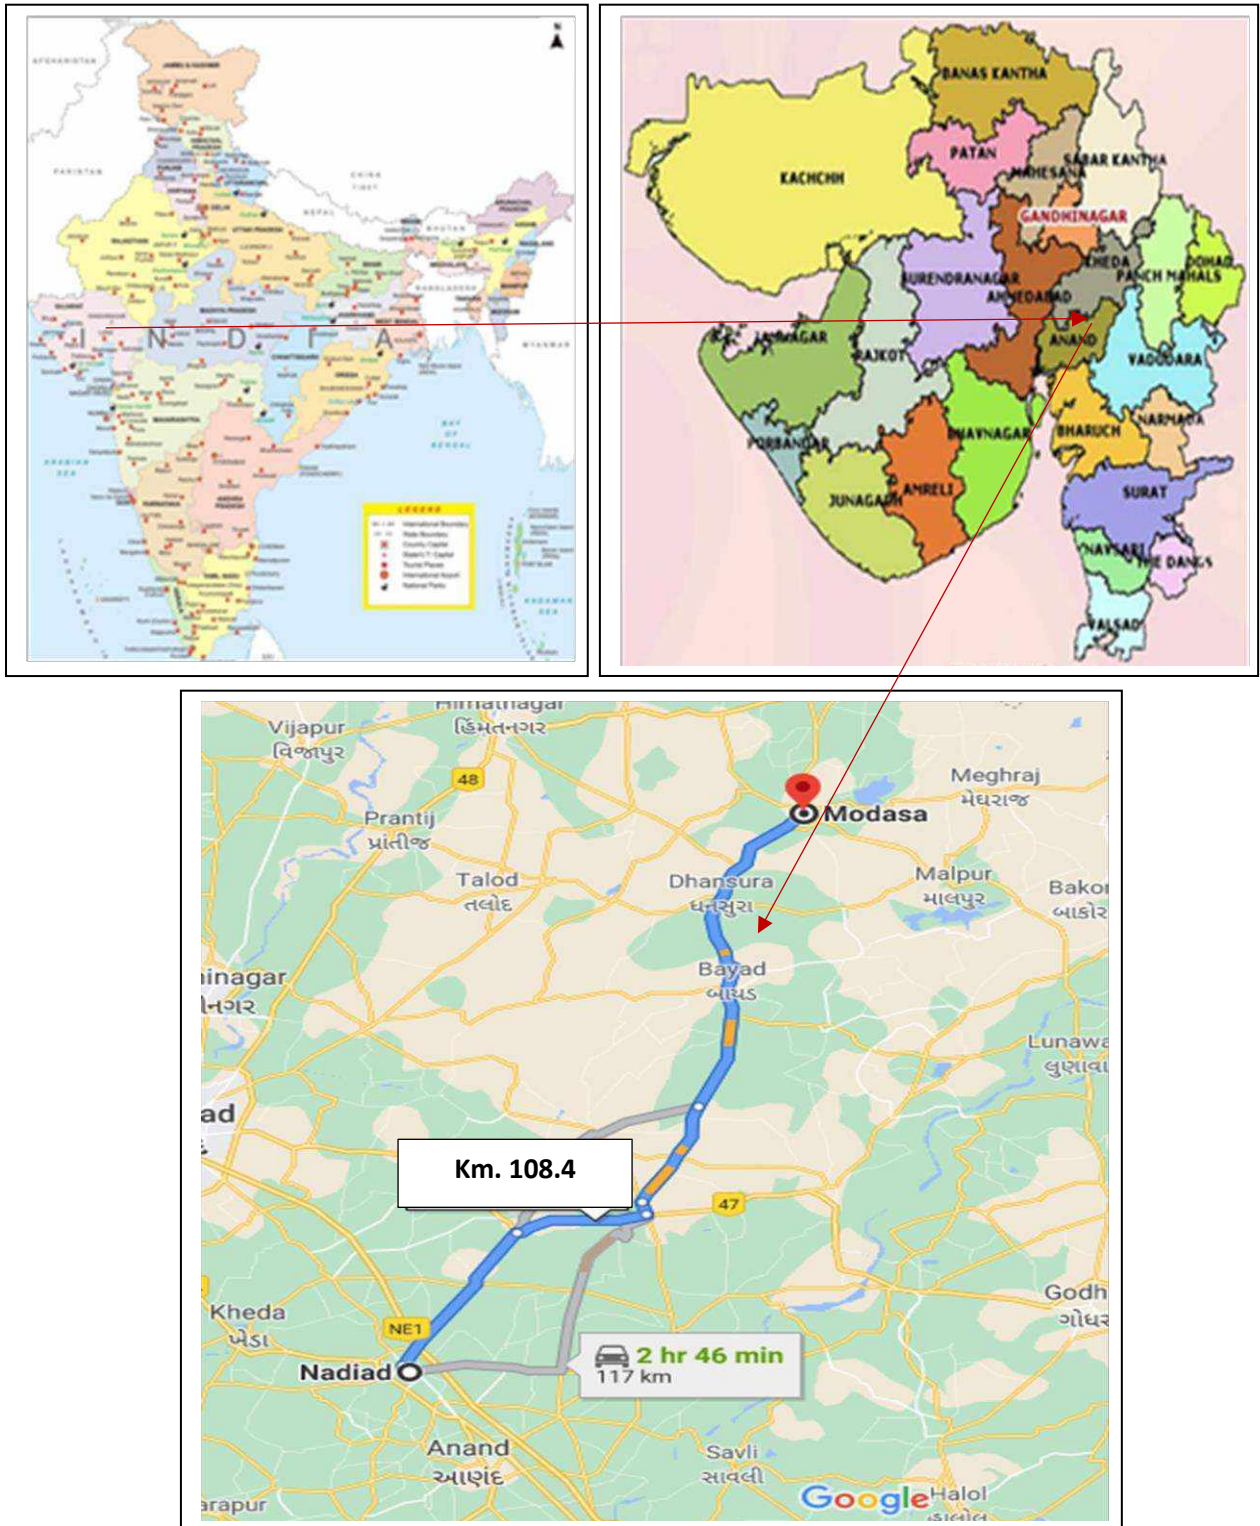

Figure 1.1: Project Location Map

1.2 The Project Data

Table 1.1: The Project Data

S. No.	Particulars	Details
1.	Name of the project	Two Laning of the Section Nadiad –Madhudha – Kathlal - Kapadvanj – Bayad – Modasa from Km. 0+600 to Km. 109+000 on SH-59 in the State of Gujarat on DBFOT on Annuity basis
2.	Road Type	State Highway (SH-59)
3.	Name of the Authority	Roads and Buildings Department, the Government of Gujarat.
4.	Name of the Concessionaire	DBL Nadiad – Modasa Tollways Ltd.
5.	Name of the EPC Contractor	Dilip Buildcon Limited
6.	Design length as per Schedule B of CA	108.400 Kms.
7.	Actual length constructed	108.400 Kms.
8.	Project lane configuration	2 Lane
9.	EPC cost	189.41 Cr
10.	Nature of contract	DBFOT (Annuity)
11.	Toll collected by	Roads & Building Department, Government of Gujarat
12.	Concession period	13 years from the appointed date
13.	Appointed date	03.07.2012
14.	Concession End Date	02.07.2026
15.	Construction period	730 days from the appointed date.
16.	Schedule completion date	03.07.2014
17.	Date of issuance of provisional certificate (Commercial operation date)	31.12.2013
18.	Date of issuance of completion certificate	29.03.2014
19.	Annuity amount (every six months)	17.46 Cr
20.	Total number of annuities payable	22 No's
21.	First annuity payment date	03.01.2015
22.	Total number of annuity paid	13 No's

1.3 Scope of consultancy services

The scope of work includes providing Technical Due Diligence of the project road and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

The scope of work includes providing Technical Due Diligence of the Project Highway and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents

- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout out road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per schedule B and Schedule C of Concession Agreement (CA) including Change of scope are listed in the following Table.

Table 2.1: Salient Features

S. No.	Particulars	As per CA	As per COS*	As per Site
1	Total project length	108.40 Kms.	---	108.40 Kms.
2	Four lane divided carriageway	7.370 Kms.	---	7.370 Kms.
3	Two lane with paved shoulder	101.03 Kms.	---	101.03 Kms.
4	Rigid pavement-two lane with paved shoulder	---	---	---
5	Flexible pavement	108.40 Kms.	---	108.40 Kms.
6	Toll plaza	---	1 No.	1 No.
7	Bus bays / Bus shelters	36 Nos.	---	36 Nos.
8	Truck lay bays	4 Nos.	-4 Nos.	---
9	Major junctions	9 Nos.	---	9 Nos.
10	Minor junctions	58 Nos.	---	58 Nos.
11	Number of Major Bridges (Retain & Repair)	7 Nos.	---	7 Nos.
12	Number of Minor Bridges	13 Nos.	---	14* Nos.
13	Number of Pipe Culverts	73 Nos.	--	72* Nos.
14	Number of Box/Slab Culverts	31 Nos.	---	32* Nos.

* As per site requirement one Box culvert is converted into Minor Bridge, two Pipe Culverts are converted into slab culverts and one additional pipe Culvert is constructed due to site condition.

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Section schedule as shown below, during the construction.

Figure 2.1: (TCS 1) 2-Lane carriageway with Paved shoulder (Concentric widening)

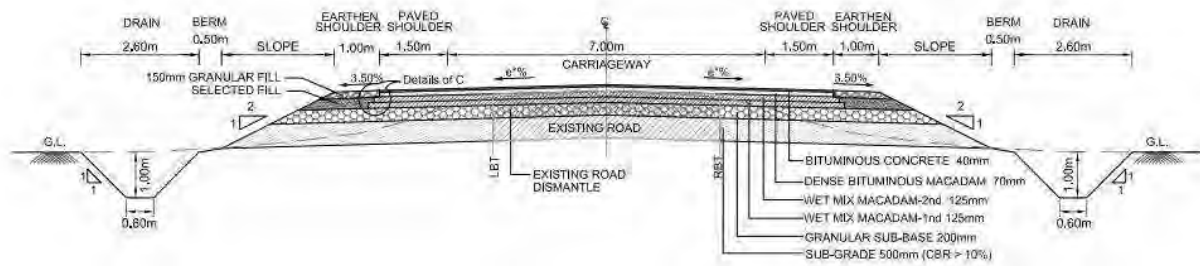

Figure 2.2: (TCS 2) 2-Lane carriageway with paved shoulders (Concentric widening/reconstruction)

Figure 2.3: (TCS 5) 2-Lane Carriageway with paved shoulders (Reconstruction in Submergence area)

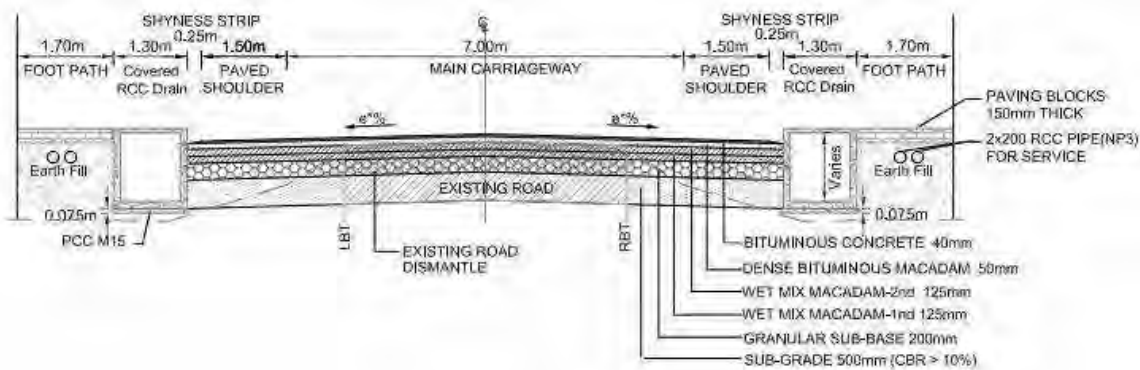

Figure 2.4: (TCS 7) 2-Lane Carriageway (With paved shoulder) with footpath in built-up section

Figure 2.5: (TCS 8A) Overlay on existing road

Figure 2.6: (TCS 9A) 4-Lane Divided Carriageway (Only Maintenance)

TCS schedule is provided below.

Table 2.2: TCS Schedule

S. No.	Chainage (Km.)		Length (Kms.)	Type of TCS
	From	To		
1	0+600	1+300	0.70	TCS8A
2	1+300	2+300	1.00	TCS9A
3	2+300	3+250	0.95	TCS8A
4	3+250	4+100	0.85	TCS8A
5	4+100	4+700	0.60	TCS5
6	4+700	5+600	0.90	TCS1
7	5+600	10+800	5.20	TCS5
8	10+800	16+010	5.21	TCS1
9	16+010	17+100	1.09	TCS7
10	17+100	25+250	8.15	TCS1
11	25+250	26+050	0.80	TCS8A
12	26+050	27+710	1.66	TCS9A
13	27+710	33+350	5.64	TCS1
14	33+350	33+700	0.35	TCS7
15	33+700	37+380	3.68	TCS1
16	37+380	37+750	0.37	TCS7
17	37+750	40+900	3.15	TCS1
18	40+900	41+550	0.65	TCS7
19	41+550	42+620	1.07	TCS1
20	42+620	42+950	0.33	TCS8A
21	42+950	44+750	1.80	TCS9A
22	44+750	45+400	0.65	TCS8A
23	45+400	45+950	0.55	TCS7
24	45+950	62+150	16.20	TCS1
25	62+150	62+450	0.30	TCS2
26	62+450	64+680	2.23	TCS1
27	64+680	64+900	0.22	TCS7
28	64+900	67+100	2.20	TCS1
29	67+100	68+070	0.97	TCS8A

S. No.	Chainage (Km.)		Length (Kms.)	Type of TCS
	From	To		
30	68+070	74+750	6.68	TCS1
31	74+750	75+850	1.10	TCS9A
32	75+850	76+650	0.80	TCS7
33	76+650	78+450	1.80	TCS1
34	78+450	78+650	0.20	TCS7
35	78+650	81+360	2.71	TCS1
36	81+360	81+670	0.31	TCS7
37	81+670	89+800	8.13	TCS1
38	89+800	90+950	1.15	TCS7
39	90+950	96+000	5.05	TCS1
40	96+000	96+560	0.56	TCS9A
41	96+560	105+780	9.22	TCS1
42	105+780	106+300	0.52	TCS8A
43	106+300	107+550	1.25	TCS9A
44	107+550	108+500	0.95	TCS8A
45	108+600	109+000	0.40	TCS7

Figure 2.7: Typical Cross Section followed in the Project road

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from road side community on the Carriageway, RCC side drains are constructed along the main carriage way on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are in open and rural areas.

2.4 Service Roads

Service road is not proposed along the entire stretch of the project road as per provisions of Schedule B of CA.

2.5 Bypass/Realignment

There is no bypass / realignment proposed on the project road as per provisions of Schedule B of CA.

2.6 Intersections

As per provisions of Schedule B of CA, 9 Major Junctions and 58 Minor Junctions are provided. Details are given below.

Table 2.3: List of Junctions

S. No.	Chainage (Km.)	Type of junction	Lead to
Major Junctions			
1	15+782	T	Ahmedabad
2	15+930	T	Dakor
3	26+052	+	LHS: Ahmedabad RHS: Balasinor
4	43+180	T	Modasa
5	43+976	T	Dakor
6	56+180	T	Dakor
7	75+490	T	Ahmedabad
8	90+320	+	LHS: Ahmedabad RHS: Dhansura

57	106+295	T	Modasa
58	106+640	T	Meghraj

2.7 Grade Separated Structures and underpasses

Grade Separated Structures and underpasses are not proposed as per provisions of Schedule B of CA.

2.8 Road Over Bridge

ROB is not proposed in the project road as per provisions of Schedule B of CA.

2.9 Summary of the Carriageway Details

Table 2.4: Summary of Carriageway Details

S. No.	Description	Flexible (Kms.)	Rigid (Kms.)	TCS Type
1	2 Lane with Paved Shoulder	82.02	---	TCS-1: of Schedule B of CA
2	2 Lane with Paved Shoulder	0.3	---	TCS-2: of Schedule B of CA
3	2 Lane with Paved Shoulder	5.8	---	TCS-5: of Schedule B of CA
4	2 Lane with Paved Shoulder	6.09	---	TCS-7: of Schedule B of CA
5	Overlay on Existing road	6.82		TCS-8A: of Schedule B of CA
6	4-Lane Divided Carriageway road	7.37		TCS-9A: of Schedule B of CA
	Total length of the project	108.4		
TYPE OF ALIGNMENT				
1	New alignment	---	---	---
2	Widening	88.41		
3	Overlay & Strengthening	14.19	---	---
4	Reconstruction	5.8	---	---
	Total length of the project	108.4	---	---

2.10 Summary of Bridges and Culverts

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.5: Summary of Structures:

S. No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts	Remarks
1	Retained			25	5	
2	Widening	7	6	27	16	
3	Reconstruction			20	10	

S. No.	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts	Remarks
4	New		7			
5	Improvement					
	Total	7	13	72	31	

2.11 Toll Plazas

As per Schedule C of the CA provisions one Toll Plaza has been constructed at Km. 80+680. Salient features of Toll Plaza are provided below.

- Each side comprises of two normal lanes, one extra wide lane and one bike lane.
- The lane width in normal lanes is 3.20m and Normal lane is 4.5m.
- Single canopy is provided to cover the toll lanes.
- Toll plaza has been constructed as per standards set forth in Schedule D of CA having facilities like lighting, water supply and firefighting system.
- Cameras are installed and monitored in administrative building.

2.12 Bus shelters

As per provisions of Schedule C of CA bus shelters are provided at 36 locations. Details are provided below.

Table 2.6: Bus shelters details

S. No.	Chainage (Km.)	Side	Remarks	S. No.	Chainage (Km.)	Side	Remarks
1	0+410	LHS	Nadiad	19	46+040	RHS	Kapadvanj
2	3+3700	LHS	Nadiad	20	62+050	LHS	Kampa
3	3+420	RHS	Nadiad	21	62+550	RHS	Kampa
4	5+230	BOTH	Bilodra	22	64+560	LHS	Boral
5	15+860	LHS	Mahuda	23	65+000	RHS	Boral
6	17+230	RHS	Muvada	24	67+030	LHS	Demai
7	25+160	BOTH	Kathlal	25	68+210	RHS	Demai
8	27+840	RHS	Kathlal	26	74+610	LHS	Bayad
9	27+900	LHS	Kathlal	27	76+800	LHS	Bayad
10	33+230	LHS	Hirapur	28	76+930	RHS	Bayad
11	33+810	RHS	Hirapur	29	78+320	LHS	Vatrak
12	34+980	LHS	Udapura	30	78+880	RHS	Vatrak
13	35+580	RHS	Udapura	31	81+250	LHS	Halavacamp
14	37+270	LHS	Dashavada	32	81+790	RHS	Halavacamp
15	37+840	RHS	Dashavada	33	89+670	LHS	Dansura
16	40+710	RHS	Mahanandpur	34	91+100	RHS	Dansura
17	40+840	LHS	Mahanandpur	35	105+580	LHS	Modasa
18	42+540	LHS	Kapadvanj	36	107+820	RHS	Modasa

2.13 Other Project Facilities Provided as per Schedule C of CA

- Roadside furniture: Sign boards, Pavement Markings, Overhead signs, kilometer stones, road marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic safety devices: W beam crash barriers, parapet walls are provided as per the provisions of Schedule C of the CA
- Landscaping: provided along the project road within ROW and in the islands of at grade intersections and being maintained
- Tree plantation: Tree plantation is provided on both sides of the project corridor all along the way and being maintained
- Medical Aid Post: Provided at toll plaza location and is operational
- Highway Lighting: Highway lighting is provided at Toll Plaza locations and is functional.

Km. 0+600 Starting Point

Km. 3+200 Bus Stand

Km. 33+200 Bus Stop

Km. 81+350 Bus Stop

Overhead sign at junction at Km. 1+300

Figure 2.8: Photos Representing Facilities

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections provided below.

3.2 Road Inventory

Inventory of the project road was carried out physically and the same is summarized in the following table. Few representative photographs are presented below.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain Terrain
2	Land Use	Predominantly Agriculture
3	Two lane length	101.03 Kms.
4	Four lane length	7.37 Kms.
5	Earthen shoulder	1.0 m to 1.5 m width on site
6	Junctions	09 Nos. Major junctions and 58 Nos. Minor junctions
7	Toll Plaza	Km. 80+680
8	Sign boards	Sign boards are provided as per Highway requirements
9	Road Markings	Lane markings are provided as per Highway requirement
10	Bus Bays /shelters	36 Nos.
11	Street Lighting	Provided as per requirement
12	Avenue plantation	Provided

3.3 Pavement Condition

Pavement condition survey was carried out on the project road based on observations supplemented by simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement Condition Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Assessment of the condition of Pavement surface is a key component of infrastructure asset management. The information used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement

condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments

3.4 Pavement Condition Survey

The survey on general pavement condition was primarily undertaken by means of slow drive- over survey, and supplemented with measurements wherever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of Surface area)
 - Ravelling (% of Surface area)
 - Potholes (% of Surface area)
 - Patching (% of Surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good and fair. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP-19 and is given in **ANNEXURE 1**. The summary of Pavement condition is given below

Table 3.3: Pavement condition summary

From (Km.)	To (Km.)	Length (Kms)	Condition
0+600	50+000	49.4	Good
50+000	90+000	40.0	Fair
90+000	109+000	19.0	Good

Km. 0+600

Km. 20+000

Km. 9+580

Km. 29+605

Figure 3.1: Representative Photos of Pavement Condition.

CHAPTER 4. INVENTORY AND REVIEW OF STRUCTURES

4.1 General Assessment and Details of the Existing structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

The Details of structures along the project highway are listed below.

Table 4.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	07
2	Minor Bridge	14
3	Pipe culverts	72
4	Slab/Box Culverts	32

The superstructure for major bridge is of RCC Girder and RCC slab type resting on RCC wall type piers and abutments with open foundation. The minor bridges of superstructure are RCC solid slab and the substructures are of RCC/PCC conventional wall type supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**.

The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. The condition of most of the culverts is fair except in few locations. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges

1. The total length of the major bridge at Km. 5+460 is 83.0m with 5 spans. The superstructure consists of RCC solid slab. Each pier and whereas abutment is regular RCC wall type abutment. Open foundations have been constructed for all piers and abutments. Superstructure is seated on Tar paper bearings. Expansion joints are of Buried type. RCC railings have been provided on both sides of the deck.
2. The total length of the major bridge at Km. 39+550 is 110.0m with 5 spans. The superstructure consists of RCC Girder. Each pier and whereas abutment is regular RCC wall type abutment. Open foundations have been constructed for all piers and abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are Strip seal type. RCC railings have been provided on both sides of the deck.
3. The total length of the major bridge at Km. 41+730 is 98.0 m with 4 spans. The superstructure consists of RCC Girder. Each pier and whereas abutment is regular RCC wall type abutment. Open foundations have been constructed for all piers and abutments. Superstructure is seated on Elastomeric bearings. Expansion joints are Strip seal type. RCC railings have been provided on both sides of the deck.
4. The total length of the major bridge at Km. 59+225 is 60.0 m with 8 spans. The superstructure is arch type. Each pier and abutment are of regular RCC wall type abutment with open foundation.

Superstructure is seated on Tar paper bearings. Expansion joints are of Buried type. RCC railings have been provided on both sides of the deck.

5. The total length of the major bridge at Km. 73+100 is 62 m with 6 spans. The superstructure consists of RCC Girder. Each pier and abutment are of regular RCC wall type abutment with open foundation.. Superstructure is seated on Tar paper bearings. Expansion joints are of Buried type. RCC railings have been provided on both sides of the deck.
6. The total length of the major bridge at Km. 79+020 is 158.20 m with 9 spans. The superstructure consists of RCC Girder. Each pier and abutment are of regular RCC wall type abutment with open foundation.. Superstructure is seated on pot bearings. Expansion joints are of Buried type. RCC railings have been provided on both sides of the deck.
7. The total length of the major bridge at Km. 99+350 is 63.75 m with 3 spans. The superstructure consists of RCC Girder. Each pier and abutment are of regular RCC wall type abutment with open foundation.. Superstructure is seated on Elastomeric bearings. Expansion joints are Strip seal type. RCC railings have been provided on both sides of the deck.

Table 4.2: List of Major Bridges

S. No.	Chainage (Km.)	Span (m)	Total Length of Bridge (m)
1	5+460	3 x 21.0 + 2 x 10.0	83.00
2	39+550	5 x 22.0	110.0
3	41+730	4 x 24.50	98.00
4	59+225	8 x 7.6	60.80
5	73+100	6 x 12.0	72.00
6	79+020	1 x 11.4 + 7 x 19.5 +1 x 10.3	158.20
7	99+350	3 x 21.25	63.75

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, drainage spouts and strip seal expansion joints are to be carried out at few locations.

Km. 5+460

Km. 39+550

Figure 4.1: Overall view of the Major bridges

4.4 Details of Minor Bridges

The details of Minor bridges in the project stretch are listed below. The type of superstructure for minor bridges is RCC Girder type, solid slab and the substructure is PCC/RCC conventional wall type supported on open foundations. Expansion joints are buried type and bearings are tar paper and elastomeric bearings. RCC crash barriers are provided on all the Minor bridges.

Table 4.3: Inventory of Minor Bridges

S. No.	Chainage (Km.)	Span (m)	Total Length of Bridge (m)	Description
1	4+924	1 x 14.40	14.40	MNB has RCC Girder type structure. It has RCC crash barrier, bituminous wearing coat, strip seal type

S. No.	Chainage (Km.)	Span (m)	Total Length of Bridge (m)	Description
				expansion joints with elastomeric bearings.
2	9+633	2 x 4.50	9.00	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
3	12+965	5 x 3.30	16.50	MNB has RCC solid slab superstructure supported on CRM wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
4	17+356	1 x 10.20	10.20	MNB has RCC solid slab superstructure supported on RCC wall type abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
5	21+856	4 x 5.65	22.60	MNB has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
6	36+330	3 x 10.00	30.00	MNB has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
7	54+561	2 x 7.30	14.60	MNB has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
8	58+564	2 x 7.00	14.00	MNB has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
9	66+149	4 x 3.00	12.00	It has RCC Box structure. It has RCC crash barrier, bituminous wearing coat.
10	68+105	1 x 30.40	30.40	MNB has PSC Girder type structure. It has RCC crash barrier, bituminous wearing coat, Strip seal type expansion joints with elastomeric bearings.
11	74+528	1 x 22.50	22.50	MNB has RCC Girder type structure. It has RCC crash barrier, bituminous wearing coat, Strip seal type expansion joints with elastomeric bearings.
12	82+629	3 x 7.30	21.90	Arch MNB has been widened with Continuous RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
13	91+153	2 x 3.50	7.00	It has been widened with RCC Box structure. It has RCC crash barrier, bituminous wearing coat..
14	93+788	1 x 14.00	14.00	MNB has RCC solid slab superstructure supported on RCC wall type abutment. Other features are RCC crash barrier, bituminous wearing coat, and elastomeric Bearings and strip seal type expansion joints.

4.5 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections.

4.5.1. Slab/Box Culverts

The details of the Slab/Box culverts along the project highway are as given below.

Table 4.4: List of Slab/Box Culverts

S. No.	Chainage (Km.)	Span (m)
1	1+096	2 x 2.30
2	1+277	1 x 2.50
3	3+761	1 x 1.50
4	4+455	1 x 1.50
5	5+933	1 x 4.40
6	9+075	1 x 1.50

36	64+761	1 x 1.2	72	106+285	1 x 1.2

4.5.4. Condition of the Pipe Culverts

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General

Review of Pavement design report, providing insights on design life of pavement, crust thickness, history of overlays over the existing pavement etc., Based on pavement condition and CA provisions recommendation for the upcoming renewal cycles.

5.2 Pavement design validation

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2001 publication while the current publication is IRC: 37-2018.

Review of Pavement Design

As per the pavement design approved in the project, the following conclusions are given.

Table 5.1: Flexible Pavement Design summary

S. No.	Description/ Pavement layer	HS-I Parameters	HS-II Parameters	HS-III Parameters
1	Sub Grade CBR (%)	10%	10%	10%
2	Design Life (Years)	8 years for BT* 15 years for granular	8 years for BT 15 years for granular	8 years for BT 15 years for granular
3	Actual Traffic (MSA)	8 MSA for 8 years 20.8 MSA 15 years	4 MSA for 8 years 8.9 MSA 15 years	18 MSA for 8 years 46.8 MSA 15 years
4	Design Traffic* (MSA)	10 MSA for BT 150 MSA for Granular	5 MSA for BT 150 MSA for Granular	18 MSA for BT 150 MSA for Granular
5	Surface course (BC)	40 mm	25 mm SDBC	40 mm
6	Binder course (DBM)	50 mm	50 mm	70 mm
7	Base course (WMM)	250 mm	250 mm	250 mm
8	Sub Base course (GSB)	200 mm	200 mm	200 mm

*BT-Bituminous Layer

5.2.1. Validation of Pavement Design

The new pavement shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”.

Pavement design validation is carried out as per actual traffic from COD. As per IRC 37, Vehicle Damage Factor (VDF), Distribution of commercial vehicles and growth rate values are 4.5, 0.75 and 5% respectively. Summary is given below.

Table 5.2: Design Traffic calculations from 2020

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2020	3223	87	213	1192	3251	4743	5.84	5.84	6	Actual
2021	3384	91	224	1252	3414	4980	6.13	11.98	7	Projected
2022	3553	96	235	1314	3584	5229	6.44	18.42	8	Projected
2023	3731	101	247	1380	3763	5491	6.76	25.18	9	Projected
2024	3918	106	259	1449	3952	5765	7.10	32.29	10	Projected
2025	4113	111	272	1521	4149	6053	7.46	39.74	11	Projected
2026	4319	117	285	1597	4357	6356	7.83	47.57	12	Projected
2027	4535	122	300	1677	4574	6674	8.22	55.79	13	Projected
2028	4762	129	315	1761	4803	7008	8.63	64.43	14	Projected
2029	5000	135	330	1849	5043	7358	9.06	73.49	15	Projected

Based on the above actual traffic, estimated MSA at 8 years and 15 years are 18.42 MSA, 73.49 MSA respectively, traffic projection with 5% growth rate. Traffic considered in pavement design is more than estimated traffic based on actual traffic. Hence the pavement design adopted is found in order.

5.3 Overlay during operation and maintenance

The base BT layers have been designed for MSA 10, 5 and 18 for HS-1, HS-2 and HS-3 respectively for 8 years (up to end of 2022). Granular layers designed for 150 MSA for HS-1, HS-2 & HS-3 for 15 years (up to end of 2029). This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic surveys, conduct BBD tests for evaluation of strength of pavement and required overlay. However, 6-7 years from COD and prior to end of concession period, overlay shall be laid as a good industrial practice.

5.3.1. Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement -Next Periodic Renewal will be proposed on or before 2026

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRR) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 6.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety Audit

6.2 Existing Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 6.2: Road Furniture Condition

S. No.	Item Description	Status	Condition
Road Furniture			
1	Sign Boards	<ul style="list-style-type: none"> • Chevron Signs • Village sign boards • Information Boards 	Available as per site requirement
			Good

S. No.	Item Description	Status	Condition	
	<ul style="list-style-type: none"> • Other Sign Boards • Gantry Sign Boards 			
2	Road Marking	Studs & Lane marking	Available as per site requirement	Good
3	Metal Beam Crash Barriers	At High embankments	Available as per site requirement	Good

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

Few observations on the road furniture in safety aspects for the project road are mentioned below:

- At few places reflectors were missing on the sign boards and few sign boards were also damaged
- Retro Reflective stickers need to be provided for metal beam crash barriers for night time road users at all locations and damaged metal beam crash barriers requires maintenance regularly the object hazard markers are placed only on one side of Head walls/parapet walls of all structures, whereas it is to be installed on both sides at structures

6.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is required during the maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There is one toll Plaza on the project road at Km. 80+680. Each side comprises of 1 normal lanes, 1 extra wide lane. The lane width in normal lanes was 3.2 m and extra wide lane was 4.5 m. The width of islands provided is 1.8 m. The single canopy is provided to cover the toll lanes. Toll plaza buildings are G+1 floor building which houses control room, UPS and Pantry.

7.2 Vehicles

The list of vehicles, which were observed at site, for operation of Highway and Toll Plaza are presented below.

Table 7.1: List of Vehicles

S. No.	Vehicle Type	No.
1	Patrol vehicle	1
2	Ambulance	1
3	Crane	1

Km. 80+680 at Toll Plaza
Figure 7.1 Representative photos of Toll Plaza

CHAPTER 8. OPERATION AND MAINTENANCE

8.1 General

As per Article 17 of CA, the Concessionaire will operate and maintain the Project roads by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines..

8.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual Inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz. pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

8.3 Operations

8.3.1. Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- 1 Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- 2 Carrying out preventive and periodic maintenance of the Project road;
- 3 Undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- 4 Undertaking major maintenance such as resurfacing of pavements, repairs to structures;
- 5 Functioning of the lighting system;
- 6 Functioning of the Patrolling System
- 7 Functioning of rescue and medical aid services

- 8 Ambulance as and when required
- 9 Functioning of the Project Facilities
- 10 Administrative, Operational and Maintenance Base Camp
- 11 Truck Lay byes
- 12 Pickup Bus stops / Bus Bays
- 13 Protection of the environment and provision of equipment and materials therefore;
- 14 Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- 15 Complying with Safety Requirements in accordance with Article 18.

8.4 Operation of Toll Plazas

There are two lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles.

8.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

8.5.1. Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence does not require any immediate or preventive interventions.

8.5.2. Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

8.5.3. Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road. The details of periodic maintenance schedule are given below.

Table 8.1: Schedule and status of for Periodic Maintenance

S. No.	Scheduled Major Maintenance	Year	Status at site
1	1st Periodic Maintenance	2026	Planned to Execute

8.5.4. Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

8.6 Review of Test Reports

8.6.1. Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of Dec, 2020. As per Schedule K of CA, “If the stretch exceeds 2500 mm in a KM shall be rectified”. No stretch exceeds the permissible limit.

8.6.2. Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement. BBD Test is to be carried once in a year.

Concessionaire has conducted the test in Dec2019. The test report has been verified and found within permissible limits as per IRC 81.

8.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost of summary is given below, and detailed cost estimations are given in **ANNEXURE 4**.

Table 8.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance	Incidental maintenance	Periodic / Major maintenance	Operational Expenses.	Total cost per year
2021	1.685	0.296		0.07	2.05
2022	1.735	0.305		0.07	2.11
2023	1.787	0.314		0.08	2.18
2024	1.841	0.324		0.08	2.24
2025	1.896	0.333		0.08	2.31
2026	1.953	0.343	24.80	0.08	27.18
2027	0.513	0.090		0.02	0.62
Total	13.05	2.29	24.80	0.55	40.69

CHAPTER 9. REVIEW OF CONCESSION AGREEMENT

9.1 Scope of Work (Article 2)

Article 2 provides the scope of work, which includes the following.

- construction of the Project Highway on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of Project Facilities as specified in Schedule-C, and in conformity with the Specifications and Standards set forth in Schedule-D
- operation and maintenance of the Project Highway in accordance with the provisions of Concession Agreement (CA)
- Performance and fulfillment of all other obligations of the Concessionaire in accordance with the provisions of this CA and matters incidental thereto.

9.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 5**.

9.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Shall provide applicable permits as per the CA

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority
- Executed and procured Substitution Agreement
- Procured all applicable permits specified in Schedule E
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

9.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfill its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project Highway to the Authority upon termination of the CA

9.5 Obligations relating to the Competing Roads (Clause 6.3)

Neither Authority nor any Governmental Instrumentality shall construct the Competing Road before 10th Anniversary of the Appointed Date

9.5.1. Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 20% of the Total Project Cost.

9.6 Provisional Completion Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA and after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA. Provisional Completion Certification is attached in **ANNEXURE 6**.

9.6.1. Completion Certificate (Clause 14.4.2)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire. Completion Certificate is provided in **ANNEXURE 7**.

9.7 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service

9.8 Change of scope (Article 16)

Change of Scope proposal initiated and consented by the Authority are provided at **ANNEXURE 9**.

9.9 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project Highway
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements.
- Preventing any unauthorized use of the Project Highway.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

9.10 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations Period; the Project Highway conforms to the maintenance requirements set forth in Schedule K (the “**Maintenance Requirements**”).

9.10.1. Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

9.10.2. Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

9.10.3. Damages for breach of Maintenance Obligations (Clause 17.8)

In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, @ 0.1% (zero point one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

9.10.4. Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

9.11 Annuity (Clause 25.1)

The Authority agrees and undertakes to pay the Concessionaire for each annuity Payment period on each annuity payment date as set forth in schedule NY of CA the sum of Rs. 17.46 Crores.

As per Clause 25.2.1, In case the COD is different from the Schedule Y of CA, then the annuity payment schedule shall be suitably modified to be a period of 6 months from the preceding Annuity Payment date.

Table 9.1: Status of Annuity Payments

S. No.	Particulars	Annuity Date	Payment Paid on
1	1st Annuity	03.01.2015	20-Jan-15
2	2nd Annuity	03.07.2015	24-Jul-15

S. No.	Particulars	Annuity Date	Payment Paid on
3	3rd Annuity	03.01.2016	12-Jan-16
4	4th Annuity	03.07.2016	11-Jul-16
5	5th Annuity	03.01.2017	13-Jan-17
6	6th Annuity	03.07.2017	10-Jul-17
7	7th Annuity	03.01.2018	6-Jan-18
8	8th Annuity	03.07.2018	7-Jul-18
9	9th Annuity	03.01.2019	4-Jan-19
10	10th Annuity	03.07.2019	4-Jul-19
11	11th Annuity	03.01.2020	12-Jan-20
12	12th Annuity	03.07.2020	6-Jul-20
13	13th Annuity	03.01.2021	11-Jan-21

9.12 Concession Fee (Article 26)

- In consideration of the grant of Concession the Concessionaire shall pay Concession Fee of Rs. 1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year
- Yearly the Concessionaire is paying the Concession Fee to the Authority

9.13 Change in Law (Article 36)

If as a result of Change in law the Concessionaire suffers an increase in cost or reduction in net after tax return or other financial burden, the aggregate financial effect of which exceeds Rs.50 Lakhs or 0.5% of the Total Project Cost whichever is higher in any accounting year, the Concessionaire may so notify the Authority and propose amendments to the Agreements so as to place the Concessionaire in the same financial position as it would have enjoyed had there been no such Change in law resulting in the cost increase, reduction in return or other financial burden as aforesaid along with required justification to substantiate the claim notified.

CHAPTER 10. INSURANCE

10.1 Details of Insurance

As per clause 27.1 of the Concession Agreement (CA), the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Insurance copies are provided in **ANNEXURE 8**. Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 10.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Property
			From	To	
Civil Engineering Completed Risk	National Insurance Company Ltd	321300441910001987	27.03.2020	26.03.2021	Road & Structure: Toll Building & Toll Booths, TMS, HTMS, Office & IT equipment, Electronic Equipment, Road Furniture, Fixtures, electrical Poles Lighting & Fittings, Sign boards & Safety Barrier
Employees Compensation Insurance Policy	The New India Assurance Co Ltd	4501003619010000061	31.01.2020	30.01.2021	All categories of Employees of the Contractor & sub-contractor engaged in the Project

CHAPTER 11. CONCLUSION

11.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

11.2 Pavement Condition

Pavement condition is good. Drainage system is effective along the project road as the RCC drains constructed in built up locations and earthen drains in rural locations. Shoulder condition is fair.

11.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are getting cleared during regular maintenance period.

11.4 Project Facilities

Toll Plaza is located at Km. 80+680 and is operational. Toll Plaza is operated by ETC Toll collection system and connected by network system monitored in administrative building. Bus bays are in good condition. Medical Aid posts found in functional condition. Avenue plantation and landscaping at Toll Plaza is provided and being maintained. Highway lighting is provided at toll plaza locations and found functional.

11.5 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 73-2007. The condition of sign boards is good. Other road appurtenances like metal beam crash barriers and Kerb are intact.

11.6 Maintenance:

- Routine maintenance is being carried out by O&M contractor effectively, based on documents reviewed, time to time observations made by client/Authority are being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance was carried recently a3nd next MM is scheduled in the year 2026.

11.7 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work is being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

Annexure 1: Pavement Condition

Condition/Quality: G=Good, F=Fair, P=Poor, VP=Very poor & D Damaged Rutting: M=Moderate & S=Severe Drain: LD=Lined open Drain, ULD=Unlined Drain, CD=Covered Drain, NO=No drain, PF=Partial Function, F= Functional

To,
Dilip Buildcon Limited
E-5/99, Arera Colony,
Bhopal - 462 016 (M.P)

Kind Attention: Mr. Devendra Jain (Dilip Buildcon Limited)

Subject: **Letter of Award (LOA) for Package 8 bid out under the Tender Notice No: 1 & 2 of 2010-11 issued by Roads & Buildings Department, Gujarat, dated 4th & 18th September 2010**

We refer to your unconditional bid for Package 8 (Nadiad - Mahudha - Kathlal - Kapadvanj - Bayad - Modasa) in response to our Request for Proposal issued vide Tender Notice no: 1 & 2 of 2010-11 issued by Roads & Buildings Department, Gujarat, dated 4th & 18th September 2010 and all addendums and corrigendums issued thereto, for the development of select stretches of state highways in Gujarat on Design Build Finance Operate Transfer – Annuity basis ("the Project").

We are pleased to inform you that your Financial Bid of ₹17,46,00,000/- (*Rupees seventeen crores forty-six lakhs only*), to be paid to you as six-monthly Annuity, as per the terms of the draft Concession Agreement, has been duly approved by the Roads & Buildings Department, Gujarat vide their order No. SHDP/102010/631/7/Pvt. dt. 01/08/2011 and you have been declared as the Selected Bidder.

Please note that this LOA is subject to the following terms and conditions:

1. As per Clause 3.3.5 of the Part 1 - Instruction to Bidders (ITB) of the RFP, within 7 (seven) days of the receipt of the LOA, you are requested to sign and return the duly signed duplicate copy of the LOA, in acknowledgement thereof, along with a letter undertaking that you would abide by all the conditions mentioned herein;
2. You are required to submit to the R&BD, details of the Special Purpose Vehicle (SPV) promoted and incorporated in accordance with Clauses 1.1.2 (B), 1.1.2(C) and 2.3 of Part 1- Instruction to Bidders (ITB) of the RFP, at the earliest;

3. In terms of Clause 1.3 of the ITB you are required to execute the Draft Concession Agreement between the R&BD, GOG and the SPV to be set up in accordance with the RFP, within 60 days from the issue of the Letter of Award;
4. In terms of Clause 9.1.1 of the Draft Concession Agreement, you are required to extend the Bid Security and keep it in force and effect, until the time you furnish the Performance Security and the same comes into effect.
5. In compliance with the terms of Clause 3.6 of the ITB you are required to pay, at the time of signing of the draft Concession Agreement, to India Infrastructure Initiative a non-refundable amount of ₹1,86,95,835 /- (**Rupees One Crore Eighty Six Lakhs Ninety Five Thousand Eight Hundred and Thirty Five Only**) plus service tax and education cess, towards 90% of project development expenses, by means of a Demand Draft from a Scheduled Bank (except a Cooperative Bank) in favour of India Infrastructure Initiative, payable at Delhi, and undertake to pay remaining amount of ₹20,77,315 /- (**Rupees Twenty Lakhs Seventy Seven Thousand Three Hundred and Fifteen Only**) plus service tax and education cess, towards balance 10% of project development expenses at any time within 3 (three) months from the date of signing of the Draft Concession Agreement.

Kindly note, that this communication by itself does not create any right or contractual relationship with R&BD, GoG. Any such right or relationship shall come into effect only on your fulfilling the above said conditions and execution of the Draft Concession Agreement. In the event of failure on your part to comply with any of the terms and conditions mentioned in the LOA and the RFP, within the time period and in the manner prescribed therein, R&BD, GoG, in addition to all other rights and remedies that may be available to it under the provisions of the RFP and the applicable laws, shall be at absolute liberty and freedom to treat your Bid as rejected and deal with the captioned Project as it deems fit in accordance with the RFP.

Please acknowledge this letter within 7 days of receipt of this letter and indicate a suitable date for execution of the Draft Concession Agreement which shall in no case, be later than 60 (sixty) days from the date of this Letter of Award.

Annexure 6: Provisional Certificate

(Ref. No. SAI/SHDP/E/1121/2013 dated-31/12/2013)

PROVISIONAL CERTIFICATE

1. I, **Arun Shende** Team Leader (SAI Consulting Engineers Pvt. Ltd), acting as Independent Engineer, under and in accordance with the Concession Agreement dated 05th January 2012 for redevelopment of the section **Nadiad –Mahudha – Kathlal –Kapadvanj-Bayad-Modasa** from km 0.600 to km109.00 (inclusive of Maintenance works between km 1.300 to km 2.300 Nadiad , km 26.050 to 27.710 Kathlal, km 42+850 to km 44.250 Kapadvanj, km 74.750 to km75.750 to km 75.850 Bayad, km 96.000 to km 96.560 Sikka Chokadi, km 106.300 to km 107.550 Modasa (as per Schdule-K)on State Highway No 59 in Gujarat (the “Project Highway”) on design, build, finance, operate and transfer (DBFOT) annuity concession basis through **M/s DBL NADIAD-MODASA TOLLWAYS LIMITED**, hereby certify that the Tests specified in Article 14 and Schedule-I of the Concession Agreement have been undertaken to determine compliance of the Project Highway with the provisions of the Agreement.
2. Construction Works that were found to be incomplete and/or deficient have been specified in the Punch List appended here to, and the Concessionaire has agreed and accepted that it shall complete and/or rectify all such works in the time and manner set forth in the Concession Agreement. Some of the incomplete works have been delayed as a results of reasons attributable to the R&BD, GoG or due to Force Majeure and the Provisional Certificate cannot be withheld on this account. Though the remaining incomplete works have been delayed as a result of reasons attributable to the Concessionaire, I am satisfied that having regard to the nature and extent of such incomplete works, it would not be prudent to withhold commercial operation of the Project Highway, pending completion thereof.
3. In view of the foregoing, I am satisfied that the Project Highway can be safely and reliably placed in commercial service of the Users thereof, and in terms of the Concession Agreement, the Project Highway is hereby provisionally declared fit for entry into commercial opeation on this the 31st day of December 2013.

Kind Attn: Mr. J. P. Mishra

Sub: Services of Independent Engineer for Two Laning with Paved Shoulders of Stretches of State Highways under SHDP to be executed on Design, Build, Finance, Operate & Transfer (DBFOT) Annuity Basis- **Package-8 - Nadiad-Kathlal-Bayad-Modasa Road (SH-59)**

Reg: Completion Certificate (Article 14 & Schedule-J)

Ref: 1. Our Letter No. SAI/SHDP/IE/1150/2014 dated 21.01.2014
2. Concessionaire's Letter No. DBLNMTL/IE-SAI/SHDP/Package-08/2014/263 dated 23.03.2014

Dear Sir,

As per Provision of Concession Agreement Article 14.3, Provisional Completion Certificate with Punch List was issued by the Independent Engineer vide letter (1) above. Accordingly Concessionaire has attended the work within the stipulated time period i.e. 90 days from the date of issue of Provisional Completion Certificate.

Concessionaire informed Independent Engineer that they have completed the punch list items vide letter (2) above. Independent Engineer's Key personals visited the project site along with Concessionaire Representative on 01.04.2014. Following Representatives were present:

Independent Engineer

Mr. N.V. Satyanarayana, Acting TL cum SQME
Dr Y.S. Madhvesh, Sr. Pavement Specialist
Mr. Sandeep Rathod, CAD Expert
Mrs. Meena Jain, Environmental Engineer
Mr. Kumar Prem Prakash, Resident Highway Engineer
SAI Site Team

Concessionaire

Mr. J. P. Mishra, DBL

Subsequently on 09.04.2014 Mr. Sushant Gupta, VP (Projects) Mr. Anil Mehta, Project Coordinator and Mr. P G Kulkarni, Team Leader cum Sr. Highway Engineer along with Concessionaire Representative Mr. J P Mishra, Project Manager also had joint inspection.

It is found that the Concessionaire has completed all works given in the Punch List satisfactorily. As Built Drawings has been submitted which are under review with Independent Engineer.

Y:\1 All Project Documents\212002-R&B Gujarat\Current Letters from 2014\Current Letters-2014.doc

SAI Consulting Engineers Pvt. Ltd.

Concessionaire could not complete the Avenue Plantation as per Provision of Concession Agreement because of ROW constraint mainly wherever the embankment height is more than 2 Meter and Urban areas.

The work has not been executed/deviated from the Provision of Concession Agreement has been attached herewith as **Annexure -1**.

The Project Assets Report is attached herewith as **Annexure-2**.

Based on the above facts and inspection, Project Highway has been completed on 29.03.2014. Independent Engineer is issuing the **Completion Certificate** pursuant to Clause 14.2 & 14.3 and Schedule-J of Concession Agreement.

The Project Highway **provisionally declared fit entry into Commercial Operation** on **31.12.2013**, as mentioned in Provisional Completion Certificate. Since Concessionaire has now completed the Punch List items within 90 days period, as per Article 14.4 CA, the **date of Commercial Operation will be 31.12.2013 as per Article 15**.

Thanking you.

Yours Sincerely,

FOR SAI CONSULTING ENGINEERS PVT. LTD.

SUSHANT GUPTA
VICE PRESIDENT (PROJECTS)

Encl: **Completion Certificate**

Annexure 1 - Reduction Scope of Work as per Schedule-B of CA

	THE NEW INDIA ASSURANCE COMPANY LIMITED Registered & Head Office- 87, M.G. Road, Fort, Mumbai-400001.
	WORKMEN'S COMPENSATION POLICY

WHEREAS the insured carrying on the Business described in the Schedule and no other for the purpose of his insurance by a proposal and declaration which shall be the basis of this contract and is deemed to be incorporated herein has applied to the Company for the insurance hereinafter contained and has paid or agreed to pay the Premium as consideration for such insurance.

NOW THIS POLICY WITNESSETH that if any time during the period of insurance any employee in the insured's immediate service shall sustain personal injury by accident or disease arising out of and in the course of his employment by the insured in the Business and if the Insured shall be liable to pay compensation for such injury either under

the Laws (s) set out in the Schedule
or at
Common Law

then subject to the terms exception and conditions contained herein or endorsed hereon the Company will indemnify the Insured against all sums for which the insured shall be so liable and will in addition be responsible for all costs and expenses incurred with its consent in defending any claim for such compensation.

PROVIDED ALWAYS that in the event of any changes in the law(s) or the substitution of other legislation thereof this policy shall remain in force but the liability of the Company shall be limited to such sum as the Company would have been liable to pay if the Law (s) had remained unaltered.

Law(s)

1. The Workmen's Compensation Act, 1923 and subsequent amendments of the said Act, prior to the date of the issue of Policy. 2. The Fatal Accidents Act, 1855.

It is hereby understood and agreed that the Workmen's Compensation (Amendment) Acts, of 1959 (8 of 1959, and 1962 (64 of 1962) and 1976 (65 of 1976) and 1984 (22 of 1984) and 1995 (30 of 1995) and 2000 (46 of 2000) and deemed to be added to the Laws set out in the Schedule to the Policy.

Provided that the Insurance granted hereunder is not extended to include :

- (i) any interest and/or penalty imposed on the Insured on account of his/her failure to comply with the requirements laid down under the W. C. Act. 1923 and
- (ii) any compensation payable on account of occupational diseases listed in part 'C' of schedule III of the W. C. Act. 1923

EXCEPTIONS

1. The Company shall not be liable under this Policy in respect of
 - (a) any injury by accident or disease, directly attributable to war, invasion, act of foreign enemy, hostilities (Whether war be declared or not) civil war, mutiny, insurrection, rebellion, revolution or military or usurped power.
 - (b) the insured's liability to employees of contractors to the insured.
 - (c) any employee who is not a "workman within meaning of the Law(s)"
 - (d) any liability of the insured which is attached by virtue of an agreement but which would not have attached in the absence of such an agreement.
 - (e) any sum which the Insured would have been entitled to recover from any party but for an agreement between the Insured and such party.

2. This Policy does not cover :
 - (a) any accident or any loss or destruction of or damage to any property whatsoever or any loss of expenses whatsoever resulting or arising therefrom or any consequential loss.
 - (b) any legal liability of whatsoever nature.
 - (c) payment of compensation in respect of death, injury, disablement, of the insured person, directly or indirectly caused by or contributed to by or arising from ionising radiation or contamination by radioactivity from any source whatsoever.
3. The indemnity or compensation provided by this Policy shall not apply to nor include any accident, loss destruction damage or legal liability directly or indirectly caused by or contributed to by or arising from nuclear weapons material.

CONDITION

1. This Policy and the Schedule shall be read together as one contract and any word or expression to which a specific meaning has been attached in any part of this policy or of the schedule shall bear such specific meaning wherever it may appear.
2. Every notice or communication to be given or made under this policy shall delivered in writing to the Company.
3. The insured shall take reasonable precaution to prevent accidents and diseases and shall comply with all statutory obligations.
4. In the event of any occurrence which may give rise to a claim under this Policy the Insured shall as soon as possible give notice thereof to the Company with full particulars. Every letter claim writ summons and process shall be notified or forwarded to the Company immediately on receipt. Notice shall also be given to the Company immediately the shall insured shall have knowledge of any impending prosecution inquest or fatal enquiry in connection with any such occurrence as aforesaid.
5. No admission offer promise or payment shall be made by or on behalf of the Insured without the consent of the Company which shall be entitled if it so desires to take over and conduct in his name the defence or settlement of any claim or to prosecute in his name for its own benefit any claim for indemnity or damages or otherwise and shall have full discretion in the conduct of any proceedings and in the settlement of any claim and the Insured shall give all such information and assistance as the Company may require.
6. The first premium and all renewal premiums that may be accepted are to be regulated by the amount of wages and salaries and other earnings paid by the Insured to employees during each period of Insurance. The name of every employee together with the amount of wages and other earnings shall be properly recorded and the insured shall at all times allow the Company to inspect such records and shall supply the Company with a correct account of all such wages salaries and other earnings paid during any period of Insurance within one month from the expiry date of such Period of Insurance. If the amount so paid shall differ from the amount on which premium has been paid the difference in premium shall be met by a further proportionate payment to the Company or by a refund by the Company as the case may be.
7. The Company may cancel this Policy by sending seven days notice by registered letter to the Insured at his last known address and in such event the premium shall be adjusted in accordance with Condition 6.
8. If any dispute or difference shall arise as to the quantum to be paid under the Policy (liability being otherwise admitted) such difference shall independently of all other questions be referred to the decision of a sole arbitrator to be appointed in writing by the parties to or if they cannot agree upon a single arbitrator within 30 days of any party invoking arbitration the same shall be referred to a panel of three arbitrators, comprising of two arbitrators, one to be appointed by each of the parties to the dispute/difference and the third arbitrator to be appointed by such two arbitrators and arbitration shall be conducted under and in accordance with the provisions of the Arbitration and Conciliation Act, 1996.

It is clearly agreed and understood that no difference or dispute shall be referable to arbitraion as hereinbefore provided if the Company has disputed or not accepted liability under or in respect of this Policy.

"It is hereby expressly stipulated and declared that it shall be a condition precedent to any right of action or suit upon this Policy that award by such arbitrators or umpire of the amount of the loss or damage shall be first obtained."

It is also hereby further expressly agreed and declared that if the Company shall disclaim liability to the Insured for any claim hereunder and such claim shall not, within twelve calendar months from the date of such disclaimer have been made the subject matter of a suit in a Court of Law, then the claim shall for all purposes be deemed to have been abandoned and shall not thereafter be recoverable hereunder.

9. The due observance and fulfilment of terms, conditions and endorsements of this policy so far as they relate to anything to be done or not to be done by the Insured and the truth of the statements and answer in the proposal shall be conditions precedent to any liability of the Company to make any payment under this Policy.

DETAILS OF REDUCTION OF SCOPE

Details of reduction of scope as recommended and submitted by the said RD as per Article-16.5 of CA is following items:

HIGHWAY

Sr. No.	Item/Structure/ Chainage/Size	Required as per Schedule B & C of CA	Remarks
1	25+870 to 25+155	Km. 25+070 to 25+250 TCS No. 25/250 to 25+255 TCS-8A	Reduction scope of work issued by Dy. Engineer Nadiad vide letter No. D/PR/SHDP/754-2013 dated 03/03/2013.

STRUCTURE

Sr. No.	Item/Structure/ Chainage/Size	Required as per Schedule B & C of CA	Remarks
1	Box Culvert at Ch. 27+800 (1x3.0)	Reconstruction	2x3.0-EPC
2	Frame Pipe Culvert at Ch. 28+695 (1x1.20)	Reconstruction	Widening with 1.50 m Pipe
3	Frame Pipe Culvert at Ch. 1+233 (1x1.20)	Reconstruction	Not done
4	Frame Pipe Culvert at Ch. 54+56 (1x1.20)	Repair & Widening	Not done
5	RCC Drain	38850.5 mt	1870m not executed

PROJECT FACILITIES

Sr. No.	Item/ Structure/ Chainage/Size	Required as per Schedule B & C of CA	Status of work at site	Remarks
1	Ambulance	1 No.	* Ambulance not provided during construction period i.e. from 03/03/2012 to 30/03/2013 * Ambulance 01 No. having registration No. GJ 27 U 3995 is available from 31/3/2013	
2	Patrol Vehicle	1 No.	* Patrol vehicle not provided during construction period i.e. from 03/03/2012 to 30/03/2013 * Patrol vehicle 01 No. having registration No. GJ 07 NY 1926 is available from 31/3/2013	
3	Vehicle for Road official	1 No.	* Vehicle not provided from period i.e. from 03/03/2012 to 30/03/2013	
4	Crane	1 No.	* Crane not provided during construction period i.e. from 03/03/2012 to 30/03/2013 * Crane 01 No. having registration No. GJ 01 PQ 4647 is available from 31/3/2013	
5	Truck Lay by	2 Nos. at Km. 24+450 to No. 8E-450	No work executed	No land available

CHAPTER 1. INTRODUCTION

1.1 General

DBL BANKHALFATA – DOGAWA TOLL WAYS LTD (BDTL) (herein after referred to as the “Concessionaire”) had augmented the existing road of “**Bankhlfata – Dogwa – Borawa - Savardevala - Punasa-Mundi Singhaji Therma Power Plant & Singhaji Bridge Approach Road, Mundi - Devala – Khutala - Attot**” section of MDR with a length of 65.40 Kms. in the State of Madhya Pradesh, in accordance with the provisions of the Concession Agreement (CA) executed with Madhya Pradesh Road Development Corporation Limited (herein after referred to as the “MPRDCL”) on 28th January,2013 on Design, Build, Finance, Operate and Transfer (DBFOT) on Annuity Basis.

Project Road consists of three stretches, which includes total length of 65.40 Kms. the stretches are provided in the following table.

Table 1.1: Project Data.

Section	Length (Kms.)
Bankhal-Dogawan-Borawan-Savardevala	23.600
Beed - Mundi Road to Singaji thermal Power Plant& Mandla Village - Singaji Bridge	13.300
Mundi – DevlaKutla - Atoot	28.400
Total Length	65.400

SHREM ROADWAYS PVT. LTD. (SRPL) acquired DBL Bankhlfata – Dogawa Tollways Ltd (BDTL) vide agreement dated 26 March 2018.

SHREM FINANCIAL PVT. LTD. appointed M/s RUKY Projects Pvt. Ltd. as consultants for Detailed Technical Due Diligence Services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the traffic potential.

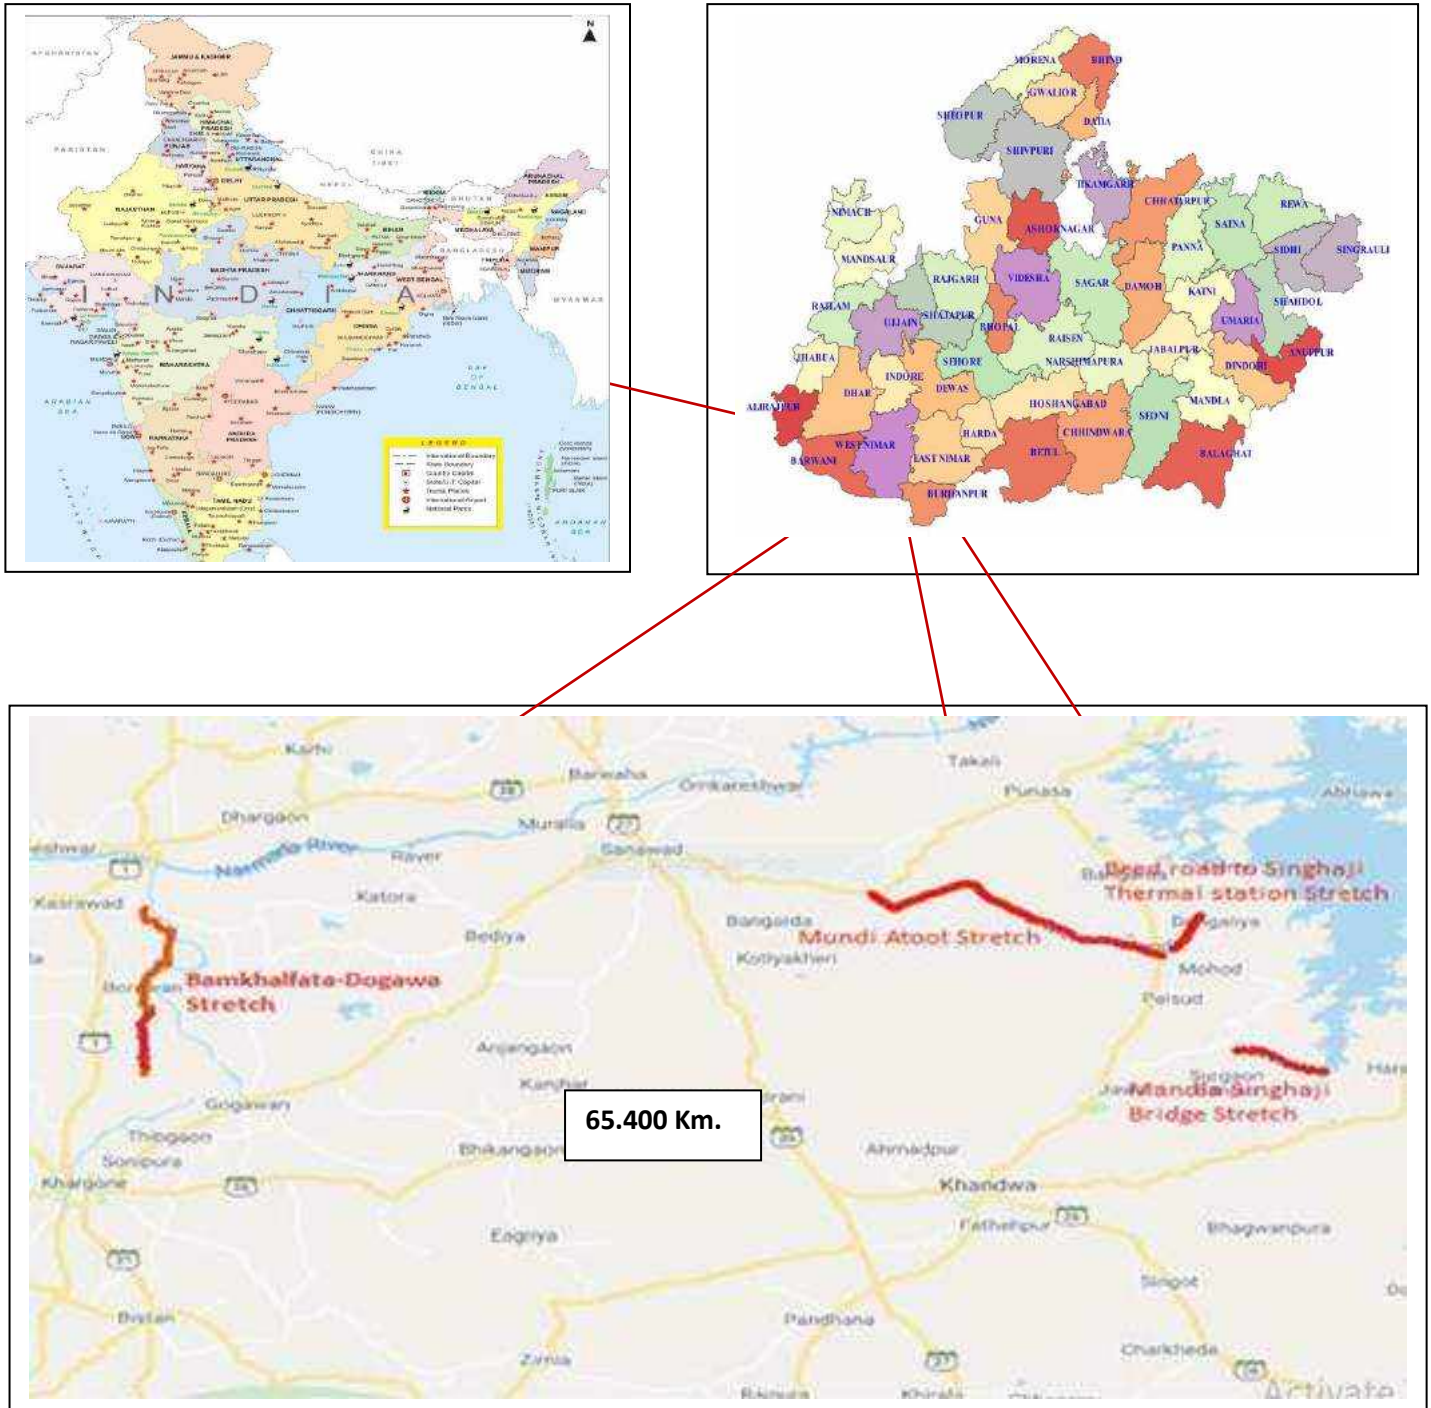

Figure 1.1: Project Location Map

Project Data:

The details of the Project are listed in the following table.

Table 1.2: Project Data.

S. No.	Particulars	Details
1	Name of the project	Development of Bankhlfata-Dogawa-Via-Borawa-Savardevala, Punasa-Kundi-Singhaji (Thermal Power Plant) & Singhaji Bridge Approach Road, Mundi-Devala-Khutala-Atoot NVDA(3 MDR) in the State of Madhya Pradesh on DBFOT (Annuity) Basis
2	Road Type	Major District Road (MDR)
3	Name of the Authority	Madhya Pradesh Road Development Corporation Limited
4	Name of the Concessionaire	DBL Bankhlfata – Dogawa Toll ways Ltd (BDTL)
5	Name of the EPC Contractor	M/s Dilip Buildcon Limited
6	Design Length as per Schedule B of CA	65.4 Kms.
7	Date of LOA	13.12.2012
8	Date of Agreement	28.01.2013
9	EPC Cost	116.53 Cr.
10	Nature of contract	DBFOT (Annuity)
11	Toll collected by	MPRDCL
12	Concession Period	15 years from the Appointed date
13	Appointed date	14.08.2013
14	Concession end date	13.08.2028
15	Construction Period	730 days from the Appointed date
16	Scheduled Completion Date	13.08.2015
17	Date of issuance of Provisional Certificate (Commercial Operation Date)	31.03.2014
18	Date of issuance of Completion Certificate	01.07.2014
19	Annuity Amount (every six months)	Rs 9.9 Cr
20	Total Number of Annuities payable	29 Nos.
21	First Annuity Payment Date	18.10.2014
22	Total Number of Annuity Paid	13 Nos.

1.2 Scope of Consultancy Services

The scope of work includes providing Technical Due Diligence of the project road and providing estimate of the anticipated maintenance works. Scope of the work as defined in the Consultancy work order is listed below:

- Review of various contractual documents,

- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout out road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project:

The salient features as per schedule B and Schedule C of CA including Change of scope are given in the following table.

Table 2.1: Salient Features

S.No.	Particulars	As per CA	As per COS*	As per Site
1	Total Length of Project	65.400 Kms.		65.400 Kms.
2	Total Length of 2 Lane(Flexible)	61.106 Kms.	-0.398 Kms.	60.708 Kms.
3	Total Length of 2 Lane(Rigid)	4.292 Kms.	0.398 Kms.	4.690 Kms.
4	Toll Plaza	Nil		Nil
5	Bus Bays / Bus Shelters	48 Nos.		48 Nos.
6	Truck Lay Bays	Nil		Nil
7	Major Junction	7 Nos.		7 Nos.
8	Minor Junctions	25 Nos.		25 Nos.
9	ROB	Nil		Nil
10	Major Bridges	3 Nos.		3 Nos.
11	Minor Bridges	11 Nos.		13* Nos.
12	Pipe Culverts	102 Nos.	-6	96 Nos.
13	Slab/Box Culverts	12 Nos.	0	12 Nos.

* As per site requirement 2 Nos of Minor Bridges are constructed

2.2 Typical Cross Section (TCS) Schedule:

The Concessionaire has followed the Typical Cross Section schedule during the construction as given below.

Figure 2.1: TCS 2.1 of Schedule D (Open Country-Plain/Rolling Terrain)

Figure 2.2: TCS 2.3 of Schedule D (Built-Up Area) 2 Lane Carriageway with Paved Shoulder

TCS Schedule is provided below.

Table 2.2: TCS Schedule

S. No.	From (Km.)	To (Km.)	Description	Length (m)	TCS Type
Section I Bankalfata - Dogawa					
1.	0+000	1+300	2L+ES	1300	TCS 2.1
2.	1+300	1+600	2L+PS	300	TCS 2.3

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the carriage way and to avoid accumulation of drainage from road side community on to the carriage way, RCC drains are constructed along the main carriage way on both flanks in Built-up sections as specified in Schedule B of the Concession Agreement in strict adherence to the Standard Specifications set forth in Schedule D of the Concession Agreement
- Accordingly, Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drain in open and rural areas.

2.4 Service Roads:

Service roads are not provided along the entire stretch of the project road as per provisions of Schedule B of the Concession Agreement.

2.5 Bypass/Realignment:

Bypasses are not provided for the project road. Total 9 No of realignments are present for the project road as per Schedule B of Concession Agreement. The total realignment length is 1.719 Kms. for total project road. The list of realignment sections is given below.

Table 2.3: Realignment sections for the Project road

2.12 Other Project Facilities Provided as per Schedule C of CA:

- Road side furniture: Sign Boards KM stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic Safety Devices: Metal Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of the Concession Agreement.
- Tree Plantation: Tree plantation is provided on both sides of the Project Corridor all along the way and being maintained.

Figure 2.4: Existing Road Features

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections below:

3.2 Road Inventory

Inventory of the project road was carried out physically and is summarized in **Table 3.1** and few representative photographs are given at the end of the Chapter

Table 3.1: Road Inventory

S.No.	Features	Remarks
1.	Terrain	Plain and Rolling
2.	Land Use	Predominantly agriculture & balance is built up
3.	Two Lane length	65.400 Kms.
4.	Earthen shoulder	1.0 m to 1.5m Width on site
5.	Realignments	1.719 Kms.
6.	Junctions	07Nos Major Junctions, 25 Nos Minor Junctions
7.	Toll Plaza	Nil
8.	Sign boards	Sign boards are provided as per highway requirements
9.	Road Markings	Lane markings are provided as per highway requirements
10.	Bus Bays /shelters	48 nos.
11.	Avenue plantation	Provided along the Project road

3.3 Pavement Condition

Pavement condition survey was carried out on the project road based on visual observations supplemented by simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Pavement surface condition assessment is a key component of infrastructure asset management. The information is used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is

to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey

The survey on general pavement condition was primarily undertaken by means of slow drive-over survey, and supplemented with measurements where ever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, pot holes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of Surface area)
 - Ravelling (% of Surface area)
 - Potholes (% of Surface area)
 - Patching (% of Surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good. The Summary of field measurements of the Pavement Condition survey is tabulated in the standard proforma as per IRC: SP-19 and is given in ANNEXURE 1.

Table 3-3: Pavement condition summary

Chainage		Length (Kms.)	Condition
From (km.)	To (Km.)

CHAPTER 4. INVENTORY AND CONDITION OF STRUCTURES

4.1 General Assessment and Details of the Existing structures

Inspection of existing structures on the project section was carried out, Detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

The details of structures along the project highway are listed below.

Table 4.1 List of Structures

S.No.	Type of Structure	Numbers
1	Major bridges	03 Nos.
2	Minor Bridge	13 Nos.
3	Pipe culverts	96 Nos.
4	Slab/Box Culverts	12 Nos.

The Major bridges superstructure is of RCC Solid slab wall type piers and abutments with open foundation. The minor bridges of superstructure are RCC solid slab and the substructures are of RCC/PCC conventional wall type supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Structural condition of most of the culverts is fair except in few locations. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges:

The total length of the Major Bridge at Km. 13+369 is 70.0m with 5 spans. The superstructure consists of RCC Solid slab. Piers and abutments are of RCC wall type. Open foundations have been constructed for all piers and abutments. RCC railings have been provided on both sides of the deck.

The total length of the Major Bridge at Km. 25+611 is 60.6m with 6 spans. The superstructure consists of RCC Solid slab. All piers and abutments are regular RCC wall type. Open foundations have been constructed for all piers and abutments. RCC railings have been provided on both sides of the deck.

The total length of the Major Bridge at Km 25+939 is 80.8m with 8 spans. The superstructure consists of RCC Solid slab. All piers and abutments are regular RCC wall type. Open foundations have been constructed for all piers and abutments. RCC railings have been provided on both sides of the deck.

Table 4.2 List of Major Bridges

S.No.	Chainage (Km.)	Span	Total Length of Bridge (m)
1	13+369	5 x 14.0	70.0
2	25+611	6 x 10.1	60.6
3	25+939	8 x 10.1	80.8

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, cleaning of drainage spouts and strip seal expansion joints are to be carried out.

4.4 Details of Minor Bridges

The details of Minor bridges in the project stretch are given below. The type of superstructure for minor bridges are RCC girders, RCC solid slab and RCC Box type. The substructures are PCC/RCC/Masonry conventional wall types supported on open foundations. Expansion joints are either buried type or strip seal and bearings are of tar paper and elastomeric bearings. RCC crash barriers are provided on all the structures.

Table 4.3 Inventory of Minor Bridges

4.5 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good for some of the pipe culverts. Vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given in the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.5.1. Details of the Slab/Box Culverts

There are 12 Nos. of slab/Box culvert in the project stretch. The details of the culverts are as given below.

Table 4.4 List of Slab/Box Culverts

S.No.	Chainage (Km.)	Span (m)	Vent Size (m)
Bankhlaftata Section			
1	2+781	1 x 2.1	1.6
2	18+01	1 x 3.4	2.8
3	18+631	1 x 5.2	3.20
Mundi Atoot Section			
4	2+937	1 x 2.8	2.5

11	25+23	1 x 4.2	2.80
12	27+369	1 x 1.4	2.5

The general condition of above Box/slab culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

4.5.2. Details of the Pipe Culverts

There are 96 Nos. of pipe culverts in the project road. The details of the culverts are as given below.

Table 4.5 List of Pipe Culverts

96	21+08	1 x 1.2

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General:

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design:

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the top surface of successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2001 publication while the current publication is IRC: 37-2018.

Review of Pavement Design

The project road has three sections i.e. Section-1 Bankhlaftata-Sarvardevala, Section-II Punasa-Singhaji power plant and Singhaji Bridge approach and Section-III Mundi-Attot Nvda. These three sections have been considered as single homogeneous section HS: As per the pavement design approved in the project, the following conclusions are given.

Table 5.1: Flexible Pavement Design summary

S. No.	Description/ Pavement layer	Design Parameters
1	Sub Grade CBR (%)	10%
2	Design Life (Years)	15 years
3	Design Traffic for BT (MSA)	2 MSA actual for 8 Years 5 MSA Adopted for 8 Years
4	Design Traffic for Granular Layers (MSA)	4.6 MSA actual for 15 Years 10 MSA Adopted for 15 Years
5	Surface course (SDBC)	25 mm
6	Binder course (DBM)	50 mm
7	Base course (WMM)	250 mm
8	Sub Base course (GSB)	200 mm

*Traffic estimated at pavement design stage is 2 MSA and 4.6 MSA for 8 Years and 15 Years respectively which is less than the specified MSA in Schedule D of CA (10MSA). Hence 10 MSA (5 MSA for BT for Initial stage) is adopted in pavement design for further evaluation of crust thickness.

5.3 Validation of Pavement design

The new pavement shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”. Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. “Guidelines for the Design of Plain Jointed Rigid Pavements for Highways”.

Traffic considered in pavement design 5 MSA for Initial stage (8 Years) for BT and 10MSA for (15 Years) granular layers is more than the traffic forecast during the design stage. Hence the pavement design adopted is found in order.

Rigid Pavement

Pavement crust thickness in the pavement design report for rigid pavement is as follows: -

Table 5.2: Rigid Pavement Design for Toll Plaza

Description	HS-I Parameters
CBR of sub grade	10 %
Design life in years	30
Pavement Quality Concrete (PQC) - mm	280
Dry Lean Concrete (DLC) - mm	150
Drainage Layer (GSB) - (mm)	150
Separation Membrane (Microns)	125
Diameter of Dowel Bar (mm)	32
Length of Dowel Bar (mm)	500
Spacing of Dowel Bars (mm)	300
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	500

5.4 Overlay during operation and maintenance:

The pavement has been designed to cater traffic 5 MSA (8 Years – up to 2021) for BT and 10 MSA (15 Years – up to 2028) for Granular layers for entire project road (up to 2028), whereas the actual traffic is 2 MSA and 4.6 MSA for 8 Years and 15 Years respectively. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation before the end of Stage-I of design life (as per pavement design report) and prior to end of concession period to evaluate the requirement of overlay.

5.5 Maintenance/ Overlay schedule:

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of SDBC. The detailed maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement - Proposed on or before 2021 and 2028.

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done once in 10 years from construction.

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety has multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992

Table 6.1: Referred IRC Publications

IRC : 35	Code of Practice for Road Markings
IRC : 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC : 67	Code of Practice for Road signs
IRC : 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP-88	Manual of Road Safety Audit

6.2 Existing Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 6.2: Safety Items

S. No.	Item Description	Status	Condition
1	Chevron signs	Available as per site requirement	Fair
	Village sign Board	Available as per site requirement	Fair
	Informatory Boards	Available as per site requirement	Fair

S. No.	Item Description		Status	Condition
		Object Hazard Markers at culverts	Available as per site requirement	Fair
2	Road Marking	Lane Marking	Available as per site requirement	Fair
3	W Beam Crash Barriers	At High Embankments	Available as per site requirement	Good

This Project Section is part of important corridor. It is the Concessionaire’s duty and responsibility to provide a safety and thorough fare for the road users by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

6.3 Conclusion

Safety arrangements done for road users along the project road are found in conformity with project highway requirements and good industry practice. However, a continuous monitoring on safety arrangements is required during the operation and maintenance period.

CHAPTER 7. OPERATION AND MAINTENANCE

7.1 General

As per Article 17 of the Concession Agreement, the Concessionaire will operate and maintain the Project road by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in this Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines.

7.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

Visual Inspection: Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.

Detailed Inspection: Detailed Inspections often (require some measuring instruments) are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution

Thorough Inspection: Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to Authority not later than 45 days prior to beginning of each accounting year during the operation period.

7.3 Operations:

Traffic Flow Operation & Traffic Management Plan:

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- 1 Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- 2 carrying out preventive and periodic maintenance of the Project road;
- 3 undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- 4 undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs
- 5 Functioning of the lighting system;
- 6 Functioning of the Patrolling System

- 7 Functioning of rescue and medical aid services
- 8 Ambulance as and when required
- 9 Functioning of the Project Facilities
- 10 Administrative, Operational and Maintenance Base Camp
- 11 Truck Parking Lay bays
- 12 Pickup Bus stops / Bus Bays
- 13 Protection of the environment and provision of equipment and materials therefor;
- 14 Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- 15 complying with Safety Requirements in accordance with Article 18.

7.4 Maintenance of Project Road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence doesn't require any immediate or preventive interventions.

Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road.

The details of periodic maintenance schedule are given below.

Table 7.1 Schedule and status of Periodic Maintenance

Description	Schedule	Status
1 st Periodic Maintenance	2021	Planned to execute
2 nd Periodic Maintenance	2028	Planned to execute

Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- Culvert and bridge repairs
- Retaining wall repairs and construction;
- Construction of Diversions;
- Floodway repairs; and
- Flood damage restoration works, etc.

7.5 Review of Test Reports

Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of September 2020. As per Schedule K of CA, If the stretch exceeds 3000mm in a KM shall be rectified. No stretch exceeded the permissible limit in the Project Road.

Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

Concessionaire has conducted the test in September 2019. The test report has been verified and found within permissible limits as per IRC 81.

7.6 O&M Forecast

The O&M costs were estimated based on various parameters of CA and project corridor. The cost summary is given below, and detailed cost estimations are given in ANNEXURE 4.

Table 7.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance	Incidental maintenance	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	0.191	0.377		0.00	0.57
2021	0.196	0.389	11.41	0.00	12.00
2022	0.202	0.400		0.00	0.60
2023	0.208	0.412		0.00	0.62
2024	0.215	0.425		0.00	0.64
2025	0.221	0.438		0.00	0.66
2026	0.228	0.451		0.00	0.68

Total	2.01	3.98	25.04	0.01	31.04

CHAPTER 8. REVIEW OF CONCESSION AGREEMENT

8.1 General: Scope of Work (Article 2)

Article 2 provides the scope of work which includes the following.

- construction of the Project road on the Site set forth in Schedule-A of CA and as specified in Schedule-B of CA together with provision of Project Facilities as specified in Schedule-C of CA, and in conformity with the Specifications and Standards set forth in Schedule-D of CA;
- operation and maintenance of the Project road in accordance with the provisions of this Agreement;
- performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental

8.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 5**.

8.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority:

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire:

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

8.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfil its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the Contract Agreement

8.5 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction, an Aggregate sum, not less than 20% of the Total Project Cost.

8.6 Provisional Completion Certificate (Clause 14.3)

Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on successful completion, the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of the Concession Agreement. Copy of the Provisional Completion Certificate issued is enclosed at **Annexure 6**

8.7 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Completion Certificate, Completion Certificate shall be issued to the Concessionaire.
- Copy of the Completion Certificate issued is enclosed at **Annexure 7**.

8.8 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

8.9 Change of scope (Article 16)

Change of scope proposals were initiated during construction period and consented by the MPRDC and the same are given in ANNEXURE 9

8.10 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of other equipment
- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the Contract Agreement.

8.11 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations Period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (the “Maintenance Requirements”).

8.12 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “Maintenance Manual”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

8.13 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

8.14 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of this Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 0.5% (zero decimal five percent) of the Average Daily Fee, and
- 0.1% (zero point one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

8.15 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

8.16 Annuity (Clause 27)

The Authority agrees and undertakes to pay the Concessionaire for each annuity Payment period on each annuity payment date as set forth in schedule Y of CA, the sum of Rs 9.90 Crores.

As per Clause 27.2.2, In case the COD is different from the Schedule Y of CA, then the annuity payment schedule shall be suitably modified to be a period of 6 months from the preceding Annuity Payment date are shown below.

Table 8.1 Status of Annuity Payments

S. No.	Particulars	Payment Paid on
1	1 st Annuity	18-Oct-14
2	2 nd Annuity	31-Mar-15
3	3 rd Annuity	5-Oct-15
4	4 th Annuity	04-Apr-16
5	5 th Annuity	5-Oct-16
6	6 th Annuity	10-Apr-17
7	7 th Annuity	31-Oct-17
8	8 th Annuity	27-Apr-18
9	9 th Annuity	16-Oct-18
10	10 th Annuity	04-Apr-19
11	11 th Annuity	1-Oct-19
12	12 th Annuity	21-Apr-20
13	13 th Annuity	30-Sep-20

All the annuities are being paid regularly by the Authority.

8.17 Concession Fee (Article 26)

- In consideration of the grant of Concession the Concessionaire shall pay Concession Fee of Rs1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC

8.18 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 9. INSURANCE

9.1 Details of Insurance

As per clause 32.1 of the Concession Agreement (CA), the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 9.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Property
			From	To	
Civil Engineering Completed Risk	National Insurance Company Limited	321300441910001991	27.03.2020	26.03.2021	Road & Structure: Toll Building & Toll Booths, TMS, HTMS, Office & IT equipment, Electronic Equipment, Road Furniture, Fixtures, electrical Poles Lighting & Fittings, Sign boards & Safety Barrier

Copy of the insurance copy is enclosed at **Annexure 8**.

CHAPTER 10. CONCLUSION

10.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

10.2 Pavement Condition

- Pavement condition is good.
- Drainage system is effective along the project road as the RCC drains constructed in built up locations and earthen drains in rural locations.
- Shoulder condition is fair.

10.3 Condition of Structures

- General condition of Bridges is good.
- No major structural defects were noticed
Condition of Culverts is good.
- Observed vegetation growth in vents of Box and Hume Pipe culverts and they are getting cleared during regular maintenance period.

10.4 Road safety

- Pavement marking is in good condition and number of sign boards are provided as per Highway requirement. The condition of signboards is good.
- Other road appurtenances like metal beam crash barriers and Kerb are intact

10.5 Maintenance

- The routine maintenance being carried out by O&M contractor effectively, based on documents reviewed, time to time observations made by client/Authority, being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance is scheduled in 2021.

10.6 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work is being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

Annexures

Annexure 1: Pavement Condition

PROVISIONAL CERTIFICATE

1. I Team leader Vaidya Organisation Indore, acting as Independent Engineer, under and in accordance with the concession agreement dated 28.01.2013 (The "Agreement") for development of the Development of Bankhlaafata - Dogawa - via Borawa - Sarvardevala, Punasa-Kundi - Singhaji (Thermal Power Plant) & Singhaji Bridge Approach Road, Mundi- Devala - Khutala - Atoot NVDA" (3 MDRs) on BOT (Annuity) Basis Package -1 (Total length 65.40km) of MDR the "Project Highway" on build, operate and transfer (BOT) basis, through M/s DBL Bankhlaafata - Dogawa Toll ways Ltd Bhopal hereby certify that the cost specified in Article 14 and Schedule-I of the agreement have been undertaken to determine compliance of the Project Highway with the provisions of the Agreement.

2. Construction works that were found to be incomplete and/or deficient have been specified in the audit list appended hereto, and the Concessionaire has agreed and accepted that it shall complete and/or rectify all such works in the time and manner set forth in the agreement. (Some of the incomplete works have been delayed as a result of reason attributable to the MPRDC or due to Force Majeure and the Provisional Certificate cannot be withheld on this account. Through the remaining incomplete works have been delayed as a result of reason attributable to the Concessionaire.) I am satisfied that having regard to the nature and extent of such incomplete works, it would not be prudent to withhold commercial operation of the Project Highway pending completion thereof.

3. In view of the foregoing, I am satisfied that the Project Highway can be safely and reliably placed in commercial service of the Users thereof, and in terms of the Agreement, the Project Highway is hereby provisionally declared fit for entry into commercial operation on this 31 day of March 2014.

DISCLAIMER AND CONSENT FOR USE

This report has been prepared for the benefit of SHREM FINANCIAL PRIVATE LIMITED (SFPL), the investment Manager of Shrem InvIT (Trust), for and in connection with initial offer of units representing an undivided beneficial interest in the Trust. In Preparing this report, RUKY Projects Pvt Ltd has relied, in whole or in part, on data and information provided by SFPL and **DBL JAORA – SAILANA TOLLWAYS LIMITED** which RUKY Project Pvt Ltd has assumed to be accurate, complete, reliable and correct.

This report may be reproduced and included in the preliminary placement memorandum, placement memorandum and any other documents prepared in connection with the aforesaid initial offer of units of the Trust and may be made available for inspection in the manner specified therein. In connection with the report, the following details in relation to the Technical Consultant may be included in preliminary placement memorandum and the placement memorandum and any other documents prepared in connection with the aforesaid initial offer of units of the Trust.

Technical Consultant:
RUKY PROJECTS PRIVATE LIMITED
Flat No. 1403A, 14th Floor,
Manjeera Trinity Corporate,
JNTU-Hitech City Road, Kukatpally,
Hyderabad – 500072

CHAPTER 1. INTRODUCTION

1.1 General

DBL Jaora-Sailana Tollways Limited. (herein after referred to as the “Concessionaire”) had augmented the existing road into two lane undivided carriageway from (i) Jaora-Piplodha-Jalandharkheda & Piploda-Sailana (42.27 Kms.) (ii) Raipururiya-Petlabad-Bamniya (18.18 Kms.) (iii) Jawad-Khoh (21.07 Kms.) (iv) Soyat-Pidawa (Km. 6.25 Kms.) with total length of 87.77 Kms. in the State by intermediate-laning/two laning on Design, build, finance, operate & transfer BOT (Annuity) basis in accordance with the terms and conditions of a concession Agreement executed with Madhya Pradesh Road Development Corporation Limited (herein after referred to as the “MPRDC”) on 24.12.2012.

Construction, operation & maintenance of (i) Jaora-Piplodha-Jalandharkheda & Piploda-Sailana - SH-31(ii) Raipururiya-Petlabad-Bamniya(iii) Jawad-Khoh (iv) Soyat-Pidawa - SH-27 on BOT (Annuity) basis. Project location map is provided at Figure 1.1.

SHREM ROADWAYS PRIVATE LIMITED (SRPL) acquired DBL JAORA-SAILANA TOLLWAYS LIMITED vide agreement dated 26 March 2018.

SHREM FINANCIAL PRIVATE LIMITED appointed RUKY Projects Pvt. Ltd. as consultant for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements.

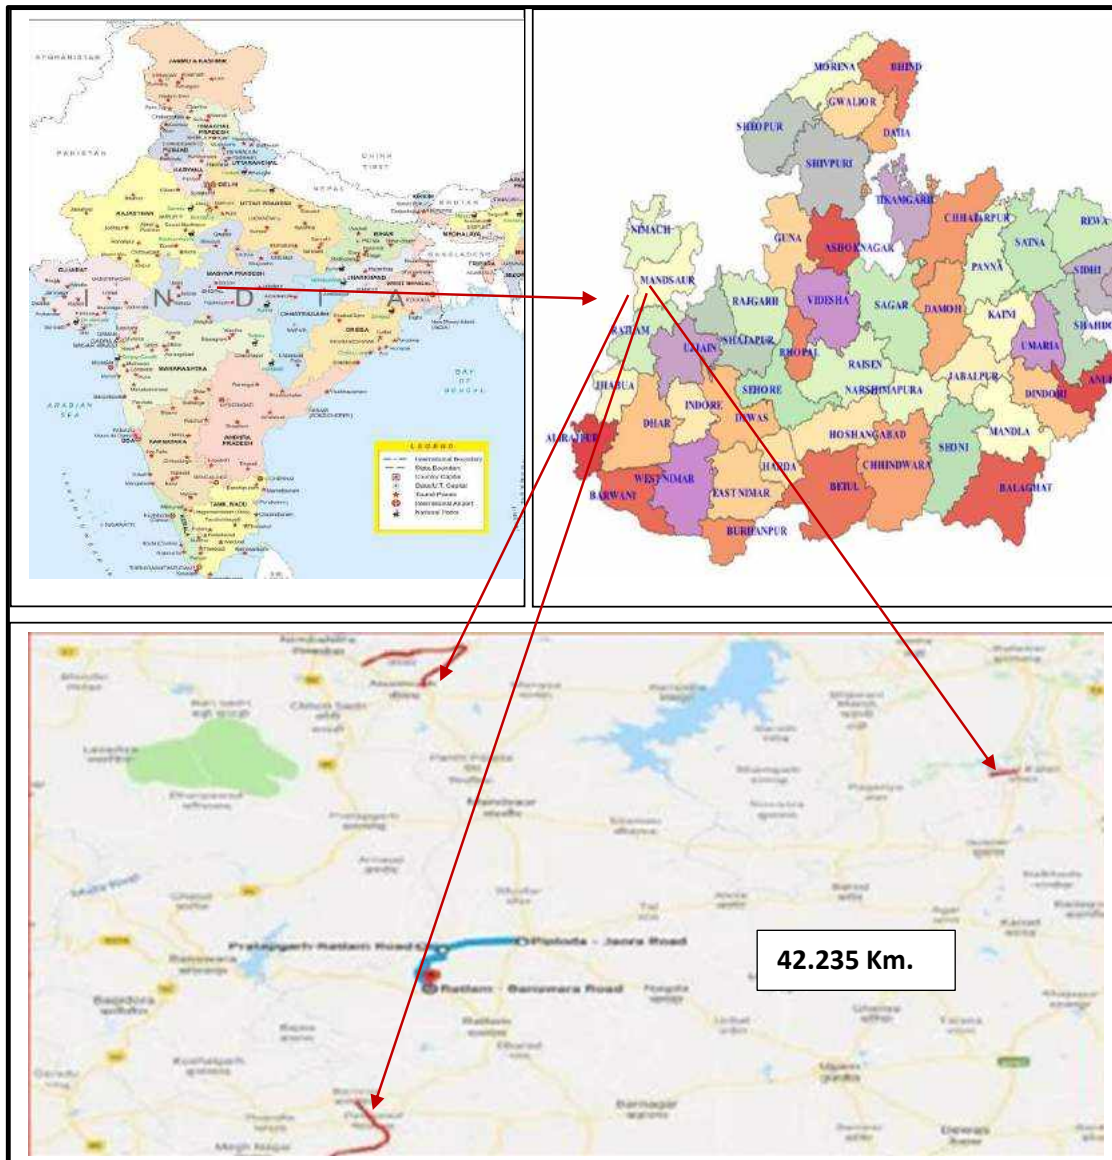

Figure 1.1: Project Location Map

1.2 Project Data

Table 1.1: Project Data

S. No.	Particulars	Details
1	Name of the project	Construction, operation and maintenance of four major district roads under Package-IV comprising of (i) Jaora-Piplodha-Jalandharkheda & Piploda-Sailana (42.235 Kms.) (ii) Raipururiya-Petlabad-Bamniya (18.18 Kms.) (iii) Jawad-Khoh (21.07 Kms.) (iv) Soyat-Pidawa (Km. 6.25Kms.) (Total Length 87.77 Kms.) in the state of Madhya Pradesh by Intermediate-Laning/Two Laning on Design, Build, Finance, Operate and Transfer BOT (Annuity) basis
2	Road Type	Major District Road (MDR)
3	Name of the Authority	Madhya Pradesh Road Development Corporation

S. No.	Particulars	Details
		Limited
4	Name of the Concessionaire	DBL Jaora-Sailana Tollways Limited
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Design Length as per Site	Jaora-Piplodha-Jalandharkheda & Piploda-Sailana: 42.235 Kms. Raipururiya-Petlabad-Bamniya: 18.400 Kms. Jawad-Khoh : 21.030 Kms. Soyat-Pidawa: 6.300 Kms. Total Length 87.965Kms.
7	Project Lane Configuration	4 and 2 Lane
8	EPC Cost	114.41 Cr
9	Nature of contract	BOT (Annuity) basis
10	Concession Period	15 years from the Appointed date
11	Letter of Award Date	09-11-2012
12	Signing of Agreement	24-12-2012
13	Appointed date	29-06-2013
14	Concession end date	28-06-2028
14	Construction Period	730 days from the Appointed date.
15	Schedule Completion Date	28-06-2015
16	Date of issuance of Provisional Certificate (Commercial Operation Date)	09-05-2014
17	Date of issuance of Completion Certificate	14.10.2014
18	Annuity Amount (every six months)	Rs.12.06 Crores
19	Total Number of Annuities payable	26 Nos.
20	First Annuity Payment Received Date	17.12.2014
21	Total Number of Annuity Paid	12

1.3 Scope of Technical Consultant:

The scope of work includes providing Technical Due Diligence of the Project Highway and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout out road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.

- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project:

The salient features described in the following table to be developed as per schedule B and Schedule C including Change of scope.

Table 2.1: Salient Features

(i) Jaora-Piplodha-Jalandharkheda & Piploda-Sailana - SH-31				
S. No.	Particulars	As per CA	As per COS	As per Site
1	Total Project Length	42.270 Kms.	(-)0.035 Kms.	42.235 Kms.
2	Rigid Pavement	2.622 Kms.	--	2.622 Kms.
3	Length of 2-Lane road	42.270 Kms.	(-)0.035 Kms.	42.235 Kms.
4	Length of 4-Lane road	--	--	--
5	Bypass/ Realignment	0.00 Km./0.995 Kms.	--	0.00 Km./0.995 Kms.
6	Toll Plaza	--	--	--
7	Bus Bays / Bus Shelters	36	--	36
8	Truck Lay Bays	--	--	--
9	Major Junction	02	--	02
10	Minor Junctions	14	--	14
11	ROB	--	--	--
12	Major Bridges	00	--	00
13	Minor Bridges	05	--	04
14	Pipe Culverts	31	--	35
	Slab/Box Culverts	24	--	17
	Total Culverts	55	--	52
(ii) Bamniya-Petlabad-Raipururiya				
S. No.	Particulars	As per CA	As per COS	As per Site
1	Total Project Length	18.177 Kms.	(+)0.223 Kms.	18.400 Kms.
2	Rigid Pavement	--	--	--
3	Length of 2-Lane road	17.460 Kms.	--	17.460 Kms.
4	Length of 4-Lane road	0.940 Kms.	--	0.940 Kms.
5	Bypass/ Realignment	0.000Kms. /0.770 Kms.	--	0.000 Km./0.770 Kms.
6	Toll Plaza	--	--	--
7	Bus Bays / Bus Shelters	18	--	18
8	Truck Lay Bays	--	--	--
9	Major Junction	01	--	01
10	Minor Junctions	10	--	10
11	ROB	--	--	--

13	Minor Bridges	03	--	03
14	Pipe Culverts	39	--	33*

	Slab/Box Culverts	09	--	09*
	Total Culverts	48	--	42
(iii) Neemuch –Jawad - Khoh - Nayagaon				
S. No.	Particulars	As per CA	As per COS	As per Site
1	Total Project Length	21.070 Kms.	(-) 0.040 Kms.	21.030 Kms.
2	Rigid Pavement	Nil	--	
3	Length of 2-Lane road	19.530 Kms.	--	19.530 Kms.
4	Length of 4-Lane road	1.500 Kms.	--	1.500 Kms.
5	Bypass/ Realignment	--	--	
6	Toll Plaza	--	--	-
7	Bus Bays / Bus Shelters	10	--	10
8	Truck Lay Bays	--	--	-
9	Major Junction	02	--	02
10	Minor Junctions	11	--	11
11	ROB	--	--	--
12	Major Bridges	00	--	00
13	Minor Bridges	03	--	03
14	Pipe Culverts	06	--	12*
	Slab/Box Culverts	10	--	07*
	Total Culverts	16	--	19
(iv) Soyat-Pidawa - SH-27				
S. No.	Particulars	As per CA	As per COS*	As per Site
1	Total Project Length	6.255 Kms.	(+) 0.045 Kms.	6.300 Kms.
2	Rigid Pavement	Nil	--	
3	Length of 2-Lane road	6.300 Kms.	--	6.300 Kms.
4	Length of 4-Lane road	--	--	--
5	Bypass/ Realignment	0.000 Kms. /0.450 Kms.	--	
6	Toll Plaza	--	--	--
7	Bus Bays / Bus Shelters	01	--	01
8	Truck Lay Bays	00	--	00
9	Major Junction	00	--	00
10	Minor Junctions	01	--	01
11	ROB	--	--	--
12	Major Bridges	00	--	00
13	Minor Bridges	00	--	00
14	Pipe Culverts	09	--	09
	Slab/Box Culverts	00	--	00
	Total Culverts	09	--	09

* 10 MNB, 89 HPC and 33 slab culverts are constructed as per site requirement along the full length of the project road .

Typical Cross Section (TCS) Schedule:

The Concessionaire has followed the following Typical Cross Section Schedule during the Construction.

Figure 2.1: TCS 2.1 of Schedule D

Two Laning with Granular Shoulder. (Cross Section in Open Areas & Rural Areas)

Figure 2.2: TCS 2.2 of Schedule D

Widening to 4 Lane divided Carriageway with footpath Built up area.

Figure 2.3: TCS 2.3 of Schedule D

The Carriageway shall be 7.0 m with Paved shoulder (In Built up Areas)

TCS Schedule is provided below.

Table 2.2: TCS Schedule

Jaora-Piploda-Jalandharkheda				
S. No.	From (Km.)	To (Km.)	length (m)	Type of TCS
1.	0+000	0+600	600	TCS.2.3 of Schedule D of CA

2.	1+000	6+300	5300	TCS.2.1 of Schedule D of CA

Figure 2.4: Pictorial Diagram of TCS Lengths

2.2 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from road side community on the Carriageway, RCC side drains are constructed along the main carriage way on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are in open and rural areas.

2.3 Service Roads:

Service road is not proposed along the entire stretch of the project road as per provisions of Schedule B of CA.

2.4 Bypass/Realignment:

There is no bypass / realignment proposed on the project road as per provisions of Schedule B of CA.

2.5 Intersections:

As per Schedule B of the Concession Agreement Major Junctions and Minor Junctions are developed. Details are given below.

Table 2.3: Summary of Major Junctions

S. No.	Chainage (Km.)	Type of junction	Type of Cross Road
Jaora- Piploda			
1	0+000	X	SH-31
Piploda - Sailana			
1	18+322	T	Village Road
Bamniya-Petlabad-Raipururiya			
1	0+000	T	Ratlam
Neemuch - Jawad			
1	0+000	X	SH-31
Jawad Nayagaon			
1	21+070	X	SH-31

Table 2.4: Summary of Minor Junctions

S. No.	Chainage (Km.)	Type of junction	Type of Cross Road
Jaora - Piploda			
1	1+530	T	Village Road
2	2+700	T	Village Road
3	4+050	T	Village Road
4	6+580	T	Village Road
5	6+800	T	Village Road

1	0+000	T	Village Road

2.6 Grade Separated Structures and underpasses:

Grade Separated Structures and underpasses are not proposed as per provisions of Schedule B of CA.

2.7 Road Over Bridge:

ROB is not proposed in the project road as per provisions of Schedule B of CA.

2.8 Summary of the Pavement and carriageway details:

Summary of Pavement Details is given below:

Table 2.5: Summary of Pavement and carriageway details

2.10 Toll Plazas:

As per Schedule C provisions of the Concession Agreement, No Toll Plazas are provided.

2.11 Bus shelters:

As per the provisions of Schedule C of the Concession Agreement bus shelters are provided at the locations given below.

Table 2-6: List of Bus shelters

Jaora- Piploda

2.12 Other Project Facilities Provided as per Schedule C

- Road side furniture: Sign Boards Kilometer stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic Safety Devices: W Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of the Concession Agreement.
- Tree Plantation: Tree plantation is provided on both sides of the Project Corridor all along the way and being maintained.

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections below:

3.2 Road Inventory

Inventory of the project road was carried out physically and is summarized in Table 3.1 and few representative photographs are given below.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain, Rolling and Hilly
2	Land Use	predominantly Agriculture
3	Four lane length	2.440 Kms.
4	Two Lane length	85.525 Kms.
5	Earthen shoulder	1.0 (m) to 1.5 (m) Width on site
6	Bypasses	Nil
7	Junctions	41 Nos.
8	Toll Plaza	Nil
9	Sign boards	Sign boards are provided as per highway requirements
10	Road Markings	Lane markings are provided as per highway requirements
11	Bus Bays /shelters	65 Nos.
12	Street Lighting	Highway lightings are provided as per highway requirements
13	Avenue plantation	Provided along the Project road

Km. 8+600 of Neemuch-Jawad Khon-Nayagaon

Km. 3+600 of Soyat-Pidawa

Figure 3.1: Existing Road Features

3.3 Pavement Condition

Pavement condition survey was carried out on the project road based on observations supplemented by simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Assessment of the condition of Pavement surface is a key component of infrastructure asset management. The information used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey methodology

The survey on general pavement condition was primarily undertaken by means of slow drive- over survey, and supplemented with measurements wherever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of Surface area)
 - Ravelling (% of Surface area)
 - Potholes (% of Surface area)
 - Patching (% of Surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP-19 and is given in **ANNEXURE 1**. The summary of Pavement condition is given below.

Table 3.3: Pavement condition summary

Jaora-Piplodha-Jalandharkheda & Piploda-Sailana			
From (Km.)	To (Km.)	Length (Km.)	Condition
0+000	42+235	42.235	Good

CHAPTER 4. INVENTORY AND REVIEW OF STRUCTURES

4.1 General Assessment and Condition of the Existing structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

The List of structures along the project road is given below.

Table 4.1: List of Structures

S. No.	Type of Structure	Numbers
Jaora-Piploda		
1	Minor Bridge	2
2	Slab / Box Culverts	8
3	Pipe culverts	26
Piploda-Sailana		
1	Minor Bridge	2
2	Slab / Box Culverts	9
3	Pipe culverts	9
Neemuch-Nayagaon		
1	Minor Bridge	3
2	Slab / Box Culverts	7
3	Pipe culverts	12
Soyat-Pirawa road		
1	Pipe culverts	9
Bamaniya –Raipurlya road		
1	Minor Bridge	3
2	Slab / Box Culverts	9
3	Pipe culverts	33

There are 10 minor bridges in all stretches. In which some are RCC solid slab structures supported on conventional wall type abutment or piers resting on open foundations. Some are RCC box type minor bridges. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types' viz. pipe culverts and RCC slab/box culverts. Structural condition of most of the culverts is fair. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Minor Bridges

There are 10 minor bridges in all stretches.

In Jaora-Piploda road, the type of superstructure for minor bridges at Ch.: 16+250 is RCC box cell structure and 19+115 is RCC solid slab. For minor bridge at Ch.; 19+115 the substructures are of PCC conventional wall type resting on open foundations.

In Piploda-Sailana road, the type of superstructure for minor bridges at Ch.: 13+914 and 14+720 is RCC solid slab and the substructure is of PCC conventional wall type resting on open foundations.

In Neemuch-Nayagaon road, the type of superstructure for minor bridges at Ch.: 11+466 and 20+535 is RCC box cell structure and for minor bridge at Ch: 19+656 is RCC solid slab. For minor bridge at Ch.; 19+656 the substructures are of CR masonry conventional wall type resting on open foundations.

In Bamaniya–Raipurlya road, the type of superstructure for minor bridges at Ch.: 0+884 and 3+809 is RCC box cell structure and for minor bridge at Ch: 6+840 is RCC solid slab. For minor bridge at Ch.; 19+656 the substructures are of RCC conventional wall type resting on open foundations.

Table 4.2: Inventory of Minor Bridges

S. No.	Chainage (Km.)	Span	Total Length of Bridge (m)	Description
Jaora – Piploda Road				
1	16+250	3 x 5.2	15.6	It is RCC box type minor bridge with RCC Crash barrier.
2	19+115	3 x 9.0	27.0	MNB has RCC solid slab superstructure supported on conventional CRM wall extended with PCC wall type piers and abutments resting on open foundations. Buried type expansion joints with RCC crash barrier.
Piploda – Sailana Road				
1	13+914	3 x 6.0	18.0	MNB has RCC solid slab superstructure supported on conventional CRM wall extended with PCC wall type piers and abutments resting on open foundations. Buried type expansion joints with masonry parapet wall.
2	14+720	4 x 5.4	21.6	MNB has RCC solid slab superstructure supported on conventional CRM wall extended with PCC wall type piers and abutments resting on open foundations. Buried type expansion joints with masonry parapet wall.
Neemuch – Nayagaon Road				
1	11+466	3 x 6.0	18.0	It is RCC box type minor bridge with RCC crash barrier.
2	19+656	4 x 5.4	21.6	MNB has RCC solid slab superstructure supported on CR masonry wall type piers and abutments resting on open foundations. Buried type expansion joints with RCC posts.
3	20+535	3 x 5.0	15.0	It is RCC box type minor bridge with With RCC crash barrir.
Bamaniya – Raipurlya Road				
1	0+884	3 x 6.0	18.0	It is RCC box type minor bridge with with RCC crash barrier.
2	3+809	2 x 6.1	12.2	It is RCC box type minor bridge with with RCC crash barrier.
3	6+840	3 x 11.4	34.2	MNB has RCC solid slab superstructure supported on conventional RCC wall type piers and abutments resting on open foundations. Buried type expansion joints with RCC crash barrier.

Km. 3+809 of Bamniya-Raipuriya

Figure 4.1: Representative photos for minor bridges

4.4 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.4.1. General Description of the Slab/Box Culverts

There are 8 slab/box culverts in Jaora-Piploda road and 9 slab/box culverts in Piploda-Sailana road. There are 7 slab/box culverts in Neemuch-Nayagaon road and 9 slab/box culverts in Bamniya Raipurliya road. The details of the slab/box culverts are given below.

Table 4.3: List of Slab/Box Culverts

S. No.	Chainage	Span (m)	Vent Size (m)
Jaora-Piploda road			
1	0+772	1 x 3.8	2.50
2	19+263	1 x 3.1	2.60
3	19+580	1 x 5.9	4.00

4.4.2. General description of the Pipe Culverts

There are 26 Pipe culverts along Jaora-Piploda road and 9 Pipe culverts along Piploda-Sailana road.

There are 12 Pipe culverts along Neemuch-Nayagaon road.

There are 9 Pipe culverts (7 Single row pipe culverts, 1 double row pipe culverts and 1 five row pipe culvert) along Soyat-Pirawa road.

There are 33 Pipe culverts along Bamaniya -Raipurlya road. The details of the culverts are below.

Table 4.4: List of Pipe Culverts

CHAPTER 5. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade as such no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2001 publication while the current publication is IRC: 37-2018.

Review of Pavement Design

As per the pavement design approved in the project, the following conclusions are given. Also Jaora-Piploda-Jalndharkheda section was considered as Homogeneous section (HS-1) and Neemuch-Jawad-Khor-Nayagaon as HS-II.

Table 5.1: Flexible Pavement Design summary

S. No.	Description/ Pavement layer	HS-I Parameters	HS-II Parameters
1	Sub Grade CBR (%)	10%	10%
2	Design Life (Years)	15 years	15 years
3	Design Traffic* (MSA)	1.67 MSA actual 10MSA Adopted	8.38 MSA actual 10MSA Adopted
4	Surface course (BC)	40 (mm)	40 (mm)
5	Binder course (DBM)	50 (mm)	50 (mm)
6	Base course (WMM)	250 (mm)	250 (mm)
7	Sub Base course (GSB)	200 (mm)	200 (mm)

5.3 Validation of Pavement Design

The new pavement shall be designed in accordance with the IRC:37. "Guidelines for the Design of Flexible Pavements".

Based on the above actual traffic during design phase, MSA estimated at 15 years are 1.67, 8.38 of HS-1 and HS-2 respectively.

Traffic considered in pavement design is more than estimated traffic based on actual traffic. Hence the pavement design adopted is found in order.

5.4 Overlay during operation and maintenance

The pavement has been designed to cater traffic 10 MSA for a design life of 15 years for Bituminous layers and granular layers (up to end of year 2028) for HS-I and HS-II, whereas the actual traffic is 1.67 MSA and 8.38 MSA for 15 years for HS-I and HS-2 respectively. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation before the end of Stage-I of design life (as per pavement design report) and prior to the end of concession period to evaluate the requirement of overlay.

5.5 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Proposed on or before 2020 (Completed recently) and next MM is scheduled in 2028.

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 6.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety

6.2 Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 6.2: Details of Road Furniture

S. No.	Item Description	Status	Condition
Road Furniture			
1	Sign Boards	Chevron Signs Village sign boards Information Boards Other Sign Boards Gantry Sign Boards	Available as per site requirement Good

S. No.	Item Description		Status	Condition
2	Road Marking	Studs & Lane marking	Available as per site requirement	Fair
3	Metal Beam Crash Barriers	At High embankments	Available as per site requirement	Good

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

Few observations on the road furniture in safety aspects for the project road are mentioned below:

- At few places reflectors were missing on the sign boards and few sign boards were also damaged
- Retro Reflective stickers need to be provided for metal beam crash barriers for night time road users at all locations and damaged metal beam crash barriers requires maintenance regularly
- The object hazard markers are placed only on one side of Head walls/parapet walls of all structures, whereas it is to be installed on both sides at structures.

During the site visit it is observed that all Safety items are provided as shown in the following table

Km. 6+800 of Neemuch-Jawad-Khon

Km. 8+600 of Neemuch-Jawad-Khon

Km. 21+070 of Neemuch-Jawad-Khon

Km. 0+800 of Bamniya-Petlabad-Raipuriya

Km. 0+800 of Soyat-Pidawa

Km. 1+700 of Soyat-Pidawa

Figure 6.1: Representative photos during road safety audit

6.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is required during the maintenance period.

CHAPTER 7. OPERATION AND MAINTENANCE

7.1 General

As per Article 17 of CA, the Concessionaire will operate and maintain the Project roads by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines.

7.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual Inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz. pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

7.3 Operations

7.3.1. Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- Carrying out preventive and periodic maintenance of the Project road;
- Undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs;
- Functioning of the lighting system;
- Functioning of the Patrolling System

- Functioning of rescue and medical aid services
- Ambulance as and when required
- Functioning of the Project Facilities
- Administrative, Operational and Maintenance Base Camp
- Truck Lay byes
- Pickup Bus stops / Bus Bays
- Protection of the environment and provision of equipment and materials therefor;
- Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- Complying with Safety Requirements in accordance with Article 18.

7.4 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

7.4.1. Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence does not require any immediate or preventive interventions.

7.4.2. Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

7.4.3. Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as "functional overlays," as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a "structural overlay" they are intended to increase load-carrying capabilities of the project road. The details of periodic maintenance schedule are given below.

Table 7.1: Schedule and status of for Periodic Maintenance

Description	Schedule of Periodic Maintenance	Status of Periodic Maintenance
1 st Periodic Maintenance	BC Overlay 2020	Completed
2 nd Periodic Maintenance	BC Overlay 2028	Planned to execute

7.4.4. Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include:

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

7.5 Review of Test Reports

7.5.1. Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of Oct - 2020. As per Schedule K of CA, if the stretch exceeds 3000mm in a Km. shall be rectified. No stretch exceeds the permissible limit.

7.5.2. Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

Concessionaire has conducted the test Oct 2020. The test report has been verified and found within permissible limits as per IRC 81.

7.6 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 4**.

Table 7.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance (In crores)	Incidental maintenance (In crores)	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	0.621	0.242		0.00	0.86
2021	0.639	0.249		0.00	0.89
2022	0.659	0.257		0.00	0.92
2023	0.678	0.264		0.00	0.94
2024	0.699	0.272		0.00	0.97
2025	0.720	0.280		0.00	1.00
2026	0.741	0.289		0.00	1.03
2027	0.764	0.297	15.11	0.00	16.17
2028	0.786	0.306	15.11	0.00	16.20
2029	0.198	0.077		0.00	0.27
Total	6.50	2.53	30.22	0.01	39.27

CHAPTER 8. REVIEW OF CONCESSION AGREEMENT

8.1 General: Scope of Work (Article 2)

Article 2 provides the scope of work, which includes the following.

- Construction of the Project road on the Site set forth in Schedule-A and as specified in Schedule-B of CA together with provision of Project Facilities as specified in Schedule-C of CA, and in conformity with the Specifications and Standards set forth in Schedule-D of CA;
- Operation and maintenance of the Project road in accordance with the provisions of the Agreement;
- Performance and fulfillment of all other obligations of the Concessionaire in accordance with the provisions of the Agreement and matters incidental

8.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. A copy of LOA is enclosed at **Annexure-5**.

8.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule E of CA
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

8.4 Major Obligations of the Concessionaire (Clause 5.1)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfill its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the Concession Agreement

8.5 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement.

- The Performance security shall remain in force and effect for a period of one year from the Appointed Date
- Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 20% of the Total Project Cost.

8.5.1. Tests (Clause 13.3)

For determining that the Project, conforms to the Maintenance Requirements, the Independent Engineer shall require the Concessionaire (Concessionaire shall in turn require the Contractor) to carry out, or cause to be carried out, tests specified by it in accordance with Good Industry Practice. One half of the costs incurred on such tests, and to the extent certified by the Independent Engineer as reasonable, shall be reimbursed by the Authority to the Concessionaire

8.6 Provisional Completion Certificate (Clause 14.3)

- Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA.

A copy of PCOD enclosed at **ANNEXURE-6**.

8.7 Completion Certificate (Clause 14.4)

- Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire.

A copy of CC enclosed at **ANNEXURE-7**.

8.8 Change of scope (Article 16)

Change of scope proposals were initiated during construction period and consented by the MPRDCL. Details are given in **ANNEXURE 9**.

8.9 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

8.10 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (The “**Maintenance Requirements**”).

8.11 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

8.12 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

8.13 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 0.5% (zero decimal five percent) of the Average Daily Fee, and
- 0.1% (zero decimal one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

8.14 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

8.15 Annuity (Clause 27)

The Authority agrees and undertakes to pay the Concessionaire for each annuity Payment period on each annuity payment date as set forth in schedule Y the sum of Rs 12.06 Crores.

As per Clause 27.2.2, In case the COD is different from the Schedule Y, then the annuity payment schedule shall be suitably modified to be a period of 6 months from the preceding Annuity Payment date.

Table 8.1: Status of Annuity Payments

S. No.	Particulars	Paid on
1	1 st Annuity	18-Dec-14
2	2 nd Annuity	14-May-15
3	3 rd Annuity	18-Nov-15
4	4 th Annuity	13-May-16
5	5 th Annuity	18-Nov-16
6	6 th Annuity	17-May-17
7	7 th Annuity	30-Nov-17
8	8 th Annuity	29-May-18
9	9 th Annuity	15-Nov-18
10	10 th Annuity	21-May-19
11	11 th Annuity	13-Nov-19
12	12 th Annuity	22-May-20

The Authority is paying all the annuities regularly.

8.16 Concession Fee (Article 26)

- In consideration of the grant of Concession, the Concessionaire shall pay Concession Fee of Rs.1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC.

8.17 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 9. INSURANCE

9.1 General

As per clause 32.1, the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks Copy of insurance is given **ANNEXURE 8**.

Table 9.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Policy
			From	To	
Civil Engineering Completed Risk	National Insurance Company Limited	3213004419 10001989	27.3.2020	26.3.2021	Road and Structure

CHAPTER 10. CONCLUSION

10.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

10.2 Pavement Condition

The Pavement condition for the overall project is good. RCC drains are constructed in Built up locations and earthen drains in rural locations which facilitates, effective drainage system along the project road. Shoulder condition is fair.

10.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are being cleared during regular maintenance period.

10.4 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 73-2007. The condition of sign boards & other road appurtenances like metal beam crash barriers is fair.

10.5 Maintenance

- Routine maintenance is being carried out by O&M contractor effectively, based on documents reviewed, time-to-time observations made by client/Authority are being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance was carried recently and next MM is scheduled in the year 2028.

10.6 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

ANNEXURES

Sub: Regarding development of (i) Jaora-Piploda-Jalandharkheda & Piploda-Sailana (ii) Raipuria-Petlabad-Bamania (iii) Jawad-Khoh & (iv) Soyat-Pidawa Major District Road under Package-IV on BOT (Annuity) basis.

In response to your Pre-Qualification you have submitted Technical and Financial Bid for development of (i) Jaora-Piploda-Jalandharkheda & Piploda-Sailana (ii) Raipuria-Petlabad-Bamania (iii) Jawad-Khoh & (iv) Soyat-Pidawa Major District Road under Package-IV on BOT (Annuity) basis. In this connection, kindly refer to the clarification, addendum etc. issued from time to time before submission of the tender document.

Also refer to your bid documents containing an unconditional price bid of Rs. **12.06 crores (Rupees twelve crores six lacs only)** as Annuity Amount payable in terms of Clause 27 of the Concession Agreement.

Pursuant to our acceptance of your tender and decision to award the work to you, we request you to send your acceptance and sign the Concession Agreement within the time stipulated in the Tender.

Change of Scope for Road Works in Soyat - Pidawa Road Project

Place/Location	As per Schedule-B				As Constructed by Concessionaire on Site				Reasons & Recommendations tendered by Independent Engineer	Decision of Committee
	From (Km)	To (Km)	Length (Km)	Existing width to be paved including drains (In Mtr.)	From (Km)	To (Km)	Length (Km)	Existing width to be paved including drains (In Mtr.)		
Soyat	0.000	1.000	1.000	20.00	0	1.5	1.500	14.00	Construction of road work in Soyat town was completed within available ROW converging complete habitation. Due to which length has been increased and work could not be completed in width specified in Schedule-B. It is recommended to consider difference of provision of schedule-B and actual work done as positive change of Scope.	Committee agreed to consider a Positive change of scope as recommended by IE.

Structures		Nos of Structure	Nos of Structure	As per note given in Schedule-B which states The Proposed span arrangement shown above are tentative, concessionaire should conduct survey and investigation to assess the accurate hydrology of proposed site of structure and design the span arrangements of Bridge/Culverts suiting to the site in consultation with IE. Any change in span arrangement shall not be treated as change of scope of work. Similarly as per clause 3.0 of Schedule-B which state Any additional structures requiring reconstruction and new construction, strengthening or widening during entire concession period will be the responsibility of the concessionaire for which no compensation will be paid. It clearly reveals that concessionaire has completed more nos. of structures as specified in schedule-B. No change of scope shall be considered as per above provision in schedule-B for structures. Hence no change of scope is required.	Committee agreed with the recommendation of IE. Hence no change of scope.
Widening + Repair & Strengthening					
a. Pipe Culvert		5	8		
b. Slab / Arch Culvert		13	9		
c. Minor Bridge		3	3		
d. Minor Bridge		0	0		
Reconstruction					
a. Pipe Culvert		47	58

CHAPTER 1. INTRODUCTION

1.1 General

DBL Hasan Periyapatna Tollways Ltd. (herein after referred to as the “Concessionaire”) had augmented the existing two lanes road “Hassan Periyapatna section in the State of Karnataka, in accordance with the provisions of Concession Agreement executed with Karnataka Road Development Corporation Limited (herein after referred to as the “KRDCL”) on the 16th December 2015, on Design, Build, Finance, Operate, Maintain and Transfer (DBFOMT) on Hybrid Annuity Basis.

The project Highway passes through SH21 comprising (i) Hassan (Sakleshpur Jn.) To Arakalgud (Mini Sowdha Jn.) (ii) Arakalgud (Mini Sowdha Jn.) to Ramanathapura (Konanur Jn.) (iii) J. Hosahalli - Periyapatna . Project location map is provided at Figure 1.1.

SHREM ROADWAYS PVT. LTD. (SRPL) acquired DBL HASSAN PERIYAPATNA TOLLWAYS LIMITED vide agreement dated 26th March 2018.

SHREM FINANCIAL PVT. LTD (SFPL). appointed M/s RUKY Projects Pvt. Ltd. as consultant for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements.

1.2 The Project Data

Table 1.1: Project Data

S.No.	Particulars	Details
1.	Name of the project	Design, Build, Finance, Operate, Maintain and Transfer (DBFOMT) of Hassan-Ramnathapura-Periyapatna in the state of Karnataka on DBFOMT annuity basis.
2.	Road Type	State Highway
3.	Name of the Authority	KRDCL
4.	Name of the Concessionaire	DBL Hassan Periyapatna Tollways Limited
5.	Name of the EPC Contractor	Dilip Buildcon Limited
6.	LOA	11.09.2015
7.	Date of agreement	16.12.2015
8.	Date of Supplementary Agreement I	29.09.2016
9.	Date of Supplementary Agreement II	17.04.2018
10.	Design Length as per Schedule I of CA	73.690 Km.
11.	Actual Length Constructed	73.690 Km.
12.	EPC Cost	Rs. 220.41 Cr.
13.	Nature of contract	DBFMOT (Hybrid Annuity)
14.	Toll collected by	Authority
15.	Concession Period	10 years from Appointed Date
16.	Appointed date	29.09.2016
17.	Concision End Date	28.09.2026
18.	Construction Period	730 Days from Appointed Date
19.	Schedule Completion Date	28.09.2018
20.	Date of issuance of Provisional Certificate (Commercial Operation Date)	28.02.2018
21.	Bonus on early completion	Applicable as per Cl,28.1 of CA
22.	Total Annuity Amount	As per 27.1 of CA
23.	Total Number of Annuity payments received as on Jan 2021	16
24.	First Annuity Date	29.03.2019
25.	Forth coming Annuity No.	05

1.3 Scope of Ruky Projects Private Limited:

The scope of work includes providing Technical Due Diligence of the Project Highway and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout out road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. STATUS OF WORK AFTER PCOD

2.1 General

In accordance with Clause 14.3 of Concession Agreement, Provisional certificate was issued on 28th February, 2018 (PCOD) for completed length of 71.940Km out of a total length of 73.690 Km.

2.2 Punch List

A Punch list is a list of tasks and items that need to be completed in specified time, before a construction project can be considered finished. Accordingly, two punch lists were given along with Provisional Certificate. Punch list-1, balance works pending due to reasons attributable to authority. Punch List-II, works delayed attributable to concessionaire are included in this list shall be completed within 90 days from the issuance of Provisional certificate.

Table 2.1: Punch List-I

a. Punch List for Provisional completion sections for the Reasons attributed to Authority)

S.No.	Description	Location	Length/Number (Km)	Present Status as per our Site Inspection
1		Link-54A	15 Locations	Link 54-A
		3+700		Bus shelter and Kerb work not completed only Bus bay work completed
		17+300		Bus bay and shelter works completed but kerb work not completed
		17+650		Total work not completed (Descoped Ref Letter No.1884 Satra & 766 KRDCCL)
		18+440		Total work not completed (Descoped Ref Letter No.1884 Satra & 766 KRDCCL)
		18+540		Bus bay & shelter works completed but kerb work not completed
	Bus Bay with shelter	25+370		Total work completed
		25+500		Total work completed
		Link-54B		Link-54B
		5+830		Total work completed
		5+860		Total work completed
		7+100		Total work completed
		7+200		Bus Bay and shelter work completed but kekerb work not completed
		12+400		Total work completed
		14+800		Bus shelter work not completed but bus bay and kerb work completed (De scoped Ref Letter No.1884 Satra & 766 KRDCCL)
		Link-54C		Link-54C
		7+950		Bus shelter completed but sheeting work not completed. But bay and kerb work not completed (Descoped Ref Letter No.1884 Satra & 766 KRDCCL)
		8+000		Bus shelter completed but sheeting work not completed. But bay and kerb work not completed (DE scoped Ref Letter No.1884 Satra & 766 KRDCCL)

S.No.	Description	Location	Length/Number (Km)	Present Status as per our Site Inspection
2	Protective works for culverts	Link-54A	10 Locations	
		2+538		Protective works completed
		3+184		Protective works completed
		3+640		Slope protection work not completed at RHS (Descoped Ref Letter N.1884 Satra & 766 KRDCCL)
		4+124		Protective works completed
		5+926		Floor apron work not completed
		6+390		Protective works completed
		6+474		Protective works completed
		6+867		Protective works completed
		8+579		Protective works completed
		24+645	Floor apron work not completed(Descoped Ref Letter NO.1884 Satra & KRDCCL)	
3	RCC Drain/Kerb and Footpath	Link-54B		Link-54B
		Km.3+711 to Km.3+749		Completed
		Km.10+890 to Km.10+929, Km.10+939 to 10+944, Km.10+994 to Km.11+004		1200 Mtrs Footpath work not completed at BHS
4	Earthen Drain	Lini-54A- 14.9Km on LHS & 14.8 Km on RHS	46.4 Kms	Completed
		Link 54B-2.8 km on LHD & 1.0 Km on RHS		Completed
		Link-54C -07Km on LHS & 05 Km on RHS		Completed

b. Punch list for Non-Provisional Completion Sections (for the reasons Attributed to Authority)

S.No.	Description	Location	Length/Number (Km)	Present Status as per our Site Inspection
1	Main Carriageway works as per design and drawings	From Km.1+120 to Km.2+300 (Link 54A)		Total work completed
2	Toll Plaza	Link 54A		RHS-3 Lane completed
				structure of Admin, Residential and medical Building completed
				Balance works: LHS:3 Lane PQC
				1. Kerb
				2. Compound wall
				3. Canopy
				4. High Mast lighting pole 30 m height
				5. Balance sign boards
				6. Parking area
3	Toll Plaza	Link 54B	11+700	7. Landscaping & Exist and Entry Roads
				8. Toll Booth Electrical WIMS
				9. Miscellaneous items
				1. LHS-3 Lane completed
				2. RHS-3 Lane Completed
				3. Structure of Admin Residential & Medical Building completed
				4. Canopy Completed
				Balance works:
				1. Kerb
2. Compound wall				
3. High Mast lighting pole 30 m height				
4. Balance sign boards				

				5. Parking area
				6. Landscaping & Exist and Entry Roads
				7. Toll Booth Electrical WIMS
				8. Miscellaneous items
4	Toll Plaza	Link 54C	16+520	1. LHS-3 Lane completed
				2. RHS-3 Lane Completed
				3. Structure of Admin Residential & Medical Building completed
				4. Canopy Completed
				Balance works:
				1. Kerb
				2. Compound wall
				3. High Mast lighting pole 30 m height
				4. Balance sign boards
				5. Parking area
				6. Landscaping & Exist and Entry Roads
				7. Toll Booth Electrical WIMS
				8. Miscellaneous items
5	Boundary Stones	Link 54-A	1+120 to 29+500(BHS)	Not completed
		Link 54-B	0+000 to 17+048(BHS)	Not completed
		Link 54-C	0+000 to 28+274(BHS)	Not completed

Punch List –II, items to be started or in progress shall be completed within 90 days from the issuance of Provisional certificate. The details are given in the following table.

c. Punch list for Provisional completion section-II (For the Reasons Attributed to the Concessionaire)

Punch List-2

S.No.	Description	Location	Length/Number (Km)	Present Status as per our Site Inspection
		2.628 Km in Link 54 A, B & C	1.29 Kms Kerb and 5.69 Kms Footpath (Descoped 1.887(Kms Footpath Ref. Letter No.1884 Satra & 766KRDCL)	
1	Providing Kerb/Footpath	Link 54-A - 0.714 Km		Link 54A -1640 mts footpath work not completed

CHAPTER 3. PROJECT DESCRIPTION & TECHNICAL DETAILS

3.1 Salient Features of the Project:

The salient features described in the following table to be developed as per schedule I of CA including Change of scope.

Table 3.1: Salient Features

S. No.	Particulars	As per CA	As per COS*	As per Site
1	Total Length of 2 Lane (Flexible)	73.690 Kms.	-2.610 Kms.	71.080 Kms.
2	Total Length of 4 Lane (Flexible)	--	2.610 Kms.	2.610 Kms.
3	Toll Plaza	3 Nos.	--	3 Nos.
4	Bus Bays	24 Nos	- 4 Nos.	24 Nos
5	Bus Shelters	28 Nos.	-3 Nos.	21 **Nos
6	Truck Lay Bays	Nil	--	Nil
7	Major Junction	5 Nos.	--	5 Nos.
8	Minor Junctions	57 Nos.	--	57 Nos.
9	Total Major Bridges	1 Nos.	--	1 Nos.
10	Total Minor Bridges	13 Nos.	--	13 Nos.
11	Total Pipe Culverts	134 Nos.	--	*139 Nos.
12	Total Box/ Slab Culverts	52 Nos.	--	*53 Nos.

* Minor bridges, HPC and Box/Slab extra are constructed as per site requirement.

**2 Bus shelters were descope and one yet to be constructed.

3.2 Typical Cross Section (TCS) Schedule:

The Concessionaire has followed the Typical Cross Section Schedule, shown below as per Schedule B of CA during the Construction.

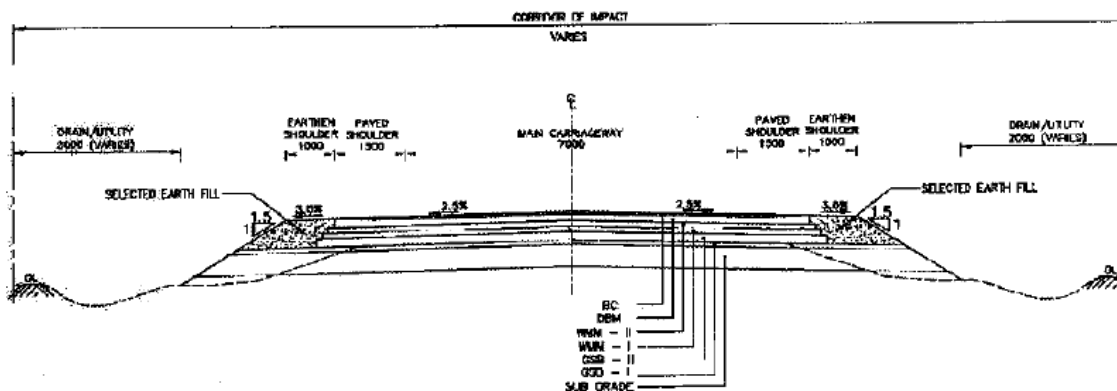

Figure 3.1: (TCS A) of Schedule of CA – Rural Cross Section with Paved Shoulder

Figure 3.2: ((TCS B) of Schedule of CA - 2 LANE Carriageway With Paved Shoulder In-built up Area

Figure 3.3: (TCS D) of Schedule of CA - 4 Lane Divided Carriageway in urban Area

TCS Schedule is provided below.

3.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from the Carriageway, side drains are constructed along the main carriageway on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are in open and rural areas.

3.4 Service Roads

Service road is not proposed along the entire stretch of the project road as per provisions of Schedule B of CA.

3.5 Bypass/Realignment

There are two realignments proposed on the project road as per provisions of Schedule B of CA are given below.

Table 3.3: List of Realignments

3.10 Summary of Bridges and Culverts:

Table 3.6: Summary of Structures as per Schedule B of CA

S.No.	Description	Count
1	Major Bridges	1 No.
2	Minor Bridges	13 Nos.
3	Hume Pipe Culverts	134 Nos.
4	Slab Culverts	52 Nos.

3.11 Toll Plazas

Table 3.7: Summary of Toll Plazas:

S.No.	Section NO /Link	Proposed Chainage
1	I/54A	Km 17+100
2	II/54B	Km 11+700
3	III/54C	Km 16+520

- There are three toll Plazas on the project road at Link-54A, Link-54B & Link-54C.
- Toll Plaza 1 at Link-54A comprises of 4 lanes.
- Only one lane in each direction is operational and the second lane is used as bike lane.
- Toll Plaza 2, which is at Link-54B, comprises of four lanes.
- Only one lane in each direction is operational and the third lane is used as bike lane.
- Toll Plaza 3, which is at Link-54C, comprises of four lanes.
- Only one lane in each direction is operational and the third lane is used as bike lane.
- Toll plazas at 54B and 54 C are under construction. Toll plaza at 54 A not constructed.

3.12 Bus/Bay shelters:

As per provisions of Schedule C of CA, bus bays/shelters are provided at 28 locations. Details are provided below.

Table 3.8: List of Bus Bay with shelters

S.No.	Chainage (km.)	Side	TYPE

8	25+380	RHS	Bus Shelter

3.13 Other Project Facilities Provided as per Schedule C of CA

- Roadside furniture: Sign Boards Kilometer stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic safety devices: W Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of CA.
- Landscaping: Provided at Toll Plaza location and being maintained
- Tree Plantation: Tree plantation is provided on both sides of the Project Corridor all along the way and is being maintained.
- Medical Aid Post: Provided at Toll Plaza location and is operational
- Highway Lighting: Highway lighting is provided at Toll Plaza and is functional.

Figure 3.5 Representative Photographs of Existing Road Features

CHAPTER 4. ROAD INVENTORY & PAVEMENT CONDITION

4.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections below:

4.2 Road Inventory

Inventory of the project road was carried out physically and the same is summarized in the following table. Few representative photographs are given below at the end of the Chapter.

Table 4.1: Road Inventory

S. No.	Features	Remarks
1.	Terrain	Plain Terrain
2.	Land Use	Mostly Agriculture
3.	Earthen shoulder	1 m to 1.5 m Width on site
4.	Junctions	62 No.
5.	Toll Plaza	03 Nos.
6.	Sign boards	Sign boards are provided as per requirement
7.	Road Markings	Lane markings are provided as per requirement
8.	Street Lighting	Highway lighting provided as per requirement

4.3 Pavement Condition

Pavement condition survey was carried out on the project road based on observations supplemented by simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 4.2: Pavement Condition Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Assessment of the condition of Pavement surface is a key component of infrastructure asset management. The information used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

4.4 Pavement Condition Survey methodology

The survey on general pavement condition was primarily undertaken by means of slow drive- over survey and supplemented with measurements wherever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of Surface area)
 - Ravelling (% of Surface area)
 - Potholes (% of Surface area)
 - Patching (% of Surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP 19 and is given in **ANNEXURE 1**. The summary of Pavement condition is given below.

Table 4.3: Pavement condition summary

From (Km.)	To (Km.)	Length (kms.)	Condition
0+000	73+430	73.430	Good

CHAPTER 5. INVENTORY AND CONDITION OF STRUCTURES

5.1 General Assessment and Condition of the Existing structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guidelines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

5.2 Inventory of Structures

The details of the structures along this project road.

Table 5.1: List of Structures

S.No.	Type of Structure	Numbers
1	Major bridges	1 Nos.
2	Minor Bridge	13 Nos.
3	Pipe culverts	139 Nos.
4	Slab/Box Culverts	53 Nos.

For major bridge the superstructure is of PSC T beam and RCC T beam supported on RCC circular type piers and wall type abutments resting on open/pile foundations. For some minor bridges the superstructure is RCC solid slab and the substructures are of RCC/PCC conventional wall type abutment and pier resting on open foundations. Also, there are some RCC box type minor bridges. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Structural condition of most of the culverts is fair except in few locations. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

5.3 Details of Major Bridges

There details of Major bridge along the project stretch is given below. The total length of the bridge is 140.0m with 2 spans of 22.0m and 3 spans of 32.0m. The superstructure is of PSC T beam and RCC T beam. The substructure is of RCC Circular type piers and wall type abutments resting on Open/pile foundations. Elastomeric/Neoprene bearings are used. Expansion joints are of Strip seal type and RCC Crash barrier has been provided.

Table 5.2: List of Major Bridges

S.No.	Chainage (Km)	Span	Total Length of Bridge (m)
1	23+611	2x22+3x32	140.0

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, drainage spouts and strip seal expansion joints are to be carried out.

Figure 5.1 Overall view of the Major Bridge at Km 23+611

5.4 Details of Minor Bridges

The details of minor bridges in the project stretch are listed below. The type of superstructure for minor bridges is RCC solid slab and the substructure is PCC/RCC conventional wall type abutment and pier resting on open foundations. Expansion joints are buried type and bearings are tar paper and neoprene bearings. RCC crash barriers are provided on all structures.

Table 5.3: Inventory of Minor Bridges

S. No.	Chainage	Span	Total Length of Bridge (m)	Description
Hassan-Arakalgud				
1	15+358	1x8.5	8.5	MNB has RCC solid slab superstructure supported on conventional PCC/RCC wall type piers and abutments resting on open foundations. Buried type expansion joints.

5.5 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

5.5.1. General description of the Slab/Box Culverts

There are 53 Nos. of slab / Box culverts in the project stretch. The details of the culverts are as given below.

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

Km. 2+072 link-C

Km. 11+047 Link-C

Figure 5.4: Representative photographs of Pipe Culverts

The culverts are in fair condition and can be retained in the present condition with following repairs/rehabilitation measures.

- Chocked culverts must be cleared.
- Debris and garbage near outside the vents must be removed.

CHAPTER 6. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

6.1 General

Review of Pavement design report, providing insights on design life of pavement, crust thickness, history of overlays over the existing pavement etc., Based on pavement condition and CA provisions recommendation for the upcoming renewal cycles.

6.2 Pavement design validation

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2012 publication while the current publication is IRC: 37-2018.

6.2.1. Pavement design crust thickness

The new pavement shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”. Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. “Guidelines for the Design of Plain Jointed Rigid Pavements for Highways”.

The project road has been divided into 3 sections i.e. Link A (from Hassan km. 32+100 to Arkalgud km. 60+400, Link B (from Arkalgud km. 61+475 to Ramanthapura km. 78+025) and Link C (from Hasahalli km. 81+660 to Periyapatna km. 111+840). The design traffic as per traffic during design stage and design traffic as per CA is summarized below.

Table 6.1: Design traffic summary

S. No.	Location	As per traffic surveys		As per Appendix II of schedule B,	
		10 years MSA (Bituminous layer)	15 years MSA (Non-Bituminous layer)	10 years MSA (Bituminous layer)	15 years MSA (Non-Bituminous layer)
1	Km. 47+930	2.72	5.02	5.13	8.63
2	Km. 72+290	2.38	4.38	3.24	5.53
3	Km. 100+135	1.14	2.11	1.5	2.53

As seen, the actual traffic is less than schedule MSA in Appendix B-II of CA, pavement has been design for 10 MSA and 10% effective CBR, Pavement crust thickness in the pavement design report for flexible pavement is as follows: -

Table 6.2: Flexible Pavement Design summary

S. No.	Description/ Pavement layer	Design/Adopted Parameters
1	Sub Grade CBR (%)	10%
2	Design Life (Years)	10 years for bituminous 15 years for granular
3	Design Traffic (MSA)	10 MSA
4	Surface course (BC)	40mm
5	Binder course (DBM)	50 mm
6	Base course (WMM)	250 mm
7	Sub Base course (GSB)	2000 mm

Pavement crust thickness in the pavement design report for rigid pavement is as follows: -

Table 6.3: Rigid Pavement Design for Toll Plaza

Description	Design/Adopted Thickness
CBR of sub grade	10 %
Design life in years	30
Pavement Quality Concrete (PQC) – (mm)	280
Dry Lean Concrete (DLC) – (mm)	150
Drainage Layer (GSB) - (mm)	200
Diameter of Dowel Bar (mm)	32
Length of Dowel Bar (mm)	500
Spacing of Dowel Bars (mm)	300
Diameter of Tie Bar (mm)	12 (Deformed)
Length of Tie Bar (mm)	640
Spacing of Tie Bars (mm)	480

The Pavement crust has been designed according to IRC specification and found in order, the adopted/ Constructed pavement layer thickness is adequately provided than actual/designed thickness.

6.3 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 10 MSA (up to 2032), whereas the actual traffic is 2.53 to 8.63 MSA. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, as per clause 2.3.7 of Schedule K of CA, periodic renewal shall be carried out as and when required and at least once between 5th or 7th year (from COD) within the concession period, the periodic maintenance activities shall also include profile corrective course overlaid with the periodic renewal of the wearing course of BC 25 mm thickness of the road pavement, the concessionaire may adopt cost effective treatment like asphalt recycling, stone mastic, micro seal etc.

Based on the present available data It is envisaged that existing pavement require overlay (periodic renewal) in the year of 2025. Nevertheless, the pavement shall be maintained to the desired level of performance by carrying out periodical renewals as mentioned in subsequent sections.

6.3.1. Maintenance/ Overlay schedule

Periodic Maintenance shall be carried out as and when required based on the road condition and at least once between 5th and 7th year (from COD) and in the last year of Concession period as a good industry practice. It includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Next periodic Renewal Proposed on or before 2025

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction

CHAPTER 7. SAFETY AUDIT OF ROAD

7.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 7.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety

7.2 Existing Road Safety Audit

During the site visit, it is observed that all safety items are provided as shown in the following table

Table 7.2: Safety Items

S. No.	Item Description		Status	Condition
Road Furniture				
1	Sign Boards	Chevron Signs Village sign boards Information Boards	Available as per site requirement	Good

S. No.	Item Description		Status	Condition
		Other Sign Boards Gantry Sign Boards		
2	Road Marking	Studs & Lane marking	Available as per site requirement	Fair
3	Metal Beam Crash Barriers	At High embankments	Available as per site requirement	Fair

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

Km. 5+926 Link-A

MBCB & Chevron signs in link-B

Km. 23+000 Link-C

Figure 7.1 Representative photograph of during road safety audit

7.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is required during the maintenance period.

CHAPTER 8. TOLL PLAZA & HTMS

8.1 General

There are three toll Plazas on the project road at Link-54A, Link-54B & Link-54C. Toll Plaza 1 at Link-54A comprises of 4 lanes. Only one lane in each direction is operational and the second lane is used as bike lane. Toll Plaza 2, which is at Link-54B, comprises of 4 lanes. Only one lane in each direction is operational and the third lane is used as bike lane. Toll Plaza 3, which is at Link-54C, comprises of 4 lanes. Only one lane in each direction is operational and the third lane is used as bike lane.

8.2 Tolling Equipment and Control Room Equipment

List of equipment provided at toll plaza and control room is given below.

Table 8.1 : List of lanes Equipment at Toll Plaza and Control Room

S No.	Item Description	Qty.
Lane Equipment		
1	TOLL LANE CONTROLLER	12
2	TOLL COLLECTOR KEYBOARD QWERTY TVS	8
3	AVC SENSORS INCLUDING (TMS & HTMS)	12

Toll Plaza Building-Link-B

Figure 8.1 Representative Photograph of Toll Plaza

CHAPTER 9. SCHEDULE OF ANNUITY PAYMENTS

9.1 Hybrid Annuity Model (HAM)

Hybrid annuity model is the PPP model, which allows the payment of Lumpsum amount during construction period based on progress milestones set forth by Authority to Concessionaire and Balance amount in the form of Annuity to the Concessionaire Bi-annually with the Interest during the balance concession period.

In this HAM model, as per Cl. 27.5 Lump sum payment is given in four installments during the construction phase as below.

Installment No	Amount in Rs. (Crores)	% Progress during construction
First	22.193	25
Second	22.193	50
Third	22.193	75
Fourth	22.193	On COD

9.2 Schedule of Annuity Payments

As per 27.2.2, the concessionaire upon achieving COD, Authority agrees to pay Rs. 26.28crores as per schedule –M.

Table 9.1: Schedule of Annuity Payments

S No.	Particulars	Annuity Due date	Payment Paid on
1	1 st Annuity	28.03.2019	28-Mar-19
2	2 nd Annuity	29.09.2019	6-Feb-20
3	3 rd Annuity	28.03.2020	30-Mar-20
4	4 th Annuity	29.09.2020	19-Nov-20
5	5 th Annuity	28.03.2021	
6	6 th Annuity	29.09.2021	
7	7 th Annuity	28.03.2022	
8	8 th Annuity	29.09.2022	
9	9 th Annuity	28.03.2023	
10	10 th Annuity	29.09.2023

12	12 th Annuity	29.09.2024	
13	13 th Annuity	28.03.2025	
14	14 th Annuity	29.09.2025	
15	15 th Annuity	28.03.2026	
16	16 th Annuity	29.09.2026	

CHAPTER 10. OPERATION AND MAINTENANCE

10.1 General

As per Article 17 of CA, the Concessionaire will operate and maintain the Project roads by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines.

10.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual Inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz. pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

10.3 Operations

Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- 1 Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- 2 carrying out preventive and periodic maintenance of the Project road;
- 3 Undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- 4 Undertaking major maintenance such as resurfacing of pavements, repairs to structures;
- 5 Functioning of the lighting system;
- 6 Functioning of the Patrolling System

- 7 Functioning of rescue and medical aid services
- 8 Ambulance as and when required
- 9 Functioning of the Project Facilities
- 10 Administrative, Operational and Maintenance Base Camp
- 11 Truck Lay byes
- 12 Pickup Bus stops / Bus Bays
- 13 Protection of the environment and provision of equipment and materials therefor;
- 14 Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- 15 Complying with Safety Requirements in accordance with Article 18.

10.4 Operation of Toll Plazas

There are two lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the Escrow Account. In case of ETC system, Toll collection is connected with Network system and directly deposited into the Escrow account.

10.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

- i. Road maintenance can be carried out in four ways as listed below.
- ii. Preventive Maintenance
- iii. Routine Maintenance
- iv. Periodic Maintenance
- v. Special repairs

Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence does not require any immediate or preventive interventions.

Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road. The details of periodic maintenance schedule are given below.

Table 10.1 Schedule and status of for Periodic Maintenance

Description	Schedule of Major Maintenance	Status of Major Maintenance
Periodic Maintenance	2025	Planned to execute

Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

10.6 Review of Test Reports

Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of Aug, 2020. As per Schedule K of CA, if the stretch exceeds 2000mm in a KM shall be rectified. No stretch exceeds the permissible limit.

Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

Concessionaire has conducted the test in Feb 2020. The test report has been verified and found within permissible limits as per IRC 81.

Environmental Quality Monitoring

In Aug 2020, Concessionaire has conducted Ambient air quality test, Noise quality test, Water quality test and soil quality test in accordance with Schedule L. The values are within the permissible limits.

10.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 5**.

Table 10.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance	Incidental maintenance	Periodic / Major maintenance	Operational Expenses	Total cost per year
	(In crores)	(In crores)			
2020	0.313	0.447		1.776	2.536
2021	0.322	0.461		1.829	2.612
2022	0.332	0.474		1.884	2.690
2023	0.342	0.489		1.940	2.771
2024	0.352	0.503	25.730	1.999	28.584
2025	0.363	0.518	26.440	2.059	29.380
2026	0.374	0.534		2.120	3.028
2027	0.191	0.273		1.083	1.547
Total	2.589	3.699	52.170	14.690	73.148

CHAPTER 11. REVIEW OF CONCESSION AGREEMENT

11.1 General: Scope of Project (Article 2)

Article 2 provides the scope of work which includes the following.

- Construction of the Project Highway on the Site set forth in schedule B and C and in conformity with the Specifications and Standards (Schedule D) and Schedule L;
- Operation and maintenance of the Project Highway in accordance with the provisions of this Agreement
- Performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental

11.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 5**.

11.3 Conditions precedent (Article 4):

Conditions precedent to be fulfilled by the Authority:

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire:

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule A
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

11.3.1. Performance Security (Article 9):

- The Concessionaire shall submit the Performance security to the Authority within 120 days from the date of the Agreement,
- The Performance security shall remain in force throughout the Construction period
- Performance Security shall be released on Commercial Operation Date.

11.3.2. Tests (Clause 13.3)

For determining that the Project, conforms to the Maintenance Requirements, the Independent Engineer shall require the Concessionaire (Concessionaire shall in turn require the Contractor) to carry out, or cause to be carried out, tests specified by it in accordance with Good Industry Practice. One half of the costs incurred on such tests, and to the extent certified by the Independent Engineer as reasonable, shall be reimbursed by the Authority to the Concessionaire

11.4 Provisional Completion Certificate (Clause 14.3)

Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA.

A copy of PCOD attached in the **Annexure-6**.

11.5 Completion Certificate (Clause 14.4)

Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire.

11.6 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

11.7 Change of scope (Article 16)

Change of scope proposals that were initiated during construction period and consented by the KRDC are provided at **Annexure 8**.

11.8 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements.
- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials

11.9 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (The “**Maintenance Requirements**”).

11.10 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Lining Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two)

copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

11.11 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

11.12 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 0.5% (zero decimal five percent) of the Average Daily Fee, and
- 0.1% (zero decimal one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

11.13 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

11.14 Concession Fee (Article 26)

- In consideration of the grant of Concession, the Concessionaire shall pay Concession Fee of Rs.1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC.

11.15 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 12. INSURANCE

12.1 General

As per clause 32.1 of the CA, the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Copy of Insurances are attached in the **Annexure-7**.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 12.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period	
			From	To
Civil Engineering Completed Risk	National Insurance Co. Ltd	321300441910001997	27/03/2020	26/03/2021
Electronic Equipment Insurance Policy schedule	Oriental Insurance Company Ltd	171200/44/2021/44	08/09/2020	07/09/2021
Employees Compensation Insurance Policy	HDFC ERGO General Insurance Company Limited	3114203376737300000	18/04/2020	17/04/2021

CHAPTER 13. CONCLUSION

13.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

13.2 Pavement Condition

The Pavement condition for the overall project is good. RCC drains are constructed in Built up locations and earthen drains in rural locations, which facilitate effective drainage system along the project road. Shoulder condition is fair.

13.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Vegetation growth is observed in vents of Box and Hume Pipe culverts and they are being cleared during regular maintenance period.

13.4 Project Facilities

Three Toll Plazas are constructed one at Link I/54A, Link I/54B & Link I/54C. All are operational. Toll Plaza is operated. Bus bays are in fair condition. Avenue plantation. Highway lighting is provided at toll plaza locations and the same is found functional.

13.5 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 73-2007. The condition of signboards & other road appurtenances like metal beam crash barriers is fair.

13.6 Maintenance

A dedicated team is appointed for routine maintenance works and working effectively. Major maintenance (MM) /Periodic maintenance was carried out recently and next MM is scheduled in 2025.

13.7 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

ANNEXURES

Annexure 1: Pavement Condition

Condition: G=Good, F=Fair, P=Poor & VP=Very poor Rutting: M=Moderate & S=Severe Drain: LD=Lined open Drain, ULD=Unlined Drain, CD=Covered Drain, NO=No drain, PF=Partial Function, F= Functional

LETTER OF AWARD

Sir,

Sub: "Design, Build, Finance, Operate, Maintain and Transfer (DBFOMT) of Existing State Highway Hassan - Ramanathapura - Periyapatna in the State of Karnataka on DBFOMT Annuity Basis (WCP-3)"- Letter of Award (LoA)

Ref: (i) RFP issued on 10th April 2015
(ii) Your bid submitted on June 17th, 2015

This is to notify that your bid submitted for the captioned project (the "Project") for a semi-annual annuity quote of Rs 26,28,00,000 (Rupees Twenty Six Crore and Twenty Eight Lakh only) is hereby accepted by the Government of Karnataka by declaring you as the "Selected Bidder". The concession period is 10 (ten) years including construction period of 24 (twenty four) months.

1. The semi-annual annuity quoted by you shall be disbursed in accordance with the provisions of Draft Concession Agreement (DCA).
2. Lumpsum Payment of Rs 88,77,20,000 (Rupees Eighty Eight Crore, Seventy Seven Lakh and Twenty Thousand only) shall be disbursed in accordance with the provisions of Draft Concession Agreement (DCA) in four equal instalments.
3. In accordance with the clause 3.3.2 of the Project RFP Document, you are hereby requested to confirm your acceptance of this Letter of Award within 7 days of its receipt by signing and returning the duplicate copy of the LOA in acknowledgement thereof. Thereafter, pursuant to clause 1.3 of the Project RFP Document, you are required to execute the Concession Agreement within 45 days from the issue of LoA.
4. You shall promote and incorporate the Concessionaire as a limited liability company under the Companies Act 1956/2013 as applicable, as the entity which shall undertake and perform the obligations and exercise rights of the Bidder under the LoA, including the obligation to enter into the Concession Agreement pursuant to the LoA for executing the Project.

Annexure 6: Provisional Completion Certificate

PROVISIONAL COMPLETION CERTIFICATE

1. I, **Raj Mallela**, acting as Independent Engineer, under and in accordance with the Concession Agreement dated 16th December 2015 (the "**Agreement**"), on Design, Build, Finance, Operate, Maintain and Transfer (DBFOMT) the State Highway Hassan - Ramanathapura - Periyapatna in the State of Karnataka on DBFOMT Annuity Basis, through DBL Hassan Periyapatna Tollways Limited, hereby certify that the Tests specified in Article 14 and Schedule-I of the Agreement have been undertaken to determine compliance of the Project Highway with the provisions of the Agreement.
2. Construction Works that were found to be incomplete and/or deficient have been specified in the Punch List appended hereto, and the Concessionaire has agreed and accepted that it shall complete and/or rectify all such works in the time and manner set forth in the Agreement. Some of the incomplete works have been delayed as a result of reasons attributable to the Authority or due to Force Majeure and the Provisional Certificate cannot be withheld on this account. Though the remaining incomplete works have been delayed as a result of reasons attributable to the Concessionaire, I am satisfied that having regard to the nature and extent of such incomplete works, it would not be prudent to withhold commercial operation of the Project Highway, pending completion thereof.
3. In view of the foregoing, I am satisfied that the 71.940 km out of the total 73.690 km of Project Highway can be safely and reliably placed in commercial service of the Users thereof, and in terms of the Agreement, the Project Highway is hereby provisionally declared fit for entry into commercial operation on this the 28th day of February 2018.

Bangalore, Karnataka-560 010,

Sub: -Design, Build, Finance, Operate, Maintain and Transfer (DBFOMT) on hybrid annuity basis Hassan- Ramanathapura – Periyapatna in the state of Karnataka (WCP-3) – **Details of Outstanding Works -Reg**

Ref: 1. Concession Agreement Dated: 16.12.2015
2. Authority letter No- KRDC/Co-finance/WCP-3/2019-20/955 dated 26.06.2019

Dear Sir,

The Concessionaire is in receipt of your office letter cited above which the Authority has requested to the Independent Engineer to list out all the items works in a desired format which are not able to be executed for the reason due to unavailability of land or any issue due to site condition.

The Concessionaire likes to affirm here that all the Construction activities within the stretches handed over by the Authority has been completed and some of the activities are being outstanding due to the issues which are purely attributable by the Authority.

In the absence of Team Leader, Concessionaire is herewith submitting proposal of De-scope with the list of the items which shall be dropped from the scope as enclosed in desired format in Annexure-I.

Further considering the above points it is requested to early action on the said issue and settle all the outstanding payments due to the Concessionaire at the earliest.

Thanking you and assuring our best service all the time.

Yours Faithfully,

Retnakaran Sallu
(Authorized Signatory)

CHAPTER 1. INTRODUCTION

1.1 General

DBL Hirekerur Ranibennur Tollways Ltd. (herein after referred to as the “Concessionaire”) had augmented the existing State Highway from “Hirekerur – Ranibennur section in the State of Karnataka, in accordance with the provisions of the Concession Agreement executed with Karnataka Road Development Corporation Limited (herein after referred to as the “KRDC”) on 16th Day of December 2015. on Design, Build, Finance, Operate, Maintain and Transfer (DBFOMT) Hybrid Annuity Basis.

The project road comprises of three State Highways viz., SH-62, SH-76 and SH-57. The Project Road starts from Hirekerur and ends at Ranibennur intersecting with NH-4. The road passes through Hirekerur, Chikkerur, Haunsabhavi, Koda, Halageri and Ranibennur.

Figure 1.1: Project Location Map

SHREM ROADWAYS PVT. LTD. (SRPL) acquired DBL Hirekerur Ranibennur Tollways Ltd vide agreement dated 26 March 2018.

SHREM FINANCIAL PVT. LTD (SFPL). appointed RUKY Projects Pvt. Ltd. as consultant for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any.

1.2 The Project Data

Table 1.1: Project Data

S. No.	Particulars	Details
1	Name of the project	Development of Hirekerur-Haunsabhavi-Ranibennur (SH-62, SH-76 &SH-57) in the State of Karnataka on DBFOMT Annuity basis.
2	Road Type	State Highway
3	Name of the Authority	KRDCL
4	Name of the Concessionaire	DBL Hirekerur Ranibennur Tollways Ltd
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	Date of LOA	11.09.2015
7	Date of Agreement	16.12.2015
8	Date of Supplementary Agreement	29.09.2016
9	Design Length as per Schedule B of CA	56.401 Km.
10	Actual Length Constructed	56.401 Km.
11	Project Lane Configuration	Two Lane
12	EPC Cost	174.2 Crores
13	Nature of contract	DBFOMT
14	Toll collected by	KRDCL
15	Concession Period	10 years from appointed date
16	Appointed date	29.09.2016
17	Concession End Date	28.09.2026
18	Construction Period	730 days
19	Schedule Completion Date	28-09-2018
20	Date of issuance of Provisional Certificate (Commercial Operation Date)	24.02.2018
21	Date of issuance of Completion Certificate	Yet to be received
22	Annuity Amount (every six months)	Rs. 19.62 Cr
23	Total Number of Annuities payable	16 Nos.
24	First Annuity Payment Date	28-03-2019
25	Total Number of Annuity Payments paid	4 Nos

1.3 Scope of Consultancy Services

The scope of work includes providing Technical Due Diligence of the Project Highway and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per schedule B and Schedule C of Concession Agreement (CA) including Change of scope are listed in the following **Table 2.1**.

Table 2.1: Salient Features

S. No.	Particulars	As per Schedule B	COS	As per Site
1	Total Length of 2-Lane with paved & earthen shoulder	47.301 Kms.		47.301 Kms.
2	Length of 2-Lane with paved shoulder	7.450 Kms.	1.650 Kms. Added	9.100 Kms.
3	Length of 4-Lane road	1.650 Kms.	-1.650 Kms. (4 Lane) to (2-Lane)	
4	Toll Plaza	1. Km. 19+050 2. Km. 43+660		1. Km. 19+050 (SH:76 Km. 153+900) 2. Km. 43+660 (SH:62 Km. 32+300)
5	Bus Bays / Bus Shelters	22 Nos.		8 Nos both Bus shelters and Bus bays completed. 6Nos only bus bays completed. 8Nos descoped.
6	Truck Lay Bays	Nil		Nil
7	Major Junction	9 Nos.		9 Nos.
8	Minor Junctions	22 Nos.		22 Nos.
9	RUB/ROB	Nil		Nil
10	Level Crossing	Nil		Nil
11	Bypass	Chikkerur (Km. 11+200 to Km. 13+192) 1.992 Kms.		1.992 Kms.
12	Re alignment	Km. 14+246 to Km. 14+366 (0.120 Kms.) Km. 15+000 to Km. 15+120 (0.120 Kms.)		Km. 14+246 to Km. 14+366 (0.120 Kms.) Km.15+000 to Km. 15+120 (0.120 Kms.)
13	Major Bridges	0 Nos.		0 Nos.
14	Minor Bridges	11 Nos.		11
15	Causeway	0 Nos.		0 Nos.
16	Box/Slab Culverts	15 Nos.		18 Nos*.
17	Pipe Culverts	81 Nos.		76 Nos*.

*As per site requirement, 3 additional box culverts are constructed and 5 pipe culverts are not constructed as per site condition.

2.2 Typical Cross Section (TCS) Schedule

The Concessionaire has followed the Typical Cross Section Schedule, shown below as per Schedule B of CA during the Construction.

Figure 2.1: TCS-A of CA Rural cross section with paved shoulder

Figure 2.2: TCS-B of CA 2 Lane carriageway with Paved shoulder in Built-up area

TCS Schedule is provided below.

Table 2.2: TCS Schedule

S. No.	From (Km.)	To (Km.)	Length (Kms.)	Type of TCS
1	0+000	1+650	1.650	TCS B
2	1+650	8+500	6.850	TCS A
3	8+500	9+000	0.500	TCS B
4	9+000	13+192	4.192	TCS A
5	13+192	16+650	3.458	TCS A
6	16+650	17+400	0.750	TCS B
7	17+400	19+800	2.400	TCS A
8	19+800	22+500	2.700	TCS B
9	22+500	26+100	3.600	TCS A
10	26+100	26+800	0.700	TCS B

S. No.	From (Km.)	To (Km.)	Length (Kms.)	Type of TCS
11	26+800	31+700	4.900	TCS A
12	31+700	32+700	1.000	TCS B
13	32+700	49+400	16.700	TCS A
14	49+400	51+200	1.800	TCS B
15	51+200	56+401	5.201	TCS A

Figure 2.3: Pictorial Diagram of TCS Lengths.

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from the Carriageway, side drains are constructed along the main carriage way on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are in open and rural areas.

2.4 Service Roads

Service road is not proposed along the entire stretch of the project road as per provisions of Schedule B of CA.

2.5 Bypass/Realignment

Realignments at Chikkerur from Km. 11+200 to Km. 13+192 (1.992 Kms.), from Km. 14+246 to Km. 14+366 (0.120 Kms.) and from Km. 15+000 to Km. 15+120 (0.120 Kms.) are proposed on the project road as per provisions of Schedule B of CA.

2.6 Intersections

As per provisions of Schedule B of CA, 9 Major Junctions and 22 Minor Junctions are provided. Details are given below.

Table 2.3: List of Junctions

S. No.	Chainage (Km.)	Type of Junction	Side	Major/ Minor
1	0+000	T	LHS	Major
2	1+040	T	RHS	Major
3	1+630	T	RHS	Minor
4	3+660	T	LHS	Minor
5	5+790	T	RHS	Minor
6	8+290	T	RHS	Minor
7	11+20	T	RHS	Major
8	14+950	T	LHS	Minor

29	50+015	T	RHS	Minor
30	50+640	X	both	Major
31	56+401	T	LHS	Major

2.7 Grade Separated Structures and underpasses

Grade Separated Structures and underpasses are not proposed as per provisions of Schedule B of CA.

2.8 Road Over Bridge (ROB)

ROB is not proposed in the project road as per provisions of Schedule B of CA.

2.9 Carriageway and pavement Details

Summary of Carriageway Details is given below:

Table 2.4: Summary of Carriageway and pavement Details

S. No.	Description	Flexible (Kms.)	Rigid (Kms.)	Remarks
1	Total Length of 2-Lane with paved & earthen shoulder	47.301	---	Type-A of Schedule B of CA
2	Length of 2-Lane with paved shoulder	7.450	---	Type-B of Schedule B of CA
3	Length of 4-Lane road	1.650	---	Type-D of Schedule B of CA

	Total	11	81	15

2.11 Toll Plazas

- There are two toll Plazas on the project road at Km. 19+030 & Km. 43+700.
- Toll Plaza 1 at Km. 19+030 comprises of 4 lanes.
- one lane in each direction is used for four wheelers and the other lane is used as bike lane.
- Toll Plaza 2 which is at Km. 43+700 comprises of 4 lanes.
- One lane in each direction is used for four wheelers and the other lane is used as bike lane.
- List of tolling equipment provided at site is furnished in the Detailed Report.

2.12 Bus bays/Bus shelters

As per provisions of Schedule C of CA bus shelters are provided at 22 locations. Details are provided below.

Table 2.6: List of Bus shelters

S. No.	Chainage (Km.)	Bus bays/ Bus shelter
1	3+550	Bus shelter
2	3+750	Bus shelter
3	8+660	Bus shelter
4	8+720	Bus shelter
5	14+650	Bus shelter
6	14+690	Bus shelter
7	21+880	Bus shelter
8	22+100	Bus shelter
9	26+500	Bus shelter
10	26+410	Bus shelter
11	28+310	Bus shelter
12	28+010	Bus shelter
13	35+430	Bus shelter
14	35+500	Bus shelter
15	36+300	Bus shelter
16	36+480	Bus shelter
17	40+440	Bus shelter
18	40+500	Bus shelter
19	42+220	Bus shelter
20	42+270	Bus shelter
21	45+940	Bus shelter
22	46+050	Bus shelter

2.13 Other Project Facilities Provided as per Schedule C of CA

- Road side furniture: Sign Boards Kilometer stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic safety devices: W Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of CA.
- Landscaping: Provided at Toll Plaza location and being maintained
- Tree Plantation: Tree plantation is provided on both sides of the Project Corridor all along the way and is being maintained.
- Medical Aid Post: Provided at Toll Plaza location and is operational
- Highway Lighting: Highway lighting is provided at Toll Plaza and Built-up sections and is functional.

Km. 8+600

Km. 22+114

Figure 2.4: Representative Photos of Bus Shelters

CHAPTER 3. STATUS OF WORK AFTER PCOD

3.1 General

In accordance with Clause 14.3 of Concession Agreement, Provisional certificate was issued on 24th February, 2018 for completed length of 50.071 Kms. The details of completed length and balance length are given in the following **Tables 3.1 & 3.2.**

Table 3.1: Details of Completed Length

From (Km.)	To (Km.)	Length (Kms.)
1+720	11+200	9.480
14+300	18+880	4.580
19+220	20+080	0.860
20+850	43+450	22.60
43+850	56+401	12.551
Total		50.071

The work in balance sections, which could not be completed due to delay in handing over of land within 240 days of appointed date, is as follows.

Table 3.2: Details of Balance Length

From (Km.)	To (Km.)	Length (Kms.)
0+000	1+720	1.720
11+200	14+300	2.390
18+880	19+220	0.340
20+080	20+850	0.770
43+450	43+850	0.400
Total		5.620

3.2 Punch list

A Punch list is a list of tasks and items that need to be completed before a construction project can be considered finished. Accordingly, two punch lists were given along with Provisional Certificate. Punch list-1, balance works pending due to reasons attributable to authority. Punch List-II, works delayed attributable to concessionaire are included in this list and shall be completed within 90 days from the issuance of Provisional certificate. The details of Punch list-I are given in the following **Table 3.3.**

Table 3.3: Punch List-I

S. No.	Item	Location	Remarks
Punch List for Provisional completion Sections-I			
1	Foot path	Km. 19+800 to Km. 20+080, Km. 20+850 to Km. 22+300 = 2.200 Kms.	Delay in water pipeline shifting
2	Development of bus bays	14 Locations	Delay in Land acquisition

Punch List for Non-Provisional completion Sections-I

S. No.	Item	Location	Length (Kms.)	Remarks
1	Hirekerur town section 4 lane overlay with widening including RCC drain and Footpath	Km. 0+000 to Km. 1+720	1.720	Completed
2	Chikkelur bypass	Km. 11+200 to Km. 13+192	1.990	Completed
3	Realignment portion	Km. 13+900 to Km. 14+300	0.400	Completed
4	Building works and PQC road work at toll plaza location-2 Nos	Km. 19+050 and Km. 43+670	0.740	Completed
5	Hansubhavi town section	Km. 20+080 to Km. 20+850	0.770	Delay in rehabilitation and resettlement

Punch List-II, items to be started or in progress shall be completed within 90 days from the issuance of Provisional certificate. The details are given in the following **Table 3.4**.

Table 3.4: Punch List-II

S. No.	Item	Location	Remarks
1	Bed Protection works of CD structures		In progress
2	Providing Kerb and Footpath	A length of 1.300 Kms.	In progress
3	Embankment slope protection works	Stone pitching 0.360 Kms, Geogreen-0.840 Kms. and turfing	Completed
4	Ground water recharge pits	10 locations	Completed
5	Bus shelters	8 locations	Completed
6	Energising of street lights	Urban sections	Completed

CHAPTER 4. ROAD INVENTORY & PAVEMENT CONDITION

4.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections provided below

4.2 Road Inventory

Inventory of the project road was carried out physically and the same is summarized in the following **Table 4.1**. Few representative photographs are presented below.

Table 4.1: Road Inventory

S. No.	Features	Remarks
1	Terrain	Plain & Rolling
2	Land Use	Mixture of Un-irrigated cultivated land and irrigated cultivated land, and barren land
3	Two lane length	56.401 Kms.
4	Earthen shoulder	1.500 m on each side
5	Junctions	31 Nos.
6	Toll Plazas	2 Nos.
7	Sign boards	Sign boards are provided as per Highway requirements
8	Road Markings	Lane markings are provided as per Highway requirement
9	Bus Bays /shelters	14 Nos.
10	Highway Lighting	Provided as per requirement
11	Avenue plantation	Provided

Km. 33+418

Km. 56+380

Km. 48+518

Figure 4.1: Representative Photos of Existing Road Features

4.3 Pavement Condition

Pavement condition survey was carried out on the project road based on observations supplemented by simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 4.2: Pavement Condition Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Assessment of the condition of Pavement surface is a key component of infrastructure asset management. The information used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

4.4 Pavement Condition Survey

The survey on general pavement condition was primarily undertaken by means of slow drive-over survey, and supplemented with measurements wherever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of Surface area)
 - Ravelling (% of Surface area)
 - Potholes (% of Surface area)
 - Patching (% of Surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP-19 and is given in **ANNEXURE 1**. The summary of Pavement condition is given below.

Table 4.3: Pavement condition summary

CHAPTER 5. INVENTORY AND CONDITION OF STRUCTURES

5.1 General Assessment and Details of the Existing structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

5.2 Inventory of Structures

There are 11 Nos Minor Bridges, 76 Nos Pipe culverts and 18 Nos Slab/ Box culverts along the project road.

Table 5.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	0
2	Minor Bridge	11
3	Pipe culverts	76
4	Slab/Box Culverts	18

The superstructures of the minor bridges are of RCC solid slab/RCC Box and the substructures are of PCC conventional wall type supported on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Condition of most of the culverts is fair except in few locations. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

5.3 Details of Minor Bridges

There are 11 minor bridges in the project stretch. The type of superstructure for minor bridges is RCC solid slab/RCC Box type and the substructure is PCC/RCC conventional wall type supported on open foundations. Expansion joints are buried type and bearings are tar paper. RCC Railing are provided in all structures.

Table 5.2: Inventory of Minor Bridges

S. No.	Chainage (Km.)	Span (m)	Total Length of Bridge (m)	Description
1	12+270	1 x 10.0	10	It has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC Railing, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
2	12+450	1 x 10.0	10	It has RCC solid slab superstructure supported on RCC wall type piers and abutment. Other features are RCC Railing, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.
3	14+608	2 x 3.0	6	It has RCC Box structure. It has RCC Parapet wall, bituminous wearing coat.
4	27+399	2 x 4.0	8	It has RCC Box structure. It has RCC Parapet wall, bituminous wearing coat.
5	44+339	4 x 12.1	48.4	It has RCC Box structure. It has RCC Parapet wall, bituminous wearing coat.
6	44+903	1 x 6.3	6.3	It has RCC solid slab superstructure supported on

Figure 5.1: Representative photos for Minor Bridges

5.4 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

5.4.1 General description of the Slab/Box Culverts

There are 18 Nos. of slab/Box culvert in the project stretch. The details of the culverts are as given below.

Table 5.3: List of Slab/Box Culverts

S. No.	Chainage @ Km.	Span (m)	Vent Size (m)
1	3+054	1 x 2.6	1.000
2	5+225 (Extra)	1 x 1.0	1.000
3	6+104	1 x 4.1	4.100
4	7+640	1 x 4.0	3.500
5	12+791	1 x 3.6	2.600
6	12+924	1 x 3.5	3.100
7	23+798	1 x 4.0	1.500
8	25+639	1 x 1.0	1.000
9	26+047	1 x 1.0	1.000
10	26+942	1 x 1.0	1.000
11	28+198 (Pipe to Box)	1 x 4.0	1.500
12	29+342	1 x 1.8	2.100
13	32+280	1 x 3.0	2.100
14	32+463	2 x 3.0	2.100
15	33+418	1 x 5.0	2.400

38	17+965	1 x 1.2	76	55+375	1 x 1.2

The general condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

Km. 6+333

Km. 11+485

Km. 46+929

Figure 5.3: Representative photos of Pipe Culvert

The culverts are in fair condition and can be retained in the present condition with following repairs/rehabilitation measures.

- Chocked culverts must be cleared.
- Debris and garbage near outside the vents must be removed.

CHAPTER 6. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

6.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

6.2 Pavement design

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2012 publication while the current publication is IRC: 37-2018.

6.2.1 Pavement design crust thickness

The new pavement shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”. Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. “Guidelines for the Design of Plain Jointed Rigid Pavements for Highways”.

The project road has been divided into 2 sections i.e. HS-1 (from Km. 0+000 to Km. 33+050) and HS-2 (from Km. 33+050 to Km. 56+401). The design traffic as per traffic during design stage and design traffic as per CA is summarized below

Table 6.1: Design Traffic Summary

HS	Existing Chainage	As per traffic surveys		As per schedule		Adopted for design	
		10 years MSA (Bituminous layer)	15 years MSA (Non-Bituminous layer)	10 years MSA (Bituminous layer)	15 years MSA (Non-Bituminous layer)	10 years MSA (Bituminous layer)	15 years MSA (Non-Bituminous layer)
1	Km. 32+270	0.78	1.44	0.67	1.17	0.78	1.44
2	Km. 153+950	2.08	3.83	3.12	5.52	3.12	5.52

As per schedule, Appendix B-II, “The design of the crust for the project road shall be done for schedule MSA or as per actual traffic whichever is more”. Since the calculated MSA of the project road is coming out higher in HS-1 and lower in HS-2, with respect to the values provided in Schedule B of Concession Agreement, therefore MSA as per actual traffic for HS-1 and as per given in schedule B for HS-2 has been adopted for the design of crust for the road. Pavement crust thickness in the pavement design report for flexible pavement is as follows: -

Table 6.2: Flexible Pavement Design summary

S. No.	Description/ Pavement layer	Design/Adopted Parameters	
		HS-1	HS-2
1	Sub Grade CBR (%)	7 %	7 %
2	Design Life (Years)	10 years for bituminous 15 years for non-bituminous	10 years for bituminous 15 years for non-bituminous
3	Design Traffic (MSA)	0.78 MSA for bituminous 1.44 MSA for non-bituminous	3.12 MSA for bituminous 5.52 MSA for non-bituminous
4	Surface course (BC)	40 mm	40 mm
5	Binder course (DBM)	50 mm	50 mm
6	Base course (WMM)	250 mm	250 mm
7	Sub Base course (GSB)	150 mm	230 mm

The Pavement crust has been designed according to IRC specification and found in order, the adopted/ Constructed pavement layer thickness is adequately provided than actual/ designed thickness.

6.3 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 0.78 MSA and 3.12 MSA (up to 2027 for 10 years) for HS-1 and HS-2 respectively. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, as per clause 2.3.7 of Schedule K of CA, periodic renewal shall be carried out as and when required and at least once between 5th and 7th year (from COD) within the concession period, the periodic maintenance activities shall also include profile corrective course overlaid with the periodic renewal of the wearing course of BC 25 mm thickness of the road pavement, the concessionaire may adopt cost effective treatment like asphalt recycling, stone mastic, micro seal etc.

Based on the present available data It is envisaged that existing pavement require overlay (periodic renewal) in the year of 2025. Nevertheless, the pavement shall be maintained to the desired level of performance by carrying out periodical renewals as mentioned in subsequent sections.

6.4 Maintenance/ Overlay schedule

Periodic Maintenance shall be carried out as and when required based on the road condition and at least once in 7 years from COD and in the last year of Concession period as a good industry practice. It includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC minimum 25 mm thickness. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Proposed in the year 2025

CHAPTER 7. SAFETY AUDIT OF ROAD

7.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 7.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 88	Manual of Road Safety Audit

7.2 Existing Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following **Table 7.2.**

Table 7.2: Safety Items

S. No.	Item Description	Status	Condition
Road Furniture			
1	Sign Boards	Chevron Signs	Available as per site requirement Good
		Village sign boards	Available as per site requirement Good
		Information Boards	Available as per site requirement Good

S. No.	Item Description		Status	Condition
		Other Sign Boards	Available as per site requirement	Good
		Gantry Sign Boards	Available as per site requirement	Good
2	Solar Blinkers/Rumble strips		Available as per site requirement	Good
3	Road Marking	Studs & Lane marking	Available as per site requirement	Fair
4	Metal Beam Crash Barriers	At High embankments	Available as per site requirement	Good

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

7.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is highly appreciated during the maintenance period.

CHAPTER 8. TOLL PLAZA & HTMS

8.1 General:

There are two toll Plazas on the project road at Km. 19+030 & Km. 43+700 and both are in operation. Control room, Traffic aid post, medical aid post, quarters completed except some portion of compound walls, PQC on extra wide lane and plumbing works. The compound wall was not constructed due to adjacent land owner's objection. The same was intimated to Authority vide Letter No.DHRTL/KRDCL/WCP-05/2019-20/681 dated 14.01.2020 and DHRTL/KRDCL/WCP-05/2019-20/688 dated 25.01.2020.

As per clause 2(g) of Schedule-C, the Concessionaire has to maintain Highway patrol, Ambulance, Crane at site office and the Concessionaire is maintaining the Highway patrolling vehicle and Ambulance.

Letter No. DHRTL/KRDCL/WCP-05/2020-21/736 dated 10.06.2020 elucidates that TP1 and TP2 are fully functional including TMS and toll collection also started since 16th Sept 2019.

8.2 Tolling Equipment and Control Room Equipment

List of equipment provided at toll plaza and control room is given below.

Table 8.1: List of Equipment at Two Toll Plaza and Control Rooms

CHAPTER 9. SCHEDULE OF ANNUITY PAYMENTS

9.1 Hybrid Annuity Model (HAM)

Hybrid annuity model is the PPP model in which Authority makes payment of 40% of the Bid Project cost during construction period based on progress milestones set forth in Concession Agreement. Payment of the balance 60% of the Bid Project Cost is made in form of bi-annual annuities with interest during the operational phase of concession.

In this HAM model, as per Cl. 27.5 Lump sum payment is given in four installments during the construction phase as below.

Table 9.1: Lump Sum Payment

Installment No	Amount in Rs. (Crores)	% Progress during construction
First	17.594	25
Second	17.594	50
Third	17.594	75
Fourth	17.594	On COD

9.2 Schedule of Annuity Payments

As per 27.1, the concessionaire upon achieving COD, Authority agrees to pay Rs. 19.62crores as per schedule-M.

Table 9.2: Schedule of Annuity Payments

S No.	Particulars	Annuity Due Date	Payment Paid on
1	1 st Annuity	28.03.2019	28-Mar-19
2	2 nd Annuity	29.09.2019	18-Dec-19
3	3 rd Annuity	28.03.2020	29-Mar-20

15	15 th Annuity	28.03.2026	
16	16 th Annuity	29.09.2026	

CHAPTER 10. OPERATION AND MAINTENANCE

10.1 General

As per Article 17 of the Concession Agreement, the Concessionaire will operate and maintain the Project Highways by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in this Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines.

10.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual Inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate if there is any need for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz. pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

10.3 Operations

10.3.1 Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- i. Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- ii. carrying out preventive and periodic maintenance of the Project road;
- iii. undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- iv. Undertaking major maintenance such as resurfacing of pavements, repairs to structures.
- v. Functioning of the lighting system;
- vi. Functioning of the Patrolling System

- vii. Functioning of rescue and medical aid services
- viii. Ambulance as and when required
- ix. Functioning of the Project Facilities
- x. Administrative, Operational and Maintenance Base Camp
- xi. Truck Lay byes
- xii. Pickup Bus stops / Bus Bays
- xiii. protection of the environment and provision of equipment and materials therefor;
- xiv. Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- xv. complying with Safety Requirements in accordance with Article 18.

10.4 Operation of Toll Plaza

One lane in each direction is currently under operational and the extra wide lane is opened only for wide vehicles. The tolling is manned by two people per direction per shift with a day having two shifts. Toll Manager takes care of the daily operation and carries out the task of patrolling on bike. The cash collected is deposited on daily basis to the escrow account. In case of ETC system Toll collection is connected with Network system and directly deposited into the Escrow account.

10.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

- i. Preventive Maintenance
- ii. Routine Maintenance
- iii. Periodic Maintenance
- iv. Special repairs

10.5.1 Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence does not require any immediate or preventive interventions.

10.5.2 Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

10.5.3 Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road.

However, as per Schedule M, cl.3.3.7 periodic maintenance of BC shall be laid as required and at least once in six years from COD and in the last year of concession period. The details of periodic maintenance schedule are given below.

Table 10.1: Schedule and status of for Major Maintenance

S. No.	Major Maintenance	Schedule	Status at site
1	1st Periodic Maintenance	2025	Planned to execute

10.5.4 Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project Highway shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

10.6 Review of Test Reports

Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of the pavement surface. Treatment can be suggested based on the condition of surface of road. As such Roughness is the measurement of riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness.

The concessionaire shall measure the road roughness at least twice in every year. Accordingly, the BI test was conducted in August 2020. As per Schedule K during the maintenance period, laying of the renewal coat shall be initiated if the stretch exceeds 2500mm/Km. The values obtained from the test report are verified and found within the above said limits. Hence no renewal coat is required.

Further it is to be noted that Concessionaire shall handover the project with riding quality with acceptable roughness value 2000mm/Km.

Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

As per Schedule K, BBD tests shall be conducted every year soon after rainy season. Deflection exceeds 1mm, a bituminous overlay shall be provided to bring it back to 0.6mm. DBL has conducted BBD test in Feb 2020 and deflection not exceeded 1mm. Hence overlay is not required.

Also a mandatory strengthening course shall be provided over the period 5th/6th years after COD. Moreover, the deflection assessed by BBD test at the end of the concession period shall not exceed 1mm.

Environmental Quality Monitoring

In Feb 2020, Concessionaire has conducted Ambient air quality test, Noise quality test, Water quality test and soil quality test in accordance with Schedule L. The values are within the permissible limits.

10.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 4**.

Table 10.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance (In crores)	Incidental maintenance (In crores)	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	0.344	0.341		1.32	2.01
2021	0.354	0.351		1.36	2.07
2022	0.365	0.362		1.40	2.13
2023	0.376	0.372		1.44	2.19
2024	0.387	0.384	19.23	1.49	21.49
2025	0.399	0.395	19.76	1.53	22.09
2026	0.411	0.407		1.58	2.40
2027	0.210	0.208		0.81	1.22
Total	2.85	2.82	38.99	10.94	55.59

CHAPTER 11. REVIEW OF CONCESSION AGREEMENT

11.1 General: Scope of Project (Article 2)

Article 2 provides the scope of work which includes the following.

- construction of the Project Highway on the Site set forth in schedule B and C and in conformity with the Specifications and Standards (Schedule D) and Schedule L;
- operation and maintenance of the Project Highway in accordance with the provisions of this Agreement
- performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental

11.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 5**.

11.3 Conditions precedent (Article 4):

Conditions precedent to be fulfilled by the Authority:

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire:

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule A
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

11.3.1 Performance Security (Article 9):

- The Concessionaire shall submit the Performance security to the Authority within 120 days from the date of the Agreement,
- The Performance security shall remain in force throughout the Construction period
- Performance Security shall be released on Commercial Operation Date.

11.3.2 Tests (Clause 13.3)

For determining that the Project, conforms to the Maintenance Requirements, the Independent Engineer shall require the Concessionaire (Concessionaire shall in turn require the Contractor) to carry out, or cause to be carried out, tests specified by it in accordance with Good Industry Practice. One half of the costs incurred on such tests, and to the extent certified by the Independent Engineer as reasonable, shall be reimbursed by the Authority to the Concessionaire.

11.4 Provisional Completion Certificate (Clause 14.3)

Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA. Copy of the provisional certificate is provided at **Annexure 6**.

11.5 Completion Certificate (Clause 14.4)

Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire.

11.6 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

11.7 Change of scope (Article 16)

Change of scope proposals that were initiated during construction period and consented by the KRDC are provided at **Annexure 8**.

11.8 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials

11.9 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (The "**Maintenance Requirements**").

11.10 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the "**Maintenance Manual**") for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the

Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

11.11 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

11.12 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 0.5% (zero decimal five percent) of the Average Daily Fee, and
- 0.1% (zero decimal one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

11.13 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

11.14 Annuity (Article 27)

The Authority agrees and undertakes to pay the Concessionaire for each annuity Payment period on each annuity payment date as set forth in schedule M of the CA the sum of Rs 19.62Crores.

11.15 Concession Fee (Article 26)

- In consideration of the grant of Concession, the Concessionaire shall pay Concession Fee of Rs.1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC.

11.16 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 12. INSURANCE

12.1 Details of Insurance:

As per clause 32.1 of the CA, the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice. Copies of insurance are provided at **Annexure7**.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks

Table 12.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period	
			From	To
Civil Engineering Complete Risk	National Insurance Company Limited	321300441910002005	27.03.2020	26.03.2021

CHAPTER 13. CONCLUSION

13.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

13.2 Pavement Condition

The Pavement condition for the overall project is good. RCC drains are constructed in Built up locations and earthen drains in rural locations which facilitates, effective drainage system along the project road. Shoulder condition is fair.

13.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are being cleared during regular maintenance period.

13.4 Project Facilities

Two Toll Plazas are constructed one at Km.19+030 & the other Km. 43+700. Bus bays are in fair condition. Medical Aid posts found functional. Highway lighting is provided at toll plaza locations and the same is found functional.

13.5 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 73-2007. The condition of sign boards & other road appurtenances like metal beam crash barriers is fair.

13.6 Maintenance

A dedicated team is appointed for routine maintenance works and working effectively. Major maintenance (MM) /Periodic maintenance was carried out recently and next MM is scheduled in 2025.

13.7 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road smooth and safe.

LETTER OF AWARD

Sir,

Sub: "Design, Build, Finance, Operate, Maintain and Transfer (DBFOMT) of Existing State Highway Hirekerur - Ranibennur in the State of Karnataka on DBFOMT Annuity Basis (WCP-5)" - Letter of Award (LoA)

Ref: (i) RFP issued on 10th April 2015
(ii) Your bid submitted on June 17th, 2015

This is to notify that your bid submitted for the captioned project (the "Project") for a semi-annual annuity quote of Rs 19,62,00,000 (Rupees Nineteen Crore and Sixty Two Lakh) is hereby accepted by the Government of Karnataka by declaring you as the "Selected Bidder". The concession period is 10 (ten) years including construction period of 24 (twenty four) months.

1. The semi-annual annuity quoted by you shall be disbursed in accordance with the provisions of Draft Concession Agreement (DCA).
2. Lumpsum Payment of Rs 70,37,60,000 (Rupees Seventy Crore, Thirty Seven Lakh and Sixty Thousand) shall be disbursed in accordance with the provisions of Draft Concession Agreement (DCA) in four equal instalments.
3. In accordance with the clause 3.3.2 of the Project RFP Document, you are hereby requested to confirm your acceptance of this Letter of Award within 7 days of its receipt. Thereafter, pursuant to clause 1.3 of the Project RFP Document, you are required to execute the Concession Agreement within 45 days from the issue of LoA.
4. You shall promote and incorporate the Concessionaire as a limited liability company under the Companies Act 1956/2013 as applicable, as the entity which shall undertake and perform the obligations and exercise rights of the Bidder under the LoA, including the obligation to enter into the Concession Agreement pursuant to the LoA for executing the Project.

Annexure 6: Provisional Certificate

Total			5.620 Km	
Length				

4. Following reports and successful test results have already been attached with IE letter dt. 24.02.2018 addressed to the Managing Director, KRDC, Bengaluru, with copies to all concerned:
- (a) Road Safety Review Reports
 - (b) Schedule 'Y' Test results
 - (c) Certified Check List for ensuring required safety and reliability for commercial operation.
5. Except the stretches mentioned in para 3 above, all other parts of the Project Highway can be safely and reliably placed under commercial operations and fulfil the obligation of Article – 15.
6. Pursuant to Clause 14.3 of the Concession Agreement, the Concessionaire has completed 50.071 Km length of the Project Highway in accordance with and as specified in Schedule-B and Schedule-C and in conformity with the specifications and standards set forth in Schedule-D of the Concession Agreement. Accordingly, pursuant to Clause 14.3 of the Concession Agreement, the Provisional Certificate of the above work covering a length of 50.071 Km w.e.f. 24th February 2018 is to be issued to the Concessionaire.
7. After compliances of the above and after concurrence of the Authority vide letter no.3509 dt. 27.03.2018 mentioned under reference 4 above, the Independent Engineer is pleased to issue the Provisional Certificate w.e.f. 24th February 2018 for 50.071 km length of Project Highway out of a total length of 55.693 km in accordance with Clause 14.3 of the Concession Agreement. Provisional Certificate is attached.

CHAPTER 1. INTRODUCTION

1.1 General

DBL Mundargi Harpanahalli Tollways Limited (herein after referred to as the “Concessionaire”) had augmented the existing road from Mundargi-Hadagali (SH-45) and Hadagali-Harpanahalli (SH-47) in the state of Karnataka, in accordance with the provisions of the Concession Agreement (CA) executed with Karnataka Road Development Corporation Limited (herein after referred to as the “**KRDCL**”) on 16th December 2015.

The Project Highway comprises of two state highways viz SH-45 and SH-47 and starts from Mundargi and ends at Hadagali under link 27C (Km. 0+000 to Km. 24+885 on SH-45) and changes its direction from Hoovina Hadagali towards Harpanahalli under link 27D (Km. 0+000 to Km. 26+321 on SH-47). The Project stretch passes through Gadag, Bellary and Davangere District and mainly passes through Mundargi, Korlahalli, Kaganor, Hoovina, Hadagali, Nagathi, Basapura, Kulahalli and Harapanahalli. Project location map is provided at **Figure 1.1**.

SHREM ROADWAYS PRIVATE LIMITED (SRPL) acquired DBL Mundargi Harpanahalli Tollways Limited vide agreement dated 26th March 2018.

SHREM FINANCIAL Pvt. Ltd (SFPL). appointed RUKY Projects Pvt. Ltd. as consultant for detailed Technical Due Diligence services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the annuity payments received and future schedule of annuity payments.

1.2 Project Data

Table 1.1: Project Data

S. No.	Particulars	Details
1	Name of the project	Design, Build, Finance, operate and maintain and transfer (DBFOMT) of existing state highway from Mundargi-Hadagali-Harapanahalli in the state of Karnataka on DBFOMT Hybrid annuity basis.
2	Road Type	State Highway
3	Name of the Authority	KRDCL
4	Name of the Concessionaire	DBL Mundargi Harpanahalli Tollways Limited
5	Name of the EPC Contractor	Dilip Buildcon Limited
6	LOA	11.09.2015
7	Date of agreement	16.12.2015
8	Date of Supplementary Agreement I	29.09.2016
9	Date of Supplementary Agreement II	17.04.2018
10	Design Length as per Schedule I of CA	51.21 Kms.
11	Actual Length Constructed	51.21 Kms.
12	EPC Cost	Rs. 157.1 Cr.
13	Nature of contract	DBFMOT (Hybrid Annuity)
14	Toll collected by	Authority
15	Concession Period	10 years from Appointed Date
16	Appointed date	29.09.2016
17	Concession End date	28.09.2026
18	Construction Period	730 Days from Appointed Date
19	Schedule Completion Date	28.09.2018
20	Date of issuance of Provisional Certificate (Commercial Operation Date)	05.02.2018
21	Bonus on early completion	Applicable as per Cl.28.1
22	Annuity Amount	As per Cl.23.4 and Cl.23.6.3 of CA
23	Total Number of Annuities received as on Jan 2021	04
24	First Annuity Date	28.03.2019

1.3 Scope of Technical Consultancy Services

The scope of work includes providing Technical Due Diligence of the Project Highway and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report

- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout out road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per schedule B and Schedule C of Concession Agreement (CA) including Change of scope are listed in the following Table.

Table 2.1: Salient Features

S. No.	Particulars	As per CA	COS*	As per Site
1.	Total Length	51.21 Kms.	----	51.21 Kms.
2.	Toll Plazas	2 Nos.		2 Nos.
3.	Bus Bays	14 Nos.	-8 Nos.	1 No*
4.	Bus Shelters	14 Nos.	-11 Nos.	2 Nos*
5.	Major Junction	10 Nos.		10Nos.
6.	Minor Junctions	20 Nos.		20Nos.
7.	Major Bridges	1 Nos.		1 Nos.
8.	Minor Bridges	11 Nos.		11 Nos.
9.	Box/Slab Culverts	19 Nos.		19 Nos.
10.	Pipe Culverts	65 Nos.		65 Nos.

* Due to land problem 5 no of bus bays and one no of bus shelter is not constructed.

2.2 Typical Cross Section (TCS) Schedule

During construction The Concessionaire has followed the Typical Cross Section schedule shown in the following figures below and TCS Schedule is tabulated and given below.

Figure 2.1: (TCS A) of Schedule of CA – Rural Cross Section with Paved Shoulder

Figure 2.2: (TCS B) of Schedule of CA - 2 LANE Carriageway With Paved Shoulder In-built up Area

Figure 2.3: (TCS D) of Schedule of CA - 4 Lane Divided Carriageway in urban Area

S. No.	From	To	Length (Kms.)	TCS Type
Link 27 C Mundargi-Hadagali (SH-45)				
1	0.000	1.500	1.50	TCS D
2	1.500	10.000	8.50	TCS A
3	10.000	10.700	0.70	TCS B
4	10.700	22.900	12.20	TCS A
5	22.900	23.700	0.80	TCS B
6	23.700	24.885	1.19	TCS D
Link 27 C Hadagali-Harapanahalli (SH-47) (SH-45)				
7	0.000	0.500	0.50	TCS D
8	0.500	7.200	6.70	TCS A
9	7.200	8.000	0.80	TCS B
10	8.000	11.300	3.30	TCS A

S. No.	From	To	Length (Kms.)	TCS Type

14	14.200	19.600	5.40	TCS A
15	19.600	20.200	0.60	TCS B
16	20.200	25.100	4.90	TCS A
17	25.100	26.321	1.22	TCS B

Table 2.2: TCS Schedule

Figure 2.4: Pictorial Diagram of TCS Lengths

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriageway and to avoid accumulation of drainage from the Carriageway, side drains are constructed along the main carriageway on both flanks as specified in Schedule B of CA in strict adherence to the Standard Specifications set forth in Schedule D of CA.
- The Concessionaire has provided RCC covered drains with footpath in built up areas while earthen drains are in open and rural areas.

2.4 Service Roads

Service road is not proposed along the entire stretch of the project road as per provisions of Schedule B of CA.

2.5 Bypass

There is no bypass / realignment proposed on the project road as per provisions of Schedule B of CA.

2.6 Intersections

As per provisions of Schedule B of the Concession Agreement 10 Major Junctions and 20 Minor Junctions are provided. Details are given below.

Table 2.3: List of Junctions

Chainage (Km.)	Junction Type	Revised Category	Side of Cross Road	Intersecting Road	Remarks
Link 27C Mundargi to Hadagali					
0+000	3-Arm	Major	RHS	SH-129	To Ramenahalli
0+030	4-Arm	Major	RHS	Town road	To Koppal
		Major	LHS	Existing SH-45	To Nagarahalli
0+850	3-Arm	Minor	LHS	Village Road	To Byalawadi
1+165	4-Arm	Major	RHS	Existing SH-45	To Mundargi
		Major	LHS	SH-23	To Shirol

2.10 Summary of Bridges and Culverts

Summary of Structures as per provisions of schedule B of the CA is given below.

Table 2.5: Summary of Structures

S. No	Description	Major Bridges	Minor Bridges	Hume Pipe Culverts	Box/Slab Culverts
1	Retained	1	3	5	3
2	Widening		4	31	6
3	Reconstruction		4	29	10
4	New				
5	Improvement				
	Total	1	11	65	19

Details of the condition survey carried out on Structures are provided at **ANNEXURE-2 & 3**.

2.11 Toll Plazas

- There are two Toll Plazas as per schedules. But only toll booths are constructed at toll plaza locations @ Km. 8+150 and @ Km. 23+800.
- Control room, Traffic aid post, quarters and medical aid post building are not constructed due to LA issue.
- Toll is being collected at tollbooths.

2.12 Bus shelters

As per provisions of Schedule C of CA bus shelters are provided at 14 locations. Details are provided below.

Table 2.6: Bus Shelters

Figure 2.5: Representative Photograph of Bus Bay

2.13 Other Project Facilities Provided as per Schedule I of Concession Agreement

- Road side furniture: Sign Boards Kilometer stones, Road Marking and object/hazard markers are provided in accordance with IRC-SP: 73-2007.
- Traffic safety devices: W Beam Crash barriers, parapet walls are provided as per the provisions of Schedule C of CA.
- Landscaping: Provided at Toll Plaza location and being maintained
- Tree Plantation: Tree plantation is provided on both sides of the Project Corridor all along the way and is being maintained.
- Medical Aid Post: Provided at Toll Plaza location and is operational
- Highway Lighting: Highway lighting is provided at Toll Plaza and is functional.

CHAPTER 3. STATUS OF WORK AFTER PCOD

3.1 General

In accordance with Clause 14.3 of Concession Agreement, Provisional certificate was issued on 31th March 2018 for completed length of 45.43 Kms. out of a total length of 51.206 Kms. The details of completed length are given in the following table.

Table 3.1: Details of Completed Length

From (Km.)	To (Km.)	Side	Length (m)
Link 27C From Km. 00+000 to Km. 24+885			
1+230	8+000	BHS	6670

23+710	23+800	BHS	90
24+100	25+500	BHS	1400
Total Length (Kms.)			45.430

3.2 Punch List

A Punch list is a list of tasks and items that need to be completed before construction and along with that only a Project can be considered, finished. Accordingly, two punch lists were given along with Provisional Certificate. Punch list-1, works delays attributable to concessionaire. The items are included in the list-I, shall be completed within 90 days from the issuance of Provisional certificate. Punch List-II balance works pending due to reasons attributable to authority.

The details of Punch List-I are given in the following table.

Table 3.2: Punch List-I

WCP-06 Design, Build, Finance, Operate, Maintain and Transfer (DBFOMT) of Existing state Highway Mundargi - Hadagali - Harpanahalli in The State of Karnataka on DBFOMT Annuity Basis (Link - 27C & 27D)			
Punch List - 1 For - PCOD (Link - 27C & 27D)			
Punch ID	Proposal	Status of Main Structure	Balance/Rectification works
PI1/1	1 No of Box Culvert in 27C & 1 No of MNB in 27D	Completed	Protection works to be done
PI1/2	Isolated locations in 27C & 27D	Completed	Cleaning of waterway and the structure, rectification of protection work, providing edge concrete for pitching and shoulder protection to be done for all structures
PI1/3	1 No of MNB Link 27C(11+701)	Not Applicable	Maintenance of existing bridge to be done
PI1/4	1 No of HPC in 27C, 4Nos of HPC in 27D and 2Nos of MNB in	Completed	Floor Apron to be done (BHS)
PI1/5	1 No of HPC in 27C	Completed	Drainage wall and protection wall (adjacent to Head wall) to be done
PI1/6	1 No of HPC in 27C	Completed	RHS Pipe collars to be matched with headwall, Protection to be done, LHS Cath pit walls to be constructed
PI1/7	2 No of HPC in 27C	Completed	Honeycomb to be rectified
PI1/8	3 Locations in 27C	Carriage way completed	Connecting RCC Drain & Wheel load Drain not covered at both ends
PI1/9	8 mt, in 27C and 18 mt in 27D	Carriage way completed	RCC drain slab to be done
PI1/10	2 Nos in 27D	Carriage way completed	Electrical pole foundation damaged, to be rectified
PI1/11	6 locations in 27D	Carriage way completed	Street light pole cables exposed on footpath, to be rectified
PI1/12	50 mt in 27D	Carriage way completed	Kerb at Toe to be provided
PI1/13	14+320(LHS)	Not Applicable	Rehabilitation of borrow area, to be done

WCP-06 Design, Build, Finance, Operate, Maintain and Transfer (DBFOMT) of Existing state Highway Mundargi - Hadagali - Harpanahalli in The State of Karnataka on DBFOMT Annuity Basis (Link - 27C & 27D)			
Punch List - 1 For - PCOD (Link - 27C & 27D)			
Punch ID	Proposal	Status of Main Structure	Balance/Rectification works
PI1/14	10 mt in 27C & 60 mt in 27D	Carriage way completed	Between BT edge to drain paving to be done
PI1/15	2 locations - 17+010(LHS), 18+303(RHS)	Not Applicable	Filter media to be provided for ground water recharge pit/bore
PI1/16	16+700(RHS)	Not Applicable	Re-use/Disposal of 20% safety stored scarified bitumen at basecamp
PI1/17	3+636-27C Widening HPC	Completed	RHS Honey comb rectification & protection works to be done as per standards & approved drawings after clearance of land owner objection
PI1/18	18+985-27C Widening HPC	Completed	BHS-300mm floor apron to be done after clearance of land owner objection
PI1/19	21+861-27C Reconstruction of MNB	Completed	RHS-for of stone pitching & aprons on A1 side (1st span width) to be executed after clearance of land owner objection
PI1/20	0+351-27D Reconstruction of MNB	Completed	LHS-Flexible apron and curtain wall to be done after clearance of water pipeline and Electric pole RHS-Flexible apron to be done after clearance of UGD line
PI1/21	3+247-27D Reconstruction of Box culvert	Completed	LHS-Flexible apron to be constructed after clearance of land owner objection
PI1/22	4+900 -27D Reconstruction of Box culvert	Completed	RHS-Protection works to be done after clearance of electric transformer and land owner objection LHS-Curtain wall construction to be done per drawing after clearance of land owner objection
PI1/23	7+289-27D Widening MNB	Completed	LHS-Protection to be done as per drawing after clearance of Electric pole and house compound RHS-Flexible apron to be done after clearance of land owner objection
PI1/24	10+866-27D Widening as per CA, Reconstruction at Site	Completed	RHS-Protection works to be done after clearance of land owner objection
PI1/25	11+867 27D Reconstruction of Box Culvert	Completed	RHS-Protection works to be carried after clearance of Electric pole and pipe line LHS-Protection works to be carried out after clearance of land problem
PI1/26	20+787-27D Widening HPC	Completed	RHS-Apron to be done after shifting of pipe line

Punch List –II, items to be started or in progress shall be completed within 90 days from the issuance of Provisional certificate. The details are given in the following table.

Table 3.3: Punch List-II

WCP-06 Design, Build, Finance, Operate, Maintain and Transfer (DBFOMT) of Existing state Highway Mundargi - Hadagali - Harpanahalli in The State of Karnataka on DBFOMT Annuity Basis (Link - 27C & 27D)

CHAPTER 4. ROAD INVENTORY & PAVEMENT CONDITION

4.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the sections provided below

4.2 Road Inventory

Inventory of the project road was carried out physically and the same is summarized in the following table. Few representative photographs are presented below.

Table 4.1: Road Inventory

S. No.	Features	Remarks
1.	Terrain	Plain Terrain
2.	Land Use	Mostly Agriculture
3.	Two lane length	51.21 Kms.
4.	Earthen shoulder	1 (m) to 1.5 (m) Width on site
5.	Junctions	30 Nos.
6.	Toll Plaza	02 Nos.
7.	Sign boards	Sign boards are provided as per requirement
8.	Road Markings	Lane markings are provided as per requirement
9.	Bus Shelters	2 Nos.
10.	Highway Lighting	Provided as per requirement
11.	Avenue plantation	Provided

Km. 25+000

Km. 22+950

Km. 23+800

Figure 4.1: Representative Photographs of Existing Road Features

4.3 Pavement Condition

Pavement condition survey was carried out on the project road based on observations supplemented by simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 4.2: Pavement Condition Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Assessment of the condition of Pavement surface is a key component of infrastructure asset management. The information used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

4.4 Pavement Condition Survey

The survey on general pavement condition was primarily undertaken by means of slow drive-over survey, and supplemented with measurements wherever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, potholes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition was measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of Surface area)
 - Ravelling (% of Surface area)
 - Potholes (% of Surface area)
 - Patching (% of Surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition

survey are tabulated in the standard proforma as per IRC: SP-19 and is given in **ANNEXURE 1**. The summary of Pavement condition is given below

Table 4.3: Pavement condition summary

From (Km.)	To (Km.)	Length (Kms.)	Condition
0+000	55+210	51.21	good

Km. 21+700

Km. 21+900

Figure 4.2: Representative Photograph of Pavement Condition Photography

CHAPTER 5. INVENTORY AND REVIEW OF STRUCTURES

5.1 General Assessment and Details of the Existing structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

5.2 Inventory of Structures

There is 01 Nos Major Bridge, 11 Nos Minor Bridges, 65 Nos Pipe culverts and 19 Nos Slab/ Box culverts are there along this project road.

Table 5.1: List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	1
2	Minor Bridge	11
3	Pipe culverts	65
4	Slab/Box Culverts	19

The superstructure of the Major bridge is of PSC T-beam and RCC Deck slab. The substructure is of RCC wall type piers and abutments resting on Well foundations. There are 11 minor bridges in which some are RCC solid slab type bridges PCC / RCC wall type Piers and abutments resting on open foundations. Also, there are some RCC box type minor bridges. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**. The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Condition of most of the culverts is fair except in few locations. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

5.3 Details of Major Bridges

There is one Major bridge in the project stretch. The total length of the bridge is 410.0m with 10 spans of 41.0m. The superstructure is of PSC T-beam and RCC Deck slab. The substructure is of RCC wall type piers and abutments resting on Well foundations. Elastomeric/Neoprene bearings are used. Expansion joints are of Modular Strip seal type and RCC railing has been provided.

Table 5.2: List of Major Bridges

S. No.	Chainage (Km.)	Span	Total Length of Bridge (m)
1	11+705	10 x 41.0	410

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, drainage spouts and strip seal expansion joints are to be carried out.

Km. 11+705

Figure 5.1: Representative of Photographs of Major Bridges

5.4 Details of Minor Bridges

There are 11 minor bridges in the project stretch. The type of superstructure for minor bridges is RCC solid slab and the substructure is PCC conventional wall type supported on open foundations. Expansion joints are buried type and bearings are of tar paper and neoprene bearings. RCC crash barriers are provided on all structures.

Table 5.3: Inventory of Minor Bridges

S. No.	Chainage Km.	Span (m)	Total Length of Bridge (m)	Description
Mundargi – Hoovina Hadagali				
1	0+680	4 x 13.0	52.00	The MNB has RCC solid slab superstructure supported on conventional RCC wall type piers and abutments resting on open foundations. Strip seal type expansion joints.
2	3+324	9 x 5.5	49.50	It is RCC box type minor bridge.
3	9+275	4 x 7.5	30.00	It is RCC box type minor bridge.

5.5 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent clearance is required. In general, the condition of all the structures is found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in ANNEXURE 3.

5.5.1. General Description of Slab/Box Culverts

There are 19 Nos. of slab / Box culverts in the project stretch. The details of the culverts are as given below.

Table 5.4: List of Slab/Box Culverts

S. No.	Chainage (km.)	Span (m)
Mundargi – Hoovina Hadagali		
1	0+250	1 x 2.0
2	1+189	1 x 2.0
3	5+720	1 x 6.0
4	13+734	1 x 1.1
5	17+665	1 x 2.0
6	19+881	1 x 1.2

64	24+424	4 x 0.9
65	26+099	1 x 0.9

General condition of above pipe culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

CHAPTER 6. PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

6.1 General

Review of Pavement design report, providing insights on design life of pavement, crust thickness, history of overlays over the existing pavement etc., Based on pavement condition and CA provisions recommendation for the upcoming renewal cycles.

6.2 Pavement design validation

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2012 publication while the current publication is IRC: 37-2018.

6.2.1. Pavement design crust thickness

The new pavement shall be designed in accordance with the IRC:37. “Guidelines for the Design of Flexible Pavements”. Rigid pavement shall be designed in accordance with the method prescribed in IRC:58. “Guidelines for the Design of Plain Jointed Rigid Pavements for Highways”.

The project road has been divided into 2 sections i.e. Link 27 C (from Mundargi Km. 174+200 to Hadagali Km. 199+500 and Link 27 D (from Hadagali Km. 355+960 to Harapanahalli Km. 329+460). The design traffic as per traffic during design stage and design traffic as per CA is summarized below.

Table 6.1: Design traffic summary

S. No.	Location	As per traffic surveys		As per schedule		Adopted for design	
		10 years MSA (Bituminous layer)	15 years MSA (Non-Bituminous layer)	10 years MSA (Bituminous layer)	15 years MSA (Non-Bituminous layer)	10 years MSA (Bituminous layer)	15 years MSA (Non-Bituminous layer)
1	Km. 182+335	11.95	19.42	3.5	5.55	11.95	19.42
2	Km. 332+245	1.23	2	3.74	5.87	3.74	5.87

As per schedule, Appendix B-II, “The design of the crust for the project road shall be done for schedule MSA or as per actual traffic whichever is more”. Since the calculated MSA of the project road is coming out higher in Link 27C and lower in Link 27D, with respect to MSA provided in Schedule B of Concession Agreement, therefore MSA as per actual traffic for Link 27 C and as per given in schedule B

for link 27 D has been adopted for the design of crust for the road. Pavement crust thickness in the pavement design report for flexible pavement is as follows:

Table 6.2: Flexible Pavement Design summary

S. No.	Description/ Pavement layer	Design/Adopted Parameters	
		Link 27 C	Link 27 D
1	Sub Grade CBR (%)	10 %	8 %
2	Design Life (Years)	10 years for bituminous 15 years for non-bituminous	10 years for bituminous 15 years for non-bituminous
3	Design Traffic (MSA)	11.95 MSA for bituminous 19.42 MSA for non-bituminous	3.74 MSA for bituminous 5.87 MSA for non-bituminous
4	Surface course (BC)	40mm	40mm
5	Binder course (DBM)	50 mm	50 mm
6	Base course (WMM)	250 mm	250 mm
7	Sub Base course (GSB)	200 mm	160 mm

Pavement crust thickness in the pavement design report for rigid pavement is as follows:

Table 6.3: Rigid Pavement Design for Toll Plaza

Description	Design/Adopted Thickness	
	Link 27 C	Link 27 D
CBR of sub grade	10 %	10 %
Design life in years	30	30
Pavement Quality Concrete (PQC) – (mm)	280	250
Dry Lean Concrete (DLC) – (mm)	150	150
Drainage Layer (GSB) - (mm)	150	150
Diameter of Dowel Bar (mm)	32	32
Length of Dowel Bar (mm)	450	450
Spacing of Dowel Bars (mm)	300	300
Diameter of Tie Bar (mm)	12 (Deformed)	12 (Deformed)
Length of Tie Bar (mm)	640	640
Spacing of Tie Bars (mm)	640	780

The Pavement crust has been designed according to IRC specification and found in order the adopted/ Constructed pavement layer thickness is adequately provided than actual/ designed thickness.

6.3 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 11.95 MSA and 3.74 MSA (up to 2027 for 10 years) for Link 27C and Link 27D respectively. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, as per clause 2.3.7 of Schedule K of CA, periodic renewal shall be carried out as and when required and at least once between 5th and 7th year (from COD) within the concession period, the periodic maintenance activities shall also include profile corrective course overlaid with the periodic

renewal of the wearing course of BC, the concessionaire may adopt cost effective treatment like asphalt recycling, stone mastic, micro seal etc.

Based on the present available data It is envisaged that existing pavement require overlay (periodic renewal) in the year of 2025. Nevertheless, the pavement shall be maintained to the desired level of performance by carrying out periodical renewals as mentioned in subsequent sections.

6.3.1. Maintenance/ Overlay schedule

Periodic Maintenance shall be carried out as and when required based on the road condition and at least once in 7 years from COD and in the last year of Concession period as a good industry practice. It includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement – Next periodic renewal In the year 2025

Periodic Maintenance for Rigid Pavement – Re-texturing shall be done at least once in 10 years from construction

CHAPTER 7. SAFETY AUDIT OF ROAD

7.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals like Type Designs for Intersections on National Highways, 1992.

Table 7.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC: 35	Code of Practice for Road Markings
IRC: 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC: 67	Code of Practice for Road signs
IRC: 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC: SP- 73	Two lane Manual
IRC: SP- 84	Four lane Manual
IRC: SP- 88	Manual of Road Safety Audit

7.2 Existing Road Safety Audit

During the site visit it is observed that all safety items are provided as shown in the following table

Table 7.2: Status of Road Safety Items

S. No.	Item Description		Status	Condition
Road Furniture				
1	Sign Boards	Chevron Signs	Available as per site requirement	Good
		Village sign boards	Available as per site requirement	Good
		Information Boards	Available as per site requirement	Good
		Other Sign Boards	Available as per site requirement	Good
		Gantry Sign Boards	Available as per site requirement	Good
2	Road Marking	Studs & Lane marking	Available as per site requirement	Fair
3	Metal Beam Crash Barriers	At High embankments	Available as per site requirement	Fair

Km. 21+900

Figure 7.1: Representative Photographs of Road Safety

7.3 Conclusions

Safety arrangements, made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is highly appreciated during the maintenance period.

CHAPTER 8. TOLL PLAZA & HTMS

8.1 General

There are two toll Plazas on the project road at Link-27C & Link-27D. Each Toll plaza comprises of 4 lanes. Each side comprises of 1 normal lanes, 1 extra wide lane. The lane width in normal lanes was 3.2 m and extra wide lane was 4.5 m. The width of islands provided is 1.8 m. The single canopy is provided to cover the toll lanes. Toll plaza buildings are G+1 floor building which houses control room, UPS and Pantry.

8.2 Tolling Equipment's

List of equipment provided at toll plaza and control room is given below

Table 8.1: List of Tolling Equipment at Toll Plaza and Control Room

S. No.	Equipment	Nos.
1	Combined toll lane controller with AVC controller	12
2	Toll collector Keyboard	12
3	AVC sensors including 3 sets of height sensors	12
4	Thermal Receipt Printer	12
5	Lane incident capture camera	12
6	Traffic Light 200mm dia	12
7	Overhead lane signals	12
8	User fare display 2-lines	12
9	Intercom slave unit	12
10	Lane barrier	12
11	IR Barrier Safety	12
12	Manual booth controller	12
13	10KVA online	
14	Barcode Reader	12

15	TMS server	2
16	Admin/LSDU	4
17	Cashu up/Audit work station	4
18	Thermal receipt printer	2
19	6KVA online UPS with 30 min back up.	2

8.3 Vehicles

The list of vehicles, which were observed at site, for operation of Highway and Toll Plaza are presented below.

Table 8.2: List of Vehicles

S. No.	Vehicle Type	Remarks
1	Jeep	Ambulance (2)
2	Jeep	Patrolling vehicle (2)

Toll Plaza at Km. 23+800

Toll Building at Km. 8+150

Figure 8.1: Representative Photographs of Toll Plaza

CHAPTER 9. SCHEDULE OF ANNUITY PAYMENTS

9.1 Hybrid Annuity Model (HAM)

Hybrid annuity model is the PPP model in which Authority makes payment of 40% of the Bid Project cost during construction period based on progress milestones set forth in Concession Agreement. Payment of the balance 60% of the Bid Project Cost is made in form of bi-annual annuities with interest during the operational phase of concession.

In this HAM model, as per Cl. 27.5 Lump sum payment is given in four installments during the construction phase as below.

Table 9.1: Payment Schedule during construction

Installment No	Amount in Rs. (Crores)	% Progress during construction
First	16.163	25
Second	16.163	50
Third	16.163	75
Fourth	16.163	On COD

9.2 Schedule of Annuity Payments

As per 27.1, the concessionaire upon achieving COD, Authority agrees to pay Rs. 17.73 crores as per schedule –M.

Table 9.2: Schedule of Annuity Payments

S. No.	Particulars	Annuity Due Dates	Payment received date
1	1st Annuity	28.03.2019	29-Mar-19
2	2nd Annuity	29.09.2019	19-Dec-19
3	3rd Annuity	28.03.2020	29-Mar-20
4	4th Annuity	29.09.2020	19-Nov-20
5	5 th Annuity	28.03.2021	
6	6 th Annuity	29.09.2021	
7	7 th Annuity	28.03.2022	
8	8 th Annuity	29.09.2022	
9	9 th Annuity	28.03.2023	
10	10 th Annuity	29.09.2023	
11	11 th Annuity	28.03.2024	
12	12 th Annuity	29.09.2024	
13	13 th Annuity	28.03.2025	
14	14 th Annuity	29.09.2025	
15	15 th Annuity	28.03.2026	
16	16 th Annuity	29.09.2026	

CHAPTER 10. OPERATION AND MAINTENANCE

10.1 General

As per Article 17 of the Concession Agreement, the Concessionaire will operate and maintain the Project Highways by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in this Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

10.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- Visual Inspection
- Detailed Inspection
- Thorough Inspection

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority's Engineer not later than 45 days prior to the commencement of the month in which maintenance is to be carried out.

10.3 Operations

10.3.1. Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project Highway and Project Facilities.

- 1 Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- 2 Carrying out preventive and periodic maintenance of the Project Highway;
- 3 Undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- 4 Undertaking major maintenance such as resurfacing of pavements, repairs to structures,
- 5 Functioning of the lighting system;
- 6 Functioning of the Patrolling System
- 7 Functioning of rescue and medical aid services
- 8 Ambulance as and when required
- 9 Functioning of the Project Facilities
- 10 Administrative, Operational and Maintenance Base Camp
- 11 Truck Parking Lay bays
- 12 Pickup Bus stops / Bus Bays
- 13 protection of the environment and provision of equipment and materials therefore;
- 14 Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project Highway
- 15 Complying with Safety Requirements in accordance with Article 18.

10.4 Maintenance of Project Highway

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year.

Road maintenance can be carried out in four ways as listed below.

1. Preventive Maintenance
2. Routine Maintenance
3. Periodic Maintenance
4. Special repairs

10.4.1. Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence doesn't require any immediate or preventive interventions.

10.4.2. Routine Maintenance

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

10.4.3. Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as "functional overlays," as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a "structural overlay", they are intended to increase load-carrying capabilities of the project road.

However, as per Schedule K, 2.3.7 periodic maintenance of BC shall be laid as required and at least 5th or 7th year from Cod.

The details of periodic maintenance schedule are given below.

Table 10.1: Schedule and status of for Major Maintenance

S. No.	Major Maintenance	Year	Status at site
1	1st Periodic Maintenance	2025	Scheduled

10.4.4. Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sandstorms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project Highway shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction
- c. Construction of Diversions
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

10.5 Review of Test Reports

10.5.1. Bump Integrator Values

Maintenance of road is dependent on several factors, one of which is the condition of the pavement surface. Treatment can be suggested based on the condition of surface of road. As such Roughness is the measurement of riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness.

The concessionaire shall measure the road roughness at least twice in every year. Accordingly, the BI test was conducted in Aug 2020. As per Schedule K during the maintenance period, laying of the renewal coat shall be initiated if the stretch exceeds 2000mm/Km. The values obtained from the test report are verified and found within the above said limits. Hence no renewal coat is required.

Further it is to be noted that Concessionaire shall handover the project with riding quality with acceptable roughness value 2000mm/Km.

10.5.2. Benkelman Beam Deflection (BBD)

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

As per Schedule K, BBD tests shall be conducted every year soon after rainy season. Deflection exceeds 1mm, a bituminous overlay shall be provided to bring it back to 0.6mm. DBL has conducted BBD test in Feb 2020 and deflection not exceeded 1mm. Hence overlay is not required.

Also a mandatory strengthening course shall be provided over the period 5th/6th years after COD. Moreover, the deflection assessed by BBD test at the end of the concession period shall not exceed 1mm.

10.5.3. Environmental Quality Monitoring

In Aug 2020, Concessionaire has conducted Ambient air quality test, Noise quality test, Water quality test and soil quality test in accordance with Schedule L. The values are within the permissible limits.

10.6 O&M Forecast

The O&M costs were estimated based on various parameters of CA and project corridor. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 4**.

Table 10.2: Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance	Incidental maintenance	Periodic / Major maintenance	Operational Expenses	Total cost per year
	(In crores)	(In crores)			
2020	0.242	0.312		1.11	1.66
2021	0.249	0.322		1.14	1.71
2022	0.256	0.331		1.18	1.77
2023	0.264	0.341		1.21	1.82
2024	0.272	0.351	17.46	1.25	19.33
2025	0.28	0.362	17.94	1.29	19.87
2026	0.288	0.373		1.33	1.99
2027	0.147	0.19		0.68	1.02

CHAPTER 11. REVIEW OF CONCESSION AGREEMENT

11.1 General: Scope of Project (Article 2)

Article 2 provides the scope of work, which includes the following.

- construction of the Project Highway on the Site set forth in schedule B and C and in conformity with the Specifications and Standards (Schedule D) and Schedule L;
- operation and maintenance of the Project Highway in accordance with the provisions of this Agreement
- performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental

11.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time. The issued LOA copy given in **ANNEXURE 5**.

11.3 Conditions precedent (Article 4)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the Concession Agreement

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule A
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

11.4 Performance Security (Article 9)

- The Concessionaire shall submit the Performance security to the Authority within 120 days from the date of the Agreement,
- The Performance security shall remain in force throughout the Construction period
- Performance Security shall be released on Commercial Operation Date.

11.5 Tests (Clause 13.3)

For determining that the Project, conforms to the Maintenance Requirements, the Independent Engineer shall require the Concessionaire (Concessionaire shall in turn require the Contractor) to carry out, or cause to be carried out, tests specified by it in accordance with Good Industry Practice. One half of the costs incurred on such tests, and to the extent certified by the Independent Engineer as reasonable, shall be reimbursed by the Authority to the Concessionaire

11.6 Provisional Completion Certificate (Clause 14.3)

Upon completion of works in accordance with the specifications and standards set forth in the Schedule B, C and D of CA after determining the tests on completion successful the Independent engineer shall issue the Completion Certificate in the form set forth in Schedule J of CA.

A copy of PCOD enclosed at **Annexure-6**.

11.7 Completion Certificate (Clause 14.4)

Upon completion of Punch list items appended to the Provisional Completion Certificate within 90 days of issuance of Provisional Complete Certificate, Completion Certificate shall be issued to the Concessionaire.

11.8 Commercial Operation Date (COD) (clause 15.1)

- COD shall be the date on which the Provisional Completion Certificate is issued by the Independent Engineer.
- With COD the Project shall enter into commercial service and the Concessionaire is entitled to demand and collect Fee.

11.9 Change of scope (Article 16)

Change of scope proposals that were initiated during construction period and consented by the KRDC are provided at **Annexure 8**.

11.10 O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements and repairs.
- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials

11.11 Maintenance Requirements (Clause 17.2)

The Contractor shall procure that at all times during the Operations period; the Project road conforms to the maintenance requirements set forth in Schedule K of CA (The "Maintenance Requirements").

11.12 Maintenance Manual (Clause 17.3)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

11.13 Maintenance Programme (Clause 17.4)

- On or before COD and no later than 45 days prior to the beginning of each Accounting year during the Operation Period as the case may be the Concessionaire shall provide to the Authority and Independent Engineer its proposed annual Programme of preventive, urgent and the schedule maintenance.
- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

11.14 Damages for breach of Maintenance Obligations (Clause 17.8)

- In the event that the Contractor fails to repair or rectify any defect or deficiency set forth in the Maintenance Requirements within the period specified therein, it shall be deemed to be in breach of the Agreement and the Concessionaire shall be entitled to recover Damages, to be calculated and paid for each day of delay until the breach is cured, at the higher of the following.
- 0.5% (zero decimal five percent) of the Average Daily Fee, and
- 0.1% (zero decimal one per cent) of the cost of such repair or rectification as estimated by the Independent Engineer.

11.15 Monthly status reports (Clause 19.1)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

11.16 Annuity (Article 27)

The Authority agrees and undertakes to pay the Concessionaire for each annuity Payment period on each annuity payment date as set forth in schedule M of the CA the sum of Rs 17.73 Crores.

11.17 Concession Fee (Article 26)

- In consideration of the grant of Concession, the Concessionaire shall pay Concession Fee of Rs.1.00 per year during the Concession Period
- Concession Fee shall be paid in advance within 90 days of the commencement of the Accounting Year.
- Yearly the Concessionaire is paying the Concession Fee to the MPRDC.

11.18 Change in Law (Article 41)

The Contractor acknowledges that the Contractor shall be responsible for any consequences arising from any Change in Law and the Contractor shall at its own costs and expenses, undertake the compliance with any such Change in Law, however, in the event any receivables are obtained by the Concessionaire from the Authority, towards the losses incurred by the Concessionaire on account of Change in Law, then the Contractor shall ensure that such receivables are passed to the Concessionaire.

CHAPTER 12. INSURANCE

12.1 Details of Insurance

As per clause 32.1 of the Concession Agreement, the Concessionaire shall effect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks. The copies of the Insurance is enclosed in **Annexure-7**.

Table 12.1: Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Property
			From	To	
Civil Engineering Completed Risk	National Insurance Co. Ltd	321300441910001999	27.3.2020	26.3.2021	Toll Plaza Building & Booths, TMS, HTMS, Office & IT Equipment, Road Furniture, Fixtures, Electrical Poles, Lighting & Fittings, Signboard, Safety/concrete/Protection barrier, gantry various equipment.
Electronic Equipment Insurance Policy schedule	Oriental Insurance Company Ltd	171200/44/2021/68	7.12.2020	6.12.2021	EI Equipment installed in the Project Highway
Employees Compensation Insurance Policy	The New India Assurance Co Ltd	4501003619010000052	8.2.2020	7.2.2021	All categories of Employees of the Contractor & sub-contractor engaged in the Project

CHAPTER 13. CONCLUSION

13.1 General

Based on the above information over all condition of the Project is provided below.

13.2 Pavement Condition

Pavement condition is Good. No major distress was noticed. In 2020, overlay was laid and riding quality is Good. Drainage system is effective along the project road as the RCC drains constructed in built up locations and earthen drains in rural locations. Shoulder condition is fair.

13.3 Condition of Structures

General condition of Bridges is Good. No major structural defects were noticed and found structurally safe. General condition of Culverts is Good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are getting cleared during regular maintenance period.

13.4 Traffic Growth

Traffic growth observed since PCOD is satisfactory.

13.5 Project Facilities

Toll Plazas are proposed at Km. 8+150 and at Km. 23+800 and tollbooths are constructed and operated. Truck lay byes/Bus bays are in Good condition. Highway lighting is provided at truck laybys and toll plaza locations and found functional.

13.6 Road safety

Pavement marking is in Good condition and number of sign boards are provided as per IRC SP 73-2007. The condition of sign boards is Good but very few sign boards were mis-utilized by the local people, sticking the pamphlets on boards resulting to reduction in visibility. However, signboards are being cleaned by maintenance team to impart the visibility. Other road appurtenances like metal beam crash barriers and kerb are intact.

13.7 Maintenance

A dedicated team is appointed for routine maintenance works and working effectively. Major maintenance (MM) /Periodic maintenance is scheduled in 2024 /2025.

13.8 Epilogue

The project is well designed and constructed as per the stipulated specifications besides maintenance work is being carried out effectively and keeping the road traffic worthy, smooth, safe at all times.

LETTER OF AWARD

Sir,

Sub: "Design, Build, Finance, Operate, Maintain and Transfer (DBFOMT) of Existing State Highway Mundargi - Hadagali - Harapanahalli in the State of Karnataka on DBFOMT Annuity Basis (WCP6)"- Letter of Award (LoA)

Ref.: (i) RFP issued on 10th April 2015
(ii) Your bid submitted on June 17th, 2015

This is to notify that your bid submitted for the captioned project (the "Project") for a semi-annual annuity quote of Rs 17,73,00,000 (Rupees Seventeen Crore and Seventy Three Lakh only) is hereby accepted by the Government of Karnataka by declaring you as the "Selected Bidder". The concession period is 10 (ten) years including construction period of 24 (twenty four) months.

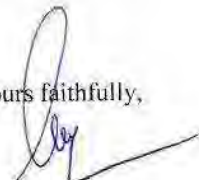

1. The semi-annual annuity quoted by you shall be disbursed in accordance with the provisions of Draft Concession Agreement (DCA).
2. Lumpsum Payment of Rs 64,65,20,000 (Rupees Sixty Four Crore, Sixty Five Lakh and Twenty Thousand) shall be disbursed in accordance with the provisions of Draft Concession Agreement (DCA) in four equal instalments.
3. In accordance with the clause 3.3.2 of the Project RFP Document, you are hereby requested to confirm your acceptance of this Letter of Award within 7 days of its receipt by signing and returning the duplicate copy of the LOA in acknowledgement thereof. Thereafter, pursuant to clause 1.3 of the Project RFP Document, you are required to execute the Concession Agreement within 45 days from the issue of LoA.
4. You shall promote and incorporate the Concessionaire as a limited liability company under the Companies Act 1956/2013 as applicable, as the entity which shall undertake and perform the obligations and exercise rights of the Bidder under the LoA, including the obligation to enter into the Concession Agreement pursuant to the LoA for executing the Project.

5. The Concessionaire shall, for the performance of its obligations hereunder during the Concession Period, provide to the Authority no later than 120 (one hundred and twenty) days from the date of the Agreement, an irrevocable and unconditional guarantee from a Bank for a sum equivalent of Rs10.26 Crore (Rupees Ten Crore and Twenty Six Lakh) in the form set forth in Schedule – F (the “Performance Security”).
6. In case of Default on your part, action as per relevant conditions of Bid Document shall be taken.

Please acknowledge the receipt.

Encl: LoA (in Duplicate)

Yours faithfully,

Managing Director,
KRDCL

PROVISIONAL CERTIFICATE

1. I, **B.T. Jwalendra Kumar**, acting as Independent Engineer, under and in accordance with the Concession Agreement dated 29.09.2016 on Design, Build, Finance, Operate and Maintain and Transfer (DBFOMT) the **Mundargi –Hadagali-Harapanahalli** in the state of Karnataka on DBFOMT Annuity Basis ,through DBL Mundargi Harapanahalli Tollways Limited ,hereby certify that the tests specified in Article 14 and Schedule-I of the Agreement have been undertaken to determine compliance of the Project Highway with Provisions of the Agreement.
2. Construction works that were found to be incomplete and/ or deficient have been specified in the punch list appended hereto, and the Concessionaire has agreed and accepted that it shall complete and/ or rectify all such works in the time and manner set forth in the Agreement. Some of the incomplete works have been delayed as a result of reasons attributable to the Authority or due to Force Majeure and the Provisional Certificate cannot be withheld on this account. Though the remaining incomplete works have been delayed as a result of reasons attributable to the concessionaire, I am satisfied that having regard to the nature and extent of such incomplete works, it would not be prudent to withhold commercial operation of the Project Highway, pending completion thereof.
3. In view of the foregoing, I am satisfied that the Project Highway can be safely and reliably placed in commercial service of the Users thereof, and in terms of the agreement, the Project Highway is hereby provisionally declared fit for entry into commercial operation on this the **5th day of February 2018.**

	16	24+100	25+500	BHS	1400	
TOTAL					45.430	K.M

In this connection, the following points are brought for the kind perusal:

I. Status of handing over of site:

The site handing over schedule as per the Schedule G of the Concession Agreement signed on 16.06.2015 and subsequently modified in the First Supplementary Agreement signed on 29.09.2016 with the approval of World Bank are as below:

R/6

Schedule G of the Concession Agreement signed on 16.06.2015			Modified clause of Schedule C as in the First Supplementary Agreement signed on 29.09.2016		
Stretch	Site	Handing Over	Stretch	Site	Handing Over
The stretches in possession of the Authority and is free from land acquisition and encumbrances	The Authority shall give the Concessionaire a minimum 80% of area of the site, free from land acquisition and encumbrances	On or before the Appointed Date.	The stretches in possession of the Authority and is free from land acquisition and encumbrances	The Authority shall give the Concessionaire a minimum 80% of the site free from land acquisition and encumbrances	On or before the Appointed Date
Balance stretches/locations where land acquisition / encumbrance clearance is involved.	The Authority shall give the Concessionaire the balance site, free from land acquisition and encumbrances.	Within 6 months of the Appointed Date.	Balance stretches/locations where land acquisition / encumbrance clearance is involved	The Authority shall hand over to the Concessionaire the balance site, free from land acquisition and encumbrances	Within 8 months of the Appointed Date

The site handed over to Concessionaire as on Appointed Date and due date of balance site handing over are as below:

Site Handing over details	% site
Handing over of site free from land acquisition and encumbrances on Appointed Date.	83.33%
Handing over of site free from land acquisition and encumbrances within 8 months from Appointed Date	5.39%
Total length handed over before the due date of 8 months from appointed date i.e., 28.05.2017	88.72%
Handing over of site free from land acquisition and encumbrances after 8 months from Appointed Date till now	3.33%
Total site handed over till date	92.05%
Balance site to be handed over as on date	7.95%

The 88.72 % of area mentioned above comprises a length of 45.43 Km covering the main carriage way, shoulders and cross drainage structures. Land acquisition and R & R was involved for constructing RCC drain in some town limits, toll plazas, Bus bays and major junctions. The concessionaire has substantially completed 45.43 Km of project highway out of 51.206 km except few minor items as detailed in the punch list-1 (refer Annexure I) which are pending mainly due to land acquisition, utility shifting and adjacent land owners obstructions. Balance length of 5.776 km is being handed over progressively as and when land acquisition process completes.

3/6

2. Issue of Provisional completion certificate,

The relevant clause of the Concession Agreement including amendments made with concurrence of World Bank with regard to issue of Provisional Completion Certificate is as below:

10.3.5 The Concessionaire shall complete the construction on the land included in the Appendix for which the Right of Way has been granted within 8 months of the Appointed Date, before Project Completion Date. However, construction on the lands for which Right of Way is granted after the period of 8 months from the Appointed Date shall be completed within a reasonable period to be determined by the Independent Engineer in accordance with Good Industry Practice; provided that the issue of Provisional Certificate shall not be affected or delayed due to any construction remaining incomplete on the date of Tests, on account of Right of Way not having been granted over such part of the Site. It is further agreed that the obligation of the Concessionaire to complete the affected Construction Works shall subsist so long as the Authority continues to pay the Damages specified herein, and upon the Authority ceasing to pay such Damages after giving 60 (sixty) days' notice thereof to the Concessionaire, the obligation of the Concessionaire to complete such works on such part of the Site for which the Right of Way is granted after 8 months of the Appointed Date, shall cease forthwith.

14.3 The Independent Engineer may, at the request of the Concessionaire and with the concurrence of the Authority in writing, issue a provisional certificate of completion substantially in the form set forth in Schedule-I (the "Provisional Certificate") if the Tests are successful and the Project Highway can be safely and reliably placed in commercial operation though certain works or things forming part thereof are outstanding and not yet complete. In such an event, the Provisional Certificate shall have appended thereto a list of outstanding items signed jointly by the Independent Engineer and the Concessionaire (the "Punch List"); provided that the Independent Engineer shall not withhold the Provisional Certificate for reason of any work remaining incomplete if the delay in completion thereof is attributable to the Authority.

In terms of provision of Concession Agreement, the Concessionaire has completed a length of 45.43 kms which is handed over prior to due date which is 8 months from the appointed date i.e., 29.09.2016 to qualify for the issue of Provisional Completion Certificate with minor outstanding works not attributable to concessionaire as detailed in the **punch list-I, Annexure I**

3. Balance site which is not handed over on or before 8 months from appointed date:

The balance works in the site which is being handed over after 8 months from the appointed date has been listed in the **punch list -2, Annexure II (Balance works)**. Punch list items also cover the incomplete affected works pertaining to Provisional Completion Certificate stretches such as bus-bays, Junction improvements etc As per the provision of Concession Agreement the balance works as listed in *Annexure-IV* shall be completed after the site is handed over by the Concessionaire within a reasonable period to be determined by the Independent Engineer in accordance with Good Industry Practice. Authority has handed

4/6

over 3.33% of site i.e., 1.69 km progressively after 8 months from the Appointed Date. The works in this reach are under progress.

4. Tests as per Schedule:

Prior to declaration of Provisional Completion, All tests to be undertaken on the project highway or part as per Concession Agreement clause 14.1.2 and Schedule- I. Accordingly the IE and Concessionaire have carried out all the tests in the sections notified by the Concessionaire and monitored and reviewed the results of the Tests and ensured necessary compliance. (Details enclosed as *Annexure-III*)

5. Quality Assurance:

The part of Project Highway notified by Concessionaire has been constructed as specified in Schedule B and C and in conformity with the Specification and Standards set forth in Schedule –D of the Concession Agreement. The RFIs raised by the Concessionaire on daily basis for the material and construction activities have been verified by the IE.

6. Status of Compliance by the Concessionaire to the Non-Compliance Reports (NCRs):

During the execution of works, several NCRs were issued by the Independent Engineer to the Concessionaire. All lapses, defects or deficiencies observed by the Independent Engineer in the construction of the Project Highway are rectified and all NCRs issued are closed in accordance with the provision of the Concession Agreement, which have been complied.

7. Operation and Maintenance Manual:

In accordance with clause 17.3 of the CA, the Concessionaire has submitted to the Independent Engineer, the “Maintenance Manual” for the regular and preventive maintenance measures of the Project Highway in conformity with the Maintenance Requirements, Safety Requirements and Good Industry Practice. The IE has reviewed the manual and concurred.

8. Environmental Audit Report:

The Independent Engineer has carried out a check and determined conformity of the Project Highway with the environmental requirements set forth in Applicable Laws and Applicable Permits

9. Safety Audit Report:

Safety audit of the Project Highway have been undertaken by the Safety Consultant as set forth in Schedule-L, and on the basis of audit, the Independent Engineer has determined conformity of the Project Highway with the provisions of this Agreement.

All the pre-requisites for issuance of the Provisional Certificate of Completion have been carefully examined and all parameters mentioned in the checklist have been certified and complied as in *Annexure-IV*.

10. Recommendations:

In terms of Concession Agreement the Concessionaire has completed the works substantially on the site handed over prior to due date **28th May 2017** i.e 8 months from the Appointed Date as specified in Schedule B and C and in conformity with the Specification and Standards set forth in Schedule –D of the Concession Agreement. The completed project length 45.43 kms

5/6

with minor outstanding works as detailed in punch list 1 is safe for commercial operation, therefore, Authority is requested for concurring issue of Provisional Certificate of Completion in terms of Concession Agreement clause 14.3 with a direction to complete the punch list items -1 within a period of 90 days.

In view of the above, the project highway can be provisionally declared fit for entry into commercial operation as on 05th February 2018.

Encl: As above

Yours Sincerely

(Independent Engineer)

DISCLAIMER AND CONSENT FOR USE

This report has been prepared for the benefit of SHREM FINANCIAL PRIVATE LIMITED (SFPL), the investment Manager of Shrem InvIT (Trust), for and in connection with initial offer of units representing an undivided beneficial interest in the Trust. In Preparing this report, RUKY Projects Pvt Ltd has relied, in whole or in part, on data and information provided by SFPL and **SURYAVANSHI INFRASTRUCTURE PRIVATE LIMITED** which RUKY Project Pvt Ltd has assumed to be accurate, complete, reliable and correct.

This report may be reproduced and included in the preliminary placement memorandum, placement memorandum and any other documents prepared in connection with the aforesaid initial offer of units of the Trust and may be made available for inspection in the manner specified therein. In connection with the report, the following details in relation to the Technical Consultant may be included in preliminary placement memorandum and the placement memorandum and any other documents prepared in connection with the aforesaid initial offer of units of the Trust.

Technical Consultant:
RUKY PROJECTS PRIVATE LIMITED
Flat No. 1403A, 14th Floor,
Manjeera Trinity Corporate,
JNTU-Hitech City Road, Kukatpally,
Hyderabad – 500072

CHAPTER 1. INTRODUCTION

1.1 General

Suryavanshi Infrastructure Private Limited. (herein after referred to as the “**Concessionaire**”) had augmented the existing road into Intermediate carriageway from Mandsaur near ROB to Sitamau near Chambal River Bridge (Up to Rajasthan Boarder) (44 Km length) section of SH-14 (here in after called “**Project Highway**”) in the state of Madhya Pradesh on design, build, operate and transfer (BOT), Toll basis in accordance with the terms and conditions set forth in the Concession Agreement executed with Madhya Pradesh Road Development Corporation Limited (herein after referred to as the “**MPRDC**”) on July 10, 2007.

Project Highway starts from Mandsaur near ROB (Km.0+000) and terminates at Sitamau near Chambal River Bridge (Km.44+000). Total length of the Project Highway is 44 Km. The Project road passes through plain terrain predominantly agricultural land with pockets of barren lands. Project Location map is given at **Figure 1.1**.

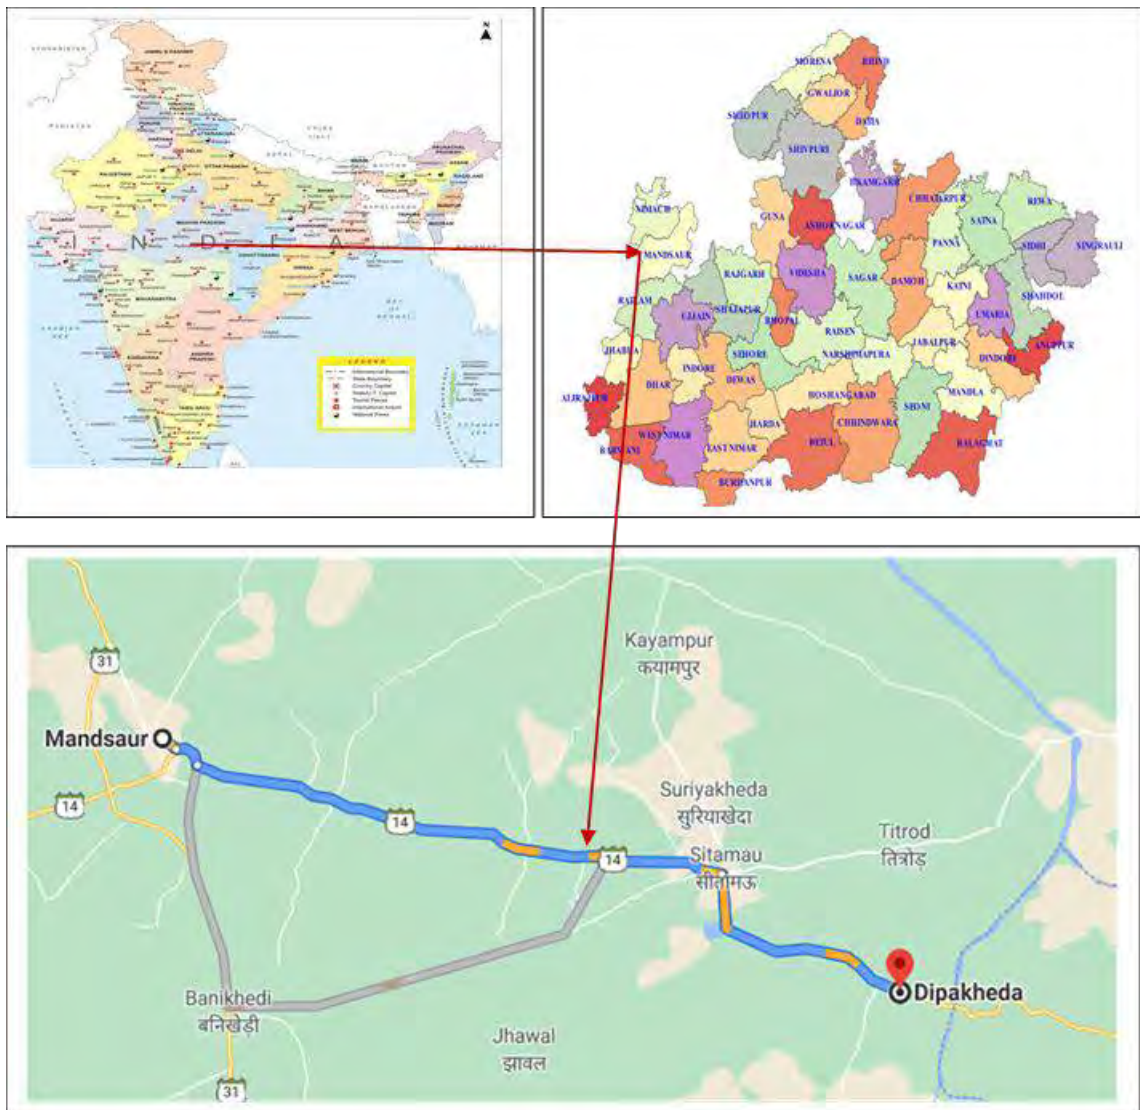

Figure 1.1: Project Location Map

SHREM ROADWAYS PRIVATE LIMITED (SRPL) acquired SURYAVANSHI INFRASTRUCTURE PRIVATE LIMITED vide agreement dated 26.3.2018.

SHREM FINANCIAL PVT LTD (SFPL) appointed RUKY Projects Pvt. Ltd. as consultants for detailed Technical Due Diligence Services of the above Road Project to know-how the present condition of Carriageway and Structures, probable costs of Operations and Maintenance during balance Concession period, additional road safety requirements if any and to review the traffic potential and to estimate the projected Toll Collection etc.

1.2 Project Data

Table 1.1: Project Data

S. No.	Particulars	Details
1	Name of the project	Reconstruction, Strengthening, widening & Rehabilitation of Mandsaur-Sitamau from Km. 18+000 to Km. 62+000 on BOT basis
2	Road Type	State Highway
3	Name of the Authority	Madhya Pradesh Road Development Corporation Limited
4	Name of the Concessionaire	Suryavanshi Infrastructure Private Limited
5	Name of the BOT Contractor	Dilip Buildcon Limited
6	Date of LOA	16.03.2007
7	Date of Agreement	10.07.2007
8	Design Length as per Schedule I of CA	44.000 Km.
9	Actual Length Constructed	44.000 Km.
10	Project Lane Configuration	Intermediate carriageway with Hard Shoulder
11	EPC Cost	Rs. 27.87 Cr.
12	Grant	Rs. 9.9 Cr
13	Nature of contract	BOT (Toll)
14	Toll collected by	Concessionaire
15	Concession Period*	25 years from the Commencement date
16	Commencement date	November 27, 2007
17	Concession End Date	November 26, 2032
18	Construction Period	15 months from the Commencement date.
19	Schedule Completion Date	February 26, 2009
20	Date of issuance of Provisional Certificate (Commercial Operation Date)	February 05,2009

1.3 Scope of consultancy services

The scope of work includes providing Due Diligence of the project road and providing estimate of the anticipated maintenance works. Scope of the work as defined in the consultancy work order is listed below:

- Review of various contractual documents
- Collection of historic/past toll revenue data
- Collection of historic/past classified Traffic data from toll plaza and to estimate the projected traffic to arrive at revenue projections.
- Carryout detailed assessment of pavement condition and propose maintenance plan along with BOQ.
- Review of latest BBD/BI test report
- Carrying out inventory & condition survey of all elements of road like embankment slope, plantation, road furniture, tolling system etc., of the project.
- Carrying out inventory & condition survey of all structures (Major Bridges, Minor Bridges, ROB, RE Wall, Flyovers, VUPs, PUPs, Culverts etc.), suggest any rehabilitation & maintenance requirements along with BOQ.
- Carryout review of tolling system to evaluate the efficiency and functionality of tolling system and to identify and give suggestions to improve if any setbacks in the system.
- Carryout road safety audit on Project highway and provide suggestions for improvement.
- Assess and Provide BOQ and cost estimate for routine & periodic maintenance including O&M.
- Review of punch list items, NCR's to identify any uncompleted works as on date of submission of report.
- Review of validity of insurance and statutory compliances related to Project.
- Review of correspondences exchanged between parties on contract related issues and claims etc.
- Submission of detailed report on technical due diligence of the project.

CHAPTER 2. PROJECT DESCRIPTION & TECHNICAL DETAILS

2.1 Salient Features of the Project

The salient features of the Project as per Schedule I of Concession Agreement (CA) including Change of scope are listed in the following Table.

Table 2.1: Salient Features

S No	Particulars	As per CA	As per COS*/Site requirement	As per Site
1	Total Length of Intermediate (Flexible)	43 Km	-	43 Km
2	Total Length of 5.5 to 7m wide (Flexible)	1 Km	-	1 Km
3	Toll Plaza	1 No.	-	1 No.
4	Major/Minor Junction	13 Nos.	-	13 Nos.
5	Major Bridges	1 No.	-	1 No.
6	Minor Bridges	3 Nos.	-	4* Nos.
7	Pipe Culverts	4 Nos.	-	27* Nos.
8	Slab Culverts	35Nos.		15* Nos.

*Additional structures were constructed as per site requirement.

*As per site requirement and additional 1 Minor Bridge and 23 Pipe Culverts are constructed.

*As per Site condition 20 nos. of Slab Culverts are not constructed.

2.2 Typical Cross Section (TCS) Schedule:

The Concessionaire has followed the Typical Cross Sections shown below as per schedule, during the construction.

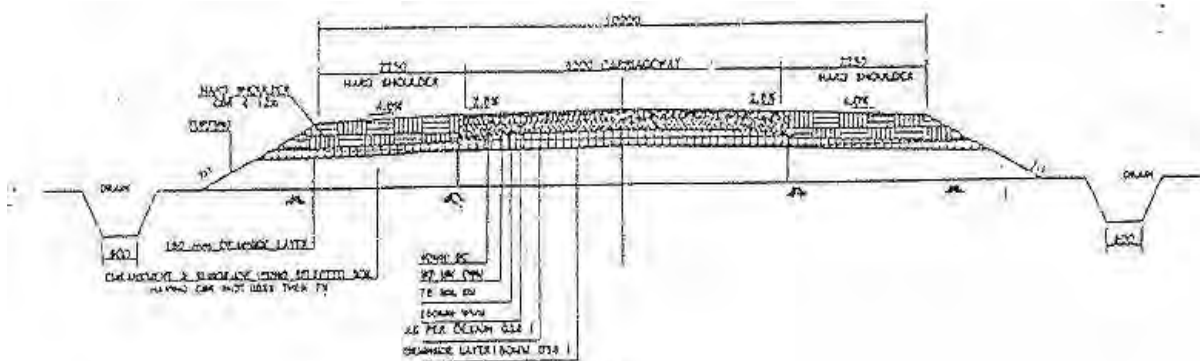

Figure 2.1: TCS-A of Schedule I of CA

Cross section for new construction (5.5m Carriageway + 2.25m Hard shoulder on both sides)

Figure 2.2: TCS- C of Schedule I of CA
Overlay on Existing Pavement (5.5m to 7m Carriageway + 2.25m to 1.5m on both sides)

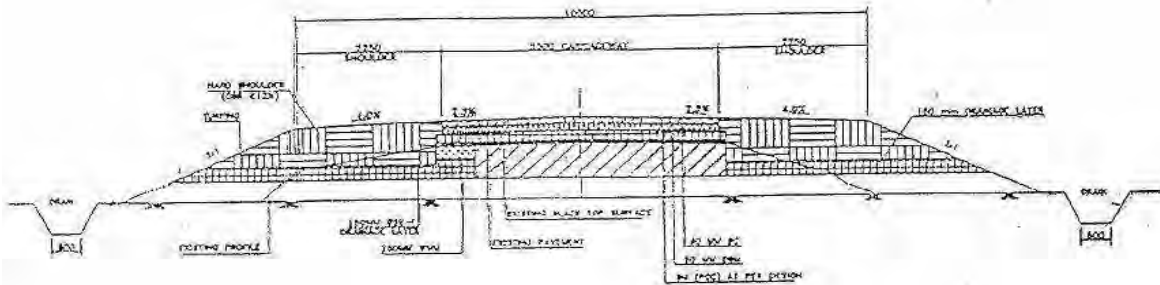

Figure 2.3: TCS-D of Schedule I of CA
(Overlay with widening (Both side) (5.5m Carriageway + 2.25m Hard shoulder on both sides)

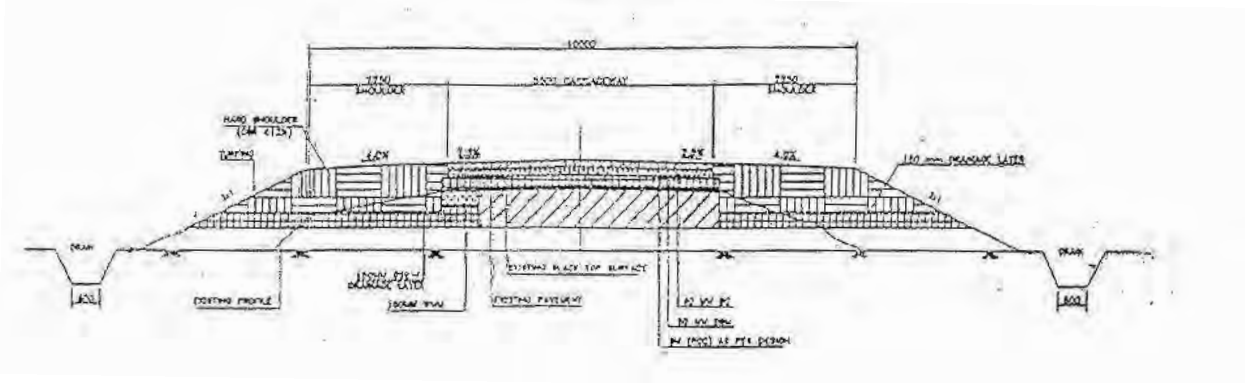

Figure 2.4: TCS-E of Schedule I of CA

Overlay with one side widening (5.5m Carriageway + 2.25m Hard shoulder on both sides)

As built drawings are verified and found in accordance with TCS.

TCS Schedule is provided below.

Table 2.2: TCS Schedule

S No	From Chainage (Km)	To Chainage (Km)	Type of TCS
1	0+000	2+000	TCS-E of Schedule I of CA
2	2+000	10+000	TCS-D of Schedule I of CA
3	10+000	11+000	TCS-C of Schedule I of CA
4	11+000	12+000	TCS-D of Schedule I of CA

S No	From Chainage (Km)	To Chainage (Km)	Type of TCS
5	12+000	16+000	TCS-D of Schedule I of CA
6	16+000	19+000	TCS-D of Schedule I of CA
7	19+000	21+000	TCS-E of Schedule I of CA
8	21+000	43+000	TCS-D of Schedule I of CA
9	43+000	44+000	TCS-A of Schedule I of CA

Figure 2.5: Pictorial Diagram of TCS Lengths.

2.3 Road Side Drainage

- To facilitate quick disposal of storm water from the Carriage way and to avoid accumulation of drainage from road side community on the Carriage Way, side drains are constructed along the main carriage way on both flanks as specified in Schedule I in conjunction with Schedule -J of the Concession Agreement.

2.4 Service Roads:

Service roads are not provided along the entire stretch of the project road as per provisions of Schedule I of the Concession Agreement.

2.5 Bypass/Realignment:

There are no Bypass/Realignment in the Project, as per provisions of Schedule I of the Concession Agreement

2.6 Summary of the Carriageway and PavementDetails:

Table 2.3: Summary of Carriageway and pavement Details

S No.	Description	Flexible	Rigid	Remarks
1	Total Length of Intermediate (Flexible)	43 Kms.	---	Fig.I.1, Fig.I.3 & Fig.I.4 of Schedule I of CA
2	Total Length of 5.5 to 7m wide (Flexible)	1 Kms.	---	Fig.I.2 of Schedule I of CA
3	Total Length of the	44.000	---	

S No.	Description	Flexible	Rigid	Remarks
	Project	Kms.		
TYPE OF ALIGNMENT				
4	New Alignment	---	---	
5	Realignment	---	---	
6	Strengthening	---	---	
7	Reconstruction	44.000 Kms.	---	
8	Total Length of the Project	44.000 Kms.	---	

2.7 Summary of Structures:

Summary of Structures as per provisions of schedule B of the CA is given below

Table 2.4: Summary of Structures:

S No	Description	Nos.
1	Major Bridges	1 No.
2	Minor Bridges	3 Nos.
3	Hume Pipe Culverts	4 Nos.
4	Slab Culverts	35 Nos.

2.8 Toll Plazas:

As per Schedule C of the CA provisions, one Toll Plaza has been constructed at Km. 21+800. Salient features of Toll Plaza are provided below.

- Each side comprises of, one normal lane and one extra wide lane and one lane for bikes.
- The lane width in normal lanes is 3.2 m and extra lane is of 4.5 m width.
- Single canopy is provided to cover the toll lanes.
- Toll plaza has been constructed as per standards set forth in Schedule J of CA having facilities like lighting, water supply and firefighting Arrangements.
- CCTV Cameras are installed and monitored in administrative building.

2.9 Bus shelters and truck lay byes:

There is no Bus Shelters and Truck lay Byes in the Project, as per provisions of Schedule I of the Concession Agreement.

Km. 16+000

Km. 20+800

Km. 21+000

Km. 30+000

Figure 2.6: Photos Representing Existing Road Features

CHAPTER 3. ROAD INVENTORY & PAVEMENT CONDITION

3.1 General

Road Inventory and pavement condition surveys were carried out by a team of Engineers and the features noted at site are presented in the following sections.

3.2 Road Inventory

Inventory of the project road was carried out physically and the same is summarized in the following table. Few representative photographs are presented below.

Table 3.1: Road Inventory

S. No.	Features	Remarks
1.	Terrain	Plain Terrain
2.	Land Use	Most of the land is agricultural
3.	Total Length of the Project 2 lane	44.000 Km.
4.	Earthen shoulder	1 m to 1.5 m Width on site
5.	Toll Plaza	Km.21+800
6.	Sign boards	Sign boards are provided as per requirement
7.	Road Markings	Lane markings are provided as per requirement
8.	Street Lighting	Highway lighting provided as per requirement

3.3 Pavement Condition

Pavement condition survey was carried out on the project road, based on observations supplemented with simple measurements. The criteria adopted for the classification of condition of the pavement is as per 4.2.1 of IRC 81-1997.

Table 3.2: Pavement Classification

Classification	Pavement condition
Good	No cracking, rutting less than 10mm
Fair	No cracking or cracking confined to single crack in the wheel track with rutting between 10mm and 20mm.
Poor	Extensive cracking and/or rutting greater than 20mm sections with cracking exceeding 20% shall be treated as failed.

Pavement surface condition assessment is a key component of infrastructure asset management. The information is used across a wide range of business processes which includes: Monitoring the performance of the road; Predicting future pavement conditions and assessing long term needs; Identifying rehabilitation and maintenance treatment options; investigate causes of pavement deterioration and evaluating specific treatment options; The purpose of the pavement condition survey is to provide a more accurate and detailed investigation of the pavement deterioration in order to assist in determining appropriate rehabilitation treatments.

3.4 Pavement Condition Survey:

The survey on general pavement condition was primarily undertaken by means of slow drive-over survey and supplemented with measurements where ever necessary. Pavement assessment was done with the help of simple instruments using measuring tape, Straight edge. It was carried out to quantify pavement deficiency on a representative basis. Aspects of pavement condition assessment include surface defects, rut depth, cracking, pot holes, patched areas, shoulder conditions etc. An overall assessment of performance serviceability of the road was also done to rate the existing pavement and shoulder condition qualitatively.

The pavement condition is measured under the following sub-heads:

- Shoulder- (Composition/Condition)
- Riding Quality (Good/Fair/Poor/Very Poor)
- Pavement Condition-
 - Cracking (% of surface area)
 - Ravelling (%of surface area)
 - Potholes (%of surface area)
 - Patching (%of surface area)
 - Rut depth (Moderate 10 to 20 mm & Severe >20 mm)
 - Pavement edge drop (mm)
- Road Side Drain (Non-Existing/ Partially Functional/ Functional)

Upon verification of the Pavement condition in the above said manner, it is observed that the Pavement condition of Project road is good. The field measurements of the Pavement Condition survey are tabulated in the standard proforma as per IRC: SP-19 and is given in **ANNEXURE 1**. The summary of Pavement condition is given below.

Table 3-3: Pavement condition summary

From (km.)	To (km.)	Length (kms)	Condition
0+000	44+000	44.000	Good

Km. 10+559

Km. 27+170

Km. 30+000

Km. 32+900

Figure 3.1 Representative Photos of Pavement Condition.

CHAPTER 4. INVENTORY AND REVIEW OF STRUCTURES

4.1 General Assessment and Details of the Existing structures

Inspection of existing structures on the project section was carried out, detailed inventory and condition is examined during the site visit as per the guide lines provided in IRC SP: 52-1999 & IRC SP: 35-1990.

4.2 Inventory of Structures

The details of structures at site is mentioned below.

Table 4.1 List of Structures

S. No.	Type of Structure	Numbers
1	Major bridges	01 Nos
2	Minor Bridge	04 Nos
3	Pipe culverts	27 Nos
4	Slab/Box Culverts	15 Nos

There is one Major bridge in the project stretch. The total length of the bridge is 144.5m with 17 spans of 8.5m. The superstructure is of RCC solid slab. The substructure is of wall type Course Rubble (CR) masonry piers and abutments, resting on open foundations. Detailed inventory and condition survey of bridges are given in **ANNEXURE 2**.

The culverts observed along the project road are mainly of two types viz. pipe culverts and RCC slab/box culverts. Condition of most of the culverts is fair. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.3 Details of Major Bridges

The total length of the major bridge at Km 5+400 is 144.5m with 17 spans. The superstructure is of RCC solid slab. The substructure is of wall type Course Rubble (CR) masonry piers and abutments, resting on open foundations. Superstructure is seated on Tar paper bearings. Expansion joints are of Buried type. Steel railings have been provided on both sides of the deck.

Table 4.2 List of Major Bridges

S. No.	Chainage (Km.)	Span	Total Length of Bridge (m)
1	5+400	17 x 8.5m	144.5

The condition of the superstructure and substructure is good. Certain minor maintenance operations such as quadrant pitching, reflector plates, drainage spouts are to be carried out.

4.4 Details of Minor Bridges

There are 04 Nos minor bridges in the project stretch. The type of superstructure for minor bridges is RCC solid slab and RCC Girders and the substructure is RCC/PCC conventional wall type supported on open foundations. Expansion joints are buried type and bearings are tar paper and elastomeric bearings. RCC crash barriers are provided on all structures.

Table 4.3 Inventory of Minor Bridges

S. No.	Chainage (Km.)	Span (m)	Total Length of Bridge (m)	Description
1	7+863	2x4.8	9.6	It has RCC solid slab superstructure supported on RCC/PCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tarpaper Bearings and buried type expansion joints.
2	16+095	3x16.6	49.8	It has RCC Girder type superstructure supported on RCC/PCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Elastomeric Bearings and buried type expansion joints.
3	22+333	3 x 6.1	18.3	It has RCC solid slab superstructure supported on RCC/PCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tarpaper Bearings and buried type expansion joints.
4	27+098	2 x 4.7	9.4	It has RCC solid slab superstructure supported on RCC/PCC wall type piers and abutment. Other features are RCC crash barrier, bituminous wearing coat, and Tar paper Bearings and buried type expansion joints.

Km. 7+863

Km. 16+095

Km. 22+333

Km. 27+098

Figure 4.1: Representative photos for minor bridges

4.5 Details of Culverts

The culverts observed along the project road are mainly of two types' viz. RCC Slab/Box culverts and Pipe culverts. The condition of culverts is generally good. For some of the pipe culverts vegetation and vent cleaning is required. In general, the conditions of all the structures are found satisfactory. The detailed condition of the same are given the following sections. Detailed inventory and condition survey of culverts are given in **ANNEXURE 3**.

4.5.1. Details of the Slab/ Box Culverts

There details of slab/Box culvert in the project stretch are given below.

Table 4.4 List of Slab/Box Culverts

S. No.	Chainage (Km.)	Span (m)	Vent Size (m)
1	0+400	2 x 2.9	1.00
2	5+700	1 x 1.8	1.20
3	6+558	1x3.4	1.50
4	10+558	1x3.4	1.20
5	23+150	2 x 4.9	2.50
6	30+440	1 x 5.7	2.50
7	31+650	1 x 3.9	1.50
8	31+950	1 x 5.6	2.00
9	32+346	1 x 7	2.00
10	32+909	1 x 3.2	1.50
11	34+160	1 x 6.9	1.80
12	35+970	1 x 5.6	2.10
13	36+240	1 x 5.6	2.00
14	36+535	1 x 5.6	1.60
15	39+762	1 x 6.3	3.00

The general condition of above slab culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

13	40+850	1 x 1.0	27	41+850	3 x 1.0
14	41+320	1 x 1.0			

The general condition of above slab culverts is good. Maintenance is to be carried out before monsoon for vent clearance, Protection works etc.

CHAPTER 5.PAVEMENT DESIGN VALIDATION AND OVERLAY SCHEDULES

5.1 General

Review of Pavement design report includes providing insights on design life of pavement, crust thickness, history of overlays on the existing pavement, pavement condition and CA provisions for the upcoming renewal cycles.

5.2 Pavement design validation

The flexible pavement has low flexural strength and hence layers reflect the deformation of the lower layers / sub-grade on to the surface layer after the withdrawal of wheel load. In order to control the deflections in the sub-grade so that no permanent deflections result, the pavement thickness is so designed that the stresses on the sub-grade soil are kept within its bearing capacity. Loading of bituminous pavement requires the stiffest layers to be placed at the surface with successive weaker layers down to sub-grade.

The project road is already operational and the standards applicable during the design development phase of the project road are taken into account for this review. Therefore, the design of pavement has been validated based on IRC: 37-2001 publication while the current publication is IRC: 37-2018.

Review of Pavement Design

As per the pavement design approved in the project, the following conclusions are given.

Table 5.1: Flexible Pavement Design summary

S. No.	Description/ Pavement layer	Design/Adopted Parameters
1	Sub Grade CBR (%)	8%
2	Design Life (Years)	25 years
3	Design Traffic (MSA)	30 MSA
4	Surface course (BC)	40mm
5	Binder course (DBM)	100 mm
6	Base course (WMM)	250 mm
7	Sub Base course (GSB)	200 mm

5.3 Validation of Pavement Design

The new pavement shall be designed in accordance with the IRC:37. "Guidelines for the Design of Flexible Pavements".

Pavement design validation is carried out as per actual traffic from COD. As per IRC 37, Vehicle Damage Factor (VDF), Distribution of commercial vehicles and growth rate values are 3.5, 0.75 and 5% respectively. Summary is given below.

Table 5.2: Real Time Traffic from COD and Project Traffic Current years with 5% growth for CMSA

FY Year	AADT in Vehicles					CVPD (Veh.)	MSA	CMSA	Year	Remarks
	Car	LCV	BUS	2-AT	MAV					
2016	997	566	99	47	129	840	0.81	0.81	9	Actual
2017	1026	501	95	45	139	780	0.75	1.55	10	Actual
2018	937	397	75	45	159	676	0.65	2.20	11	Actual
2019	1082	466	76	39	151	732	0.70	2.90	12	Actual
2020	1216	403	69	35	146	653	0.63	3.53	13	Actual
2021	1276	424	72	37	153	686	0.66	4.18	14	Projected
2022	1340	445	76	39	161	720	0.69	4.87	15	Projected
2023	1407	467	80	41	169	756	0.72	5.60	16	Projected
2024	1478	490	84	43	178	794	0.76	6.36	17	Projected
2025	1552	515	88	45	186	834	0.80	7.16	18	Projected
2026	1629	541	92	47	196	876	0.84	8.00	19	Projected
2027	1711	568	97	49	206	919	0.88	8.88	20	Projected
2028	1796	596	102	52	216	965	0.92	9.80	21	Projected
2029	1886	626	107	54	227	1014	0.97	10.78	22	Projected
2030	1980	657	112	57	238	1064	1.02	11.79	23	Projected
2031	2079	690	118	60	250	1118	1.07	12.87	24	Projected
2032	2183	725	124	63	262	1173	1.12	13.99	25	Projected

Based on the above actual traffic, estimated MSA at 14 years, 20 years and 25 years are 4.18, 8.88 and 13.99 of TP respectively.

Traffic considered in pavement design is more than projected traffic evaluated based on actual traffic up to 2020. Hence the pavement design adopted is found in order.

5.4 Overlay during operation and maintenance

The pavement has been designed to cater traffic of 30 MSA for a design life of 25 years for Bituminous layers and Granular layers (up to end of year 2032), whereas the estimated traffic is 4.18 MSA, 8.88 MSA and 13.99 MSA for 14 years 20 years and 25 years respectively. This implies that pavement will be structurally adequate to cater the future traffic with periodic renewal carried out under the maintenance program.

However, it is recommended to carry out traffic survey, pavement condition and pavement strength evaluation before the end of Stage-I, II & III of design life (as per pavement design report) and prior to the end of concession period to evaluate the requirement of overlay.

5.5 Maintenance/ Overlay schedule

Periodic Maintenance includes Profile corrective course overlaid with the periodic renewal of the wearing course of BC. The detail maintenance schedule is summarized below.

Routine maintenance - Every year

Periodic Renewal for Flexible Pavement - Proposed on or before 2021-22.

CHAPTER 6. SAFETY AUDIT OF ROAD

6.1 General

Road Safety Audit (RSA) is defined as “the formal safety performance examination of an existing or future road or intersection by an independent, multidisciplinary team. It qualitatively estimates and reports on potential road safety issues and identifies opportunities for improvements in safety for all road users”.

Road Safety is a multi- sectorial and multi- dimensional issues. It incorporates the development and management of road infrastructure, provisions of safer vehicles, legislations and law enforcements, mobility planning, provisions of health and hospital services, child safety, urban land use planning.

A Key feature of a road safety audit is the use of a team of professionals with varied expertise. The team shall include highway safety engineers, highway design engineers, maintenance personal, and law enforcement. Additional specialties shall be added to the team as needed.

Central Road Research Institute (CRRRI) has studied road safety elements extensively in the past and has come up with various manuals such as manual for safety in road design (1998), Road safety Audit Manual (2003) and Revised Road Safety Audit manual (2010). Indian Road Congress (IRC) has published Special provision SP-88, Manual on road Safety Audit. The methodology used for the design stage audit process is based on these manuals. Type Designs for Intersections on National Highways, 1992

Table 6.1: Referred IRC Publications

IRC Code No.	IRC Code Name
IRC : 35	Code of Practice for Road Markings
IRC : 38	Guidelines for Design of Horizontal curves for highways and Design tables
IRC : 67	Code of Practice for Road signs
IRC : 73	Geometric Design standards for rural highways (non-urban)
IRC:103	Guidelines for Pedestrian Facilities
IRC: SP-15	Ribbon Development along highways and its prevention
IRC: SP-23	Vertical curves for highways
IRC: SP-41	Guidelines on design of at-grade intersections in Rural and Urban areas
IRC: SP-55	Guidelines for safety in construction zones
IRC:SP- 88	Manual of Road Safety Audit

6.2 Road Safety Audit

During the site visit, it is observed that all safety items are provided as shown in the following table

S. No.	Item Description	Status	Condition	
1	Sign Boards	Chevron signs	Available as per site requirement	Good
		Village sign Board	Available as per site requirement	Good
		Informatory Boards	Available as per site requirement	Good
		Object Hazard Markers at culverts	Available as per site requirement	Good
2	Road Marking	Lane Marking	Available as per site requirement	Fair

S. No.	Item Description		Status	Condition
3	W Beam Crash Barriers	At High Embankments	Available as per site requirement	Good

This Project Section is part of an important corridor. It is the Concessionaire’s duty and responsibility to provide safe road for the commuters by assuring safe and hindrance free movement for both Traffic and Pedestrians along urban locations & habitations.

6.3 Conclusion

Safety arrangements are made for road users along the Project road are found to be in conformity with project road requirements and good industry practice. However, a continuous monitoring on safety arrangements is required during the maintenance period.

CHAPTER 7. TOLL PLAZA & HTMS

7.1 General

There is one toll Plazas on the project road at Km.21+800. Each side comprises of 1 normal lanes, 1 extra wide lane and 1 bike lane. The lane width in normal lanes was 3.2 m and extra wide lane was 4.5 m. The width of islands provided is 1.8 m. The single canopy is provided to cover the toll lanes. Toll plaza administrative building is G+1 RCC building with 8 rooms one of which is used as control room, one for UPS and one for Pantry.

7.2 Tolling Equipment and Control Room Equipment

List of equipment provided at toll plaza and control room is given below.

Table 7.1 List of Equipment at Toll Plaza and Control Room

CHAPTER 8. TOLL REVENUE

8.1 Toll Revenue Calculations

In accordance with clause 6.1, the Concessionaire entitled to collect appropriate fee from the users.

Accordingly, the Concessionaire provided toll plaza wise details. Based on the data made available the summarized annual classified Traffic census details for the past eleven years are provided in Table 8.1 below. The Actual traffic data recorded below has been taken as a basis to calculate AACGR % (Annual Average Compound Growth Rate)

Table 8.1: Year wise Traffic (Vehicles) Details

FY Year	Car	LCV	Bus	Truck	MAV	Total Traffic
2009	138294	62661	46931	13750	26118	287754
2010	190847	105155	61533	21021	35873	414429
2011	225591	123640	65973	18951	53747	487902
2012	242408	152182	89654	21953	39829	546026
2013	316222	212567	79645	26332	54486	689252
2014	351799	203761	53506	23132	60057	692255

2018	394754	169919	27785	14341	55017	661816
2019	444948	147668	25199	12820	53454	684089
AACGR*						10.06%

* AACGR - Annual Average Compound Growth Rate

8.2 Actual Revenue Collection

In accordance with clause 17.5, “During the operation period, the Concessionaire shall furnish to MRPDC within 7 days of completion of each month, a statement of fee (Monthly fee statement)”. As per provisions of CA the concessionaire submitted monthly fee statement and the summary of form submitted under Schedule M during the financial year 2019-20 is given under as Table 8.2.

Table 8.2: Summary of 2019-20 Tollable traffic and revenue collected at Toll Plaza

S. No.	Details	No. of Vehicles	Fee Collected (in lakh Rs.)
1	Car	245197	8581895
	Local S.J. car	21867	393606
	Local Personal Car	10959	287665
2	Mini Bus	89557	7522788
	Local S.J. Mini Bus	11974	502908
3	Bus	17825	3101550
	Local S.J. Bus	1308	113796
4	Truck	9390	1962510
	Local S.J. Truck	2264	237720
5	Heavy Truck	46721	19482657
	Local S.J. Heavy Truck	5098	1065482
	Grand Total	462160	43252577

Note: S.J.-Single Journey

The figures shown in Table 8.1 are Real time traffic data on project road for the past eleven years and the growth rate is calculated to be 10.06%. It is pertinent to note that the figures given in table 8.1 are inclusive of exempted /non tollable traffic.

The figures shown in Table 8.2 are actual tollable traffic based on which the toll revenue collected and is excluding of exempted/non tollable traffic. For the realistic estimate of the traffic growth and projected revenue calculation actual traffic based on which FY 2019-20 revenue collected (table 8-2) is considered as a base year traffic and the projected traffic growth rate is restricted to 5%.

Based on the base year traffic and growth rate as explained above traffic projections from year 2019-20 to till end of Concession period toll plaza wise are calculated and summarized below in Table 8.3.

Table 8.3: Projected traffic

FY Year	AADT in Vehicles					CVPD* (Veh.)	AADT in PCU					CVPD* (PCU)	Remarks
	Car	LCV	BUS	2-AT	MAV		Car	LCV	BUS	2-AT	MAV

*CVPD: Commercial vehicle per day (LCV+BUS+2 AT+MAV)

8.3 Toll Revenue Calculations

The toll revenue for horizon year is calculated based on the input from the above data, actual toll rates collected on base year (2019-20), with Traffic growth, WPI growth and toll efficiency has been assumed 5%, 4% and 100% respectively and other inputs considered in revenue calculations is given in table 8.4

Table 8.4: Toll Revenue inputs

Particular	Toll plaza
Location	Km.21+800
4 lane length in km	0
2 lane length in km	44
Agreement Date	30-06-2007
Appointed Date	27-11-2007
Concession period	25
Commercial operation date	30-01-2009
Concession End Date	26-11-2032
Traffic study year	2020
Vehicle Type	AADT (Veh.)
Car/Jeep/Van	732
2-axle Bus	278
LCV/LGV	52
2A-Truck	32
MAV (2A-6A)	142
Growth Rate (%)	5%

The split trip type based on the available toll data from Concessionaire is used to derive the annual toll collection for each plaza. The revenue estimated and presented below. Detailed toll revenue estimation is given in **ANNEXURE 4**.

Table 8.5 Toll Revenue Estimated (in Rs. lakhs)

Financial Year	Annual Revenue of TP @ Km.21+800	Remarks
2019-20	432.526	Actual
2020-21	472.664	Projected
2021-22	515.110	Projected

Financial Year	Annual Revenue of TP @ Km.21+800	Remarks

2023-24	609.593	Projected
2024-25	661.851	Projected
2025-26	717.811	Projected
2026-27	778.104	Projected
2027-28	843.836	Projected
2028-29	912.324	Projected
2029-30	986.189	Projected
2030-31	1064.684	Projected
2031-32	1148.563	Projected
2032-33	814.483	240 Days

CHAPTER 9. OPERATION AND MAINTENANCE

9.1 General

As per Chapter XVI of the Concession Agreement (CA), the Concessionaire will operate and maintain the Project road by itself or through O & M Contractors and comply with specification and standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws, applicable permits and manufacturer guidelines and instructions with respect to toll system.

9.2 Inspection

Inspection system followed is illustrated as divided into the following 3 types.

- **Visual Inspection:** Visual inspections are done at frequent intervals, and are intended to determine any potential traffic hazards to the road user or hampering the aesthetics of the project stretch. Visual inspections are meant to identify defects that constitute an imminent or immediate hazard to the public.
- **Detailed Inspection:** Detailed Inspections often require some measuring instruments, are done less frequently and are intended more towards determining performance and behavior of various elements. These inspections also indicate, need (if any) for thorough inspections. Detailed inspections are carried out primarily to establish programs of periodic or major maintenance tasks, and enhancement requirements not requiring urgent execution
- **Thorough Inspection:** Thorough Inspections are aimed at finding the cause and remedy of specific problems and at specific locations. Specialist's inspections are required once in a while. Thorough Inspections shall be carried out with highly sophisticated instruments

The inspection procedures will assist in identifying the need for replacement or renewal under planned program of maintenance and rehabilitation. The elements viz pavement, drainage, shoulders / slopes / Earthworks, structures and buildings are covered.

Maintenance program will be submitted to authority not later than 45 days prior to each accounting year.

9.3 Operations

Traffic Flow Operation & Traffic Management Plan

Following are the obligations of the Concessionaire for the regular and emergency operations of the Project road and Project Facilities.

- 1 Permitting smooth and uninterrupted flow of traffic during normal operating conditions.
- 2 Functioning of the Toll System including charging and collecting the fees from the road user in accordance with the CA.
- 3 Carrying out preventive and periodic maintenance of the Project road;
- 4 Undertaking routine maintenance including prompt repairs of potholes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices;
- 5 Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system and other equipment;

- 6 Functioning of the lighting system;
- 7 Functioning of the Patrolling System
- 8 Functioning of rescue and medical aid services
- 9 Ambulance as and when required
- 10 Functioning of the Project Facilities
- 11 Administrative, Operational and Maintenance Base Camp
- 12 Truck Lay byes
- 13 Pickup Bus stops / Bus Bays
- 14 Protection of the environment and provision of equipment and materials therefor;
- 15 Operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project road
- 16 Complying with Safety Requirements in accordance with Chapter XVIII.

9.4 Operation of Toll Plaza

There are two lanes in each direction operating at toll plaza, middle lanes are used by Car/LCV for collecting toll and extra wide lanes are utilized by wide vehicles like Bus/Trucks/Tractors and toll exempted vehicles. The cash collected is deposited on daily basis to the escrow account. In case of ETC system Toll collection is connected with Network system and directly deposited into the Escrow account

9.5 Maintenance of Project road

The maintenance methodology and yearly maintenance programme will guide the Maintenance team to undertake the routine & periodic maintenance works of the Project Facilities. This programme is the basic indicator of the intended works to be carried out by the Maintenance Team over a period of one year. Road maintenance can be carried out in four ways as listed below.

1. Preventive Maintenance
2. Routine Maintenance
3. Periodic Maintenance
4. Special repairs

Preventive Maintenance

Preventive maintenance is an organized, systematic process of applying a series of preventive treatments over the life of the pavement to minimize life cycle costs.

The strategy of applying periodic treatments at appropriate times in a pavement's life is economical than applying treatment at the end of pavement's life. Preventive maintenance is designed to retard pavement deterioration. Regular preventive maintenance will be carried out to ensure adherence to the Design Requirements and specifications throughout the Concession period.

The flexible pavement is in good condition and hence doesn't require any immediate or preventive interventions.

Routine Maintenance:

Routine maintenance, which involves repairing of cracks, replacement of safety girders along the highway, clearance of debris following accidents, ensuring functionality of sign posts, maintenance of a security set-up, and such other activities.

Periodic Maintenance

In contrast to preventive maintenance treatments, periodic maintenance treatments are ideally applied on pavements to improve surface integrity and waterproofing, or to improve skid resistance, without increasing the strength of the pavement significantly. They are sometimes referred to as “functional overlays,” as they are intended to restore or enhance the ability of the roadway to serve its purpose (function), but do not increase the load-carrying capabilities. If the pavement failure is more and demands for a “structural overlay” they are intended to increase load-carrying capabilities of the project road.

The details of periodic maintenance schedule are given below.

Table 9.1: Schedule and status of for Periodic Maintenance

S. No.	Major Maintenance	Schedule	Status at site
1	1st Periodic Maintenance	2016	Completed
2	2 nd Periodic Maintenance Phase I	2021	Planned to execute
3	2 nd Periodic Maintenance Phase II	2022	Planned to execute
4	3 rd Periodic Maintenance	2028	Planned to execute
5	4 th Periodic Maintenance	2033	Planned to execute

Special Repairs

The group of activities performed to restore the roadway following damage due to natural calamities such as heavy floods, sand storms, hurricanes, cyclones, earthquakes or landslides which shall be unpredictable. The affected Project road shall be rectified, and the system shall be restored to function as per programme prepared in consultation with Independent Engineer. Typical activities include,

- a. Culvert and bridge repairs
- b. Retaining wall repairs and construction;
- c. Construction of Diversions;
- d. Floodway repairs; and
- e. Flood damage restoration works, etc.

9.6 Review of Test Reports:

9.6.1. Bump Integrator Test:

Maintenance of road is dependent on several factors, one of which is the condition of Pavement surface. As such Roughness is the measurement of the riding quality, which in turn is the effect of total surface deterioration. Bump Integrator (BI) is one of the equipment needed for roughness measurement. The roughness of pavement surface is designated as uneven index value and expressed as surface roughness from which the condition of the road can be assessed.

The test was conducted in the month of January 2020. As per Schedule M of the CA, If the value exceeds 3000mm in a KM, the stretch shall be rectified. No stretch exceeded the permissible limit of 3000 mm in the Project road.

9.6.2. Benkelman Beam Deflection (BBD):

The performance of flexible pavement is closely related to the elastic deflection of pavement under the wheel loads. The deformation or elastic deflection under a given load depends upon subgrade soil type, its moisture content and compaction, the thickness and the quality of pavement courses, drainage conditions, pavement surface temperatures etc. BBD method is widely followed to evaluate the structural capacity of pavement and for estimation and design of overlay for strengthening of any weak pavement.

Concessionaire has conducted the test in January 2020. The test report has been verified and found within permissible limits as per IRC 81.

9.7 O&M Forecast

The O&M costs were estimated based on various parameters of CA, design reports and BBD/BI test results. The cost summary is given below, and detailed cost estimations are given in **ANNEXURE 5**.

Table 9.2 Proposed Plan for Future Operation & Maintenance Cost (In Crores)

Year	Routine maintenance (In crores)	Incidental maintenance (In crores)	Periodic / Major maintenance	Operational Expenses	Total cost per year
2020	0.149	0.126		0.45	0.72
2021	0.153	0.130	1.81	0.46	2.55
2022	0.158	0.134	4.36	0.47	5.13
2023	0.162	0.138		0.49	0.79
2024	0.167	0.142		0.50	0.81
2025	0.172	0.146		0.52	0.84
2026	0.177	0.151		0.53	0.86
2027	0.183	0.155		0.55	0.89
2028	0.188	0.160	7.31	0.57	8.22
2029	0.194	0.165		0.58	0.94

2031	0.206	0.175		0.62	1.00
2032	0.212	0.180		0.64	1.03
2033	0.143	0.122	8.39	0.43	9.09
Total	2.463	2.094	21.87	7.41	33.84

CHAPTER 10. REVIEW OF CONCESSION AGREEMENT

10.1 Scope of Work (Chapter II)

Chapter II provides the scope of work, which includes the following.

- Construction of the Project road on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of Project Facilities as specified in Schedule-C, and in conformity with the Specifications and Standards set forth in Schedule-J.
- Operation and maintenance of the Project road in accordance with the provisions of Concession Agreement (CA)
- Performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this CA and matters incidental

10.2 Letter of Award

After evaluation of the bids received, Authority will select one bidder considering their score in technical and financial bids. Further Authority will issue a Letter called LOA (Letter of Award) to the selected bidder requiring the execution of agreement within stipulated time.

10.3 Conditions precedent (Chapter IV)

Conditions precedent to be fulfilled by the Authority

- Providing adequate Right of Way
- Providing necessary approvals as per the CA

Conditions precedent to be fulfilled by the Concessionaire

- Provide performance security to the Authority as per Cl.5.1
- Executed and procured Escrow Agreement & Substitution Agreement
- Procured all applicable permits specified in Schedule A
- Executed financing Agreements and delivering 3 copies of Financial Package
- Delivered to the Authority confirmation in original of the correctness of their representations and warranties set forth in Agreement and a legal opinion from the legal opinion from the legal counsel of the Concessionaire

10.4 Performance Security (Chapter V)

- The Concessionaire shall submit the Performance security to the Authority within 180 days from the date of the Agreement,
- The Performance security shall remain in force and effect for a period of one year from the Appointed Date

Performance Security shall be released upon the Concessionaire expending on Project Construction an Aggregate sum that is not less than 50% of the Total Project Cost and 100% of its equity as certified by IE and auditors of concessionaire.

10.5 Major Obligations of the Concessionaire (Chapter VII)

- The Concessionaire shall obtain necessary permits in conformity with the applicable laws
- Procure appropriate rights for obtaining materials
- Perform and fulfil its obligations under financing Agreements
- To make reasonable efforts to facilitate the acquisition of land required for execution
- Transfer the Project road upon termination of the CA

10.6 Provisional Completion Certificate (Chapter XIII)

- A section of the project shall be deemed to be completed to open for traffic only when the completion certificate or provisional certificate for that section is issued in accordance with the CI 15. Copy enclosed at **ANNEXURE-6**.

10.7 Change of scope (Chapter XV)

No change of scope proposals was initiated during construction period.

10.8 O&M Obligations of the Concessionaire (Chapter XVI)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project road
- Collecting and appropriating the Fee
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices
- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any unauthorized use of the Project road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

10.9 Project monitoring Fee

As per clause 6.10.3, Project Monitoring fee shall be paid by the Concessionaire at the rate of 1% of annual toll collected for the first ten years. Thereafter 2% from 11th to 15th year and 3% for remaining concession period.

10.10 Maintenance Requirements (Clause 16.2)

The Contractor shall procure that at all times during the Operations period; the Project road conforms to the maintenance requirements set forth in Schedule M of CA (The “**Maintenance Requirements**”).

10.11 Maintenance Manual (Clause 16.2)

No later than 180 (one hundred and eighty days prior to the Scheduled Two Laning Date, the Contractor shall, in consultation with the Independent Engineer, evolve a repair and maintenance manual (the “**Maintenance Manual**”) for the regular and preventive maintenance of the Project in conformity with the Specifications and Standards, Maintenance Requirements, Safety Requirements and Good Industry Practice, and shall provide 5 (five) copies thereof to the Authority

and 2 (two) copies to the Independent Engineer. The Maintenance Manual shall be revised and updated once every 3 (three) years and the provisions of this Clause shall apply, mutatis mutandis, to such revision.

10.12 Maintenance Programme (Clause 16.3)

- The Concessionaire has been submitting the Annual Maintenance Programme regularly as per the above clause.

10.13 Monthly status reports (Chapter XVII)

During the Operation Period, the Contractor shall, no later than 7 (seven) days after the close of each month, furnish to the Concessionaire, the Authority and the Independent Engineer a monthly report stating in reasonable detail the condition of the Project including its compliance or otherwise with the Maintenance Requirements, Maintenance Manual, Maintenance Program and Safety Requirements, and shall promptly give such other relevant information as may be required by the Concessionaire, Independent Engineer or the Authority. In particular, such report shall separately identify and state in reasonable detail the defects and deficiencies that require rectification.

10.14 Monthly Fee Statement (Clause 17.5)

During the Operations Period, the Contractor shall furnish to the Concessionaire and the Authority, if required by the Contractor, within 7 (seven) days of completion of each month, a statement of Fee.

10.15 Grant/Subsidy (Chapter XXII)

MPRDC agrees to pay to the concessionaire grant or subsidy as cash supported by way of outright grant equal to the sum set forth in the bid of the bidder and accepted by MPRDC namely Rs. 9.9 Crores in accordance with the province of this class-XXII.

10.16 Force Majeure (Chapter XXVIII)

Non-political event mean act of God or events beyond the reasonable control of the affected party.

10.17 Change in Law (Chapter XXXI)

If as a result of change in law, the concessionaire suffers an increase in costs or reduction in revenues or other financial burden, the aggregate financial effect of which exceeds Rs. 35 Lacs or 0.5% of the realizable fee whichever is higher.

CHAPTER 11. INSURANCE

11.1 Details of Insurance

As per clause 26.1 of the Concession Agreement, the Concessionaire shall affect and maintain at its own cost during the Operation Period such insurances for such maximum sums as may be required under the Financing Agreements and the Applicable laws, and such insurances as may be necessary or prudent in accordance with Good Industry Practice.

Accordingly, the Concessionaire has procured the following insurances for mitigating the risks. Copy of Insurances are enclosed at **ANNEXURE-7**.

Table 11.1 Insurance Details

Name of the Policy	Insurance Company	Policy No	Effective Period		Description of the Property
			From	To	
Electronic Equipment Insurance Policy schedule	Oriental Insurance Company Ltd	171200/44/2021/50	7.10.2020	6.10.2021	EEl Equipment installed in the Project Highway
Fire Industrial All Risk Policy	Oriental Insurance Company Ltd	171200/11/2021/395	4.02.2021	3.02.2022	Roads Inclusive of Service Road, Structures, Bridges (Major, Minor, Railway, River Including all Other Bridges) , Underpasses, Culverts, drainages, Utilities, Slabs Box, Causeways, Machineries
Standard Fire & Special Perils Policy	Oriental Insurance Company Ltd	171200/11/2021/394	4.02.2021	3.02.2022	Toll Plaza Building & Booths, TMS, HTMS, Office & IT Equipment, Road Furniture, Fixtures, Electrical Poles, Lighting & Fittings, Signboard, Safety/concrete/protecti on barrier, gantry various equipment.
Employees Compensation Insurance Policy	HDFC ERGO General Insurance Company Ltd	31142033879769000 00	19.5.2020	18.05.2021	All categories of Employees of the Contractor & sub-contractor engaged in the Project

CHAPTER 12. CONCLUSION

12.1 General

Based on detailed site inspection, review of various documents and reports as described in the preceding chapters technical over view of the Project is provided below.

12.2 Pavement Condition

The overall project pavement condition is good. RCC drains are constructed in Built up locations and earthen drains in rural locations resulting in, effective drainage system along the project road. Shoulder condition is fair.

12.3 Condition of Structures

General condition of Bridges is good. No major structural defects were noticed. General condition of Culverts is good. Observed vegetation growth in vents of Box and Hume Pipe culverts and they are getting cleared during regular maintenance period.

12.4 Traffic Growth

Based on real time traffic, the traffic growth observed is 10.06%, whereas 5% growth is considered while evaluating forecast of traffic volumes.

12.5 Project Facilities:

Toll Plaza is located at Km. 21+800 and is operational. Toll Plaza is operated by ETC Toll collection system and connected by network system monitored in administrative building. Medical Aid posts found in functional condition. Avenue plantation and landscaping at Toll Plaza is provided and being maintained.

12.6 Road safety

Pavement marking is in fair condition and number of sign boards are provided as per IRC SP 73-2007. The condition of signboards & other road appurtenances like metal beam crash barriers is fair.

12.7 Maintenance

- The routine maintenance being carried out by O&M contractor effectively, based on documents reviewed, time to time observations made by client/Authority, being complied and no outstanding NCR's are to be attended as on date.
- Major maintenance (MM) /Periodic maintenance will be carried out in 2021, 2028 and 2033.

12.8 Epilogue

The project is designed and constructed as per the stipulated specifications besides maintenance work, being carried out timely and effectively to keep the road in traffic worthy and safe at all times.

ANNEXURES

Annexure 1: Pavement Condition

Condition: G=Good, F=Fair, P=Poor & VP=Very poor Rutting: M=Moderate & S=Severe Drain: LD=Lined open Drain, ULD=Unlined Drain, CD=Covered Drain, NO=No drain, PF=Partial Function, F= Functional

Policy No. 3114203387976900000

Employees Compensation Insurance

Insured Name		SURYAVANSHI INFRASTRUCTURE PVT LTD (PAN Number:AACCD6124B)		Business	OTHERS	
Correspondence Address		PLOT NO. 5, GOVIND NARAYAN SINGH GATE,CHUNA BHATTI, BHOPAL,BHOPAL,MADHYA PRADESH,462016.				
Mobile		Phone		E Mail		
					Policy Issuance Date	13/05/2020
Period of Insurance		From Date & Time	19/05/2020 00:01 AM	To Date & Time	18/05/2021 Midnight	

LAW

The Policy covers Liability of the Insured under the following Law(s) shown as covered, subject to claim being otherwise admissible as per terms, conditions and exclusions of the Policy and subject to Limit of Indemnity as stipulated against each Law:

Sr. No.	Law	Limit of Indemnity
a.	Employee's Compensation Act, 1923 and subsequent amendments thereof prior to the date of issue of this Policy	Subject otherwise, to the terms, conditions & Exclusions of the Policy, the amount of liability incurred by the Insured
b.	Common Law	Subject otherwise, to the terms, conditions & Exclusions of the Policy, the amount of liability incurred by the Insured, but not exceeding:- a) Limit Per Employee for any number of accidents during Period of Insurance ₹. Unlimited b) Limit Per Accident for any number of Employees ₹. Unlimited c) Aggregate Limit for all accidents and claims arising there from during the Period of Insurance ₹. Unlimited

DISCLAIMER

*This traffic study report ("**this Report**") is prepared by Ramboll India Private Limited ("**Ramboll**") and is intended for **Shrem Financial Private Limited's** ("**Client**") sole and exclusive use and is not for the benefit of any third party and may not be distributed to, disclosed in any form to, used by, or relied upon by, any third party, except as agreed between the parties, without prior written consent of Ramboll, which consent may be withheld in Ramboll's sole discretion. Ramboll agrees and acknowledges notwithstanding the above, this Report may be disclosed, in whole or in part, in any of the offering documents and roadshow and marketing materials prepared in relation to the private placement of units by Shrem InvIT.*

Ramboll has prepared the Report in an independent and objective manner based on information available on the date of this Report, and it has taken all reasonable care to ensure its accuracy and completeness. Ramboll believes that this Report presents a true and fair view and a reasonable expectation for the future within the limitations of, among others, secondary statistics and primary research, but it does not purport to be exhaustive and precise forecasts. The results that can be or are derived from these findings are based on certain assumptions and parameters/conditions. As such, a blanket, generic use of the derived results or the methodology is not encouraged.

Use of this Report or any information contained herein, if by any party other than the Client, shall be at the sole risk of such party and shall constitute a release and agreement by such party to defend and indemnify Ramboll and its officers, employees from and against any liability for direct, indirect, incidental, consequential or special loss or damage or other liability of any nature arising from its use of the Report or reliance upon any of its content. To the maximum extent permitted by law, such release from and indemnification against liability shall apply in contract, tort (including negligence), strict liability, or any other theory of liability.

In preparing this Report, Ramboll relied, in whole or in part, on data and information provided by the Client, which information has not been independently verified by Ramboll and which Ramboll has assumed to be accurate, complete, reliable, and current. Therefore, while Ramboll has utilized its best efforts in preparing this Report, Ramboll does not warrant or guarantee the conclusions set forth in this Report which are dependent or based upon data, information, or statements supplied by the Client.

1. INTRODUCTION

1.1 General

The project road, Guna-Biaora, is part of NH-3 which starts at Guna (km 332.100) and ends at Biaora (km 426.100) with a length of about 93.5 km. The project road as part of the upgradation of National Highways in India under NHDP Phase IV was upgraded from 2-lane to 4-lane highway and was awarded to M/s Dilip Buildcon Limited which in turn formed an SPV M/s Jalpa Devi Tollways Pvt. Ltd. The project is undertaken on Design, Build, Finance, Operate and Transfer (DBFOT) basis for a concession period of 26 years. The asset is operational since June 2018.

The National Highway 3 (NH-3) connects the city of Agra with Mumbai, the financial capital of India. This 1,161 km-long road spans across the states of Uttar Pradesh, Rajasthan, Madhya Pradesh and Maharashtra. It acts as a major connection between economic centres falling on and around the corridor such as New Delhi, Agra, Gwalior, Bhopal, Indore, Nashik, Mumbai, Pune.

Figure 1-1 shows the alignment of NH-3 with major places along the highway.

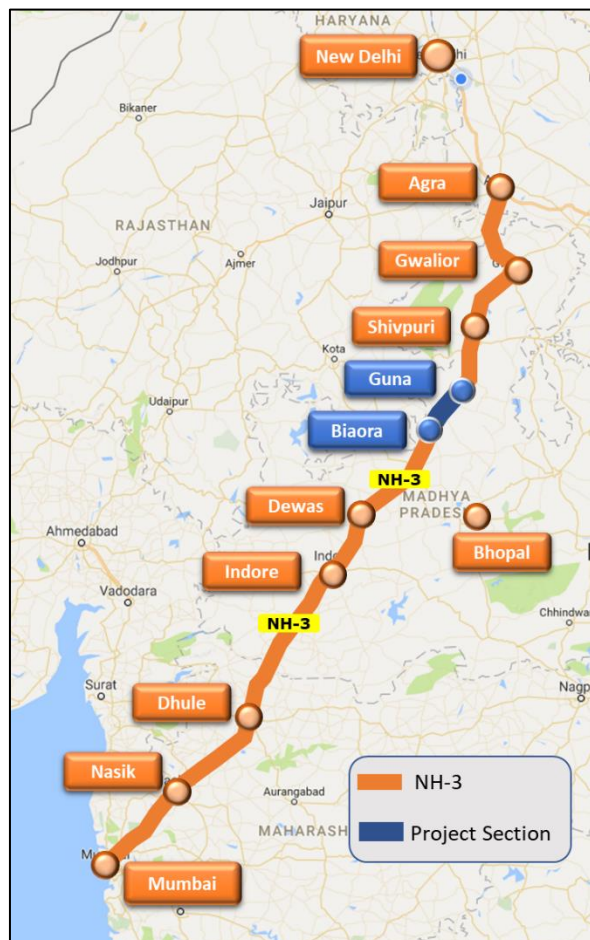

Figure 1-1: Alignment of NH-3 with major places

Shrem Financial Pvt Ltd, has appointed Ramboll India Private Ltd as the Traffic Consultant to carry out a study for assessing the present traffic levels, travel pattern and revenue

estimation duly considering the network characteristics, future economic perspective in the influence area of the project and the provisions in the Concession Agreement of the project for the balance concession period.

1.2 Objective and Scope of Services

The objective of the study is to study the existing tollable traffic and travel pattern of the project road.

- Undertake Traffic Survey on the highway section as per the following:
 - Seven days, 24 hours, Videography Traffic Counts at 2 existing toll plaza locations on the project road
 - One-day Origin-Destination survey at 2 existing toll plaza locations to assess the existing travel pattern of vehicles plying on the project road - origin and destination, commodity carried for freight vehicles, purpose of travel for cars
- Establish seasonality factors using available past traffic data and/or from using fuel sales data or any relevant data
- Estimation of the base year AADT using available toll data for the year or seasonality factors for conversion of ADT to AADT
- Review of past traffic studies, traffic data and other relevant reports as may be available to determine category wise volume of traffic for past years
- To identify competing route and analyse the network conditions, traffic characteristics & level of toll charged, future plans of tolling the alternative routes and the advantage/ disadvantage of the competing road and their impact on the project traffic.
- Analysis of OD data to cover:
 - Trip matrix and influence factors for different zones contributing traffic on the corridor
 - Identification of Project Influence Area from analysis of travel pattern - regional distribution of traffic,
 - Commodity composition- Goods type distribution
 - Top OD pairs by vehicle types
 - Travel frequency and trip purpose distribution
- Analysis of commodity movement on project road – major commodities carried, origin and destination of commodities carried etc.
- Carry out a study of past economic performance of influence area

- To study the impact of traffic diversion (from/to project road) in present condition and future improved scenario, a cost ratio-based diversion analysis using spreadsheet-based modelling for potential OD pairs to be undertaken
 - Assessment of the potential divertible/corridor traffic sensitive to network improvements based on the observed travel pattern.
 - An assessment of generalised cost of travel (vehicle operating cost, travel time costs and toll charges) using the project road and alternate road will be done and a cost ratio of travel determined.
 - The diversion percentages will be estimated using diversion curve equations and diverted traffic (to/from project road) to be estimated.
- Identification of Project Influence Area and traffic generators (industrial areas, towns, ports etc.)
- Preparation of traffic projections for the balance concession period in three scenarios – low, most likely and high
- Review of Concession Agreement and Capacity analysis of the road
- Estimation of tollable traffic streams by toll category and estimation of toll revenue as per categories of traffic streams stipulated in the tolling schedule for the concession period.
- Review future road and transportation network developments in the area of influence of the project and identify those schemes that may impact positively or negatively traffic on the toll road
- Identify factors which may have a positive and / or negative impact on the traffic - all major developments like industrial corridors, economic corridors, ports, Bharatmala, Sagarmala
- Upcoming developments and future development potential of the region would be assessed for the induced/newly generated traffic
- Estimation of toll revenue as per categories of traffic streams stipulated in the tolling schedule for the concession period
- Scenario Analysis of toll revenue - Critical parameters of diversion (if applicable) and three scenarios of traffic growth (most likely, low and high)

1.3 Report Structure

This report is divided into four chapters, including this introduction chapter. Chapter 2 details upon the project road characteristics and socio – economic profile of the districts in the project influence area including the estimation of AADT and travel characteristics in the Project Influence Area (PIA). Chapter 3 contains the details on the derivation of

traffic growth rates used for traffic forecasting. Chapter 4 presents the details regarding tolling strategy, toll rates and the revenue projections for the duration of the concession.

2. TRAFFIC SURVEY AND ANALYSIS

2.1 General

In order to understand the traffic characteristics, the volume of traffic and travel pattern of vehicles plying on the project road were collected through primary surveys. This chapter presents the details of the project road characteristics, traffic surveys carried out, their analysis and the salient findings. The results of the analysis will be utilized in assessing the traffic growth and estimation of traffic and revenue forecast on the project road for the remaining concession period.

2.2 Project Road Characteristics

The project road section, Guna-Biaora, a part of the NH-3 in the state of Madhya Pradesh, starts at km 332.100 near Guna and ends at km 426.100 at Biaora with a length of about 93.5km. The project road falls under the jurisdiction of Guna district and Rajgarh district passing through settlements of Guna, Raghogarh, Janjali, Binaganj, Pakhripura and Biaora. There are two operational toll plazas on the project road, one near Pagara (km 348.885) and other at Jogipura (km 400.465) as part of the concession.

The alignment of project road and toll plaza locations is shown in **Figure 2-1**.

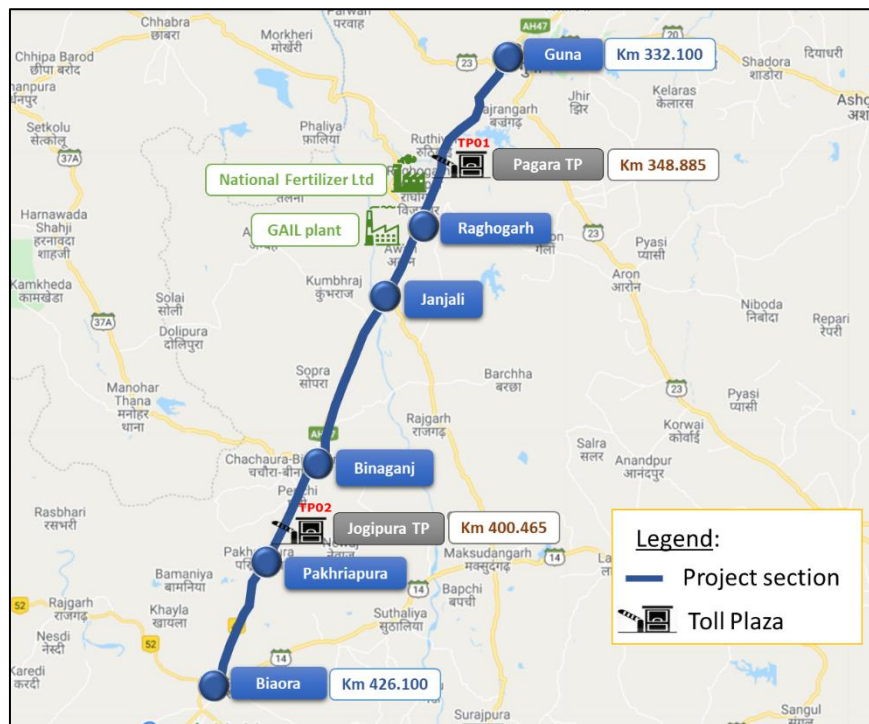

Figure 2-1: Project road and location of toll plazas

The project road, in wider context, serves the long-distance traffic, which is majorly plying from Gwalior, Agra and beyond on the north towards Nasik, Mumbai, Pune and beyond on the south. Apart from long distance traffic, it also serves the short distance traffic which is mainly generated within project corridor between Shivpuri, Guna, Biaora, Indore, Bhopal and surrounding areas.

Also, the project road has presence of two large scale industries/plants in the vicinity which influence the traffic on the corridor viz, National Fertilizer Ltd (largest in the state) and the Gas Authority of India Ltd (GAIL).

2.2.1 Profile of Project Influence Area Districts

Guna district

Guna district is situated in the north west part of Madhya Pradesh with an area of 6,390 sq.km. It is surrounded by the districts of Shivpuri on the north, Ashokanagar on the north east, Rajgarh on the south, and Vidisha on the south east in Madhya Pradesh and shares border with the states of Rajasthan on the west. The city of Guna is the administrative headquarters of Guna district.

Guna is predominantly an agricultural region and the prime share of revenue comes from the agriculture and related products. Wheat, mustard, coriander and soya bean are the major crops produced. The economy also thrives on the small-scale industries for soya bean oil and mustard oil mostly located in Guna.

Also, National Fertilizer Limited (NFL), largest in the state located in Vijapura is a Central public sector enterprise (Govt of India Undertaking) unit involved in manufacturing of fertilizers. The district also has the presence of Gas Authority of India Ltd (GAIL) involved in distribution of Liquified petroleum gas (LPG).

The district population as per Census 2011 is 1.24 million with a decadal growth rate of about 30.20 percent.

Rajgarh district

Rajgarh district is located on the north western part of Madhya Pradesh with an area of 6,154 sq. km. It is spread over 6 tehsils viz, Rajgarh, Khilchipur, Jirapur, Biaora, Narisgharh, Sarangpur and Pachore with Rajgarh as the district headquarter.

The district is bounded by Rajasthan state to the north, district of Guna to the north east, Bhopal to the east, Sehore on the south east, and Shajapur to the south and west.

The economy of the district mainly depends upon agriculture and related products.

According to 2011 census, the district has a population of 1.54 million with decadal growth of about 23.83 percent.

2.3 Traffic Surveys

In order to understand the characteristics and the volume of traffic using the project road, data on road network, traffic and travel pattern of vehicles plying on the project road were collected through primary traffic surveys. Traffic volume video graphic survey for seven days and origin-destination (OD) survey as roadside interview for one day at toll plaza locations were conducted on the project road. The schedule of the traffic surveys and location on the project road are given in **Table 2-1**.

Location	Chainage	Duration	Date(s)
Classified Traffic Volume Counts			
TP01-Pagara	km 348.885	7 Days	30 th Dec 2020 –5 th Jan, 2021
TP02-Jogipura	km 400.465		
Origin and Destination Survey			
TP01-Pagara	km 348.885	1 Day	30 th Dec 2020
TP02-Jogipura	km 400.465		

Table 2-1: Traffic Survey Location and Schedule

Trained enumerators were engaged for conducting traffic surveys under the supervision of experienced transport planner. The vehicle classification as generally used in the traffic surveys of NHA studies along with their PCU values, as suggested in IRC: 64 – 1990, are presented in **Table 2-2**.

Vehicle Type	PCU Factor
Motorized Vehicles	
Car, Jeep, Van & Taxi	1.0
Two –Wheeler	0.5
Three-Wheeler (Auto-Rickshaw)	1.0
Mini-Bus/ School Bus	1.5
Govt. Bus/ Private Bus	3.0
Mini LCV/Max Pick Up	1.0
Light Commercial Vehicle (LCV)	1.5
2-Axle Truck	3.0
3-Axle Truck	3.0
Multi-Axle Vehicle (MAV 4-6 Axle)	4.5
HME	4.5
Agricultural Tractor	1.5
Agricultural Tractor with Trailer	4.5
Non – Motorised Vehicles	
Cycle	0.5
Cycle Rickshaw	2.0
Animal Drawn Cart	6.0

Table 2-2: Vehicle classification and PCU factors

2.4 Traffic Characteristics

The data collected from the traffic volume count survey was analysed in order to get the results with respect to existing traffic intensity, flow pattern, hourly variation and composition of traffic on the study road network. The various traffic characteristics have been analysed under the following heads:

- Average Daily Traffic (ADT)
 - Daily variation of traffic
 - Peak hour traffic and hourly variation

- Directional distribution
- Traffic composition
- Annual Average Daily Traffic (AADT)

2.4.1 Average Daily Traffic (ADT)

The traffic volume data collected at the toll plaza locations during the seven days survey has been analysed. The summary of ADT in terms of vehicles and PCUs is presented in

Table 2-3.

Mode	TP01	TP02
Tollable vehicles		
Car/Jeep/Var/Taxi	3,472	2,700
Minibus	112	33
Standard Bus	476	403
Mini LCV	362	325
LCV	1,110	1,007
2 Axle	933	856
3 Axle	1,491	1,502
MAV (4-6 Axle)	2,536	2,434
HMV/ MAV (= > 7 Axle)	6	6
Non Tollable vehicles		
Two-Wheeler	4,969	1,736
Auto Rickshaw	200	79
Agri. Tractors	110	117
Total Non-Motorised	86	7
Total Vehicles/PCUs		
Total Tollable Vehicles	10,498	9,266
Total Non Tollable Vehicles	5,365	1,939
Total Vehicles	15,863	11,204
Total PCU	28,997	25,312
Tollable PCU	25,807	23,847

Table 2-3: Average Daily Traffic

- The observed total vehicles are around 15,863 and 11,204 respectively at TP01 and TP02. The higher traffic at TP01 can be attributed to interaction from/to NFL/GAIL plants.
- The share of passenger vehicles in total traffic is 58.7 and 44.2 percent, respectively at TP01 and TP02.
- Car traffic has a share of around 22.0 percent (3,472 vehicles) and 24.0 percent (2,700 vehicles) of total traffic at TP01 and TP02 respectively.
- Freight vehicles account for a share of 41.3 percent at TP01 and 55.8 percent at TP02. Within the freight traffic, MAV accounts for 16.0 percent (2,542 vehicles) and 21.8 percent (2,440 vehicles) at TP01 and TP02 respectively.

- The tollable traffic recorded at TP01 and TP02 are 66.0 percent and 83.0 percent respectively. The remaining non-tollable traffic mainly comprise of two wheelers and auto rickshaws.

Daily Variation of Traffic

The day wise variation of total passenger and freight traffic at the toll plaza locations in terms of vehicles and PCUs are shown in **Figure 2-2** and **Figure 2-3**.

Figure 2-2: Daily Variation of Traffic at TP01

Figure 2-3: Daily Variation of Total Traffic at TP02

It was observed that the traffic at toll plaza locations is almost consistent throughout the seven days with some minor fluctuations.

Peak Hour Traffic and Hourly Variation

The hourly variation of traffic illustrates the distribution of traffic over the day with respect to time, and the peak hour factor (PHF) is the maximum percentage of the total traffic that uses the project highway in one single hour of the day. Highway capacities and design calculations are based on PHF. The peak hour factor observed at the count locations is summarized in **Table 2-4**.

Survey Location	Peak Hour Traffic (PCUs)	Peak hour %	Observed Peak Hour
TP01	1,719	5.9	15:00 - 16:00
TP02	1,361	5.4	16:00 - 17:00

Table 2-4: Observed Peak Hour Factor

The peak hour volume at TP01 is 5.9 percent in PCUs which was observed during afternoon (15.00 - 16.00) and at TP02, it was 5.4 percent which was observed during 16:00 – 17:00 hours.

Figure 2-4 shows the hourly variation of ADT in terms of number of vehicles and PCUs observed at the toll plaza locations.

Figure 2-4 : Hourly Variation of Total Traffic at toll plaza locations

The hourly variation graph indicates that the traffic flow is almost the same during the day and tapering off at night.

Directional Distribution

The directional distribution analysis, as reported in **Table 2-5**, indicates that there is an almost equal distribution of directional traffic (PCUs) at the toll plaza locations.

Direction/Location	TP01	TP02
Guna - Biaora	48.1%	51.8%
Biaora - Guna	51.9%	48.2%

Table 2-5 : Directional distribution (in PCU)

Traffic Composition

Analysis was carried out to find the composition of traffic in terms of fast- and slow-moving traffic. The total traffic composition at the toll plaza locations is presented in **Figure 2-5**.

Figure 2-5: Total Traffic Composition at the toll plaza locations

- Non- motorised vehicles are very minimal and negligible at toll plaza locations.
- Other non-tollable vehicles (two-wheeler, auto rikshaw and tractor) account for about 33.3 percent at TP01 and 17.2 percent at TP02.

The traffic composition of tollable vehicles is presented in **Figure 2-6**.

Figure 2-6: Traffic Composition of tollable vehicles at the toll plaza locations

- In case of passenger traffic, car traffic is having a share about 33.1 percent at TP01 and 29.1 percent at TP02.
- The share 2A traffic is about 8.9 percent and 9.2 percent at TP01 and TP02 respectively.

- In case of freight traffic, MAVs are having the highest share at both toll plazas with 24.2 percent and 26.3 percent at TP01 and TP02 respectively.

2.4.2 Annual Average Daily Traffic (AADT)

For the present study, the toll traffic data was provided by the client since the commencement of toll operations (June-18 to Dec-20). This dataset was analysed to understand the traffic characteristics of the project road. Month-wise toll data since the operation is presented in **Appendix 2.1**.

The derivation of FY21 AADT has been done by looking at the quarter on quarter behaviour of traffic in FY21 vs FY20. The first quarter showed a decline in traffic in freight modes due to a complete lockdown in view of COVID-19. The traffic showed recovery in second and third quarter of FY21 as the lockdowns were eased and economic activities slowly started to pick up. Based on this comparison of quarterly behaviour, an estimate of the recovery trends for the fourth quarter of FY21 has been done. The quarterly traffic and the estimated AADT for FY21 is presented in **Table 2-6**.

Description/ Mode	Car	LCV	BUS	2A	3A	MAV	OSV
TP01-Pagara							
Traffic in FY21							
Q1-Actual	2,942	447	493	750	1,066	2,152	3
Q2-Actual	3,899	518	526	1,399	1,463	2,633	3
Q3-Actual	4,342	595	414	1,629	1,568	2,693	3
Q4-Estimate	4,753	631	414	1,652	1,577	2,659	3
AADT							
FY21	3,984	548	462	1,357	1,418	2,534	3
TP02-Jogipura							
Traffic in FY21							
Q1-Actual	2,199	404	553	589	1,000	1,994	3
Q2-Actual	3,055	421	590	1,214	1,393	2,556	4
Q3-Actual	3,326	434	405	1,492	1,511	2,539	3
Q4-Estimate	3,539	437	405	1,418	1,547	2,545	3
AADT							
FY21	3,030	424	488	1,178	1,363	2,409	3

Table 2-6: AADT – FY21 as per Tolling Categories

In case of buses, Q4 of FY20 had shown a drastic increase and cannot be adopted as the base traffic. Therefore, the bus number in Q4 of FY21 has been assumed to be same as Q3 of FY21. While fixing the recovery factors for Q4 of FY21, due consideration has been given to the release of pent up demand by freight vehicles and likely growth for future quarters.

2.5 Travel Characteristics

2.5.1 Survey Methodology

In order to understand the travel demand pattern in the region and tollable traffic streams, origin and destination (OD) surveys were carried out at the toll plaza locations. The OD survey was carried out for 24 hours, by roadside interview method as described

in IRC: 102-1988. Both passenger and commercial vehicles plying on the project road were stopped on a random sampling basis and interviewed.

The travel characteristics obtained by OD survey facilitate the identification of:

1. Local and through traffic on the project road.
2. Potential divertible traffic to/from project road to various alternative routes.

Trained enumerators under the supervision of transport planners collected the trip characteristics using survey forms designed for this purpose. The OD survey elicited characteristics like origin, destination, frequency, purpose of trip for passenger vehicles and commodity being transported for goods vehicles. The information pertaining to origin and destination of trips collected during roadside interviews was analysed to obtain the trip distribution based on a zoning system suitably designed for the present study.

2.5.2 Traffic Zoning System

To understand the spatial dimensions of the trip characteristics of the vehicles interviewed during the O-D survey, a detailed zoning system was developed giving due consideration to the following factors:

- The road network catering to the traffic on the project road and its generating points
- Important towns, villages, factories and industrial centres around the project road area
- Administrative boundaries of districts and states.
- Configuration of the project road in the regional road network with respect to other roads

Two major types of areas were identified for analysis purpose: -

Immediate Influence Area (IIA): It includes the cities/towns/villages and districts along the project road and adjacent to it, which generate/attract trips to the project road. In this study, it consists of districts of Guna and Rajgarh in the state of Madhya Pradesh.

Broad Influence Area (BIA): It includes the remaining districts of Madhya Pradesh and other neighbouring states such as Uttar Pradesh, Rajasthan, Maharashtra and remaining states of India.

Detailed zoning system is prepared for IIA, while more aggregate or broad zoning is developed for BIA. The zoning system adopted for data collection was based on 79 zones and is presented in **Appendix 2.2**.

2.5.3 Sample Size

The vehicles during the OD surveys were interviewed on a random sample basis. **Table 2-7** shows the AADT and the sample size (both in absolute numbers and in percentage terms) captured during the exercise.

Modes	Car	Bus	LCV	2A	3A	MAV/ Oversize
TP01						
Sample	2,050	216	474	775	863	1,272
AADT	3,984	462	548	1,357	1,418	2,537
Percentage (%)	51.5	46.8	86.5	57.1	60.8	50.1
TP02						
Sample	2,068	204	299	824	851	1,314
AADT	3,030	488	424	1,178	1,363	2,412
Percentage (%)	68.3	41.8	70.5	69.9	62.4	54.5

Table 2-7: Sample size collected in OD

Based on the sample size of different categories of vehicles interviewed during the OD survey, direction-wise expansion factors were calculated based on FY21 AADT. The OD matrices for all vehicle categories were generated and analysis was done in terms of regional distribution, travel pattern, commodity distribution and trip purpose for cars. The mode wise OD matrices are presented in **Appendix 2.3**.

2.5.4 Regional Distribution

Based on the OD matrices, the regional distribution of tollable vehicles at the toll plaza locations has been calculated. **Table 2-8** gives the distribution indicating the attraction and generation zones for the traffic on the project road.

Region/Modes	Car	Bus	LCV	2A	3A	MAV
TP01						
Madhya Pradesh	82.9	75.7	68.2	46.0	41.2	35.6
Uttar Pradesh	6.4	8.3	7.9	15.7	17.8	19.8
Maharashtra	3.5	6.3	7.2	10.9	14.0	15.5
Delhi	2.3	1.0	6.5	10.2	10.2	8.3
Gujarat	1.3	5.4	2.3	4.7	4.8	6.9
Rest of North India states	2.4	3.4	2.6	5.5	5.9	5.0
South India states	0.6	0.0	2.2	3.4	3.0	3.0
Rest of India	0.6	0.0	3.0	3.7	3.1	5.7
Total	100.0	100.0	100.0	100.0	100.0	100.0
TP02						
Madhya Pradesh	83.9	76.3	60.1	49.7	36.6	32.0
Uttar Pradesh	9.4	9.0	10.4	14.9	19.4	20.5
Maharashtra	2.9	6.4	10.2	12.7	16.0	18.6

Rest of India	0.4	0.3	3.0	3.2	3.5	6.3
Total	100.0	100.0	100.0	100.0	100.0	100.0

Table 2-8: Regional Distribution of Tollable Traffic (in %) on project road

Passenger traffic:

- In case of car traffic, Madhya Pradesh contributes about 82.9 and 83.9 percent at TP01 and TP02 respectively. However, Uttar Pradesh and Maharashtra contribute about 7-9 percent and 3-4 percent at both the toll plazas.
- Within the state of Madhya Pradesh, Guna district accounts for 38.0 percent and 26.0 percent at TP01 and TP02 respectively for car traffic.
- In case of Bus traffic, Madhya Pradesh contributes about 75.7 percent and 76.3 percent at TP01 and TP02 respectively, followed by Uttar Pradesh accounting for 8-9 percent at both toll plazas.
- The car traffic is observed to be having Guna- Ragogarh and Guna-Indore as top OD pair at TP01 and TP02 respectively.

Freight Traffic

- In case of LCV traffic, Madhya Pradesh contributes about 68.2 and 60.1 percent at TP01 and TP02 respectively, followed by Uttar Pradesh and Maharashtra accounting for 7-10 percent each at both the toll plazas.
- In case of MAVs, share of Madhya Pradesh state at TP01 and TP02 is about 35.6 and 32.0 percent respectively. Uttar Pradesh contributes around 20-21 percent at both the toll plaza locations. Maharashtra contributes 15.5 percent at TP01 and 18.6 percent at TP02. Delhi and Gujarat also have a reasonable share at TP01, about 8.3 percent and 6.9 percent, while at TP02 it is about 6.7 percent and 7.9 percent.
- The MAV traffic is observed to be having Indore- Lucknow/Kanpur as top OD pair at TP01 and TP02 respectively.

The mode wise top 20 OD pairs are given in **Appendix 2.4**.

2.5.5 Travel Pattern

In order to assess the travel pattern of vehicles, the important streams of traffic plying on the project road are estimated. The list of the popular movements found at the toll plaza locations is presented in **Table 2-9** and **Table 2-10** respectively.

S. No	Traffic Streams	Cars	Bus	LCV	2A	3A	MAV
1	Guna & surroundings - Biaora & surroundings	339	56	16	14	7	18
		8.5%	12.1%	3.0%	1.0%	0.5%	0.7%

		0.1%	1.0%	5.8%	5.1%	7.8%	13.5%
12	Zones Between TP01 & TP02 to Biaora & beyond	421	67	31	96	65	59
		13.9%	13.7%	7.3%	8.2%	4.8%	2.4%
Total		3,030	488	424	1,178	1,363	2,412

Table 2-10: Traffic Streams on TP02**Passenger traffic:**

- The car traffic originating to/from Guna & surroundings to Biaora & surroundings (stream 1) at TP01 is about 8.5 percent (339 vehicles) and at TP02 is about 12.0 percent (364 vehicles) respectively.
- Local streams of car traffic (crossing single toll plaza - stream 12) is found to be around 1,284 (32.2 percent) at TP01 and 421 vehicles (13.9 percent) at TP02. The higher share of local traffic at TP01 is due to the presence of two large plants National Fertilizer Ltd and Gail Authority of India Ltd; also, Guna serves as the district administrative headquarter.
- Around 21.1 percent (800 vehicles) of cars at TP01 and 23.1 percent (699 vehicles) at TP02 are found to be travelling between Gwalior/Shivpuri & surroundings to Biaora & beyond (stream 3).
- In case of bus traffic, about 12.1 percent (56 vehicles) at TP01 and 4.6 percent (23 vehicles) at TP02 are found to be travelling between Guna & surroundings to Biaora & surroundings (stream 1).
- The local bus traffic (crossing single plaza-stream 12) is found to be 21.1 percent (97 vehicles) at TP01 and about 13.7 percent (67 vehicles) at TP02 respectively.

Freight traffic:

- In case of 3A/MAV, around 94.5 percent (3,737 vehicles) and 96.7 percent (3,651 vehicles) at TP01 and TP02 is found to be crossing both the toll plazas.
- In case of MAVs, about 226 vehicles on an average are found to be travelling between Delhi NCR & beyond to Mumbai & surroundings (stream 6). Local streams of traffic

(crossing single toll plaza-stream 12) is found to be around 5.6 percent (143 vehicles) and 2.4 percent (59 vehicles) at TP01 and TP02 respectively.

- Similarly, about 111 Two-Axle trucks and 124 Three-Axle trucks on an average are found to be travelling between Delhi NCR & beyond to Mumbai & surroundings (stream 6).
- About 29.2 percent (397 vehicles) at TP01 and 26.7 percent (315 vehicles) of 2A traffic are found to travelling between Agra/Lucknow/Kanpur & surroundings to Biaora & beyond (stream 4).
- Also, in case of LCVs about 15.1 percent (83 vehicles) at TP01 and around 20.1 percent (85 vehicles) at TP02 are found to be travelling between Agra/Lucknow/Kanpur & surroundings to Biaora & beyond (stream 4). Local streams of traffic (crossing single toll plaza-stream 12) is found to be around 37.8 percent (207 vehicles) and 7.3 percent (31 vehicles) at TP01 and TP02 respectively. Higher share of LCV at TP01 for local traffic is due to interaction to/from GAIL/NFL plant, that carries smaller LPG cylinders and fertilizers to project influence areas.

2.5.6 Commodity Distribution

Analysis was also carried out to understand the different commercial vehicles being used to transport different commodities. **Table 2-11** and **Table 2-12** presents the commodity-wise share in the total commercial traffic on the project road at both toll plazas, respectively.

Commodity Type	LCV	2 Axle	3 Axle	MAV
Food Grains and Cash Crops	5.9	8.6	12.9	7.6
Fruits & Vegetables	20.7	17.7	19.8	23.0
Building Materials	0.8	0.9	2.5	1.7
Iron & Steel Products	2.5	3.2	3.8	4.4
Petroleum Products, Chemicals and Gas	7.6	8.9	7.1	9.4
Heavy Machinery & Industrial Equipment's	1.7	2.8	1.4	4.1
Industrial Products & Equipment	8.9	9.0	5.1	6.1
Consumer Items	8.0	14.5	19.5	9.1
Automobile and New Chassis	8.4	8.3	5.6	12.4
Containers	0.4	0.0	0.0	0.0
Ores & Minerals (Coal, Bauxite, limestone)	0.4	0.0	0.0	0.5
Miscellaneous Items (Medicines, Powder, Livestock, Forest products, Fertilizers, Milk, etc.)	9.3	7.9	8.2	9.4
Parcels	10.1	10.1	7.1	8.2
Empty Vehicles	15.2	8.1	7.1	3.9
Total	100.0	100.0	100.0	100.0

Table 2-11: Commodity distribution at TP01(%)

Commodity Type	LCV	2 Axle	3 Axle	MAV
Food Grains and Cash Crops	5.7	7.3	10.7	8.9
Fruits & Vegetables	13.4	16.7	15.5	19.3
Building Materials	1.7	1.7	2.8	1.8
Iron & Steel Products	3.3	4.5	4.1	5.6
Petroleum Products, Chemicals and Gas	3.7	5.5	6.2	12.3
Heavy Machinery & Industrial Equipment's	1.7	1.3	1.2	2.7
Industrial Products & Equipment	12.4	8.3	8.0	6.0
Consumer Items	15.4	18.0	20.8	12.4
Automobile and New Chassis	10.0	8.6	5.6	13.9
Containers	0.0	0.0	0.6	0.1
Ores & Minerals (Coal, Bauxite, limestone)	0.0	0.5	0.2	0.8
Miscellaneous Items (Medicines, Powder, Livestock, Forest products, Fertilizers, Milk, etc.)	8.7	5.8	6.7	7.1
Parcels	7.7	7.4	6.2	4.3
Empty Vehicles	16.4	14.4	11.3	4.9
Total	100.0	100.0	100.0	100.0

Table 2-12: Commodity distribution at TP02(%)

- Major commodities being transported across both the toll plazas are fruits and vegetables, food grains, automobiles, parcels, petroleum/gas products, miscellaneous products, etc.
- About 23 percent and 20 percent MAVs at TP01 and TP02, respectively have been found to transport fruits and vegetables (potatoes, onions, garlic etc) across the toll plazas. It may be noted that these commodities are laden from the southern side of the project viz, Indore, Bhopal, Nasik etc and travel to north towards Shivpuri, Gwalior, Agra and other city centres. After dropping these commodities to the mandis/city centres these MAVs trucks return empty.
- Also, about 15-19 percent of 2A and 3A are found to be transporting fruits and vegetables across both the toll plazas.
- Around 12 percent and 14 percent MAVs at TP01 and TP02 are found carrying automobile vehicles (cars & motorbikes) from long distance such as Delhi/Agra/Lucknow and destined to Indore/Maharashtra & surroundings.
- About 6-7 percent of 3-Axle trucks and around 10-12 percent of MAVs have been found laden with chemical/gas products (LPG) in high share across both the toll plazas. GAIL distributive plant is located along the project road from where chemical/gas products (LPG) are capsuled and distributed to nearby demand centres - towns/ cities.
- About 8-10 percent of LCVs, 2-Axle & 3-Axle trucks across both the toll plazas were found to be transporting parcels to nearby towns and cities along the project road.

- About 8-10 percent of LCVs, 2-Axle & 3-Axle trucks have been found to be transporting miscellaneous items.
- About 15-20 percent of 2-Axle trucks and 3A trucks have been found to be transporting consumer items to nearby town/cities across both the toll plazas.

2.5.7 Trip Purpose Distribution

An analysis was also carried out to assess the purpose of car trips on the project road. **Table 2-13** summarises the purpose-wise share of the passenger cars at the O-D survey location.

Purpose	TP01	TP02
Work & Business	78.5	78.0
Education	3.5	2.9
Social	9.0	9.8
Shopping	3.2	2.1
Religious	5.4	6.5
Others	0.5	0.7
Total	100.0	100.0

Table 2-13: Purpose - wise distribution of Car Trips

- Work and business trips account for about 78-79 percent across both the toll plazas. At both the toll plazas, shopping trips account for about 2-3 percent each.
- Social trips were observed to be around 9-10 percent whereas education trips account for another 3-4 percent across the two toll plazas.
- Religious trips account for about 5-6 percent across both the toll plazas.

3. TRAFFIC GROWTH RATE AND PROJECTIONS

3.1 General

As the project road has been executed on a DBFOT basis under NHDP Phase 4 with a concession period of 26 years, an estimation of the traffic using the tolled highway and its future growth are important elements to assess the project's economics as they are generally the main/sole source of revenue for the project. The Guna – Biaora section of NH-3 is around 93.50 km in length. This chapter details various aspects of the current traffic of the project road and its growth potential.

3.2 Project Road Traffic

The traffic that is likely to use the project road was estimated on the basis of the traffic and travel characteristics using the toll data made available by the client. The traffic on the project road would normally consist of the following components:

- Normal Traffic
- Diverted Traffic
- Induced/Developmental Traffic

3.2.1 Normal Traffic

Normal traffic is the traffic which is already plying on the project road as assessed in Table 2-6 .

3.2.2 Diverted Traffic

Diverted traffic is generally dictated by the presence of an alternative route at a lower generalised cost, which is in-turn defined by the road configuration and its condition, the type of vehicle and its operating costs, the average riding speed, the route distance and any tolling that may apply on a specific route.

In context of the project road, there are no routes in vicinity of toll plazas to avoid the project road. The development of the under-construction green-field Delhi-Mumbai Expressway (DME) may impact the project road traffic.

Delhi – Mumbai Expressway

Delhi–Mumbai Expressway is an under-construction 1,296 km long controlled-access highway connecting the national capital Delhi with India's commercial capital Mumbai. The expressway is proposed on a greenfield-alignment and will be a 12-lane facility (6 lanes in each direction). Being a signal-free access-controlled corridor between the two cities running across five states will cut down the travel time from 25 hours to 12 hours.

This Expressway was first announced in April 2018 by Union Minister Nitin Gadkari and as per the latest update, it is targeted to be completed by January 2023. Around 18 packages out of 50 packages are already under construction, and tenders for several

route sections are being awarded and under various stages of implementation as per latest NHAI update.

The alignment of proposed Delhi – Mumbai expressway is parallel to the project section and it passes through the states of Haryana (80km), Rajasthan (375km), Madhya Pradesh (245km), Gujarat (425 km) and Maharashtra (170km). The alignment of Delhi-Mumbai expressway is presented in Figure 3-1.

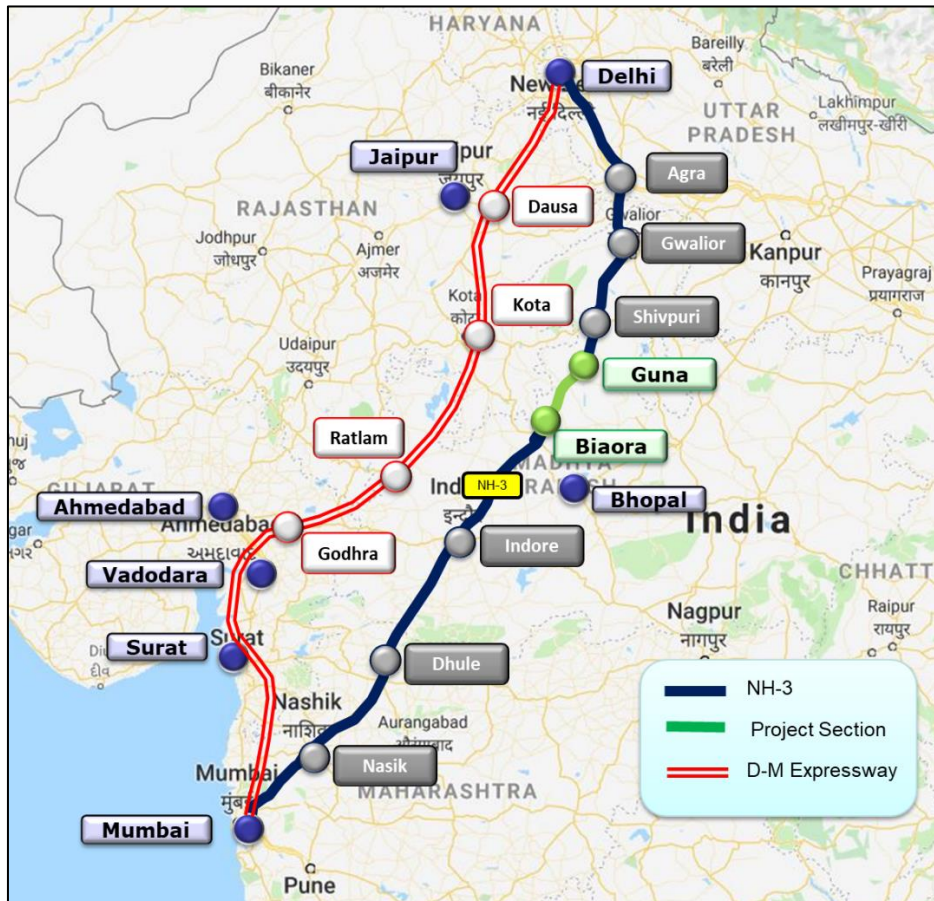

Figure 3-1: Alignment of Delhi-Mumbai Expressway

The route via project section is about 1,387 km as against 1,296 km via DME. Thus, the route via DME is about 90 km shorter than the route via PR. The toll rates for DME are considered as 1.5 times the normal NHAI per km toll rates (accounting for 1.25 times for normal length of expressway and increase for the likely equivalent structure length). Once completed, some of the freight vehicles currently using the project road travelling between Delhi & beyond to Mumbai & surroundings, may find Delhi Mumbai Expressway attractive and may divert from the project road traffic.

The assessment of any likely traffic addition to/diversion away from the Project Road (PR) has been done using the cost ratio analysis as described below:

- Assessment of the potential divertible traffic sensitive to network improvements based on the observed travel pattern

- Calculation of road user cost of travelling on the project road and the alternative route. The road user cost includes vehicle operating cost (VOC), travel time cost (TTC) and toll cost (TC), if any.

The road user cost is estimated based on vehicle operating cost equations presented in Updation of Road User Cost Study (RUCS) carried out by Central Road Research Institute in 2009 for Ministry of Road Transport and Highways. Using the likely traffic stream speeds and lane configuration, the vehicle operating, and travel time costs are estimated for each of the routes. Road user cost on the identified routes is calculated and diversion percentages are estimated using diversion curve method mainly for trucks. In this method, traffic likely to be diverted from/to the project road, was estimated using Logit model, which computes expected diversion percentage based on the ratio of perceived cost on the existing and proposed facilities. The perceived cost is the financial vehicle operating cost and the time saving cost including toll charges (if any). According to the model, a vehicle will shift if the perceived cost on an alternative route is lower in comparison to existing route. The diversion equations for estimating diversion have been adopted from IRC 108:2015. These equations are presented in **Table 3-1**.

Vehicle	Cost Ratio (CR) Interval	Equations
Car	≤ 0.634	$\% \text{ Div.} = 98.750 - (\text{CR}/0.634) * 8.125$
	$0.634 \leq \text{CR} \leq 1.465$	$\% \text{ Div.} = 90.625 - ((\text{CR}-0.634)/0.831) * 84.375$
	$1.465 \leq \text{CR} \leq 2.0$	$\% \text{ Div.} = 6.25 - ((\text{CR}-1.465)/0.535) * 5.25$
Truck & Bus	≤ 0.750	$\% \text{ Div.} = 100 - ((\text{CR}/0.75) * 5)$
	$0.750 \leq \text{CR} \leq 1.250$	$\% \text{ Div.} = 95 - ((\text{CR}-0.75)/0.5) * 90$
	$1.250 \leq \text{CR} \leq 2.0$	$\% \text{ Div.} = ((2-\text{CR})/0.75) * 5$

Source: IRC 108-2015

Table 3-1: Diversion Equations Used for Analysis

The diversion percentages are estimated for the future conditions keeping in view, the updated project road network and surrounding road network. The diversion percentages are then applied to the potential divertible traffic/corridor by OD pair to calculate the traffic that would divert to/from the project road.

The share of project road after the opening of Delhi-Mumbai expressway has been estimated using cost ratio analysis. The assessment has been done for traffic stream between Delhi & beyond to Mumbai & surroundings as derived from the OD analysis of the two toll plazas. The estimated diversion for freight vehicles based on the route choice analysis is presented in **Table 3-2**.

Modes	2A	3A	MAV
Potential traffic	111	124	226
Future Project Road share (%)	41.1	35.3	41.4
Future Project Road traffic	46	44	94
Expected loss from PR	66	80	133

Table 3-2: Impact of Delhi-Mumbai Expressway

The development of the Delhi-Mumbai expressway is expected to result in a loss of about 66-2A, 80-3A, and 133-MAVs. This diversion to DME has been considered in the base case.

As DME is likely to be operational in FY24, the traffic on expressway might take some time to shift on to the expressway. In view of a slow built of traffic on DME, 50 percent of the expected loss due to DME operation has been considered in FY24 and 75 percent for FY25 increasing to 100 percent from FY26 onwards.

3.2.3 Induced/ Development traffic

Developmental /new generated traffic is the one which would be generated, over and above normal growth, because of lowering of transport costs or new developments in the immediate influence area of the project road. In case of the project road, there is no development envisaged in the vicinity of the project road.

Bharatmala Pariyojana is the second largest highways construction project in the country since NHDP, under which almost 50,000 km or highway roads were targeted across the country. It will look to improve connectivity particularly on economic corridors, border areas and far flung areas with an aim of quicker movement of cargo and boosting exports.

It will connect 550 district headquarters to minimum 4-lane highway by raising the number of corridors to 50 (from current 6) and move 80 percent freight traffic (currently 40 percent) to national highways by connecting 24 logistics parks and 7 north east multimodal waterway ports.

The Phase-I includes economic corridors of around 9,000 km; inter-corridor and feeder routes of around 6,000 km; 5,000 km roads under the National Corridors Efficiency Program, border and international connectivity roads of around 2,000 km; coastal and port connectivity roads of around 2,000 km; expressways of around 800 km and 10,000 km of NHDP roads. The total length in phase 1 comes to around 34,800 km.

In the context of the project influence area, there are a few economic corridors and inter corridors listed in the Madhya Pradesh plan. The economic corridors are planned from Jaipur/ Chittorgarh- Indore, Indore-Nagpur and Ahmedabad-Sagar as economic corridors and is likely to improve connectivity with an aim to provide quicker movement of cargo.

Figure 3-2. presents the details of the upcoming projects under Bharatmala in the project influence area in the context of the project section.

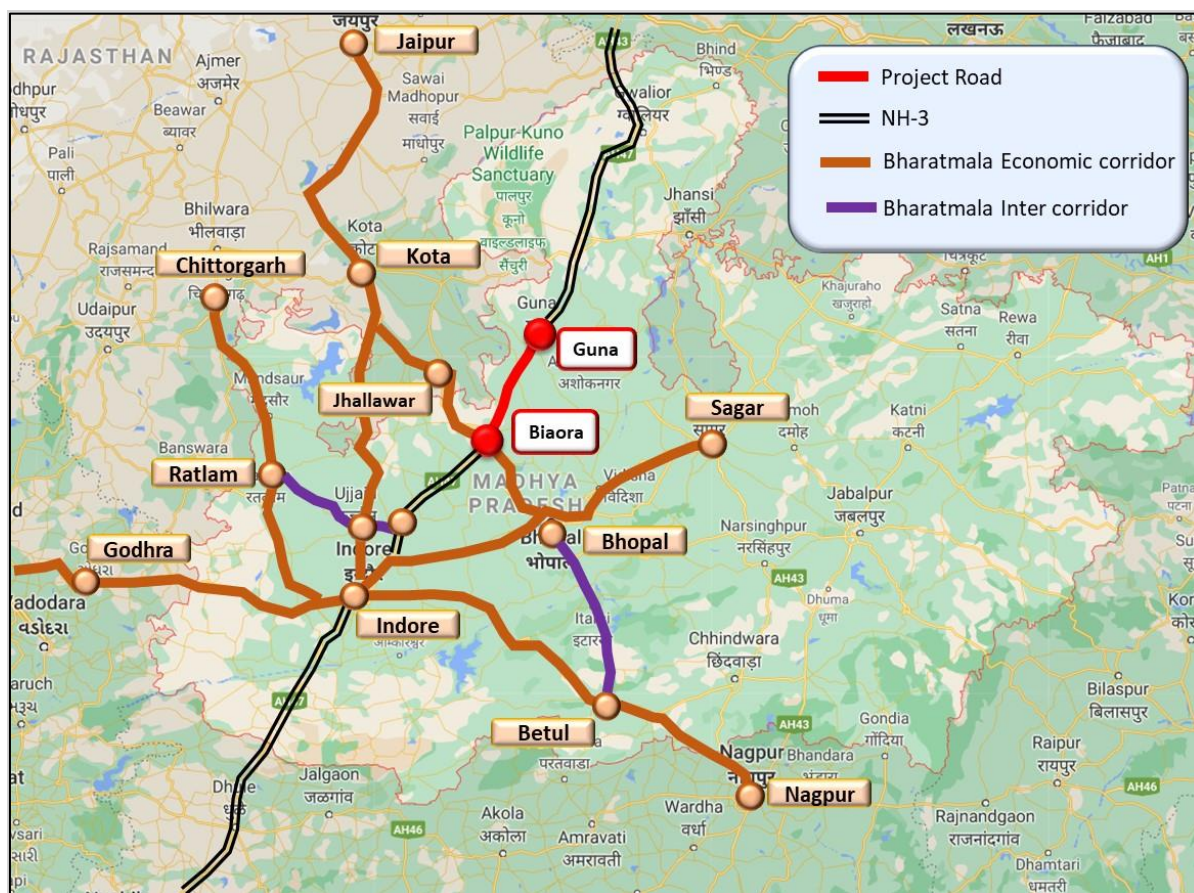

Figure 3-2: Alignment of the Economic Corridors and Feeder Roads

As the project road is a caters to the long-distance traffic, it is likely to remain an important highway for the North-South movement and may see sustained growth in the future. With Ayodhya gaining importance as the tourist hub due to the construction of the new temple, the project road will serve the connectivity between Ayodhya and Ujjain & other religious towns of MP.

3.3 Traffic Growth Rate Estimation

3.3.1 Methodology

Traffic growth for both passenger and freight vehicles has been estimated using the econometric approach as described in IRC-108, 1996. For freight traffic, due consideration has been given to the total tonnage transported and the shift in types of vehicles used for moving goods.

The econometric model applied, relates traffic growth to changes in state (or district) domestic product via an elasticity factor. According to IRC guidelines, elasticity based econometric model for highway projects should be derived in the following form:

$$\text{Log}_e(P) = A_0 + A_1 \text{Log}_e(EI), \text{ where:}$$

P = traffic volume;

EI = Economic Indicator;

A0 = Regression constant;

A1 = Regression co-efficient (Elasticity Index).

In order to estimate traffic on the project road the methodology described below has been followed:

- Identify the influence area - From the analysis of OD survey data carried out as part of the present study, the project influencing states and districts, which are likely to impact the traffic growth on the project road, were identified.
- Review Past traffic Data – Based on toll data available for the project, a review of past traffic and tonnage growth is carried out.
- Analysis of economic growth of the Project Influencing Area (PIA) - For each PIA state an economic profile describing past performance and future outlook was prepared. This also considers India's past economic performance and its future outlook.
- Estimation of traffic elasticity to income – in order to translate economic growth into traffic growth, an elasticity factor was estimated.
- Derivation of traffic growth rates – On the basis of the weighted (based on OD shares) PIA outlook and related traffic elasticity, traffic growth rates were estimated.

The methodology thus adopted incorporates, as basic data inputs, the perspective growth envisaged in the influence area and the changes in transport demand elasticities over a period of time. The traffic growth rates by vehicle type for the project road have been determined in line with the concession period of 26 years up to FY42.

3.3.2 Traffic Pattern and Influence Area

The travel pattern as derived from origin and destination survey analysis reveals the predominance of Madhya Pradesh in both passenger and freight vehicles. Besides Madhya Pradesh, the states of Uttar Pradesh, Maharashtra, Delhi and Gujarat do contribute to the project road traffic.

Looking at the predominance of Madhya Pradesh, Uttar Pradesh, Maharashtra, Delhi and Gujarat, these states have been considered as the PIA state for both passenger and freight vehicles. The normalised shares of all the influencing states for the existing toll plazas are presented in **Table 3-3**.

State/ Modes	Car	Bus	LCV	2A	3A	MAV
Madhya Pradesh	85.5	78.5	70.4	54.0	44.8	39.4
Uttar Pradesh	7.9	9.0	9.8	17.4	21.4	23.4
Maharashtra	3.3	6.5	9.3	13.3	17.3	19.8
Delhi	2.0	1.5	7.5	10.8	10.5	8.8
Gujarat	1.2	4.6	2.9	4.5	6.0	8.6
Total	100.0	100.0	100.0	100.0	100.0	100.0

Table 3-3: Normalised OD shares for the project road (%)

The travel pattern on the project road reveals that around 85.5 percent of cars are being generated from the state of Madhya Pradesh. In case of Buses, around 78.5 percent are being generated from the state of Madhya Pradesh. The state of Uttar Pradesh contributes around 8 percent in the car traffic and 9 percent in bus traffic.

The share of LCV is more than 70 percent from Madhya Pradesh and 10 percent from Uttar Pradesh. The Madhya Pradesh contributes around 54 percent in the 2A trucks, around 17 percent share is from Uttar Pradesh, 13 percent from Maharashtra and 11 percent from Delhi. In case of 3A trucks, Madhya Pradesh contributes around 45 percent traffic, while Uttar Pradesh has a share around of 21 percent and Maharashtra has a share of 17 percent. For MAVs, around 39 percent of traffic is being generated from Madhya Pradesh, 23 percent from Uttar Pradesh, 19.8 percent from Maharashtra and about 8 percent each from Delhi and Gujarat.

In the context of the project road, Guna and Rajgarh districts of Madhya Pradesh are the top contributors to the project road traffic.

3.4 Past Economic Growth of PIA

Growth of traffic on the project road depends on existing development and future growth prospects of the connecting regions. A number of economic indicators for the PIA state, as published by Central Statistical Organisation (2011-12 prices), have been studied to assess their past performance.

Madhya Pradesh

- Madhya Pradesh's Gross State Domestic Product (GSDP) stood at Rs 5,618 billion in 2019-20 and has been growing at a compounded annual growth rate of 7.4 per cent since 2011-12.
- The state's growth had been between 3-5 per cent since 2013-15 and picked up to 12.4 per cent in 2016-17. It has shown a growth of around 5.8 percent in FY19 and 7.6 percent in FY20.
- The services sector is the largest contributor to GSDP (41 percent), agriculture allied activities sector at 34.9 percent, secondary sector at 24.1 per cent of the GSDP in 2019-20.

The change of sectoral composition of GSDP over the years is presented in **Figure 3-3**.

Figure 3-3: GSDP (in Rs billion) and its sectoral composition for Madhya Pradesh

The performance of the state economy and its different sectors has been studied using time trend analysis. The average annual growth rates as obtained using regression analysis are presented in **Table 3-4**.

Particulars	2011-12 to 2018-19	2014-15 to 2018-19
GSDP	7.4%	7.7%
Agriculture and Allied	6.7%	6.8%
Industry	6.2%	6.8%
Services	7.3%	8.0%
Construction	3.5%	4.9%
Per Capita Income	5.8%	6.2%

Table 3-4 : Average Annual Growth Rates (%) of State Income for Madhya Pradesh

Economy of Madhya Pradesh is highly dependent on agriculture, although services and industries play an increasingly significant role in the economy of the state. The construction sector is one of the main drivers of the industrial growth of Madhya Pradesh.

The state is manufacturing base for a number of large and medium scale industries from diverse sectors such as automobile and auto-components, cement, agro-processing, consumer goods, pharmaceuticals, etc. The state has large mineral resources of coal, copper, limestone, and magnesium. The main industries are in the cement, minerals and textile sectors.

Bhopal, Indore, Gwalior and Jabalpur are the major locations where SEZs have been approved. These SEZs have been proposed for mineral-based, agro-based and multi-product industries. There is one operational multi-product SEZ in Indore. Madhya Pradesh will attract encouraging investments and is poised to become a pharmaceutical hub.

The per capita income of Madhya Pradesh is Rs 67,770 in the year 2019-20 and has been growing at 5.8 percent during 2011-12 to 2019-20. The growth in per capita income is presented in **Figure 3-4**.

Figure 3-4: Per Capita Income of Maharashtra from 2011-12 to 2019-20

Other PIA States

The other PIA states contributing to the traffic on the project road are Uttar Pradesh, Maharashtra, Delhi and Gujarat.

- Uttar Pradesh's Gross State Domestic Product (GSDP) stood at Rs 11,872.71 billion in 2019-20 and has been growing at a compounded annual growth rate of 6.9 percent since 2011-12. The industrial Policy of one District one product will provide a boost to the economy of the state and has provided direct and indirect employment opportunities to many people in the state.
- Gross State Domestic Product (GSDP) of Maharashtra stood at Rs 20,390 billion in 2018-19 and has been growing at a compounded annual growth rate of 8.5 per cent since 2011-12.
- Delhi's Gross State Domestic Product (GSDP) stood at Rs 6,344 billion in 2019-20 and has been growing at a compounded annual growth rate of 8.2 percent since 2011-12.
- Gross State Domestic Product (GSDP) of Gujarat stood at Rs 11,863.7 billion in 2018-19 and has been growing at a compounded annual growth rate of 9.8 per cent since 2011-12.
- The services sector is the largest contributor to GSDP of the PIA states, 49 percent in Uttar Pradesh, 56 percent in Maharashtra, 85 percent in Delhi and 36 percent in Gujarat. The secondary sector contributes 29 percent and 31 percent in Uttar Pradesh and Maharashtra respectively. This share accounts for about 13 and 47 percent in case of Delhi and Gujarat.

The average annual growth rates as obtained using regression analysis till the last available year (FY12-FY20) are presented in **Table 3-5**.

State/Particular	Uttar Pradesh	Maharashtra*	Delhi	Gujarat*
GSDP	6.9	8.5	8.2	9.8
Primary	3.9	3.0	0.8	6.8
Secondary	8.8	8.3	8.0	11.2
Tertiary	7.3	9.7	8.2	8.4
Construction	4.9	5.0	5.4	3.1
Per Capita Income	5.2	7.2	6.0	8.2

*- Till FY19

Table 3-5: Average Annual Growth Rates (%) of State Income for other PIA states

The GSDP over the years for the states of Uttar Pradesh, Maharashtra, Delhi and Gujarat are presented in **Figure 3-5**.

Figure 3-5: GSDP (in Rs billion) for other influencing states of other PIA states

3.5 India and PIA Outlook

3.5.1 India's past performance and outlook for future

India's growth trend during the recent years has been presented in **Figure 3-6**.

Figure 3-6: GDP growth in India

Economic growth in India has been broadly on an accelerating path till FY18. It is likely to be the fastest growing major economy in the world in the medium-term. The growth in real GDP was 8.3 percent for FY17 and 7.0 percent in FY18, while the growth in FY19 was slightly lower at 6.1 percent. The long-term trend line growth of 7.2 percent has been achieved between FY12 to FY19. During FY20, growth has slowed down due to some structural issues and global headwinds resulting in an average GDP growth rate of 4.2 percent.

With the outbreak of COVID-19, global recession is likely to be witnessed across all the economies. The lockdown period announced by Indian government had an adverse impact on the economy. The first quarter estimated for FY21 has indicated a contraction of 23.9 percent and second quarter showed a rebound in growth by contracting 7.5 percent. The forecast for next two quarters is expected to be minor positive growth (Q3 at 0.1 percent and 0.7 percent in Q4) with economic activities picking up slowly. The resultant contraction for FY21 is expected to be around 7 to 8 percent.

The Indian economy is likely to see the impact of global slowdown due to COVID-19 and hence, the GDP forecast for India by various international agencies has been revised for the next two years. ICRA, Moody and SBI have recently predicted a growth of around -9 to -11 percent for FY21. S&P has predicted -7 percent for FY21 and a strong revival in FY22 with a likely growth of 10 percent. The forecast by IMF on January 26, 2021 for FY21 is -8 percent, 11 percent for FY22 and 6.8 percent for FY23. World Bank on October 9, 2020 has forecasted a growth of around -9.6 percent for FY21 and 5.4 percent for FY22. As per ADB’s latest update (December 20), India's GDP is expected to grow by -8 percent in 2021 and 8 percent in FY22. Organisation for Economic Cooperation and Development (OECD) has forecasted the GDP growth to be around -9.9 percent in FY21 and 8.0 percent for FY22.

In light of grim outlook being predicted by various agencies for the current years and likely revival thereafter spread over a couple of years, India's outlook adopted for the present study is around 8.0 percent for FY22. For the long term, the GDP growth is envisaged to be 6.0 percent till FY25, 5.5 percent from FY26 to FY35 and 5.0 percent till the end of concession period.

As per NITI Aayog in the document "Strategy for New India @ 75", the Indian Economy GDP is expected to reach \$4.0 trillion by FY23 and the government is providing a push through various reforms to reach a target of \$5 trillion by 2025.

The Oxford Economics forecast for 2034 provided under various scenarios suggest Indian Economy to reach \$6.8 trillion in scenario 1 - pushing old ways faster (focus on investment in education, health and human capital), \$7.4 trillion under scenario 2- turbocharging investment (rapid and significant investment in physical infrastructure) and \$10.4 trillion under the most optimistic scenario 3- the winning leap (additional focus on R&D and innovation). The long-term forecast by Deutsche Bank and Bloomberg also estimate the size of Indian Economy by 2030 to be around 7 and 8.4 trillion dollars respectively.

With the present crisis and recent growth trends, target of 5 trillion economy might be difficult to achieve by 2025 and likely to be delayed by 2-3 years due to impact of COVID19 and resultant economic slowdown. With the current size of the economy at \$3.2 trillion in FY20 and with the adopted GDP growth rates, the economy size of \$5 trillion is likely to be achieved by 2029. Also, the forecast is likely to be closer to the Scenario 2 of Oxford Economics which envisages an economy size of \$7.4 trillion by 2035.

3.5.2 PIA states outlook

A snapshot of the main economic indicators in the past and the growth adopted for future for the PIA state is presented in **Table 3-6**.

Indicators	Madhya Pradesh	Uttar Pradesh	Maharashtra*	Delhi	Gujarat*
GSDP in Rs Billion	5,618	11,375	20,391	6,344	11,864
GSDP growth (2011/12 to last year) in %	7.4%	6.9%	8.5%	8.2%	9.8%
Per capita Income in Rs (FY20)	67,770	52,154	1,67,581	3,16,650	1,75,630
Sector share in %, FY20					
Agriculture and allied	34.9%	23.0%	13.1%	2.0%	17.1%
Industry	24.1%	29.6%	31.0%	13.5%	47.0%
Services	41.0%	47.3%	55.9%	84.5%	35.9%

*-Till FY19

Table 3-6: Main Economic indicators of PIA states

Income estimates are available till FY20 for all the PIA states except Maharashtra and Gujarat. The income growth of PIA states of Maharashtra and Gujarat as observed in the

past years (FY12 to FY19) is assumed to continue for FY20. In order to arrive at the forecast of the PIA states, past performance of the State GDPs vis-a-vis India GDP has been studied and the multipliers have been derived for both short term and long term. A reality check is done in the background as to whether adoption of these applicable growth rates for all the states of India lead to achieving the overall target set for India as a whole. The adopted multipliers along with the states' outlook are presented in **Table 3-7**.

Period	India	Madhya Pradesh	Uttar Pradesh	Maharashtra	Delhi	Gujarat
Past growth						
2011-12 to 2019-20	7.0%	9.1%	7.0%	7.1%	8.2%	9.8%
2014-15 to 2019-20	7.0%	11.4%	8.2%	7.3%	8.0%	10.0%
Past Multipliers vis-a-vis India						
2011-12 to 2019-20		1.30	1.00	1.00	1.17	1.40
2014-15 to 2019-20		1.65	1.19	1.06	1.15	1.44
Multipliers adopted for future						
FY22-FY35		1.10	0.90	1.00	1.10	1.20
Outlook adopted for future in %						
FY21-FY22	8.00	8.8	7.2	8.0	8.8	9.6
FY23-FY25	6.00	6.6	5.4	6.0	6.6	7.2
FY26-FY30	5.50	6.1	5.0	5.5	6.1	6.6
FY31-FY35	5.50	6.1	5.0	5.5	6.1	6.6
Beyond 2035	5.00	5.5	4.5	5.0	5.5	6.0

Table 3-7: Past multipliers and future outlook of PIA states

Based on the normalised OD shares of the toll plazas (Table 3-3) and the outlooks adopted for PIA states, the future weighted income is presented in **Table 3-8**.

Period/Modes	Cars	Bus	LCV	2A	3A	MAV
FY22	8.55	8.53	8.45	8.28	8.21	8.19
FY23-FY25	6.41	6.40	6.33	6.21	6.15	6.14
FY26-FY30	5.88	5.86	5.81	5.70	5.64	5.63
FY31-FY35	5.88	5.86	5.81	5.70	5.64	5.63
Beyond FY35	5.35	5.33	5.28	5.18	5.13	5.12

Table 3-8: Future weighted income of PIA states

3.6 Review of Past Traffic Data

Past toll data was available for the toll plaza locations since the start of operations from June 2018 till December 2020. A comparison of the toll data is presented in **Table 3-9**.

FY/Mode	Car	LCV	Bus	2A	3A	MAV
TP01						
FY19	2,147	625	310	1,058	1,293	2,301
FY20	2,748	615	527	1,020	1,273	2,327
FY21	3,984	548	462	1,357	1,418	2,534
YOY Growth Rate in %						

FY/Mode	Car	LCV	Bus	2A	3A	MAV
FY20 vs FY19	28.0%	-1.5%	70.0%	-3.6%	-1.6%	1.1%
FY21 vs FY20	45.0%	-11.0%	-12.3%	33.1%	11.5%	8.9%
End Point Growth in %						
FY21 vs FY19	36.2%	-6.4%	22.1%	13.2%	4.7%	4.9%
TP02						
FY19	1,365	411	348	879	1,216	2,151
FY20	1,824	393	678	723	1,205	2,225
FY21	3,030	424	488	1,178	1,363	2,409
YOY Growth Rate in %						
FY20 vs FY19	33.6%	-4.4%	94.5%	-17.7%	-0.9%	3.4%
FY21 vs FY20	66.1%	7.8%	-28.0%	62.9%	13.1%	8.3%
End Point Growth in %						
FY21 vs FY19	49.0%	1.5%	18.3%	15.7%	5.9%	5.8%

Table 3-9: Past traffic comparison

The comparison of the past data shows an exorbitant double-digit growth in cars at the toll plaza locations between FY19 and FY21. LCVs have shown a negative growth except for 7.8 percent at TP02 in FY21 vs FY19 comparison. The growth in 2A trucks has been negative in the initial year of operation but a double-digit growth is observed in FY21 vs FY20 comparison. MAVs have shown a growth between 8-9 percent at both the toll plazas for FY20 vs FY21 comparison whereas for 3A the growth has been around 11-13 percent for the same year. The end point growth between FY19 and FY21 has been in the range of 5-6 percent for both 3A and MAV.

3.7 Past and Future Transport Demand Elasticity

The econometric model applied for the project, relates traffic growth to changes in state domestic product via an elasticity factor according to IRC guidelines. The elasticity by vehicle types have been estimated based on the regression analysis of weighted income of PIA states with the actual traffic data.

A regression between GSDP (as independent variable) and registered vehicles (as dependant variable) of PIA state of Madhya Pradesh was carried out. The registered vehicle elasticity in case of cars is 1.21. In case of all trucks combined, the registered vehicle elasticity is 1.7.

Vehicle registration data is also used as a proxy wherein operational toll data is not available. Vehicle registration data represents all vehicles registered in the state, but does not indicate actual number of vehicles plying on the road as it does not account for factors such vehicles taken off the road due to lack road worthiness, those registered in a state but mostly used elsewhere, etc. Consequently, the elasticity values based on vehicle registration may not be representative of the traffic growth trends on the project road.

In general, the best measure of deriving traffic elasticity to income is time series data of traffic on the road. In case of the project road, past traffic data is available since the year

of operation of the toll plazas. The YOY mode wise traffic elasticity has been derived using rate of growth in the traffic vis a vis the rate of growth in income (weighted income derived from weighted OD shares). The elasticity estimates for different time periods have been done using regression analysis with mode wise traffic as dependent variable and weighted income as independent variable. The income growth of PIA state of Gujarat and Maharashtra as observed in the past years (FY12 to FY19) is assumed to continue for FY20. The year on year actual elasticity and trend line elasticity values between GSDP and traffic for the toll plazas is presented in **Table 3-10**.

FY/Mode	Car	LCV	Bus	2A	3A	MAV
TP01						
FY20 vs FY19	2.4	-0.1	6.4	-0.3	-0.2	0.1
FY21 vs FY20	8.1	-1.9	-2.1	5.2	1.7	1.3
TP02						
FY20 vs FY19	2.9	-0.4	8.6	-1.7	-0.1	0.3
FY21 vs FY20	12.0	1.3	-4.7	9.8	2.0	1.2

Table 3-10: Actual Traffic Elasticity

Cars

- The elasticity observed at the toll plazas in the first year of operation has been around 2.4-3.0 in FY19 and FY20. A further high elasticity of around 8.0-12.0 is seen in FY20 and FY21. This could be due to the completion of widening (to four lane) of all the sections on NH3. In case of cars, the elasticity values derived across the other national highways is between 1.0 to 1.5 varying from asset to asset. Some of the assets have shown an elasticity as high as 1.7 to 2.0. The elasticities and the past growth levels for cars are a result of increasing income levels, increasing vehicle ownership, and higher propensity to travel on highways in India due to network level developments and higher levels of service. These levels of growth are likely to continue in the near to medium term since car ownership levels are still very low and the road network is undergoing continual development. Considering all these aspects, coupled with the importance of the project road being the link for the towns of Gwalior and Guna in northern part of MP to Indore (financial capital of the state) and Bhopal (administrative capital of state), car elasticity has been considered as 1.4 for the period up to FY25 and tapering beyond that.
- The motorisations levels in India also play an important role in determining car growth. With the increasing car ownership levels, propensity to travel and network level improvements on National Highways, car growth is likely to be at a high rate as witnessed in the recent past. The low motorization rate suggests that there is room for continued growth for many years to come. The motorisation rate for cars (per 1000 population) in India has gone up from 6.6 in 2001 to 20 in 2015. Although India's car fleet has been growing at 10% for nearly 25 years, its motorization rate is low compared to other countries of similar wealth and much lower than developed

countries with motorization rate of around 450. The forecasts by different agencies indicate that number of cars will increase to 35 per thousand populations by 2025. With the continual increase in motorization rate and improved road network usage by cars for inter-urban travel, car growth is expected to be robust.

- It is likely that this growth would slow down over time as the market becomes more mature and saturated, therefore elasticity to GSDP can be expected to decline over time. With the anticipated growth momentum in the coming years, higher elasticity values have been considered for the slab up to FY25 and further tapering has been done in the next slab.

Bus

- Over the years in India, there has been a change in passenger's travel mode preferences with increasingly more people shifting from public transport systems towards personalised modes. This has resulted, in general, in elasticity of bus traffic/demand to GSDP lower than unity ranging between 0.3 to 0.7 across the operational National Highways.
- Bus elasticity has been considered as 1.0 for FY22 and 0.7 for the period FY23 to FY35 and 0.6 till the end of concession period.

Trucks

- For MAV category, an elasticity ranging between 1.2 and 1.3 was observed at TP01 and TP02 in FY20 to FY21 comparison whereas 3A trucks have shown an elasticity of 1.7-2.0 for the same year. With the existing share of 36 percent for 3A trucks amongst 3A and MAV, it is likely that with the tonnage shifts happening towards MAV due to their operational efficiencies, the share of 3A will further go down. Therefore, an elasticity of 0.6 has been adopted for 3A trucks and 1.0 for MAV trucks till FY25. 2A trucks have shown a very high growth/elasticity in last one year. Going forward, 0.9 has been adopted till FY25.
- It is likely that this growth would slow down over time as the market becomes more mature and saturated, therefore elasticity to GSDP can be expected to decline over time. With the anticipated growth momentum in the coming years, higher elasticity values have been considered for the slab up to FY25 and further tapering has been done in the next slab.

In India as a whole, the freight vehicle mix has been changing in the last decade favouring MAV to 2 Axle/ 3Axle vehicles for long-distance traffic, given the operational efficiencies achievable with larger vehicles. Considering the ongoing technical advancements in automobile industry, some of the standard 2 Axle/ 3 Axle trucks would gradually be replaced by MAVs. Mature National highways with tolling in operation for few years, have

already witnessed the shift in 2A/3A trucks to MAV for long distance movement and some of the 2A trucks are still being used for local movements.

The changing trend is clearly visible in the sales of trucks. Demand for the traditional 16T and 25T rigid trucks is declining while segments like 31T and 37T rigid trucks and 35T, 40T and 49T tractor-trailers are gaining major traction. In fact, the 37T multi-axle rigid truck segment is one of the fastest growing segments in HCVs.

As per SIAM, LCV goods carrier have shown a growth of 25 percent in FY17 to FY19 and M&HCV rigid/ trailer trucks witnessed a growth of around 17 percent during the same period. However, all the vehicles have shown a double-digit negative growth in FY20 due to the economic slowdown, COVID 19 and technology disruption in the form of compliance to Bharat Stage VI norms etc. The elasticity for LCV observed at the toll plazas is negative which could be partially due to Mini LCV being charged in car is gaining popularity for short distance traffic and more localised supply movements over the years. An elasticity of 0.6 for LCV category has been adopted up to FY35 and 0.5 has been considered till the end of concession period.

On an overall level, due consideration has been given to the tonnage shifts happening in the market with Mini LCV gaining importance for short distance movements over LCVs and MAVs being preferred over 2A/3A for long distance movements due to better operational efficiencies. Some of the 2A/3A trucks are also being used for local movements.

While assigning elasticities to different modes, freight travel pattern and over all elasticity of cargo tonnage with respect to weighted GSDP has been an important consideration. The recommended elasticity values adopted for all vehicle types in line with the traffic growth being observed on other national highways and changes in freight traffic pattern observed on the project road are presented in **Table 3-11**.

Period/Modes	Cars	Bus	LCV	2A	3A	MAV
FY22	1.4	1.0	0.6	0.9	0.6	1.0
FY23-FY25	1.4	0.7	0.6	0.9	0.6	1.0
FY26-FY30	1.3	0.7	0.6	0.8	0.5	1.0
FY31-FY35	1.2	0.7	0.6	0.7	0.5	0.9
Beyond FY35	1.1	0.6	0.5	0.6	0.4	0.8

Table 3-11: Recommended Elasticity for Project Road

3.8 Projected Traffic Growth Rates

Based on the moderated perspective elasticity values and the projected growth rates of the income for PIA states, the future average annual compound traffic growth rates by vehicle type have been estimated for the project road by using the following relationship:

$$Tgr = (GSDPgr) \times E ; \text{ Where,}$$

Tgr – Traffic growth rate for mode

GSDPgr – growth rate of GSDP

E – Elasticity value for mode

The estimated traffic growth rates for the project road have been presented in **Table 3-12**.

Period/Modes	Car	Bus	LCV	2A	3A	MAV
TP01 and TP02						
FY22	12.0	8.5	5.1	7.5	4.9	8.2
FY23-FY25	9.0	4.5	3.8	5.6	3.7	6.1
FY26-FY30	7.6	4.1	3.5	4.6	2.8	5.6
FY31-FY35	7.1	4.1	3.5	4.0	2.8	5.1
Beyond FY35	5.9	3.2	2.6	3.1	2.1	4.1

Table 3-12: Projected Traffic Growth Rates for PIA (%)

In derivation of above growth rates, the likely shift of buses to cars in case of passenger vehicles and the replacement/ tonnage shift of 2A/3A trucks to MAV for long distance in case of freight vehicles has been duly considered. Adopting these growth rates for 3A and MAV, the resultant market share of 3A goes down to 25 percent from the current level of 36 percent. Based on the above growth rates the average cargo growth (tonnage) is likely to be around 4.5 percent till the end of concession period.

The above growth rates relate to the most likely Base Case. In addition, two sets of traffic growth rates under low and high cases have also been considered and impact on toll revenue evaluated for both these cases. A growth rate of 200 basis point (2 per cent) lower than base case, for all types of vehicles modes has been considered in low growth scenario. A 100-basis point higher traffic growth rate than the base case has been considered for high growth scenario.

3.9 Modifications in Concession Period and Capacity Analysis

Table 3-13 presents the projections of the tollable vehicles after considering the impact of DME (from FY24 onwards) at the toll plazas on the project road based on the most likely growth rates till the end of concession as assessed in this study.

FY/TPs	TP01	TP02	Average
2021	25,934	23,607	24,770
2022	28,021	25,483	26,752
2023	29,687	26,973	28,330
2024	30,840	27,938	29,389
2025	32,366	29,260	30,813
2026	33,723	30,431	32,077
2027	35,502	32,012	33,757
2028	37,381	33,680	35,531
2029	39,368	35,442	37,405

FY/TPs	TP01	TP02	Average
2030	41,469	37,304	39,386
2031	43,519	39,120	41,319
2032	45,679	41,030	43,354
2033	47,953	43,040	45,497
2034	50,349	45,156	47,752
2035	52,873	47,382	50,127
2036	55,010	49,262	52,136
2037	57,241	51,224	54,232
2038	59,570	53,269	56,420
2039	62,003	55,404	58,703
2040	64,543	57,630	61,087
2041	67,196	59,954	63,575
2042	69,968	62,380	66,174

Table 3-13: Projected Traffic at the toll plazas

The target traffic as per RFP is deemed to be 27,136 PCUs as on 1st October 2025. Based on the above traffic forecast, the traffic estimated on the project road as the average of the traffic for the three consecutive accounting years (FY25 to FY27) is estimated to be 32,216 PCUs which is around 18.7 percent higher than the target traffic.

As per clause 29.2.1 of CA, if the Actual Average Traffic shall have fallen short of or exceeded the target traffic by more than 2.5 percent, then there will be an increase or reduction in concession period.

Based on the CA (clause 29.2.1), if the traffic in PCUs at target date is higher than the target traffic, then for every 1 percent increase, the concession period shall be decreased by 0.75 percent, and no more than 10 per cent of the base concession period.

The concession period may, therefore, be subject to a decrease by 2.6 years to 23.4 years. However, in lieu of reduction in concession period, the concessionaire may opt to pay 25 percent of the realisable fee over the respective years to NHAI.

Based on the projected traffic using the recommended Base Case growth rates, the project road traffic is likely to reach the designed capacity of 60,000 PCUs in FY40.

4. TOLL REVENUE PROJECTIONS

4.1 Tolling Strategy

Generally, in DBFOT road projects, "Open System" of toll collection is specified. As the project road has been widened on existing alignment and there are several roads joining the highway, an open tolling system has been implemented on the project road. This enables the concessionaire to collect tolls from through traffic as well as from short distance one.

As mentioned earlier, two toll plazas are operational on the project road at Pagara and Jogipura with effective tolling length of 56.577 km and 48.117 km respectively.

4.2 Schedule of User Fee

As per Schedule of User Fee (Schedule R) of Concession Agreement for the project, the per km toll rates applicable from 2007-08 for normal tolling length and permanent structures, the revision basis and concessions are provided.

The concessions to traffic have been given in the form of rates as below:

Local traffic

Car / Jeep / Vans - includes local users owning a vehicle registered for non-commercial purposes, residing within a distance of 20 km from the toll plaza and crossing the same for commuting purposes. The discounted fee for these users is currently a monthly pass of Rs. 275.00

Commercial vehicles - includes local users owning a commercial vehicle (excluding vehicles under National Permit), registered with address on the Registration Certificate of a particular district and uses such vehicle for commuting on a section of National Highway, permanent bridge, tunnel or bypass, as the case may be, which is located within that district, shall be levied user fee on all toll plazas which are located within that district at the rate of fifty per cent of the prescribed rate of fee (single journey rate). No such concession shall be provided, if a service road or alternative road is available for use by such commercial vehicles. Thus, local commercial traffic has to pay only 50 percent of the normal ticket.

Daily Pass

When the vehicle has to cross the tolled section more than once in a day, the user shall have the option to pay one and half times (1.5 times) of the fee for a single entry; this pass shall be valid for 2 entries within 24 hours of purchase.

Monthly Pass

A user, who makes use of the project road frequently during a month, may opt to purchase a monthly pass upon payment of a charge equal to two-thirds of the fee payable

for 50 single journeys; this pass can be used for a maximum 50 one-way journeys over the month of validity.

Thus, the different categories of toll tickets are as follows:

- (i) Traffic paying normal toll rates (single trip)
- (ii) Traffic paying return journey rates
- (iii) Traffic paying monthly pass rates
- (iv) Traffic paying local personal rates
- (v) Traffic paying local commercial rates

4.3 Tolling Streams

The tolling stream distribution has been derived from the toll data and the latest year of FY21 has been adopted for the present study and is presented in **Table 4-1**.

Ticket Type/Modes	Car	LCV	Bus	2A	3A	MAV
TP01						
Single	81.0	81.6	94.2	98.4	97.3	99.0
Return	0.0	0.0	0.0	0.0	0.0	0.0
Monthly	0.0	0.0	0.0	0.0	0.0	0.0
Local personal	3.5	0.0	0.0	0.0	0.0	0.0
Local commercial	0.0	13.5	0.4	0.0	0.0	0.0
Exempt	15.4	4.9	5.4	1.6	2.7	1.0
Total	100.0	100.0	100.0	100.0	100.0	100.0
TP02

Monthly	0.0	0.0	0.0	0.0	0.0	0.0
Local personal	0.5	0.0	0.0	0.0	0.0	0.0
Local commercial	0.0	0.6	0.0	0.0	0.0	0.0
Exempt	10.6	3.5	5.0	1.0	1.6	0.3
Total	100.0	100.0	100.0	100.0	100.0	100.0

Table 4-1: Tolling Distribution (incl. exemptions & violations), FY21 (%)

The paying traffic for the year FY21 has been worked out by deducting the toll exempt percentage (exemptions and violations, FY21) from total AADT and is presented in **Table 4-2**.

Toll Plaza/Mode	Car	LCV	Bus	2A	3A	MAV	OSV
TP01							
Base AADT including toll exempted vehicles	3,984	548	462	1,357	1,418	2,534	3
% of Exemptions/ Violations	15.4%	4.9%	5.4%	1.6%	2.7%	1.0%	5.3%
Paying Traffic	3,369	521	437	1,336	1,380	2,510	3
TP02							
Base AADT including toll exempted vehicles	3,030	424	488	1,178	1,363	2,409	3
% of Exemptions/ Violations	10.6%	3.5%	5.0%	1.0%	1.6%	0.3%	2.9%
Paying Traffic	2,709	409	464	1,166	1,342	2,401	3

Table 4-2: Toll Paying Traffic, FY21

The tolling stream distribution excluding exemptions and violations from paying traffic is presented in **Table 4-3**.

Ticket Type/ Modes	Car	LCV	Bus	2A	3A	MAV	OSV
TP01							
Single	95.8	85.8	99.6	100.0	100.0	100.0	100.0
Return	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Monthly	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Local personal	4.1	0.0	0.0	0.0	0.0	0.0	0.0
Local commercial	0.0	14.2	0.4	0.0	0.0	0.0	0.0
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0
TP02							
Single	99.4	99.3	100.0	100.0	100.0	100.0	100.0
Return	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Monthly	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Local personal	0.6	0.0	0.0	0.0	0.0	0.0	0.0
Local commercial	0.0	0.6	0.0	0.0	0.0	0.0	0.0
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0

Table 4-3: Tolling Distribution (excl. exemptions and violations category), FY21(%)

The normal toll paying traffic for cars is around 96 percent at TP01 and 99 percent of car traffic at TP02. The local personal traffic is around 4 percent at TP01 and 0.6 percent at TP02. In case of Buses also, majority of the traffic is falling in normal toll category.

For LCV category, around 86 percent is buying normal ticket at TP01 and 14 percent of traffic is opting for local commercial pass. This could be due to the local trips being made to GAIL and National Fertilizer Plant located in vicinity of TP01. At TP02, 99 percent is falling under normal toll category. For 2A/3A/MAV category, all of the traffic is opting for normal ticket as these vehicles have a long lead of travel and are less likely to return in the same day.

Trip rate for local pass users is considered as 1.0, for monthly pass it is 1.67 across all modes. For daily pass, based on the past toll data, trip rate of 2.0 has been considered for all the modes.

4.4 Toll Rates

This section presents details on the toll rates that are likely to be imposed on the users of the project road during the concession period. The toll rates (Rs/km) for the base year 2007-08 for different vehicle categories as per concession agreement are presented in

Table 4-4.

Mode	Base rate per km (in Rs)
Car, Jeep, Van, LMV	0.65
LCV /Mini Bus	1.05
Bus/ 2 Axle Truck	2.20
3 Axle	2.40
MAV	3.45
Oversized	4.20

Table 4-4: Toll Rates in Rs/km for Different Vehicle Categories

The CA states that the 2007 toll rates shall be increased without compounding by three per cent each year with effect from the 1st day of April 2008 and such increased rate shall be deemed to be the base rate for the subsequent years.

In addition to this, the rate of fee for use of bypass forming part of a section of a National Highway constructed with a cost of Rs 10 crore or more, for the base year 2007, shall be one and a half times of the per km base rates specified above and the length of such bypass shall be excluded from the length of such section of National Highway.

In addition to this, the fee levied and collected hereunder for permanent bridge/ structures, as the case may be, having a length of 60 m or more on the basis of the cost for structure as specified shall be due and payable at the toll plaza.

In case of the project road, the details of normal tolling lengths, bypass length (at 1.5 times) and equivalent structure lengths being charged at the two toll plazas of Pagara and Jogipura are presented in **Table 4-5.**

	Length in km	
	TP01	TP02
A. Normal length	49.222	35.668
B. Bypass length @ 1.5 times	2.05	5.75
C. Equivalent Structure length	4.280	3.824
D. Total tolling length = (A+1.5*B+C)	56.577	48.117

Table 4-5: Tolling lengths at two toll plazas

The effective tolling lengths are 56.777 km and 48.117 km at Pagara (TP01) and Jogipura (TP02) respectively.

The applicable base rates shall be revised annually with effect from April 1 each year to reflect the increase in wholesale price index for the month of December of the immediate

preceding year in which sub revision is undertaken but such revision shall be restricted for 40 per cent of the increase in wholesale price index.

Actual WPI information for December 2020 of 124.5 under 2011-12 series converted into 1999-00 series ($124.5 \times 1.873 \times 1.641 = 382.7$) has been used. In view of the past inflation trend, the forecast for WPI has been considered as 4.0 percent for the period till the end of concession in light of the long term past growth trend since 2009. The stream of toll rates to be charged at the toll plazas for different years is presented in **Table 4-6**. The toll fee has been rounded to nearest 5 Rupees as per Schedule R of the concession agreement.

FY End	Car	LCV	Bus/2A	3A	MAV	OSV	Car Local
TP01							
2021	70	110	230	250	360	440	275
2025	80	130	270	290	420	510	325
2030	100	160	330	360	520	635	400
2035	120	195	410	450	645	785	495
2040	150	245	510	555	800	970	615
2042	165	265	555	605	870	1,060	670
TP02							
2021	60	95	195	215	305	370	275
2025	65	110	230	250	355	435	325
2030	85	135	280	305	440	540	400
2035	105	165	350	380	545	665	495
2040	130	205	435	470	680	825	615
2042	140	225	470	515	740	900	670

Table 4-6: Toll rates at toll plazas (in Rs)

The users purchasing return journey tickets will pay 1.5 times the above toll rates; the traffic opting for monthly passes will pay 33.3 times (two-thirds of 50 single journeys) the normal traffic toll rates. All passes have been rounded to the nearest 5 Rupees as per concession agreement.

4.5 Toll Revenue Estimates

The concession period for the project road is 26 years from the appointed date (the date financial close is achieved). Toll revenue streams have been calculated assuming that:

- Toll would be collected for all 365 days in a year; and for 366 days in the leap years
- Tolling would terminate at end of March 2042 and revenues have been presented till FY42

In addition to the mode wise toll revenue, there is a component of total revenue from POS and WIM for which mode wise details are not available. This component accounts for 1.11 percent of the total revenue for the project road in the first three quarters of FY21. Therefore, the total revenue has also been presented adding this component of revenue from POS and WIM.

The toll revenue for the project road for the base case along with the concessions available is presented in **Table 4-7**.

FY ending March	Normal Toll	Return Passes	Monthly Passes	Local Concessions	Total Revenue without POS and WIM	Total Revenue with POS and WIM
2021	1,201.1	-	0.0	2.2	1,203.3	1,216.7

2042	7,947.5	-	0.1	14.0	7,961.6	8,050.1

Table 4-7: Toll Revenue (in Rs million) by type of concession for the Project Road

For the project, the normal toll revenue is likely to be about 99.8 percent of total toll revenues for the project road. Local concessions have a share of about 0.2 percent in the project road revenue.

A mode wise breakdown of the revenue streams is also presented for the project in **Table 4-8**.

FY End	Car	LCV	Bus	2A	3A	MAV	OSV	Total Revenue without POS and WIM	Total Revenue with POS and WIM
2021	134.6	31.8	66.0	185.0	219.2	565.9	0.84	1,203.3	1,216.7

Table 4-8: Toll Revenue (in Rs million) for Project Road by mode

Cars represent around 16 percent share in total revenue with Buses having a share of 5.1 percent only. Amongst the freight vehicles category, MAVs represent the highest share of around 48.9 percent of total revenue. 3A trucks account for a share of 13.6 percent, LCVs and 2A trucks have a share of 2.2 percent and 14.2 percent respectively.

4.6 Scenario Analysis

For toll road projects, revenue streams are generally based on the assessment of the traffic volume (base and future) crossing the toll plazas and the applicable toll imposed on the user of the road. There is an inherent element of uncertainty in any forecast and whilst it is not possible to measure risk in a strictly statistical sense (as many of the risks are largely or partly unknown), in this section an attempt is made at quantifying the main risks that could have an impact on this forecast.

The econometric approach used to derive traffic growth, is based on the estimation of GSDP growth rates for the influence area economies and traffic demand elasticity by mode; the estimation of both variables contains a certain degree of uncertainty which can be represented in the scenario analysis. Scenario analysis has been done in the following subheadings for the base case:

High Case

The high case is based on a more optimistic economic outlook for future years as compared to the base case and therefore, based on traffic growth rates of 100 basis points (1 per cent) higher than the base case for every year and for all modes.

Low Case

A growth rate of 200 basis point (2 percent) lower than base case for all types of vehicles has been considered in the present analysis to reflect uncertainty with regard to economic performance of PIA states.

Without DME

This scenario estimates the impact of diversion to DME in terms of the gain in toll revenue which could have occurred in the event of DME not being there as an alternate route option.

Scenario Results

The results of different scenarios are presented in **Table 4-9**. A comparison versus base case has been presented for the Present Value of the project (at 12 per cent discount rate) and the compounded annual growth rate (CAGR) from FY21 to end of concession (FY42).

FY ending March	Base Case	High Case	Low Case	Impact of Diversion to DME
2021	1,216.7	1,216.7	1,216.7	1,216.7
2022	1,415.9	1,429.0	1,389.7	1,415.9
2023	1,566.1	1,595.6	1,508.0	1,566.1
2024	1,686.4	1,734.3	1,593.1	1,724.2
2025	1,841.5	1,911.8	1,706.9	1,904.0
2026	2,009.6	2,106.1	1,827.3	2,101.1
2027	2,191.7	2,318.7	1,954.9	2,291.2
2028	2,403.8	2,567.3	2,103.4	2,512.6
2029	2,648.0	2,854.9	2,273.0	2,767.4
2030	2,897.8	3,153.9	2,440.3	3,027.6
2031	3,149.9	3,461.1	2,602.0	3,291.5
2032	3,461.4	3,839.5	2,804.8	3,616.3
2033	3,780.6	4,233.5	3,005.1	3,948.9
2034	4,150.6	4,692.1	3,236.4	4,334.6
2035	4,541.2	5,182.5	3,473.7	4,741.8
2036	4,932.8	5,683.5	3,700.8	5,149.8
2037	5,318.8	6,187.2	3,913.6	5,552.8
2038	5,794.4	6,805.0	4,181.7	6,047.7
2039	6,281.3	7,447.6	4,446.1	6,555.0
2040	6,861.4	8,213.5	4,763.5	7,158.9
2041	7,410.8	8,956.3	5,046.2	7,731.5
2042	8,050.1	9,822.3	5,376.4	8,396.5
PV12	19,779	21,674	16,606	20,475
PV12 vs base		9.6%	-16.0%	3.5%
CAGR FY21 to FY42	9.4%	10.2%	7.1%	9.4%

Table 4-9: Comparison of Annual Revenues Forecasts (Base) to Alternate Traffic Growth Assumptions

The low growth scenario has a negative impact on revenue PV of about 16 percent versus base case (till FY42), whilst the optimistic growth scenario would generate about 9.6 percent higher PV than the base case. The project would have gained 3.5 percent more revenue in PV terms than the base case in case DME was not there.

The project road revenues will have a CAGR of 9.4 percent for the period up to FY42.

Executive Summary

Project Background

Jalpa Devi Tollways Limited promoted by Dilip Buildcon Limited (DBL) to undertake project envisaging four-laning with paved shoulder of existing two-lane Guna-Biaora section NH-3 from Km 332.100 to Km 426.100 in Madhya Pradesh (Total length: 94.00 km) to be executed as BOT (Toll) on Design, Build, Finance, Operate and Transfer (DBFOT) basis under NHDP phase IV awarded by National Highways Authority of India.

Overall concession period is for 26 years from Appointment date.

In this context, Jalpa Devi Tollways Limited on behalf of IDBI Bank Limited has appointed **Mott MacDonald Private Limited (MM India)** to provide their services as Lender's Independent Engineer (LIE) for Traffic Study and Project Cost Vetting for the Project.

Site Visit and Traffic study

Site visit was conducted by the team of MM India during 28th January 2016 to 4th February 2016; entire road stretch was traversed to assess project works. Traffic survey was executed during this period.

On the basis of Classified Traffic Volume Count (CTVC) survey it was noted that average traffic volume for toll plaza location at km 348+885 and km 400+465 were 17,542 PCU and 14,412 PCU respectively.

For tollable vehicles category, private Car/Jeep/Van forms the majority of passenger traffic at both survey locations, while 3-Axle trucks and Multi Axle trucks constitute considerable commercial traffic on the project road. For non-tollable traffic two wheelers and agriculture tractors with trailer has a major share.

Traffic forecast for horizon years is projected based on econometric modelling taking into consideration elasticity factors derived from vehicular growth rates, Net State Domestic Product and Per Capita Income. The average traffic growth rate for period of 26 years is 4.3%.

Toll Revenue

Considering traffic growth as projected by MM India and the toll rates as specified in the Concession Agreement, toll revenue projections were undertaken. Toll cumulative revenue forecast from 15th September 2018 till 18th March 2042 is as mentioned below:

- Ruthiyai Toll plaza (km 348+885) : INR 4,023.52 Crores
- Pakhriyapura Toll plaza (km 400+465) : INR 3,291.88 Crores
- **Total** : **INR 7,315.40 Crores**

Average revenue growth rate is estimated at about 6.35% per annum.

Alternate route / transportation mode analysis

Alternate route analysis comprising of distance, total toll cost and total travel cost analysis for all the possible route for travel between Mumbai – Agra, Guna – Bhopal and Indore – Shivpuri has been undertaken. Following are key results:

- Agra – Mumbai: No possibility of shifting of vehicles from Project highway to any other alternative route. However, vehicles may be added to Project highway forming a part of Mumbai – Agra stretch.
- Guna – Bhopal: Passenger vehicle might shift to alternative route, route shift for commercial vehicles will be marginal as the route passing through Project highway is four lane from start to end and time taken for movement will be minimum.
- Indore – Shivpuri: No possibility of vehicles shifting to alternative route.

In case of alternate mode, railway carries considerable amount of passenger and goods traffic along the Project Highway. For passenger traffic, there is potential to shift traffic from road to rail owing to higher road transportation cost; but the same will be compensated by additional growth of vehicles. While no mode shift is envisaged for goods traffic.

Project Influence Area (PIA)

No direct tourism locations are present on the Project highway, but taking into consideration the level of connectivity it provides to various tourism locations in Madhya Pradesh and Uttar Pradesh, the Project highway can be considered under Sphere of Influence.

For Industrial development in the vicinity the Project highway falls under Sphere of Control, while for industrial development in surrounding area and states NH 3 falls under Sphere of Influence. Hence, for industrial sector Project highway is of prime importance.

Tolling strategy

Key points pertaining to tolling strategy covered in the Report comprises of:

- Construction of ETC lane
- Collection of overloading penalty
- Restriction for undue exemption / passage of vehicle

Review of cost estimates

Total estimated cost of project according to NHAI, JDTL and MM India is presented below:

Sr. No.	Project Cost Component	Total Amount (INR Crores)		
		As per NHAI	As per JDTL	As per MM India
1	Road Works Cost	489.93	420.17	410.38
2	Structure Works Cost	223.47	211.26	212.81
3	Project Facilities Cost	53.16	84.01	103.70
	Total Project Cost	766.56	715.43	726.88

Total project cost as estimate by MM India is INR 726.88 Crores i.e., about 5% lower than NHAI and 2 % higher than JDTL. Considering the scale and complexity of the project variation of about 10% is acceptable. Hence, the project cost estimated by JDTL of INR 715.43 Crores may be considered for approval.

1 Introduction

1.1 Project Background

Jalpa Devi Tollways Limited (hereinafter referred to as JDTL or the Developer or the Client), is a company promoted by Dilip Buildcon Limited (DBL) to undertake project envisaging four-laning with paved shoulder of existing two-lane Guna-Biaora section of NH-3 from Km 332.100 to Km 426.100 in Madhya Pradesh (length: 94.000 km) to be executed as BOT (Toll) on Design, Build, Finance, Operate and Transfer (DBFOT) basis under NHDP phase IV awarded by ***NHAI (hereinafter referred as NHAI or the Concessioneing Authority)*** for a concession period of 26 years (***hereinafter referred to as the Project***).

In this context Jalpa Devi Tollways Limited, on behalf of IDBI Bank Limited, has appointed ***Mott MacDonald Private Limited (hereinafter referred to as MM India or the Consultant)*** to provide their services as Lender's Independent Engineer (LIE) for Traffic Study and Project Cost Vetting for the Project.

1.2 Consultant's Background

Mott MacDonald is a U.K. based uniquely diverse £1 billion global consultancy, delivering leading-edge solutions for public and private sector clients across 12 core business areas. As one of the world's largest employee-owned companies with more than 14,000 staff, we have principal offices in nearly 50 countries and projects in 140 countries.

Mott MacDonald in India has over 1,400 staff in India engaged in planning, developing and delivering projects across many sectors – from energy, industry, water and environment to transport, buildings, urban infrastructure and social development. We are making our mark in many areas of business and industry, serving not only the burgeoning domestic demand but also a wider customer base in core markets such as industry, infrastructure and health.

1.2.1 Our Services

- **Management Consultancy and Buildings (MCB)** comprises of management consultancy, project management and buildings practice. The management consultancy practice has presence of about three decades in India offering services in industry, infrastructure and social development sectors.
MCB offers a wide array of advisory and engineering services to national and local governments, public and private utilities,

industrial and commercial companies, investors, developers, banks and financial institutions, multilateral and bilateral funding agencies and private entrepreneurs, while working in diverse spectrum of sub-divisions of industry advisory, infrastructure and social advisory, project management advisory and buildings.

- **Industry Consultancy (INC)** has established presence in Indian market for four decades and caters to most of the manufacturing sub-sectors including the emerging sectors like bio-technology.

INC provides comprehensive services primarily in facility design comprising basic engineering through its process engineering skills, detailed engineering (comprising architectural, civil/structural, electrical, process, mechanical, piping, instrumentation & HVAC), project procurement, inspection services, construction supervision, project management and commissioning.

- **Environment & Infrastructure (ENI)** division provides study, design and supervision services mainly in highways, integrated urban development (water, wastewater, metros, railways and airports), urban planning and environmental improvement (waste management, biodiversity, water and forestry management).

1.2.1.1 Infrastructure Advisory Services

One of our key strengths lies in large-scale integrated infrastructure developments encompassing roads, railways, ports, urban infrastructure like metros, water supply, drainage, solid waste, sanitation and community buildings. We are ideally equipped to help develop solutions that take account of economic, technical, social and environmental factors.

Assistance is also provided to clients in financial, demand and economic modelling, need assessment, opportunity scanning, feasibility assessment, project evaluation and privatization.

The range of services provided by our Infrastructure Advisory Services Division covers the entire spectrum of infrastructure sectors including:

- Transportation (Roads, Ports, Airports)
- Urban Infrastructure (Urban Transport, Water Supply and Sanitation)
- Industrial Infrastructure (Special Investment Region, SEZ, Industrial Parks)
- Integrated Tourism (Religious, Beach, Adventure, Eco, Rural etc.)
- Energy (Power and City Gas Distribution)

While providing services in these sectors, we endeavour to support our clients by providing quality services in a transparent, objective oriented and a time bound manner.

1.3 Scope of Work

1.3.1 Traffic Study

- Review the past traffic data on the project stretch and other competing routes, subject to availability of data from the Client
- Analyse the network conditions, traffic characteristics and level of toll charged for the competing/alternate routes if any.
- Analyse the traffic based on traffic growth rates in the region along with passenger traffic and commercial traffic based on the past trends in the region.
- Carryout seven day mid-block traffic count, 2 days Origin Destination survey and 2 days TMC at required locations.
- Conduct axle load survey, commodity movement survey, etc.; if any diversion of traffic is possible on account of levying of toll¹, the same shall be clearly brought out in the report.
- All traffic data collected will be in line with relevant Schedule and read with the amendments thereto the Concession Agreement.
- Study traffic and travel characteristics on the project road and work out Annual Average Daily Traffic (AADT) based on suitable Seasonal Correction Factors and willingness to pay.
- The traffic counts for the type of vehicles, which do not pay tolls and local traffic will be done separately. Net quantity of traffic in the base year, evaluation of existing pattern (origin-destination etc.), economic parameters having an influence on the proposed road.
- Movement of any specific commodity on the project road, class of traffic commuting on the road and categories of vehicles with high frequency on the project road will also be commented.
- Various NHs/ SHs/ other roads linked to project road. Comment on condition of various adjoining/ feeder roads (if any) and their likely impact on future traffic movement on the Project road. Category / class of traffic coming from those roads.

¹ As per understanding of the Consultant, it will be part of OD survey

- Comments on traffic potential viz. normal traffic, diverted traffic (from road and from rail), induced/generated traffic. Project influence areas- districts / sectors.
- The data collected shall be utilized for traffic projects of future and estimation of revenue generation after arriving at the tollable traffic for base year conditions. The forecast will be arrived under 3 scenarios - base case, low case and optimistic case.
- Toll revenue Estimation - The Consultant will provide Annual toll revenues which shall be computed as per toll rates provided as per the Concession Agreement for the entire concession period.
- The approach / methodology to be followed and assumptions made for arriving at future traffic projects will be scientific and systematically taking into account all socio-economic demographic and traffic characteristics for the project corridor, as followed by leading traffic analysts.
- Advise the lenders on the tolling strategy for the stretch.
- Review of tolling system and adequacy thereof to enable monitoring and control of revenue.

1.3.2 Project Cost Vetting

- Review the quantities provided in the Techno Economic Viability Study / EPC Contracts / Draft EPC Contract and tender documents including the cost estimated for routine and periodic maintenance of the proposed project vis-a-vis project work to be carried out as per Concession Agreement.
- Cost reconciliation with NHA DPR / Feasibility Report, Developer's project cost estimate and comment on reasonableness or variations thereon.
- Highlight the major variances in rates and quantities, likely physical contingencies, price escalations and the total construction cost.
- Compare the cost with that of similar projects and reasonableness of the same.

1.4 Kick-off meeting and site visit

Kick-off meeting was executed through telecon with DBL officials on 23rd January 2016. Key points discussed during meeting were as follows:

- Physical features of the Project

- Preliminary identification of locations for Classified Traffic Volume Count (CTVC), Origin Destination, Axle Load, Registration plate and Turning Movement Count (TMC) surveys
- Project Influence Area (PIA)
- Safety measures required on the Project highway during execution of traffic survey
- Data checklist

Details of the officials present in kick-off meeting are as mentioned in Table 1.1.

Table 1.1: Kick-off meeting participants: 23rd January 2016

Company	Name of Person	Designation
DBL	Mr Mahendra Singh Jhala	Sr. Manager (Finance)
	Mr Manish Trivedi	Project Manager
MM India	Mr Darshan Rathod	Senior Consultant
	Mr Yash Majeethia	Consultant

Site visit including traffic survey monitoring was conducted by the Consultant along with traffic survey team from 28th January 2016 to 4th February 2016. Key tasks undertaken were:

- Preliminary survey of the Project highway
- Carrying out traffic surveys in accordance with defined Scope of Work
- Assessing feeder / connecting network and understanding of Project Influence Area (PIA)
- Visual inspection of physical components of the Project highway and structural components
- Stakeholder consultation
- Visit to alternate routes

Details of MM India officials present during traffic survey monitoring and stakeholder consultation are as detailed in Table 1.2.

Table 1.2: Site visit, survey monitoring and stakeholder consultation team

Sr. No.	Name of Person	Designation
1	Mr Tuhin Goswami	Lead Project Manager
2	Mr Manish Trivedi	Project Manager
3	Mr Darshan Rathod	Senior Consultant
4	Mr Aritra Chatterjee	Consultant
5	Traffic Survey Team	-

1.5 Report Structure

This document is Final Report covering chapters as mentioned in Table 1.3.

Table 1.3: Structure of Final Report

Sr. No.	Chapter
1	Introduction
2	Approach & Methodology
3	Description of the Project highway
4	Traffic survey analysis
5	Traffic forecasting
6	Toll revenue estimation
7	Alternate route / Transportation mode analysis
8	Project Influence Area (PIA)
9	Tolling Strategy
10	Project Cost Review
Appendix A	Contact List – Stakeholder Consultation
Appendix B	Traffic survey formats
Appendix C	Elasticity Graphs for Econometric Model
Appendix D	Toll rate derivation
Appendix E	Technical Circular for overloaded vehicles

1.6 Data shared by Client

Following documents are shared by the Client in relevance of assignment / scope of work:

- Brief of the Project
- Copy of Signed Concession Agreement
- Letter of Award
- Project cost abstract, BOQ and rate analysis
- Project drawings

1.7 Caveats

- Traffic survey has been conducted using manual counting.

- The Consultant could not address following points of scope of work in absence of data pertaining to traffic at survey locations²:
 - Past traffic analysis
 - Review of existing tolling system and adequacy thereof to enable monitoring and control of revenue
- Traffic volume is rounded-off while deriving tollable traffic and ticket-wise tollable traffic for appropriate representation of category-wise number of vehicles.
- Wholesale Price Index being dynamic is considered in accordance with forecasts made by Reserve Bank of India and period from which forecast is not available the Consultant has derived the values based on best fit trend analysis.
- Traffic and toll revenue forecasting may get influenced by change in existing policy and/or introduction of new government policies / rules like exemption from toll fees for private vehicles etc.; hence revenue estimated by the Consultant may vary at time of actual realization.
- MM India has not analysed the cost estimates of NHAI and has considered the estimated cost as indicated in the said Executive Summary prepared by NHAI and available in public domain.
- MM India has considered current market prices of highly volatile commodities like bitumen and aggregates.

² No operational toll plaza on the Project highway

2 Approach and Methodology

Broad approach and methodology adopted for the assignment included following steps:

- Preparatory work
 - Secondary research and study of the Project documents
 - Identification of location for traffic study
 - Preparation of data collection performas for traffic study
- Kick-off meeting
- Workings at project road stretch
 - Traffic study (execution and monitoring)
 - Stakeholder consultation (Refer Appendix A)
 - Reconnaissance survey for cost vetting
- Analysis of traffic survey data / cost vetting
- Submission of study findings

2.1 Preparatory work

Since the objective and scope of work spelt by the Client was clear at macro level, the Consultant initiated the study with preparatory work followed by kick-off meeting and site visit.

2.1.1 Secondary research / study of project documents

The Consultant studied project documents and also carried out secondary research / literature survey for understanding of Project Influence Area; especially road network (SH/NH) and proposed/upcoming economic development in the region.

2.1.2 Identification of location for traffic study

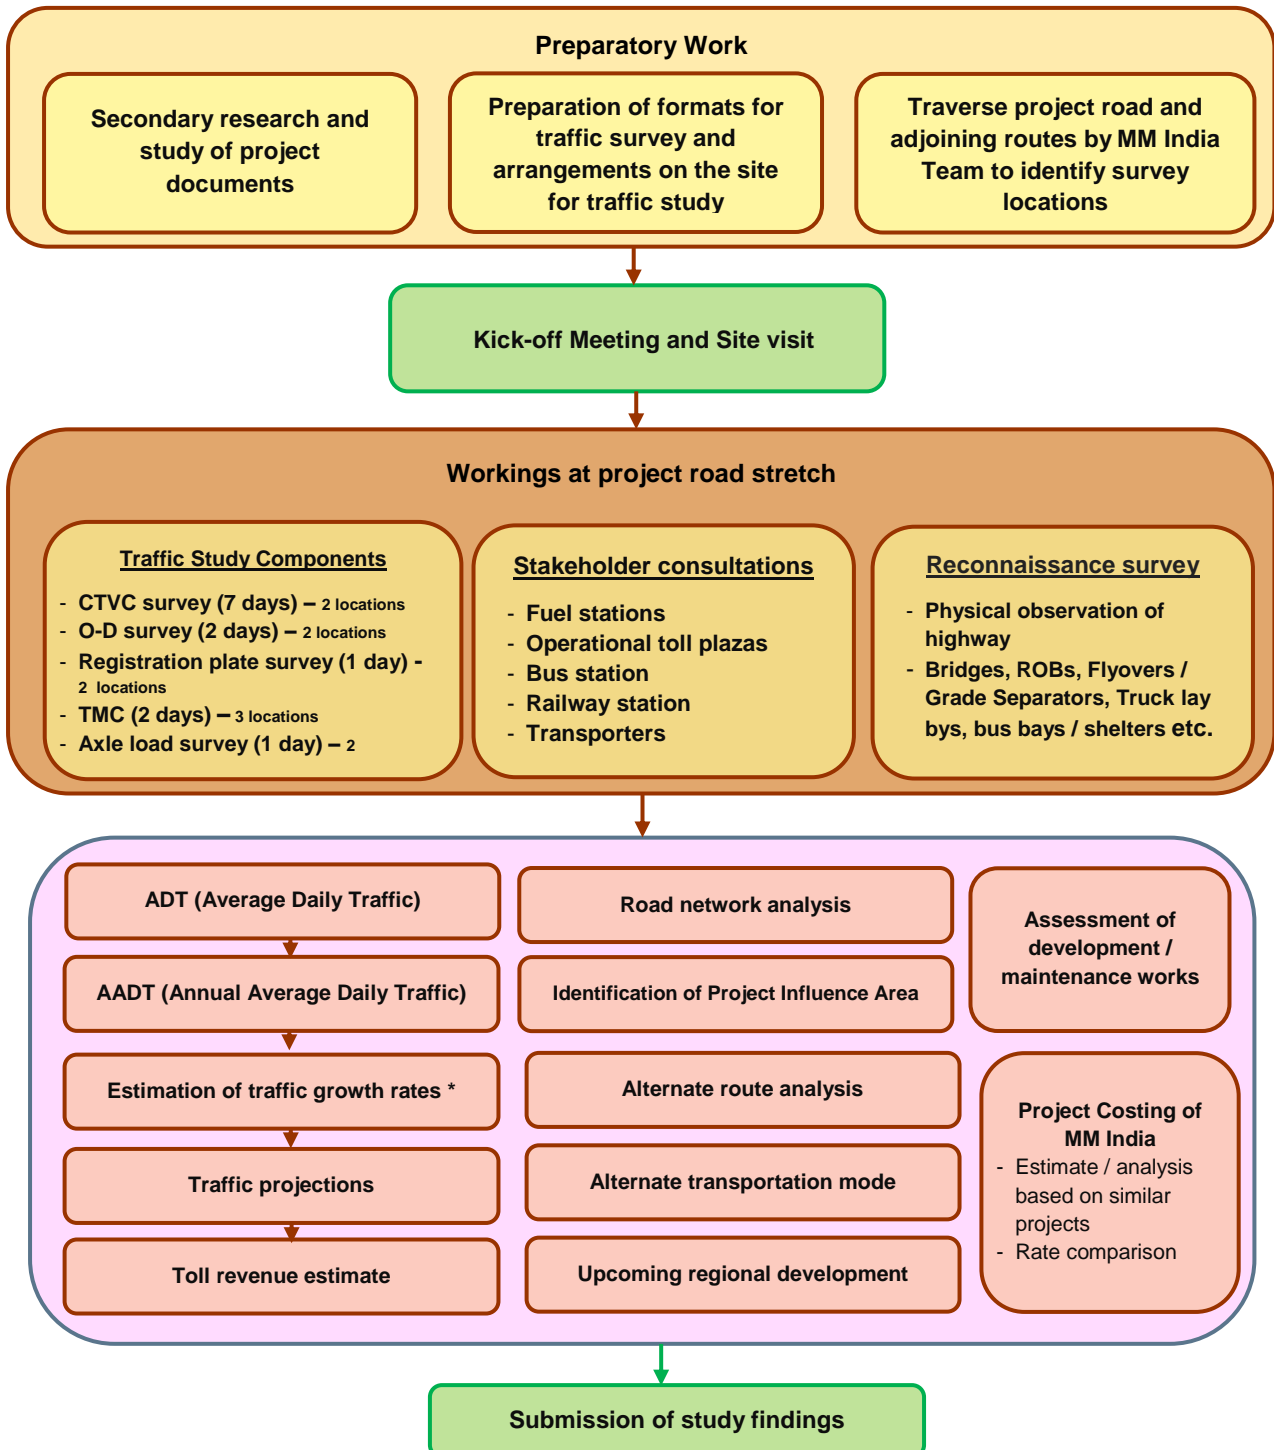

Based on the understanding developed through secondary research, the Consultant identified locations for traffic survey components (CTVC / OD / Registration plate survey / Axle load survey) at two proposed toll plazas and potential major / minor junctions for conducting Traffic Movement Count (TMC) survey.

2.1.3 Preparation of data collection formats for traffic study

Based on the initial discussion carried out with the Client, data shared by the Client and secondary research, the Consultant prepared data collection formats and coordinated for traffic survey.

Formats for Traffic Study are attached as Appendix B.

Figure 2.1: Methodology for Traffic Study and Cost Vetting

Source: MM India * based on secondary data

2.2 Kick-off meeting

The Consultant discussed proposed development in detail and obtained requisite chainage-wise salient features of the Project highway.

Following points were discussed with the Developer during kick-off meeting:

- Expectations and specific requirement of the Client and the Developer
- Approach and methodology for execution of the assignment
- Deciding communication protocol
- Data checklist
- Discussion on the issues and constraints etc.

2.3 Workings at the Project highway

2.3.1 Traffic survey (execution and monitoring) and stakeholder consultation

Traffic surveys were conducted for the assessment of the prevailing traffic and travel characteristics on the Project highway and within the project influencing area.

Following activities were carried out as part of traffic study:

- Classified Traffic Volume Count (CTVC): 7-days (24 hours) x 2 locations
- Origin - Destination (OD) survey: 2-days (24 hours) x 2 locations
- Registration Plate (RP) survey: 1-day (24 hours) x 2 locations
- Axle load survey: 1-day (24 hours) x 2 locations
- Turning Movement Count (TMC): 2-days (24 hours) X 3 locations

Following standards were considered for traffic study:

- Classified Traffic Volume Count has been carried out in accordance with the guidelines of the Indian Road Congress specified in IRC: 9-1972, IRC: 102-1988 and IRC: 64-1990.
- Roadside interview method as detailed in IRC: 102-1988 was used for conducting O-D survey.

Location and schedule of activities of traffic study components are as elucidated in section 4.1.

MM India team was present for seven days during traffic survey at the Project highway for execution and monitoring. Team consists of Project Manager, Civil / Infrastructure Engineer, Technical / Traffic analyst and Business analyst.

The Consultant also captured data regarding upcoming urban and industrial development, possibility of mode shift / split for cargo traffic, competitive route analysis during the same tenure within project influence area.

2.3.2 Reconnaissance survey for cost vetting

MM India team carried out visual inspection of the Project highway to understand the level of work in context of project cost vetting. Major components include:

- Physical observation of the Project highway
- Project structures such as bridges, ROBs, flyovers / grade separators, etc.
- Proposed location of toll plazas
- Major / minor junctions
- Truck lay bys and bus bays / shelters, etc.

Detailed understanding developed during reconnaissance survey followed by the discussion with team of the Developer assisted the Consultant to carry out project cost vetting in terms of quantity, material requirement, repairing works, etc.

2.4 Analysis of traffic survey data / cost vetting

2.4.1 Traffic study

Base year traffic was derived from traffic survey and travel characteristics; based on which future traffic is forecasted. Classified Traffic Volume Count (CTVC) has been analysed to assess various parameters like daily / hourly traffic variation, directional distribution, Average Daily Traffic (ADT), Annual Average Daily Traffic (AADT), etc.

AADT values have been derived by applying seasonal correction factor based on fuel sales data of fuel station along the Project highway. Future traffic has been forecasted using various methods such as:

- Growth rate as per circular of Ministry of Shipping, Road Transport and Highways
- Vehicle registration method

- Weighted influence of NSDP, Per Capita Income and Population growth
- Econometric analysis

Origin Destination survey data was analysed to understand origin, destination, trip frequency and commodities along the Project highway. Traffic characteristic facilitated identification of influence region, local and through traffic.

Registration plate survey data was analysed in order to derive the frequency of vehicles passing through the toll plaza as there would be many forms of frequency associated such as single trip, return within 24 hours and trips made by local residents. These factors, captured in the data, assisted in projecting the toll revenue for the concession period.

Turning Movement Count (TMC) survey data was analysed in order to determine diverging and converging traffic between two survey locations / proposed toll plazas.

Axle load survey was analysed to determine proportion of overloaded vehicles plying on the Project highway and there by damaging the road surface. Moreover this would also help to ascertain quantum of increment in traffic, if overloading is not allowed on the Project highway.

2.4.2 Cost vetting

Based on the schedule of works provided in the Concession Agreement, MM India reviewed group-wise block cost estimate in order to ascertain cognisable variation in total project cost estimated by the Developer.

2.5 Submission of study findings

Study findings of traffic study are incorporated in form of this ***Final Report***.

3 Description of Project road stretch

3.1 Location

The Project highway on NH-3 in Madhya Pradesh starts from km 332+100 Guna Jhansi bypass, passes through Awan – Binaganj – Kotra and ends at km 426+100 at Biaora; with total project length of 94 km.

The Project location is exhibited in Map 3.1.

Map 3.1: Road section of The Project

Source: Google Maps and MM India Analysis

The Project highway is an integral part and one of the main highway providing North – South connectivity in India and part of Asian Highway 47 (AH-47).

3.2 Salient features of the Project

Salient features of the Project are as described in subsequent sub-sections.

3.2.1 Project details

Key details for the Project are as presented in Table 3.1.

Table 3.1: Project Details

Particulars	Details
Project Name	Four laning of Guna – Biaora section of NH-3 from km 322.100 to km 426.100 in the State of Madhya Pradesh under NHDP Phase IV to be executed on BOT (Toll) Mode on DBFOT basis
Length	94.000 km
Type of PPP	Design, Build, Finance, Operate and Transfer (DBFOT)
Name of the Concessionaire	M/s. Jalpa Devi Tollways Limited
Letter of Award	29 th June 2015
Signing of CA	21 st September 2015
Appointed date	19 th March 2016
Schedule Four laning	15 th September 2018
Concession end date (26 years from appointed date)	18 th March 2042

Source: Concession Agreement and MM India analysis

3.2.2 Physical features of the Project highway

Key features / structures on the Project highway are as depicted in Table 3.2.

Table 3.2: Key features / structures on the Project highway

Sr. No.	Particulars	Unit	Details
1	Main Carriage way (Four lane)	km	93.500
2	Service road (both sides)	km	9.800
3	Toll plaza (proposed) - km 348+885 - km 400+465	Nos.	2
4	Major Bridge	No.	4
5	Minor Bridge	Nos.	34
6	Grade Separator	Nos.	2
7	Pedestrian / Cattle Underpass	Nos.	9
8	Culverts	Nos.	74
9	By-passes	Nos.	2
10	Bus bays	Nos.	22

Sr. No.	Particulars	Unit	Details
11	Truck laybys	Nos.	2
12	Rest area	No.	1

4 Traffic Survey Analysis

4.1 Location and schedule of traffic survey

Traffic survey was carried on the Project highway during 28th January 2016 to 4th February 2016. Origin-Destination and Turning Movement Count survey has been undertaken for two days during weekend as well as weekday; while registration plate and axle load survey was carried out for one day at proposed location of toll plazas i.e. near village Ruthiyai and near village Pakhriyapura. Component-wise traffic survey locations and schedule are listed in Table 4.1 and shown in Map 4.1.

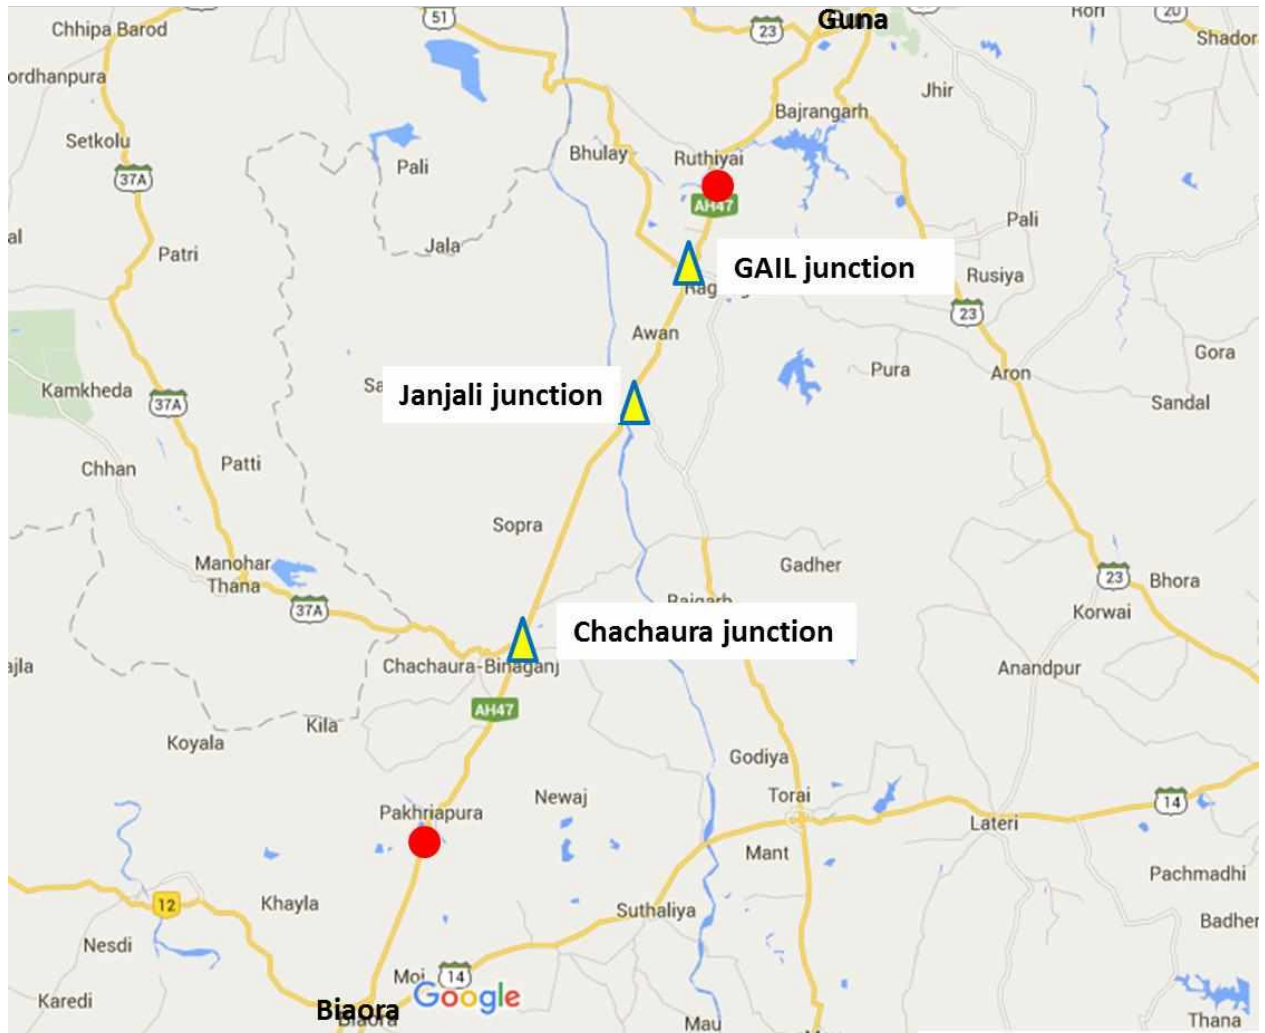

Table 4.1: Location and schedule of traffic survey components

Sr. No	Traffic Survey Component	Chainage	Location Name	Duration ³	
1	Classified Traffic Volume Count (CTVC)	km 348+885	Proposed toll plaza near Ruthiyai village	28/01/2016	04/02/2016
		km 186+650	Proposed Pakhriyapura Toll Plaza	28/01/2016	04/02/2016
2	Original Destination (OD)	km 348+885	Proposed toll plaza near Ruthiyai village	31/01/2016	01/02/2016
		km 186+650	Proposed Pakhriyapura Toll Plaza	02/02/2016	03/02/2016
3	Axle Load (AL) and Registration Plate (RP) Survey	km 348+885	Proposed toll plaza near Ruthiyai village	31/01/2016	01/02/2016
		km 186+650	Proposed toll plaza Pakhriyapura village	02/02/2016	03/02/2016
4	Turning Movement Count (TMC)	km 355+149	Raghogarh / Gail junction	30/01/2016	31/01/2016
		km 366+440	Janjali junction		
		km 388+238	Binagunj junction	01/02/2016	02/02/2016

Traffic surveys have been carried out in accordance with the guidelines of Indian Roads Congress specified in IRC: 9-1972 and IRC: 102-1988.

Photo 4.1 and Photo 4.2 depicts execution of traffic survey on site.

Photo 4.1: CTVC survey in progress

Photo 4.2: Axle load survey in progress

Source: MM India Traffic Survey Monitoring

Analysis of traffic study is given in subsequent sections.

4.2 Traffic volume characteristics

Traffic surveys have been carried out to establish base year traffic and travel characteristics. Baseline traffic characteristics are very important for assessment of future traffic. Traffic volume count has been analysed to assess following traffic characteristics:

- Daily variation in traffic volume
- Directional distribution of daily traffic volume
- Average Daily Traffic (ADT)
- Hourly variation of ADT
- Traffic composition of ADT
- Annual Average Daily Traffic (AADT)

Various types of vehicles, having different sizes and characteristics, were converted into equivalent Passenger Car Unit (PCU). PCU values as recommended by Indian Roads Congress (IRC-64, 1990), has been used for conversion as presented in Table 4.2.

Table 4.2: PCU factors considered for the study

Vehicle Type	PCU
Fast Vehicles	
Two Wheeler (Motor cycle or scooter)	0.50
Car / Jeep / Van / 3-Wheeler vehicles	1.00

Vehicle Type	PCU
LCV / Mini Bus	1.50
Bus	3.00
2 Axle truck	3.00
3 Axle truck	3.00
Multi Axle truck	4.50
Agricultural Tractor (with trailer)	4.50
Agricultural Tractor (without trailer)	1.50
Slow Vehicles	
Bicycle	0.50
Cycle Rickshaw	2.00
Hand Cart	3.00
Horse-drawn vehicle	4.00
Bullock cart*	8.00

* For smaller bullock-carts, a value of 6.00 shall be appropriate

Source: IRC-64, 1990

4.2.1 Daily variation in traffic flow

Daily variation of traffic flow for seven days have been recorded and analysed at two proposed toll plazas locations - Ruthiyai and Pakhriyapura i.e. Chainages km 34+885 and km 400+465 respectively.

4.2.1.1 Toll Plaza at Ruthiyai (km 348+885)

Daily traffic variation at Chainage km 348+885 has been presented in Table 4.3.

Table 4.3: Daily traffic variation at Chainage km 348+885 (Proposed Toll Plaza at Ruthiyai)

			28/01/16	29/01/16	30/01/16	31/01/16	01/02/16	02/02/16	03/02/16

Source: MM India Survey

- For tollable vehicles category:
 - Goods segment: 3-Axle truck has a major share of about 18%, followed by Multi-Axle trucks with about share of about 15%, 2-Axle truck and LCV has a share of 8% and 5% respectively in total nos. of vehicles including tollable and non-tollable
 - Passenger segment: Car/Jeep/Van comprises largest share of tollable traffic about 15%, followed by private transport buses with share of about 2.3% in total nos. of vehicles including tollable and non-tollable
- Overall tollable traffic movement is higher by about 5.4% on Sunday as compared average daily tollable traffic on the Project highway.
- Considerable movement of Ambulance i.e. average 18 per day during week is witnessed in both the directions.
- 2-wheeler vehicles have a major share of about 26% and 83% in total vehicles and vehicles under non-tollable category respectively.

4.2.1.2 Toll Plaza at Pakhriyapura (km 400+465)

Daily traffic variation at Chainage km 400+465 has been presented in Table 4.4.

Table 4.4: Daily traffic variation at Chainage km 400+465 (Proposed Toll Plaza at Pakhriyapura)

	Vehicle Type	Units	28/01/16	29/01/16	30/01/16	31/01/16	01/02/16	02/02/16	03/02/16

Source: MM India Survey

- For tollable vehicles category:
 - Goods segment: 3-Axle truck has a major share of about 23.5%, followed by Multi-Axle truck with about 21%, followed by 2-Axle truck with about 11% and LCV for about 7.5% of share in total nos. of vehicles including tollable and non-tollable
 - Passenger segment: Car/Jeep/Van comprises largest share of about 13%, followed by private transport buses with share of about 2% in total nos. of vehicles including tollable and non-tollable
- 2-wheeler vehicles have a major share of about 14% and 80% in total vehicles and vehicles under non-tollable category respectively. The movement and traffic of two-wheelers at km 348+885 is higher as compared to survey location km 400+465 due to movement towards GAIL Ltd. and National Fertilizer Ltd. at Vijaypur.
- Movement of 3-Axle trucks and 2-Axle trucks is higher by 16% and 6% respectively at km 348+885 as compared km 400+465 due to additional movement of commercial carriers originating and destined for GAIL Ltd. and National Fertilizer Ltd.

4.2.2 Directional flow

Directional flow provides information regarding the proportion of the vehicles moving in up and down directions as recorded at any particular CTVC location. Directional distributions of traffic flow at two proposed toll plazas locations have been analysed and directional splits for seven days at Chainage km 348+885 has been represented by Chart 4.1.

Chart 4.1: Directional flow at Chainage km 348+885 (Ruthiyai Toll Plaza)

Source: MM India Analysis

- Traffic flow at chainage km 348+885 is minutely varying in both the directions i.e., from Guna towards Biaora and vice-versa with directional distribution on the Project highway ranging between 44% - 55%. No significant observations for the same.
- Traffic movement from Guna towards Biaora is lower on 28th January 2016 (Thursday).
- Overall trend of movement from Guna to Biaora is witnessed increasing due to heavy movement of truck carriers and car carriers followed by goods traffic of 2-axle and 3-axle vehicles. No significant observations for the same.

Directional traffic flow at Chainage km 400+465 has been represented in Chart 5.2.

Chart 4.2: Directional flow at Chainage km 400+465 (Pakhriyapura Toll Plaza)

Source: MM India Analysis

- Traffic flow at chainage km 400+465 is almost constant in both directions i.e., from Guna to Biaora and vice versa with directional distribution on the Project highway ranging between 48% - 52%.
- On 29th January 2016, higher share of movement between Biaora to Guna is primarily due goods traffic carrying fruits, wood, grains and aggregates, petroleum products etc.

4.2.3 Average Daily Traffic (ADT)

Summary of ADT in terms of vehicles and PCU's at survey locations of km 348+885 and km 400+465 are presented in Table 4.5.

Table 4.5: Average Daily Traffic (ADT)

Vehicle Type	Units	km 348+885	km 400+465
Car/Jeep/Van (Private)	Nos.	1,252	721
Car/Jeep/Van (Taxi)	Nos.	79	20
Mini-Bus	Nos.	122	30
Tollable Vehicles			
Private Bus	Nos.	194	117
Education Bus	Nos.	1	2
Government Bus	Nos.	1	1
4 Wheeler Tempo	Nos.	184	143
LCV	Nos.	440	443

	Vehicle Type	Units	km 348+885	km 400+465
	2 - Axle Truck	Nos.	697	636
	3 - Axle Truck	Nos.	1,552	1,328
	Multi Axle Truck	Nos.	1,284	1,211
	MAV > 6 - Axle	Nos.	1	2
	HCM / EME	Nos.	4	3
	Total Tollable	Nos.	5,811	4,657
	Total Tollable PCU	PCU	15,586	13,389
Non Tollable Vehicles	Cycle	Nos.	45	7
	Cycle rickshaw	Nos.	1	-
	Hand/Animal Cart	Nos.	-	1
	2 Wheelers	Nos.	2,270	805
	3 Wheelers	Nos.	251	29
	Car/Jeep/Van	Nos.	11	5
	Ambulance	Nos.	19	3
	Bus / Truck	Nos.	1	-
	3 Wheeler Tempo	Nos.	8	13
	Agricultural Tractor	Nos.	30	22
	Agricultural Tractor-trailer	Nos.	100	117
	Total Non Tollable	Nos.	2,736	1,002
	Total Non Tollable PCU	PCU	1,956	1,023
Total Vehicles traffic	Nos.	8,547	5,659	
Total Vehicles PCU	PCU	17,542	14,412	

Source: MM India survey

- ADT at km 348+885 is higher by about 33.8% as compared to km 400+465. This is mainly due to movement from Guna to GAIL Ltd. and National Fertilizer Ltd.. Overall variation in ADT PCU values is about 17.8%.
- Total Tollable ADT at km 348+885 is higher by about 20% as compared to km 400+650. While, variation in terms of PCU for total tollable ADT is about 14%.
- The proportion of Car/Van/Jeep (Private) is higher by about 57% at km 348+885 as compared to same category traffic at chainage km 400+465.
- Movement of educational bus is almost same at both the proposed toll plaza locations.
- Traffic of 3-Axle trucks is higher by 16% and that of MAV trucks is higher by about 6% at km 348+885 as compared to survey location km 400+465 which is attributed to additional movement of gas carriers to and from GAIL facility.

- Two-wheeler (non-tollable) traffic is about 80% more at km 348+885, due to GAIL Ltd. and National Fertilizer Ltd. facility at Ruthiyai.

4.2.4 Hourly variation of traffic

4.2.4.1 Guna – Biaora

Analysis has been carried out to study the hourly variation of traffic moving from Guna towards Biaora. The peak hour traffic volume observed at km 348+885 and km 400+465 are shown in Table 4.6.

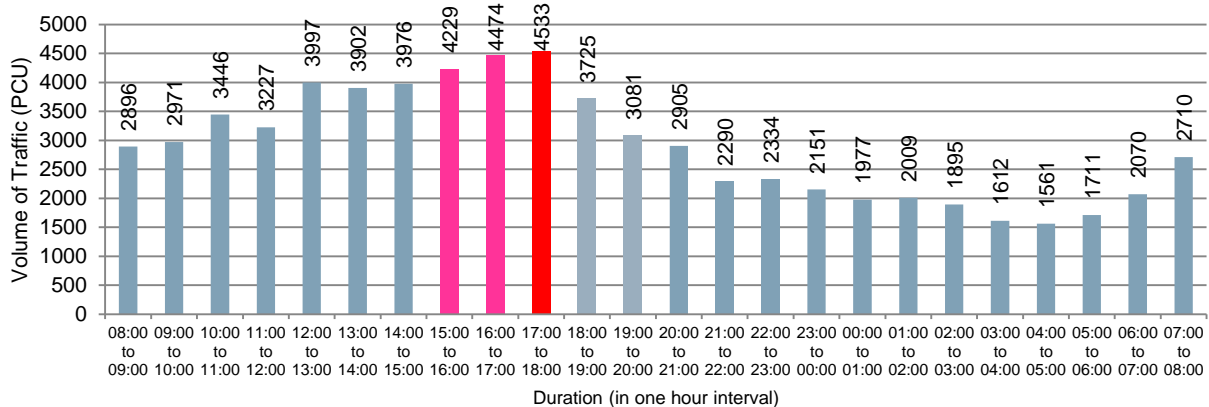

Table 4.6: Peak hour traffic share on the Project highway (Guna – Biaora)

Survey Location Chainage	Peak Hour Volume	Total Volume (PCU)	Peak Hour share (%)	Peak Hour (24 hrs.)	Near to Peak Hour (24 hrs.)
km 348+885	2,276	4,533	6.5%	17:00 to 18:00	15:00 to 17:00
km 400+465	1,273	3,581	6.5%	18:00 to 19:00	16:00 to 18:00

Source: MM India analysis

Graphical representation for hourly variation in traffic at Chainage km 348+885 is shown in Chart 4.3.

Chart 4.3: Hourly variation in traffic flow at km 348+885 i.e. proposed Ruthiyai Toll Plaza (Guna – Bioara)

Source: MM India Analysis

From Chart 4.3, it can be inferred that:

- The volume of traffic increases during day time and decreased at night.

- Traffic remains almost constant from 12:00 hours to 15:00 hours
- Traffic peak is formed between 17:00 to 18:00 hours with total volume of 2,276 vehicles and PCU value of 4,533. This is mainly due movement of 2-axle, 3-axle and 4-axle vehicles carrying perishable good such fruits, vegetables and other eatables as well as vehicles carrying grains and materials such as wood, plastic items, etc.
- Night peak is formed in evening during 22:00 to 23:00 hour.

Graphical representation for hourly variation in traffic at Chainage km 400+465 is shown in Chart 4.4.

Chart 4.4: Hourly variation in traffic flow at km 400+465 i.e. proposed Pakhriyapura Toll Plaza (Guna – Biaora)

Source: MM India analysis

From Chart 4.4, it can be inferred that:

- The volume of traffic is higher during day time
- Traffic peak is formed between 18:00 to 19:00 hours with total volume of 1,273 vehicles and PCU value of 3,581
- Night peak is formed in evening during 23:00 to 00:00 hour mainly

Vehicle-wise and category-wise peak hour traffic moving from Guna towards Biaora is depicted in Table 4.7.

Table 4.7: Vehicle-wise and category-wise peak hour traffic (Guna – Biaora)

Vehicle category	km 348+885			km 400+465		
	Peak PCU	Peak Time	Peak as % of total	Peak PCU	Peak Time	Peak as % of total
2-Wheeler	438	17:00 to 18:00	10.6%	139	16:00 to 17:00	9.6%
Car/Jeep/Van (Private)	305	12:00 to 13:00	6.7%	185	18:00 to 19:00	7.1%
Car/Jeep/Van (Taxi)	32	15:00 to 16:00	9.4%	11	11:00 to 12:00	15.7%

Vehicle category	km 348+885			km 400+465		
	Peak PCU	Peak Time	Peak as % of total	Peak PCU	Peak Time	Peak as % of total
Mini-bus	63	13:00 to 14:00	9.8%	14	12:00 to 13:00	12.7%
Private bus	189	03:00 to 04:00	9.7%	120	02:00 to 03:00	10.6%
Education bus	9	17:00 to 18:00	100.0%	3	08:00 to 09:00	100.0%
Government bus	0	08:00 to 09:00	-	3	02:00 to 03:00	50.0%
LCV	137	13:00 to 14:00	6.0%	135	17:00 to 18:00	6.0%
2-Axle truck	603	17:00 to 18:00	8.1%	543	18:00 to 19:00	8.0%
3-Axle truck	1454	15:00 to 16:00	6.0%	1179	15:00 to 16:00	5.8%
MAV	1422	17:00 to 18:00	7.2%	1197	18:00 to 19:00	6.7%
MAV>6 axle	5	12:00 to 13:00	14.3%	18	17:00 to 18:00	36.4%
HCM/EME	14	09:00 to 10:00	15.0%	9	17:00 to 18:00	22.2%
Agriculture Tractor & Trailer	180	15:00 to 16:00	11.0%	248	17:00 to 18:00	14.6%

Source: MM India analysis

4.2.4.2 Biaora – Guna

Analysis was carried out to understand hourly variation of traffic moving from Biaora to Guna. Peak hour traffic volumes observed at km 348+885 and km 400+465 are shown in Table 4.8.

Table 4.8: Peak hour traffic share on Project Highway (Biaora - Guna)

Survey Location Chainage	Peak Hour Volume	Total Volume (PCU)	Peak Hour share (%)	Peak Hour (24 hrs.)	Near to Peak Hour (24 hrs.)
km 348+885	2,161	4,683	6.7%	16:00 to 17:00	13:00 to 15:00 / 17:00 to 18:00
km 400+465	1,389	4,111	6.9%	10:00 to 11:00	09:00 to 10:00 / 11:00 to 12:00

Source: MM India analysis

Graphical representation for hourly variation in traffic at Chainage km 348+885 is shown in Chart 4.5.

Chart 4.5: Hourly variation in traffic flow at km 348+885 i.e. proposed Ruthiyai Toll Plaza (Biaora – Guna)

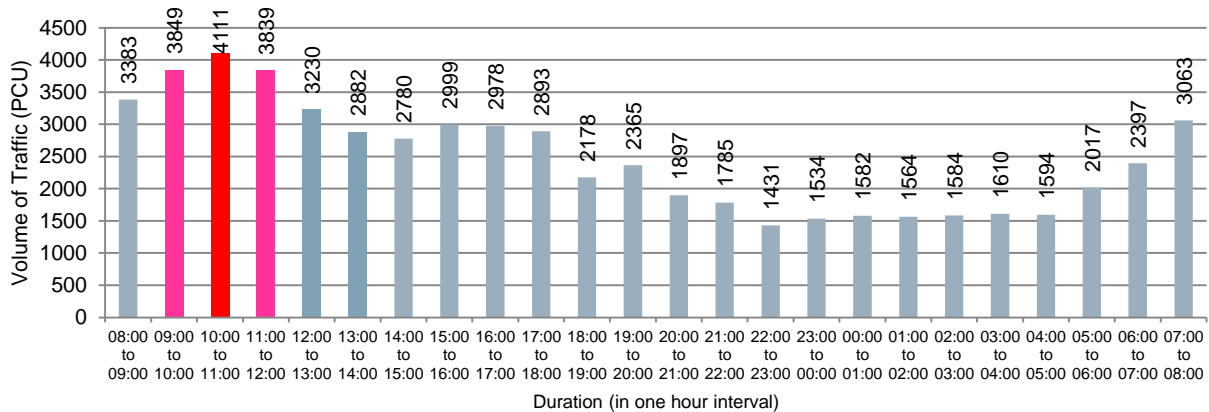

Source: MM India analysis

Chart 4.5 it can be inferred that it can be inferred that:

- The volume of traffic is higher during day time
- Traffic decreases from 18:00 hours till 03:00 hours
- Traffic peak is formed between 16:00 to 17:00 hours with total volume of 2,161 vehicles and PCU value of 4,683. This is mainly due movement of truck carrying vehicles, return of school traffic, labours returning from fields.

Graphical representation for hourly variation in traffic at Chainage km 400+465 is shown in Chart 4.6.

Chart 4.6: Hourly variation in traffic flow at km 400+465 i.e. proposed Pakhriyapura Toll Plaza (Biaora – Guna)

Source: MM India analysis

From Chart 4.6 it can be inferred that it can be inferred that:

- The volume of traffic is higher during day time
- Traffic peak is formed between 10:00 to 11:00 hours with total volume of 1,389 vehicles and PCU value of 4,111.
- Night peak is formed during 19:00 to 20:00 hour

Vehicle-wise and category-wise peak hour traffic moving from Biaora towards Guna is depicted in Table 4.9.

Table 4.9: Vehicle-wise and category-wise peak hour traffic (Biaora – Guna)

Vehicle category	km 348+885			km 400+465		
	Peak PCU	Peak Time	Peak as % of total	Peak PCU	Peak Time	Peak as % of total
2-Wheeler	396	12:00 to 13:00	10.4%	134	17:00 to 18:00	9.7%
Car/Jeep/Van (Private)	305	13:00 to 14:00	7.3%	163	19:00 to 20:00	6.7%
Car/Jeep/Van (Taxi)	26	11:00 to 12:00	12.4%	12	08:00 to 09:00	16.9%
Mini-bus	60	12:00 to 13:00	9.5%	26	12:00 to 13:00	12.1%
Private bus	174	01:00 to 02:00	8.2%	132	02:00 to 03:00	10.0%
Education bus	9	07:00 to 08:00	42.9%	15	15:00 to 16:00	50.0%
Government bus	9	20:00 to 21:00	75.0%	6	06:00 to 07:00	33.3%
LCV	165	16:00 to 17:00	7.0%	153	08:00 to 09:00	6.4%
2-Axle truck	495	14:00 to 15:00	6.9%	498	11:00 to 12:00	7.6%
3-Axle truck	1593	16:00 to 17:00	6.5%	1382	09:00 to 10:00	6.4%
MAV	1490	17:00 to 18:00	7.2%	1454	10:00 to 11:00	7.1%

Source: MM India analysis

4.2.5 Traffic composition

Summary of motorized traffic composition for two survey locations on the Project highway by vehicle type is expressed in percentage in Table 4.10 and graphically shown in Chart 4.7.

Table 4.10: Location-wise traffic composition (Nos. %)

Tollable Vehicles	Vehicle Type	km 348+885	km 400+465
		Car/Jeep/Van (Private)	14.6%
	Car/Jeep/Van (Taxi)	0.9%	0.4%
	Mini-Bus	1.4%	0.5%

Vehicle Type	km 348+885	km 400+465
Private Bus	2.3%	2.1%
Education Bus	0.0%	0.0%
Government Bus	0.0%	0.0%
4 Wheeler Tempo	2.2%	2.5%
LCV	5.1%	7.8%
2 - Axle Truck	8.2%	11.2%
3 - Axle Truck	18.2%	23.5%
Multi Axle Truck	15.0%	21.4%
MAV > 6 – Axle	0.0%	0.0%
HCM / EME	0.0%	0.1%
Cycle	0.5%	0.1%
Cycle rickshaw	0.0%	0.0%
Hand/Animal Cart	0.0%	0.0%
2 Wheelers	26.6%	14.2%
3 Wheelers	2.9%	0.5%
Car/Jeep/Van	0.1%	0.1%
Ambulance	0.2%	0.1%
Bus / Truck	0.0%	0.0%
3 Wheeler Tempo	0.1%	0.2%
Agricultural Tractor	0.4%	0.4%
Agricultural Tractor-trailer	1.2%	2.1%

Source: MM India Survey

- Passenger segment: At both the survey location km 348+885 and km 400+465, Car/Jeep/Van (Private and Taxi) form the major proportion of the number of vehicles plying on the Project highway with share of 14.6% and 12.7% respectively.
- Goods segment: 3-Axle trucks are at second position in terms of contribution to total traffic with share of 18.2% and 23.5% at survey locations km 348+885 and km 400+465 respectively. While share of Multi-Axle truck is 15.0% and 21.4% at km 348+885 and km 400+465 respectively.
- Non-tollable category of vehicles: at km 348+885 and km 400+465, two-wheelers form the largest proportion with values of 26.6% and 14.2% respectively. This is mainly due to heavy internal village movements near Toll Plazas.
- Proportion of all the other category of vehicles is almost equal / balanced conditions at both the survey locations.

Chart 4.7: Category wise traffic composition in number of vehicles (%)

Source: MM India Survey

As shown in Chart 4.7, it can be inferred that at km 348+885 and km 400+465 passenger and goods traffic has ratio of 50:50 and 30:70 respectively in absolute terms. Higher share of passenger vehicles is mainly due to considerable movement of 2-wheelers at both survey locations; further higher in the same category at km 348+885 is due to movement to GAIL Ltd. and National Fertiliser Ltd.

Chart 4.8 presents composition of passenger and goods traffic as a proportion in PCU values for respective categories.

Chart 4.8: Category wise traffic composition in PCU values (%)

Source: MM India Survey

As depicted in Chart 4.8, share of passenger vehicles in PCU values at Chainage km 348+885 and km 400+465 is lesser than goods traffic.

4.2.6 Annual Average Daily Traffic (AADT)

Seasonal factor has been applied to ADT to estimate AADT for the Project highway. Month-wise fuel sales data from January 2015 to December 2015 were collected from fuel stations along the Project highway to assess seasonal factor. Seasonal variation shows that traffic of vehicles operated on:

- Petrol are highest in April and least in July
- Diesel are highest in May – June and least in August

Fuel prices for Petrol and Diesel in Madhya Pradesh along the Project highway as on 1st February, 2016 are as represented in Table 4.11.

Table 4.11: Fuel prices in Madhya Pradesh along the Project stretch

Location	Petrol (INR / Litre)	Diesel (INR / Litre)
Madhya Pradesh (Project highway)	68.00	50.83

Source: MM India Primary survey on February 1, 2016

Seasonal factor has been calculated on the basis of average value of January and February months as traffic surveys have been carried spreading over both months.

- Seasonal factors, arrived based on diesel sale data, has been applied to all commercial vehicles for the reason that they run on diesel.
- Seasonal factor for private cars has been arrived based on combined basis for petrol and diesel as cars in India are based on both types of fuel.

Due to higher performance of petrol power engines and its low maintenance users opt to have petrol cars rather than diesel cars. But increase in petrol price in recent years has led to the price difference in petrol and diesel to be about INR 17.17. So users have shifted to diesel cars there by having considerable benefits of fuel efficiency. So, the seasonal factor for private car is arrived by taking the weighted average of petrol and diesel assuming corresponding weights of 60% and 40% respectively.

Seasonal factor for month (M) can be calculated using the formulas:

$$\text{Seasonal factor}_{(M)} = \frac{\sum FP_{(M)}}{\sum FP_{(Y)}}$$

Where,

$\sum FP_{(M)}$ = Sum of fuel sales of particular month of all the fuel stations considered

$\sum FP_{(Y)}$ = Sum of fuel sales of particular year of all the fuel stations considered

Seasonal factors arrived for the project corridor is presented in Table 4.12.

Table 4.12: Seasonal factor on the Project highway for determining AADT

Month	Factor for Diesel	Factor for Petrol
January	0.863	0.844
February	0.847	0.917
Average: January - February	0.855	0.880
March	0.894	0.918
April	1.389	1.458
May	1.144	1.156
June	1.499	1.057
July	0.865	0.781
August	0.562	0.863
September	0.743	1.040
October	1.272	1.000
November	0.945	0.929
December	0.977	1.038

Source: MM India analysis

AADT for tollable vehicles for the base year (FY 2015-16) at the toll plaza locations are presented in Table 4.13.

Table 4.13: AADT for Tollable Vehicles

Vehicle Type	km 348+885	km 400+465	Total
Car/Jeep/Van (Private)	1,441	830	2,271
Car/Jeep/Van (Taxi)	91	23	114
Mini-Bus	143	35	178
Private Bus	227	137	364
Education Bus	1	2	3
Government Bus	1	1	2
4 Wheeler Tempo	215	167	382
LCV	515	518	1,033

Vehicle Type	km 348+885	km 400+465	Total
2 - Axle Truck	816	744	1,560
3 - Axle Truck	1,816	1,554	3,370
Multi Axle Truck	1,503	1,417	2,920
MAV > 6 - Axle	1	2	3
HCM / EME	5	4	9
Total Tollable	6,775	5,434	12,209
Total Tollable PCU	18,215	15,651	33,866

Source: MM India analysis

Total tollable vehicles and total tollable PCU have increased by about 16% at both locations as compared to ADT values stated in Table 4.5; this is due to application of average correction factor for month of January and February i.e. 1.170 for diesel and 1.138 for petrol vehicles in order to factor the seasonality deviation in traffic as analysed based on past trend of fuel sales.

4.2.7 Non-toll paying vehicles

Traffic volume count for such non-tollable vehicle categories was carried out separately as mentioned in Table 4.14.

Table 4.14: Composition of Tollable and Non-Tollable traffic

Particulars	Units	km 348+885	km 400+465
Tollable	Nos.	68.0%	82.3%
Non-Tollable	Nos.	32.0%	17.7%
Tollable	PCU	88.8%	92.9%
Non-Tollable	PCU	11.2%	7.1%

Source: MM India analysis

- From Table 4.14, it can be inferred that Non-Tollable vehicles are higher by 14% in terms of number of vehicles and 10% in terms of PCU at km 348+885 as compared to km 400+465.
- It is primarily due to higher movement of two-wheeler traffic at km 348+885

Composition of vehicles under Non-Tollable category is as shown in Table 4.15.

Table 4.15: Composition of Non-Tollable vehicles*

Vehicle Category	km 348+885	km 400+465
Cycle	1.6%	0.7%

Vehicle Category	km 348+885	km 400+465
Cycle rickshaw	0.0%	0.0%
Hand/Animal Cart	0.0%	0.1%
2 Wheelers	83.0%	80.3%
3 Wheelers	9.2%	2.9%
Car/Jeep/Van	0.4%	0.5%
Ambulance	0.7%	0.3%
Bus / Truck	0.0%	0.0%
3 Wheeler Tempo	0.3%	1.3%
Agricultural Tractor	1.1%	2.2%
Agricultural Tractor-trailer	3.7%	11.7%

* Based on number of vehicles counted during the traffic survey

Source: MM India Analysis

- Two wheelers are highest in proportion followed by tractor with trailer. It is because tractor with trailer is being used mainly for transportation of agriculture produce to the nearby markets in the region.

4.3 Axle Load survey

Axle load survey has been carried out at survey locations km 348+885 and km 400+465 for tollable goods vehicles. Results in form of overloaded vehicles detected at both toll plazas are as elucidated in Table 4.16.

Table 4.16: Summary of percentage overload found during axle load survey

Location	Particulars	2-Axle	3-Axle	MAV	LCV
348+885 (Ruthiyai Toll Plaza)	Guna – Biaora	4.9%	72.7%	-	4.2%
	Biaora – Guna	2.6%	90.9%	-	8.3%
km 400+465 (Pakhriyapura Toll Plaza)	Guna – Biaora	-	75.8%	-	-
	Biaora – Guna	4.2%	98.6%	-	5%

Source: MM India survey and analysis

Direction and survey location-wise details of overloaded commodities are as mentioned in Table 4.17.

Table 4.17: Vehicle category-wise details of overloading

Location	Direction	2-Axle	3-Axle	MAV	LCV
348+885 (Ruthiyai Toll Plaza)	Guna – Biaora	Rice and parcels	Oil, paper, parcels, wheat and FMCG	-	Plastic
	Biaora – Guna	Banana and Onion	Oil, Fruits and Vegetables,	-	Parcel

Location	Direction	2-Axle	3-Axle	MAV	LCV
km 400+465 (Pakhriyapura Toll Plaza)	Guna – Biaora	-	woods products Plastic, cotton, metal products, fruits and vegetables, electronic goods	-	-
	Biaora – Guna	Banana and edible oil	Fertilizer, edible oil, metal products, wood products, fruits and vegetables	-	Sand

Source: MM India survey and analysis

4.4 Origin – Destination survey

Roadside interview method, as detailed in IRC: 102-1988, is used for conducting O-D survey. Origin Destination (O-D) survey is conducted for tollable vehicles (both passenger and goods) in both the directions at toll plaza locations on the Project highway (at km 348+885 and km 400+465) for a period of 24 hours through a pre-designed survey format. The O-D survey focuses on origin, destination, trip frequency and commodities carried by freight vehicles. Travel characteristics estimated by O-D surveys on the Project highway facilitate the identification of influence regions, local and through traffic, trip categorization, etc.

4.4.1 Trip direction

Movement of traffic between major origin and destination locations as captured in both the directions is as discussed in subsequent sub-sections.

4.4.1.1 Survey location at km 348+885

Guna – Biaora

Major origin locations for traffic moving from Guna towards Biaora are as depicted in Chart 4.9.

Chart 4.9: From Guna towards Biaora: Origin location share

Source: MM India analysis

- About 37% of the goods traffic is originating from Gwalior, Delhi, and moving towards Indore, Bhopal and Mumbai; this is mainly because NH 3 provides important connecting link for traffic moving between northern states and Maharashtra, Andhra Pradesh, Tamil Nadu and other southern states, as this highway is shorter by about 120-150 km as compared to NH-8 which connects Mumbai – Delhi.

Major destination locations for traffic moving from Guna towards Biaora are as depicted in Chart 4.10.

Chart 4.10: From Guna towards Biaora: Destination location share

Source: MM India analysis

- Majority of the goods traffic coming from Guna towards Biaora is destined for Indore, Bhopal and Mumbai in proportion of 22%, 9% and 8% respectively.
- Indore and Bhopal has the highest share as they are important trading points and consumption centre for goods moving from and beyond Biaora.

Biaora – Guna

Major origin locations for traffic moving from Biaora towards Guna are as depicted in Chart 4.11.

Chart 4.11: From Biaora towards Guna: Origin location share

Source: MM India analysis

- About 37% of the total traffic originates from Indore, Mumbai and Bhopal; this is mainly they are important distribution centres for goods moving towards northern states of the country.

Major destination locations for traffic moving from Biaora towards Guna are as depicted in Chart 4.12.

Chart 4.12: From Biaora towards Guna: Destination location share

Source: MM India analysis

- About 39% of vehicles originating from Biaora and beyond are destined to Gwalior, Delhi and Kanpur.

4.4.1.2 Survey location km 400+465

Guna – Biaora

Major origin locations for traffic moving from Guna towards Biaora are as depicted in Chart 4.13.

Chart 4.13: From Guna towards Biaora: Origin location share

Source: MM India analysis

- Traffic characteristics are observed to be same as at km 348+885
- Majority of the cargo movement originates from Delhi, Guna and Gwalior.

Major destination locations for traffic moving from Guna towards Biaora are as depicted in Chart 4.14.

Chart 4.14: From Guan towards Biaora: Destination location share

Source: MM India analysis

- Majority of the goods traffic coming from Guna towards Biaora are destined for Indore and Bhopal in proportion of 26% and 14% respectively; these are important consumption and distribution centre for goods traffic in the state.

Biaora – Guna

Major origin locations for traffic moving from Biaora towards Guna are as depicted in Chart 4.15.

Chart 4.15: From Biaora towards Guna: Origin location share

Source: MM India analysis

- Return trip of vehicles originating from Indore and Bhopal comprises of about 33% of the traffic moving from Biaora towards Guna.

Major destination locations for traffic moving from Biaora towards Guna are as depicted in Chart 4.16.

Chart 4.16: From Biaora towards Guna: Destination location share

Source: MM India analysis

- About 44% of the goods traffic moving from Biaora towards Guna is destined for Guna, followed by Gwalior, Delhi and Kanpur.

4.4.2 Commodity analysis

4.4.2.1 Survey location at km 348+885

Major commodities handled by traffic moving between Guna and Biaora at km 348+885 are as presented in Table 4.18.

Table 4.18: Commodity share at km 348+885

Commodity	Guna – Biaora	Biaora – Guna
Empty	12%	5%
Potato	4%	5%
Food grains	7%	2%
Motor vehicles	4%	3%
Gas Carriers	4%	7%
Fruits	3%	10%
Vegetables	1%	2%
Onion	0%	14%
Coal	0%	0%

Commodity	Guna – Biaora	Biaora – Guna
Food products	12%	7%
Metals	3%	3%
Clothes	1%	1%
Edible oil	2%	1%
Paper	1%	1%
Rubber	0%	0%
Wood	1%	0%
Plastic	1%	1%
Fuel carriers	0%	0%
Others	42%	36%
Total	100%	100%

Source: MM India analysis

Guna – Biaora

- About 42% of total goods vehicles moving from Guna to Biaora comprises of empty cargo carriers making their return trip.
- Potato and food grains carrier have a share of 4% and 7% respectively.
- Fruits and vegetables have a share of 3% and 1% respectively.
- Food products comprising of dry fruits, flour, FMCG goods, etc., have a considerable share of about 12%.
- Motor vehicle carriers moving from Chennai in South to Delhi / Haryana in North India comprises of 4% of total traffic. However, the traffic is more in absolute terms, but due to higher seasonal movement of agriculture / perishable produce in the area their movement seems to be lesser in relative terms.
- Liquefied Gas Carriers have been observed plying through the Project highway with a share of about 4%.

Biaora – Guna

- Onion and Potato carriers have a share of about 14% and 5% respectively for traffic moving from Biaora to Guna at km 348+885.
- Fruits and vegetables combine movement comprises of about 12% of movement.
- Gas carriers have a share of about 7%.

4.4.2.2 Survey location km 400+465

Major commodities handled by traffic moving between Guna and Biaora at km 400+465 are as presented in Table 4.18.

Table 4.19: Commodity share at km 400+465

Commodity	Guna – Biaora	Biaora – Guna
Empty	10%	5%
Potato	6%	4%
Food grains	10%	7%
Motor vehicles	4%	1%
Gas Carriers	2%	1%
Fruits	5%	14%
Vegetables	2%	4%
Onion	2%	12%
Coal	2%	1%
Food products	9%	12%
Metals	2%	4%
Clothes	1%	1%
Edible oil	2%	1%
Paper	1%	0%
Rubber	1%	0%
Wood	1%	0%
Plastic	1%	1%
Fuel carriers	0%	3%
Others	39%	29%
Total	100%	100%

Source: MM India analysis

Traffic characteristics in both the direction at km 400+645 (proposed Pakhriyapura Toll plaza) are almost similar to that observed at km 348+885 (proposed Ruthiyai Toll plaza).

4.4.2.3 Seasonal variety

- Motor vehicle carriers are the round the year cargo with constant absolute figures; lower amount in monsoon which is of normal nature across the country
- **January, February and mid-March:** fruits and vegetables are on higher quantity for e.g. Onion, Garlic, Ginger, Grapes, Pomegranate, Santra etc. vegetable and fruits
- **April and May:** grain related movement is high due to harvesting season as well as peak traffic season in the year
- **July and August:** overall down due to monsoon effect
- **October and November:** overall high quantity of all type of commodities including automobile logistics due to Diwali time

4.5 Willingness to pay

4.5.1 Survey location at km 348+885

Summary of responses received as a part of OD survey for willingness to pay for the proposed Ruthiyai Toll plaza is as represented in Table 4.20.

Table 4.20: Willingness to pay survey at km 348+885

Willingness to Pay	Passenger (%)	Goods (%)
Yes	98%	98%
No	2%	2%

Source: MM India analysis

Hence, a strong willingness has been witnessed for both passenger and goods traffic in case of improved highway condition between Guna and Biaora.

4.5.2 Survey location at km 400+465

Summary of responses received as a part of OD survey for willingness to pay for the proposed Pakhriyapura Toll plaza is as represented in Table 4.21.

Table 4.21: Willingness to pay survey at km 400+465

Willingness to Pay	Passenger (%)	Goods (%)
Yes	97%	98%
No	3%	2%

Source: MM India analysis

Hence, a strong willingness has been witnessed for both passenger and goods traffic in case of improved highway condition between Guna and Biaora.

4.6 Registration plate survey (vehicle trip frequency)

4.6.1 Survey location km 348+885

At survey location km 348+885 i.e., proposed Ruthiyai toll plaza registration details of the vehicles passing through the plaza are as presented in Table 4.22.

Table 4.22: Vehicle registration details at km 348+885

State of registration	Guna – Biaora	Biaora – Guna
Madhya Pradesh	43.0%	47.8%
Uttar Pradesh	18.3%	19.0%
Haryana	15.0%	11.4%
Rajasthan	8.1%	9.8%
Maharashtra	3.6%	4.7%
Gujarat	2.8%	1.6%
Nagaland	1.9%	1.3%
Delhi	1.1%	1.1%
Tamil Nadu	1.1%	1.1%
Uttarakhand	0.8%	0.1%
Punjab	0.5%	0.4%
Others	3.8%	1.6%

Source: MM India survey and analysis

On the basis of registration plate survey and O-D survey, trip frequency for various categories of vehicles at km 348+885 is as depicted in Table 6.6.

Table 4.23: Ticket-wise distribution of traffic at km 348+885 (Proposed Ruthiyai Toll Plaza)

Category	km 348+885 (Proposed Ruthiyai Toll Plaza)
Single Journey	
Car/Jeep/Van	45.2%
LCV	71.8%
Bus/Truck	84.7%

4.7 Turning Movement Count (TMC) analysis

Turning movement count (TMC) survey was conducted for 2-days 24 hours at three junctions as mentioned in Figure 4.1:

- km 355+149: Ragaogarh / Gail junction
- km 366+440: Janjali junction
- km 388+238: Binaganj junction

Figure 4.1: TMC survey locations

Source: MM India analysis

Traffic at three junctions has been analysed to assess directional traffic volume.

4.7.1 TMC Analysis for km 355+149

TMC survey was conducted at km 355+149 i.e., GAIL junction in order to determine turning movements of traffic moving to and from GAIL and Ragaogarh. Layout of junction at km 355+149 is as Figure 4.2.

Figure 4.2: GAIL junction (TMC @ km 355+149)

Source: MM Analysis

Volume of traffic moving in either direction at GAIL junction is as mentioned in Table 4.26.

Table 4.26: Volume of Traffic in PCU at GAIL junction (TMC Location -1)

Vehicle type	Guna to			GAIL to			Biaora to			Ragaogarh to		
	GAIL	Biaora	Ragaogarh	Biaora	Ragaogarh	Guna	Ragaogarh	Guna	GAIL	Guna	GAIL	Biaora

Source: MM Analysis

- Traffic moving directly between Guna and Biaora comprises about 71% of the total traffic reported at the junction. Movement mainly comprises of Car / Jeep / Van, 2-Axle, 3-Axle and MAV trucks.
- Minor movement is observed converging and diverging from NH 3 to and from GAIL and Ragaogarh direction.

4.7.2 TMC Analysis for km 366+440

TMC survey was conducted at km 366+440 i.e., at Janjali junction in order to determine turning movements of traffic moving to and from Maksundangarh. Layout of junction at km 366+440 is as Figure 4.2.

Figure 4.3: Janjali Junction (TMC @ km 366+440)

Source: MM Analysis

Volume of traffic moving in either direction at Janjali junction is as mentioned in Table 4.26.

Table 4.27: Volume of Traffic in PCU at janjali junction (TMC Location -2)

Vehicle type	Guna to		Maksundangarh to		Biaora to	
	Maksundan garh	Biaora	Guna	Biaora	Maksundan garh	Guna
2 Wheelers	343	353	353	184	168	387
3 wheelers	6	56	10	6	8	39
Car/Jeep/Van	107	648	113	47	50	461
Buses	67	329	68	-	2	316
Animal and hand Drawn	18	-	9	-	6	3

Vehicle type	Guna to		Maksundangarh to		Biaora to	
	Maksundan garh	Biaora	Guna	Biaora	Maksundan garh	Guna
Cycle	24	15	31	5	2	10
Cycle Rickshaw	1	3	1	-	-	-
Tempo + LCV	32	431	31	13	8	416
2 Axle Truck	27	965	30	2	6	959
3 Axle Truck	59	3,130	68	5	18	3,337
MAV	18	2,761	20	5	-	2,891
HCM/EME/Harvester	2	2	5	-	-	5
Tractor	18	30	11	8	8	51
Tractor-Trailer	1,008	477	1,204	90	126	448
Total	1,728	9,199	1,952	362	401	9,321
Proportion	7.5%	40.1%	8.5%	1.6%	1.7%	40.6%

Source: MM Analysis

- At Janjali junction, traffic moving between Guna and Biaora comprises of about 80% of total traffic at the junction. This is mainly due to heavy movement of 3 Axle and MAV truck.
- Movement between Maksundangarh and Guna is balanced in both directions having share of 8% in each direction.
- Movement between Biaora to Maksundangarh and vice versa have share of 1.5%.

4.7.3 TMC Analysis for km 388+238

TMC survey was conducted at km 388+238 i.e., at Chachaura junction in order to determine turning movements of traffic moving to and from Chachaura. Layout of junction at km 388+238 is as Figure 4.2.

Figure 4.4: Chachaura Junction (TMC @ km 388+238)

Source: MM Analysis

Volume of traffic moving in either direction at Chachaura junction is as mentioned in Table 4.26.

Table 4.28: Volume of Traffic in PCU at Chachaura junction (TMC Location -3)

Vehicle type	Guna to		Chachaura to		Biaora to	
	Chachaura	Biaora	Guna	Biaora	Chachaura	Guna
2 Wheelers	1,136	461	1,223	211	277	730
3 wheelers	151	56	202	66	54	117
Car/Jeep/Van	245	597	329	161	163	729

Cycle Rickshaw	12	42	6	14	22	60
Tempo + LCV	162	402	72	56	48	386
2 Axle Truck	54	969	27	6	3	1,059
3 Axle Truck	86	2,943	41	23	9	3,353
MAV	18	2,898	-	9	5	2,907
HCM/EME/Harvester	-	27	-	-	5	9
Tractor	5	8	14	17	6	21
Tractor-Trailer	288	320	374	99	68	162
Total	2,432	8,951	2,818	774	806	9,840
Proportion	9.5%	34.9%	11.0%	3.0%	3.1%	38.4%

Source: MM Analysis

- At Chachaura junction, traffic moving between Guna and Biaora comprises of about 73% of total traffic at the junction.
- Movement between Chachaura to Guna and Biaora is balanced in both directions having share of 9% and 3% respectively.

5 Traffic Forecasting

Traffic forecasting is carried out to assess the traffic volumes till 2041-2042 as the concession period is up to 18th March 2042, in accordance with project schedule as mentioned in Table 5.1.

Table 5.1: Project schedule

Particulars	Date
Letter of Award	29 th June 2015
Signing of CA	21 st September 2015
FC / Appointed Date	19 th March 2016
Schedule Four laning	15 th September 2018
Concession end date	18 th March 2042

Source: JDTL and MM India analysis

For this, reliable forecasts of traffic along with its compositions are essential. Growth of traffic depends on various factors such as population, Net State Domestic Product (NSDP), vehicle registration growth rate, agricultural output and other socio-economic parameters. Based on traffic volume, Average Daily Traffic (ADT) and Annual Average Daily Traffic (AADT), toll revenue projections have been carried out for the Project highway.

5.1 Estimation of growth rates

Perspective growth envisaged in economy and changes in transport aspects over a period of time are considered for forecasting traffic. Thus, past trend in traffic growth and economic perspective has been studied in detail for traffic forecasting.

Traffic volume in annual form has been projected for project life based on various methods. This requires estimation of traffic and traffic generation along the corridor. Transport demand changes due to shifts in pattern of economic activities. In view of this, projection of future traffic incorporates consideration of basic socio-economic characteristics and rate of change expected during the study period in the project influence area. Though future pattern of change in these factors can be estimated with only a limited degree of accuracy, utmost care has been taken for the same by the Consultant.

Following methods are adopted for determination of traffic growth rates:

- Growth Rates as per circular of Ministry of Shipping, Road Transport and Highways
- Growth Rates based on Vehicle Registration Method

- Growth Rates based on weighted influence of NSDP, Per Capita Income and population growth
- Growth rates based on Socio-Economic Analysis

Traffic projections for the study have been carried out using all the above stated methods.

5.1.1 Projections based on Growth Rate as per Circular of Ministry of Shipping, Road Transport & Highways (MORTH)

As per circular by Ministry of Shipping, Road Transport and Highways, 2008, Government of India (GoI), dated 18th January, 2008; growth rate of 5% is considered for determination of lane requirement. Hence, the same is used for projection of traffic for remaining concession period.

Considering FY 2015-16 as base year, projections are undertaken for a period of 26 years till 2041-42. Summary of traffic projections at proposed Ruthiyai Toll Plaza (km 348+885) and at Pakhriyapura Toll Plaza (km 400+465) are as presented in Table 5.2.

Table 5.2: Projected traffic as per MORTH growth rate method (PCU / day)

Year	km 348+885	km 400+465	Total
2015-16	18,215	15,651	33,866
2016-17	19,126	16,433	35,559
2017-18	20,082	17,255	37,337

5.1.2 Projections based on Vehicle Registration Method

Vehicle registration data has been collected for Madhya Pradesh for a decade (2002-2012)⁴ and same has been considered to project the values for horizon year. Growth rate for the traffic derived from past vehicular registration data of Madhya Pradesh state is as shown in Table 5.3.

Table 5.3: Vehicular growth rates

Vehicle Category	Average growth rate
Car/Jeep/Van (Private)	14.9%
Car/Jeep/Van (Taxi)	24.1%
Mini-Bus	8.5%
Bus – Private, Education and Government	42.6%
4 Wheeler Tempo and LCV	33.2%
2 - Axle Truck and 3 - Axle Truck	13.4%
Multi Axle Truck and MAV > 6 – Axle	51.8%
HCM / EME	38.5%

Source: MM India desk research

Considering FY 2015-16 as base year, projections are done till FY 2041-2042. Summary of traffic projections using the growth rates obtained from vehicle registration method for toll plaza locations at km 348+885 and km 400+465 are as presented in Table 5.4.

Table 5.4: Projected traffic as per Vehicle Registration method (PCU / day)

Year	km 348+885	km 400+465	Total
2015-16	18,215	15,651	33,866

⁴ As per availability of data in public domain

Source: MM India analysis

5.1.3 Projections based on weighted Influence of NSDP, Per Capita Income and Population Growth

In this method, a specific weightage is assigned to the growth indicators influencing the traffic growth. Growth indicators considered are Net State Domestic Product (NSDP), Per Capita Income (PCI) and Population. Growth rate of each indicator is weighted as per its influence on traffic growth for passenger vehicles and goods vehicles.

Average growth rate over a decade for NSPD, Per Capita Income and Population is as elucidated in Table 5.5.

Table 5.5: Average growth rates of NSDP, Per Capita Income and Population Growth Rates for Madhya Pradesh

Particulars	Values
Net State Domestic Product	7.8%
Per Capita Income	6.2%
Population growth	2.0%

Source: Census 2011, Central Statistics Office (CSO) and MM India analysis

Table 5.6 shows average growth values per year of Net State Domestic Product and Per Capita Income of Madhya Pradesh.

Table 5.6: NSDP, Per Capita Income and Population Growth Rates of Madhya Pradesh

Year	NSDP (INR Crores)	NSDP growth	PCI (INR)	PCI growth
2004-05	999.4		15,442	
2005-06	1,049.75	5.04%	15,927	3.14%
2006-07	1,145.45	9.12%	17,073	7.20%
2007-08	1,199.58	4.73%	17,527	2.66%
2008-09	1,351.24	12.64%	19,462	11.04%
2009-10	1,479.33	9.48%	20,959	7.69%
2010-11	1,557.01	5.25%	21,706	3.56%
2011-12	1,708.79	9.75%	23,447	8.02%
2012-13	1,884.80	10.30%	25,463	8.60%
2013-14	2,098.06	11.31%	27,917	9.64%
Average	-	7.76%	-	6.15%

Source: Central Statistics Office (CSO) and MM India analysis

Influence weightages considered of these growth factors on traffic growth are mentioned in Table 5.7. The consideration made while assigning the weightages for:

- Passenger vehicles: Per Capita Income (PCI), as increase in PCI leads to increased purchasing power of individuals for motor vehicles. Hence, weightage of 60% is provided to PCI.
- Goods vehicles: NSDP is the governing factor influencing vehicular growth, hence, weightage of 60% is provided to NSDP.

Table 5.7: Influence Weightages considered of these growth factors on traffic growth

Indicators	Avg. Growth rates	Influence factors for growth in Passenger Vehicles	Influence factors for growth in Goods Vehicles
NSDP	7.8%	0.2	0.6
PCI	6.2%	0.6	0.2
Population	2.0%	0.2	0.2

Source: MM India assumptions

As mentioned in Table 5.7, the growth rates estimated for passenger vehicles (Car/Jeep/Van and various type of buses) is 5.6% per year and the growth rate estimated for goods vehicles (4 Wheel Tempo, LCV, 2 Axle Trucks, 3 Axle Trucks, MAV, HCM/EME) is 6.3% per year. Projected traffic based on these influence factors for proposed Ruthiyai Toll Plaza and Pakhriyapura Toll plaza locations at km 348+885 and km 400+465 respectively are as presented in Table 5.8.

Table 5.8: Projected traffic as per weighted Influence of NSDP, Per Capita Income and Population Growth (PCU / day)

5.1.4 Projections as per Econometric Analysis

Growth rates play a vital role in estimating the traffic. For estimating the growth rates of vehicles, the Consultant has collected the vehicle registration data and various economic parameters viz. Net State Domestic Product (NSDP) and Per Capita Income (PCI) for Madhya Pradesh. In order to work out the elasticity of traffic with various economic parameters as well as to estimate the future growth rate of traffic, an attempt has been made to develop an econometric modelling by regression analysis of mentioned economic parameters.

Following steps have been adopted to derive the Elasticity and Growth Factor:

- Growth rate of goods vehicles is considered directly proportional to the growth rates estimated for different sectors such as agricultural, industry, trade and mining etc. NSDP figures are considered for derivation of elasticity and growth factor of goods vehicles.
- Growth rate of passenger vehicles largely depends on the growth of Per Capita Income and number of registered vehicles in the state. The number of registered vehicles has been regressed with Per Capita Income (PCI) of the state.
- Elasticity of traffic for various modes of transport with respect to their various parameters has been worked out for future growth of traffic.
- Traffic growth rates are a product of the economic growth rate and the elasticity of traffic demand. Elasticity of traffic demand for each vehicle type can be computed correlating the historical traffic volumes and economic trends.

$$T_{GR}(\text{Goods}) = NSDP_{GR} \times E$$

Where,

$T_{GR}(\text{Goods})$ = Traffic Growth Rate for goods vehicles

$NSDP_{GR}$ = NSDP growth rate

E = Elasticity value (Goods vehicles – NSDP)

– $T_{GR} \text{ (Passengers)} = PCI_{GR} \times E$

Where,

$T_{GR} \text{ (Passengers)}$ = Traffic Growth Rate for passenger vehicles

PCI_{GR} = PCI growth rate

E = Elasticity value (Passenger vehicles – PCI)

– $y = E x + c$

Where,

E = Elasticity (equation of line) or slope of line

y = Y - intercept of line

x = X - intercept of line

c = Constant value

- The elasticity values adopted based on regression analysis using the past data and then the traffic growth rates are estimated. Thus estimated elasticity values may be adopted for only 10 years (2015-25) and be reduced to one-half after that every ten years. Due to liberalisation in economy it is assumed that the present coefficient of elasticity may not continue at this rate and could observe reduction by half of initial value for every three years.
- However, in case of MAV category of vehicles elasticity may decrease by 25% of the original value for every five years. While, the growth rate for 3-Axle trucks derived by elasticity being very low, hence the realistic value of 4% is considered for the same for 2015-25.

Vehicular growth rates, based on steps as discussed, is presented in Table 5.9.

Table 5.9: Vehicular Growth Rates for Realistic Scenario as per econometric analysis

Vehicle Category	2015-20	2020-25	2025-30	2030-35	2035-40	2040-45
Car/Jeep/Van (Private)	4.7%	4.7%	2.3%	2.3%	1.2%	1.2%
Car/Jeep/Van (Taxi)	5.2%	5.2%	2.6%	2.6%	1.3%	1.3%
Mini-Bus	2.0%	2.0%	1.0%	1.0%	0.5%	0.5%
Private Bus	7.6%	7.6%	3.8%	3.8%	1.9%	1.9%
Education Bus	7.6%	7.6%	3.8%	3.8%	1.9%	1.9%
Government Bus	7.6%	7.6%	3.8%	3.8%	1.9%	1.9%
4 Wheeler Tempo	15.6%	15.6%	7.8%	7.8%	3.9%	3.9%
LCV	15.6%	15.6%	7.8%	7.8%	3.9%	3.9%
2 - Axle Truck	2.0%	2.0%	1.0%	1.0%	0.5%	0.5%
3 - Axle Truck*	4.0%	4.0%	2.0%	2.0%	2.0%	2.0%
Multi Axle Truck**	9.5%	7.1%	4.7%	2.4%	2.4%	1.2%

Vehicle Category	2015-20	2020-25	2025-30	2030-35	2035-40	2040-45
MAV > 6 – Axle**	9.5%	7.1%	4.7%	2.4%	2.4%	1.2%
HCM / EME	6.9%	6.9%	3.5%	3.5%	1.7%	1.7%

* Realistic growth rate considered as 4% against 2%. Elasticity is expected to decrease by 50% after 10 years but thereafter assumed to remain constant

** Elasticity is considered to be 75% of initial value from 2020-25, 50% of initial value from 2025-30, 25% of initial value from 2030-40 and 12.5% of initial value from 2040-45

Source: MM India analysis and assumptions

Elasticity graphs of economic indicators are attached as Appendix C and elasticity values are as depicted in Table 5.10.

Table 5.10: Elasticity factor

Vehicle Category	Elasticity factor
Car/Jeep/Van (Private)	0.313
Car/Jeep/Van (Taxi)	0.214
Mini-Bus	0.231
Private Bus	0.179
Education Bus	0.179
Government Bus	0.179
4 Wheeler Tempo	0.471
LCV	0.471
2 - Axle Truck	0.147
3 - Axle Truck	0.147
Multi Axle Truck	0.183
MAV > 6 – Axle	0.183
HCM / EME	0.179

2040-41	52,504	46,293	98,797
2041-42	53,499	47,181	100,680

Source: MM India analysis

5.2 Traffic projections for the Project highway

Forecasting is subjective and approximate. Future pattern of change in population, NSDP, fuel consumption, Per Capita Income etc. can be estimated with limited degree of accuracy. A realistic approach has been adopted by the Consultant to derive the traffic forecasts of the Project highway. Chart 5.1 depicts the total projected traffic based on the four methods discussed at both toll plazas.

Chart 5.1: Aggregate Projected Traffic in PCU/day derived from 4 different methods* for both toll plazas

Source: MM India analysis

* Traffic estimated using vehicle registration method is too high hence not plotted in the graph for better readability

With the available projections based on four different methods, a realistic value is adopted based on projections as per econometric analysis as it represents the best possible traffic growth scenario.

It is considered to accept the projected values as per the projections based on econometric analysis. The aggregated projected values for FY 2041-42 at proposed Ruthiyai and Pakhriyapura toll plaza locations i.e. at km 348+885 and km 400+465 is 100,680 against 33,866 in FY 2015-16 (Base year).

Additionally optimistic scenario has been discussed by increasing the traffic projections with certain justifiable proportion.

5.2.1 Base / Most Likely scenario

Values of projected traffic based on econometric analysis are considered as the base case.

The projected traffic based on these influence factors for proposed Ruthiyai and Pakhriyapura toll plazas at chainage km 348+885 and km 400+465 are as presented in Table 5.12.

Table 5.12: Projected traffic as per Base Scenario (PCU / day)

Year	km 348+885	km 400+465	Total
2015-16	18,215	15,651	33,866
2016-17	19,423	16,720	36,143
2017-18	20,736	17,885	38,621
2018-19	22,164	19,155	41,319
2019-20	23,720	20,541	44,261
2020-21	25,187	21,839	47,025

Source: MM India analysis

Overall average year-over-year growth rate from FY 2016-17 to FY 2041-2042 for vehicular traffic in base scenario / most likely scenario is 4.3%.

5.2.2 Optimistic case

The Consultant has considered increment of 10% of traffic in all categories in FY 2020-21 as compared to base case. This can be attributed to shift of traffic from NH 8 to NH 3 due to completion of various works packages of NH 3.

The projected traffic for the optimistic case at proposed Ruthiyai and Pakhriyapura toll plazas at chainage km 348+885 and km 400+465 are as presented in Table 5.12.

Table 5.13: Projected traffic as per Optimistic Scenario (PCU / day)

Year	km 348+885	km 400+465	Total
2015-16	18,215	15,651	33,866
2016-17	19,423	16,720	36,143
2017-18	20,736	17,885	38,621

Source: MM India analysis

Overall average year-over-year growth rate from FY 2016-17 to FY 2041-2042 for vehicular traffic in Optimistic scenario is 4.7%.

5.2.3 Pessimistic case

In order to derive the underlying assumptions for pessimistic case, the Consultant considers that there can be decrement of about 5% in traffic on Project highway owing to development of all other competing routes which may cause utilisation of alternate route especially for Guna-Bhopal.

The projected traffic for pessimistic case at proposed Ruthiyai and Pakhriyapura toll plazas at chainage km 348+885 and km 400+465 are as presented in Table 5.12.

Table 5.14: Projected traffic as per Optimistic Scenario (PCU / day)

Year	km 348+885	km 400+465	Total
2015-16	18,215	15,651	33,866
2016-17	19,423	16,720	36,143
2017-18	20,736	17,885	38,621

2036-37	45,640	40,163	85,803
2037-38	46,716	41,134	87,850
2038-39	47,822	42,131	89,953

Year	km 348+885	km 400+465	Total
2039-40	48,957	43,156	92,113
2040-41	49,879	43,979	93,857
2041-42	50,824	44,822	95,646

Source: MM India analysis

Overall average year-over-year growth rate from FY 2016-17 to FY 2041-2042 for vehicular traffic in pessimistic scenario is 4.1%.

However, the probability of diversion is less as the Project highway is four lane as compared to all other possible routes which will be two lane as discussed in section 7.

6 Toll revenue estimation

6.1 Category-wise projected tollable vehicles

Toll revenue for the Project highway is analysed based on the total tollable traffic as derived in Chapter 5.

Category-wise total quantum of tollable traffic per day from FY 2015-16 till FY 2041-42 in terms of number of vehicles at proposed Ruthiyai and Pakhriyapura toll plazas at km 348+885 and km 400+465 are as presented in Table 6.1 and Table 6.2.

Table 6.1: Tollable traffic at proposed Ruthiyai Toll Plaza – Km 348+885 (Nos. per day)

6.2 Base toll rates and annual revision

6.2.1 Base toll rates

As per Article 27 of the Concession Agreement, the toll rates (user fees) shall be collected in accordance with the National Highway Fee

(Determination of Rates and Collection) Rules, 2008 and amendments thereto as mentioned in Concession Agreement.

The base toll rate for use of a section of national highway of four or more lanes for base year 2007-08 is as depicted in Table 6.3.

Table 6.3: Base toll rates

Sr. No.	Category of Vehicle	Base rate of fee per km for the base year 2007-08 (in INR)
1	Car, Jeep, Van or Light Motor Vehicle	0.65
2	Light Commercial Vehicle, Light Goods Vehicle or Mini Bus	1.05
3	Bus or Truck (Two Axles)	2.20
4	Three-axle commercial vehicles	2.40
5	Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV (four to six axles)	3.45
6	Oversized Vehicles (seven or more axles)	4.20

Source: National Highway Fee (Determination of Rates and Collection) Rules, 2008 and amendments thereto

With reference to amendment dated 3rd December 2010, the rate of fees for use of bypass forming part of a section of NH constructed with the cost of more than INR 10 Crores, for the base year 2007-8, shall be 1.5 times the rate specified in Table 6.3.

According to Amendment dated 16th December 2013, toll rate (user fee) for use of standalone structure i.e., independent bridge or tunnel or flyover shall be calculated by converting normal length of structure to equivalent length as depicted in Concession Agreement. The applicable rates for equivalent length of structure shall be as stated in Table 6.3.

6.2.2 Annual revision

Annual revision of toll rate (user fees) shall be in accordance to National Highway Fee (Determination of Rates and Collection) Rules, 2008 and amendment thereto dated 3rd December 2010.

The rate stated in Table 6.3 shall be increased without compounding by three percent each year with effect from 1st day of April 2008 and such increased rate shall be deemed to be the base rate for the subsequent year.

Additionally, the applicable base rate shall be revised annually with effect from 1st April of each year to reflect the increase in wholesale price index for the month of December of the year but such revision shall be restricted to forty percent of the increase in wholesale price index.

The formula for determining the applicable rate if fee shall be as stated:

$$\begin{aligned} \text{Applicable rate of fee} \\ = \text{base rate} + \text{base rate} \times \left(\frac{\text{WPI A} - \text{WPI B}}{\text{WPI B}} \right) \times 0.40 \end{aligned}$$

Where,

Applicable rate = User fee payable by the user

Base rate = Value determined by non-compounded increase of 3 percent

WPI A = Wholesale Price Index as of December month in current year

WPI B = Wholesale Price Index of December month in base year (2007-08)

6.3 Toll rate derivation

The toll rate shall be derived taking into consideration following key features as per 'Schedule R' of the Concession Agreement as represented in Table 6.4.

Table 6.4: Project configuration for toll rate

Particulars	Unit	Km 348+885	Km 400+465
Highway length	Km	51.7	41.8
Structures length	Km	4.28	3.28
Bypass length (>10 Cr.)	Km	2.05	5.75

Source: Schedule – R of Concession Agreement

The base rates shall be considered 1.5 times for bypass length in accordance with provision as stated in section 6.2.1.

For the ease of payment and collection of fees, such fee shall be rounded off to the nearest INR 5 in accordance with the fee rules.

6.4 Fee structure

In accordance with Article 27, the user fee structure shall with respect to the categories as be as stated below:

- Single journey ticket: One onward journey only allowed
- Return journey ticket: One return journey within 24 hours from the time of payment / generation of ticket
- Monthly pass: Fifty trips within one month from date of payment / generation of ticket
- Monthly pass for local non-commercial vehicles: Vehicle registered for non-commercial purposes and used as such for commuting on a section of the Project highway, provided that
 - such vehicle is owned by a person who resides within a distance of 20 km (twenty kilometres) from the nearest Toll Plaza;
 - its use of such section of the Project highway does not extend beyond a Toll Plaza other than such nearest Toll Plaza; and
 - such section of the Project highway has no service road or alternative road; and shall include a vehicle that uses a section of the Project highway but does not cross a Toll Plaza

The rate shall be INR 150 with reference to the base year 2007-08

6.5 Review of Wholesale Price Index (WPI)

As mentioned in section 6.2, annual revision is function of Wholesale Price Index for the month of December in any particular year.

The Consultant has predicted future WPI on the basis of the Survey of Professional Forecasters on Macroeconomic Indicators – 32nd Round by Reserve Bank of India and best fit trend line analysis for WPI values.

As per, Results of the Survey of Professional Forecasters on Macroeconomic Indicators – 32nd Round by Reserve Bank of India annual average change in WPI for ten years starting from 2016-17 is expected to be 4.1%⁵. Thereafter the Consultant has calculated the WPI values based on trend analysis. Table 6.5 depicts the estimated values of WPI.

⁵ <https://rbi.org.in/scripts/PublicationsView.aspx?id=16202>

Table 6.5: Estimated values of WPI

Year	WPI	% Increase
2014-15	179.60	6.4%
2015-16	178.70	-0.5%
2016-17	177.40	-0.7%
2017-18	184.67	4.1%
2018-19	192.25	4.1%
2019-20	200.13	4.1%
2020-21	208.33	4.1%
2021-22	216.87	4.1%
2022-23	225.77	4.1%
2023-24	235.02	4.1%

2034-35	323.67	2.6%
2035-36	331.77	2.5%
2036-37	339.89	2.4%
2037-38	348.03	2.4%
2038-39	356.20	2.3%
2039-40	364.39	2.3%
2040-41	372.60	2.3%
2041-42	380.83	2.2%

Source: WPI data: Office of the Economic Adviser and MM India Analysis

Toll rates at toll plaza are considered to be increasing equivalent to forty percentage increment in WPI year over year as per formula for calculation of new toll rates as stated in section 6.2.2. However, it is to be noted that macro-economic parameters like WPI being dynamic in nature, might not follow the values as projected by the Consultant.

6.6 Ticket-wise distribution of traffic

On the basis of O-D survey and registration plate survey, ticket-wise distribution for various categories of vehicles at proposed Ruthiyai and Pakhriyapura Toll Plazas are as depicted in Table 6.6.

Table 6.6: Ticket-wise distribution of traffic at proposed Ruthiyai and Pakhriyapura Toll Plazas

Category	Ruthiyai Toll Plaza (km 348+885)	Pakhriyapura Toll Plaza (km 400+465)
Single Journey		
Car/Jeep/Van	45.2%	76.91%
LCV	71.8%	79.49%
Bus/Truck	84.7%	89.59%
Up to 3 Axle Vehicle	98.1%	97.76%
4 to 6 Axle Vehicle	97.5%	98.94%
HCM / EME	100.0%	100.00%
7 or more Axle vehicle	100.0%	100.00%
Return Journey		
Car/Jeep/Van	6.6%	8.76%
LCV	9.1%	11.36%
Bus/Truck	2.2%	4.84%
Up to 3 Axle Vehicle	1.4%	1.45%
4 to 6 Axle Vehicle	2.4%	0.59%
HCM / EME	0.0%	0.00%
7 or more Axle vehicle	0.0%	0.00%
Monthly Pass		
Car/Jeep/Van	25.2%	8.21%
LCV	19.1%	9.16%

6.7 Projected toll revenue

Total revenue generated as per the toll rates projected for toll plaza as depicted in Appendix D and trip frequency distribution as mentioned section 6.6 is presented in Table 6.7.

Table 6.7: Projected Toll revenue (INR Crores)

Year	km 348+885	km 400+465	Total
2018-19*	31.92	25.74	57.66
2019-20	66.66	53.60	120.25
2020-21	73.36	59.44	132.81
2021-22	81.30	66.02	147.32
2022-23	90.77	73.49	164.26
2023-24	100.82	82.23	183.05
2024-25	112.59	91.11	203.70
2025-26	122.01	99.02	221.03
2026-27	132.28	107.68	239.96
2027-28	140.77	114.94	255.70
2028-29	151.64	123.95	275.59
2029-30	163.65	133.67	297.31
2030-31	174.56	142.47	317.03
2031-32	186.90	152.35	339.25
2032-33	198.47	162.37	360.84
2033-34	211.48	173.61	385.09
2034-35	224.71	185.24	409.95
2035-36	239.48	196.64	436.12
2036-37	251.91	206.77	458.69
2037-38	266.36	218.30	484.66
2038-39	281.35	231.20	512.55
2039-40^	250.84	205.69	456.53
2040-41	233.90	191.84	425.74
2041-42**	235.79	194.50	430.29
Total	4,023.52	3,291.88	7,315.40

* From 15th September 2018

^ 75% of total revenue considered from 11th August 2039 till end of concession period, in accordance with clause 29.2.2 of Concession agreement as the average PCU for both toll plaza exceed 27,136 PCU as on target date i.e., 1st October 2025. 25% of the realizable revenue shall be paid to NHAI in the form of premium

** Till 18th March 2042 (End of concession period)

Source: MM India analysis

The projected cumulative toll revenue considering the base / most likely scenario is INR 7,315.40 Crores. The average Y-o-Y growth rate observed is about 6.35%.

Taking into consideration traffic values in accordance with optimistic scenario as discussed in section 5.2.2, the project cumulative toll revenue stand at INR 8,029.07 Crores with Y-0-Y growth rate of 6.15%. However, in case of pessimistic scenario cumulative toll revenue is estimated at INR 6,958.45 Crores with Y-o-Y growth rate of 6.09%.

7 Alternate route / transportation mode analysis

Alternate route and mode analysis provides an overview of potential factors that might affect traffic on the Project highway. Alternate route provides an option to the traffic to by-pass the Project highway, while mode shifts from rail to road or vice versa also affects the quantum of traffic on the Project highway.

7.1 Alternate route: Mumbai – Agra

Existing alternate route between Mumbai – Agra is as presented in Map 7.1.

Map 7.1: Alternate Routes Mumbai – Agra

Source: Google Map and MM Analysis

Route wise distance details as depicted in Table 7.1.

Table 7.1: Route details Mumbai – Agra

Particulars	Details of routes	Description	Distance (km)
Route 1	NH 3	Mumbai – Indore	584
		Indore – Biaora	191
		Biaora – Guna	94
		Guna – Shivpuri	104
		Shivpur – Gwalior	117
		Gwalior – Agra	120
		Mumbai – Agra	1,210
Route 2	NH 3, NH 90, NH 76	Mumbai – Indore	584
		Indore – Jhalawar	232
		Jhalawar – Shivpuri	227
		Shivpur – Gwalior	117
		Gwalior – Agra	119
		Mumbai – Agra	1,279
Route 3	NH 3, NH 86, NH 26, NH 75	Mumbai - Indore	584
		Indore - Bhopal	194
		Bhopal - Lalitpur	247
		Lalitpur - Jhansi	96
		Jhansi - Gwalior	104
		Gwalior - Agra	120
		Mumbai – Agra	1,345
Route 4	NH 8, NH 113, NH 76, NH 12, NH 11	Mumbai - Vadodara	418
		Vadodara - Chittorgarh	461
		Chittorgarh - Bharatpur	508
		Bharatpur - Agra	58
		Mumbai – Agra	1,445

Source: MM analysis

Key observations for Mumbai – Agra route:

- From distance matrix as mentioned in the Table 7.1, it can be inferred that Route 1 via NH-3 passing through the Project stretch i.e. Guna - Biaora is the shortest.
- Route 2 passing through Indore, Shivpuri and Gwalior has a total travel distance of 1,279 km i.e., higher by 69 km than the shortest route i.e., Route 1.
- Route 3 passing by Indore, Bhopal, Lalitpur, Jhansi and Gwalior is about 135 km more than the shortest route i.e., Route 1.

- While, Route 4 comprising of NH 8 passing via Vadodara, Chittorgarh and Bharatpur is higher by about 235 km as compared to Route 1 passing via Project highway.

7.1.1 Toll Cost Analysis

Details of toll collection plazas on all four alternate routes between Mumbai and Agra are as mentioned in previous section are as summarized in Table 7.2.

Table 7.2: Toll plaza locations Mumbai – Agra route

Sr. No.	Route 1	Route 2	Route 3	Route 4
1	Kharegaon	Kharegaon	Kharegaon	Khaniwade
2	Arjunali	Arjunali	Arjunali	Charoti
3	Ghoti	Ghoti	Ghoti	Bhagwada
4	Baswant	Baswant	Baswant	Boriach
5	Chandwad	Chandwad	Chandwad	Choryasi
6	Laling	Laling	Laling	Bharthan
7	Songir	Songir	Songir	Bhatwada
8	Nardana	Nardana	Nardana	Sonwa
9	Shirpur	Shirpur	Shirpur	Sikandra
10	Khalghat	Khalghat	Khalghat	Amoli
11	Kalghat	Kalghat	Kalghat	Ludhawai
12	Indore Dewas (Indore Bypass)	Indore Dewas (Indore Bypass)	Indore Dewas (Indore Bypass)	Korai
13	Indore Dewas (Indore Side)	Indore Dewas (Indore Side)	Indore Dewas (Indore Side)	
14	Guna	Fatehpur	Malthone	
15	Choundha	Mundiyar	Vighaket	
16	Jajau	Choundha	Babina	
17	Pakhriyapura	Jajau	Gwalior (by pass)	
18	Ruthyai	Ujjain – Jhalawar*	Choundha	
19	Shivpuri – Dewas (3 tolls)*	Jhalwar – Baran*	Jajau	

* Proposed tolls

Source: NHTIS and MM India Analysis

Key information:

- Nos. of toll plaza on Route 1: 19
- Nos. of toll plaza on Route 2: 19
- Nos. of toll plaza on Route 3: 19
- Nos. of toll plaza on Route 4: 12

Total toll cost for each class of vehicles travelling between Agra – Mumbai is mentioned in Table 7.3.

Table 7.3: Total toll cost Agra – Mumbai

Category	Route 1	Route 2	Route 3	Route 4
Car / Jeep/Van	1,490	1,352	1,357	707
LCV	1,490	1,352	1,357	707
Bus /Truck	2,451	2,234	2,259	1,232
Up to 3 axle vehicle	5,036	4,541	4,606	2,455
4 to 6 axle	7,141	6,778	6,623	3,986
HCM/EME	8,245	7,447	7,552	3,986
7 or more axle	8,245	7,447	7,552	4,072

Source: NHAI toll information system and MM India analysis

Route 4 has least whereas Route 1 has highest toll cast as compared to all the four alternative routes. However, this is not the clear indicator of preference of route which the traveller might choose as vehicle running cost is also taken into consideration. Hence, the Consultant has derived Total Travel Cost as discussed in subsequent section.

7.1.2 Total Travel Cost

Total Travel Cost analysis is arithmetic summation of toll cost and vehicle running cost on any particular route between Mumbai and Agra.

$$TTC = TC + [\{TD/ Mileage\} \times FC]$$

Where,

TTC = Total Travel Cost

TC = Toll Cost, on particular route

TD = Total Distance, between Origin and Destination on selected route

Mileage = Fuel efficiency of vehicle in km / litre

FC = FUEL Cost, depending on vehicle type (Petrol or Diesel)

Toll cost analysis is as carried and presented in preceding section. While, in order to determine the vehicle running cost, mileage considered for different categories of vehicles are as depicted in Table 7.4.

Table 7.4: Mileage consideration for vehicles

Vehicle class	Fuel type	Mileage (km/Litre)
Car/Jeep/Van	Petrol	14

Vehicle class	Fuel type	Mileage (km/Litre)
Car/Jeep/Van	Diesel	21
LCV	Diesel	15
Bus/Truck	Diesel	4
Up to 3 Axle Vehicle	Diesel	4
4 to 6 Axle	Diesel	3
HCM / EME	Diesel	2
7 or more Axle	Diesel	2

Source: MM India desk research

Fuel prices for Petrol and Diesel on the Project highway are considered as INR 68.00 per litres and INR 50.83 per litre respectively.

On the basis of vehicle operation cost and toll payable on each alternative route between Mumbai and Agra, total travel cost for each vehicle class was assessed as presented in Table 7.5.

Table 7.5: TTC: Agra – Mumbai (INR)

Category	Route 1	Route 2	Route 3	Route 4
Car / Jeep/Van (Petrol)	7,367	7,564	7,890	7,726
Car / Jeep/Van (Diesel)	4,419	4,448	4,613	4,205
LCV	6,551	6,568	6,817	6,129
Bus /Truck	20,412	20,794	21,698	20,817
Up to 3 axle vehicle	22,517	23,031	23,715	22,348
4 to 6 axle	28,746	29,118	30,341	28,469
HCM/EME	38,997	39,953	41,735	40,797
7 or more axle	39,837	40,648	42,435	40,906

Source: MM India Analysis

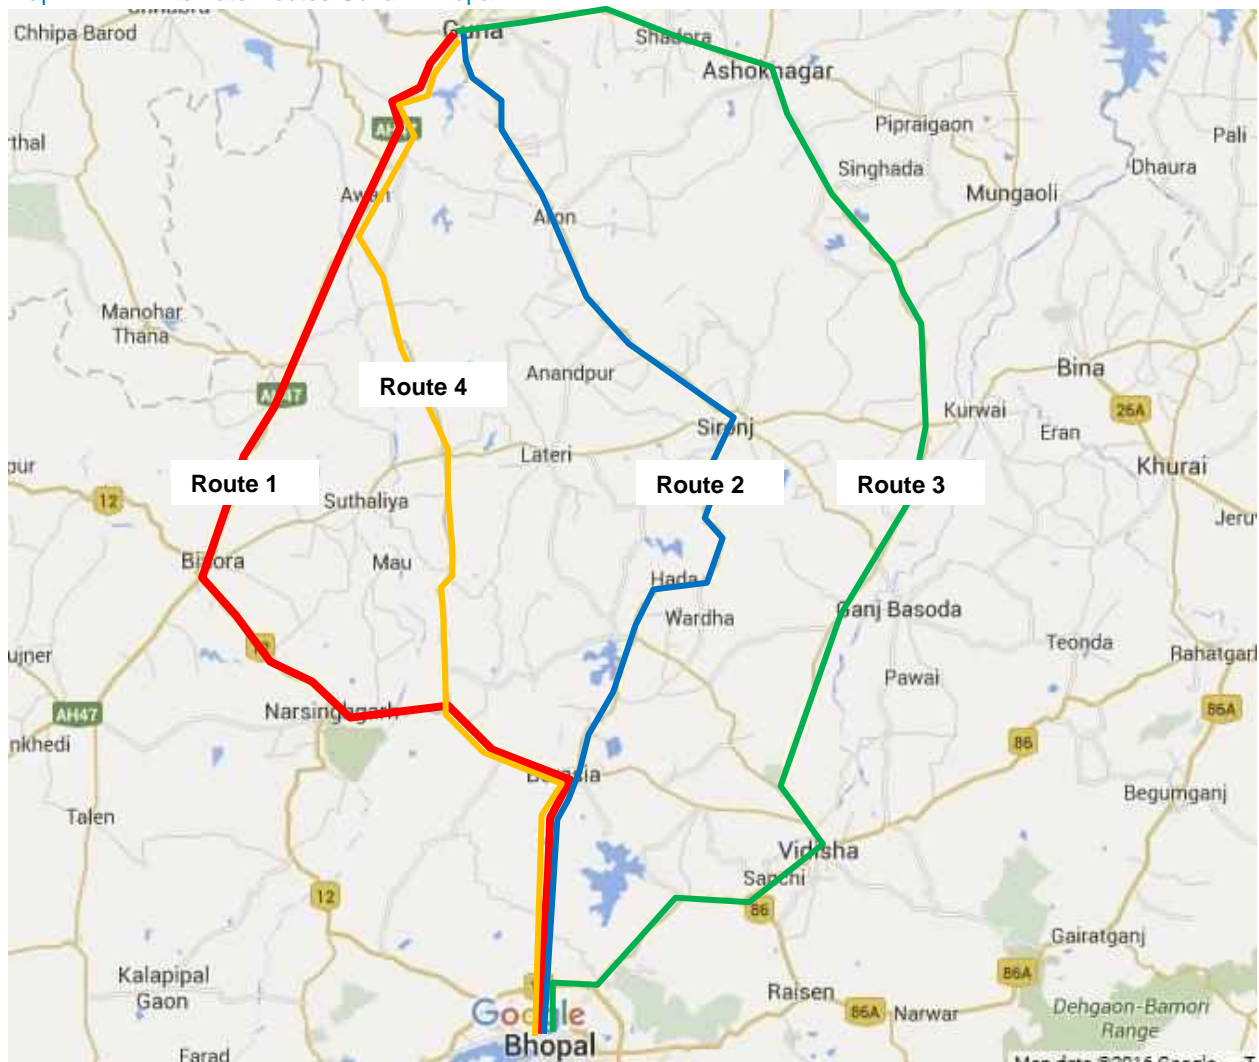

Key observations are as mentioned below:

- Total Travel Cost for Route-1 is cheapest amongst all the alternate routes; while Route-3 is the most expensive route for all class of vehicles.
- In case of Car/Jeep/Van and LCV vehicle category Route 4 proves to be the cheapest, but owing to considerable higher distance and time of travel Route 1 will be preferred option.
- In case of commercial vehicles, marginal difference in TTC between Route 1 and Route 4; however due to time considerations and distance considerations Route 1 will be preferred post completion of entire Dewas – Shivpuri stretch.

7.2 Alternate route: Guna – Bhopal

Existing alternate route between Guna – Bhopal is as presented in Map 7.3.

Map 7.2: Alternate Routes Guna – Bhopal

Source: Google Map and MM Analysis

Route wise distance details as depicted in Table 7.6.

Table 7.6: Route details Guna – Bhopal

Particulars	Details of routes	Description	Distance (km)
Route 1	NH 3, NH 12	Guna – Biaora	94
		Biaora – Narsinghgarh	34
		Narsinghgarh - Bhopal	85
		Guna – Bhopal	213
Route 2	SH 23	Guna – Sironj	82
		Sironj – Berasia	70
		Berasia – Bhopal	43
		Guna – Bhopal	195
Route 3	SH 19, SH 26	Guna -Ashoknagar	48
		Ashoknagar - Vidisha	136
		Vidisha – Bhopal	57
		Guna – Bhopal	241
Route 4	SH 19	Guna –Janjali	39
		Janjali – Berasia	101
		Berasia – Bhopal	43
		Guna – Bhopal	183

Source: MM analysis

Key observations for Guna – Bhopal route:

- List of routes in lower to higher order in terms of distance is as stated Route 4, Route 2, Route 1 and Route 3.
- Bhopal – Berasia – Sironj will be four lane, however Guna – Sironj will be a two lane section.
- Hence, the Project highway comprising of Route 1 is the second longest route between Guna and Bhopal.

7.2.1 Toll Cost Analysis

Details of toll collection plazas on all four alternate routes between Guna and Bhopal are as mentioned in previous section are as summarized in Table 7.7.

Table 7.7: Toll plaza locations Guna – Bhopal route

Sr. No.	Route 1	Route 2	Route 3	Route 4
1	Ruthyai*	Bajrangarh*	Guna – Ishagarh	Ruthyai

Sr. No.	Route 1	Route 2	Route 3	Route 4
2	Pakhriyapura*	Berasia*	Bhopal - Vidisha	Berasia – Bhopal*
3	Parvati bridge	Sironj – Berasia – Bhopal*		
4	Bhopal – Biaora*			

Source: NHTIS and MM India Analysis

* Proposed tolls

Key information:

- Nos. of toll plaza on Route 1: 4
- Nos. of toll plaza on Route 2: 3
- Nos. of toll plaza on Route 3: 2
- Nos. of toll plaza on Route 4: 2

Total toll cost for each class of vehicles travelling between Guna – Bhopal is mentioned in Table 7.8.

Table 7.8: Total toll cost Guna – Bhopal

Category	Route 1	Route 2	Route 3	Route 4
Car / Jeep/Van	270	140	40	90
LCV	270	140	40	90
Bus /Truck	415	335	100	170
Up to 3 axle vehicle	885	690	205	355
4 to 6 axle	965	830	245	405
HCM/EME	1,385	1,165	495	580
7 or more axle	1,385	1,165	495	580

Source: NHA toll information system and MM India analysis

Route 3 has least amount of toll followed by Route 4, Route 2 and Route 1 (Project highway). However, this is not the clear indicator of preference of route which the traveller might choose as vehicle running cost is also taken into consideration. Hence, the Consultant has derived Total Travel Cost as discussed in subsequent section.

7.2.2 Total Travel Cost

Total Travel Cost analysis is arithmetic summation of toll cost and vehicle running cost on any particular route between Guna and Bhopal.

$$TTC = TC + \{TD / \text{Mileage}\} \times FC$$

Where,

TTC = Total Travel Cost

TC = Toll Cost, on particular route

TD = Total Distance, between Origin and Destination on selected route

Mileage = Fuel efficiency of vehicle in km / litre

FC = Fuel Cost, depending on vehicle type (Petrol or Diesel)

Toll cost analysis is as carried and presented in preceding section. While, in order to determine the vehicle running cost, mileage considered for different categories of vehicles are as depicted in Table 7.9.

Table 7.9: Mileage consideration for vehicles

Vehicle class	Fuel type	Mileage (km/Litre)
Car/Jeep/Van	Petrol	14
Car/Jeep/Van	Diesel	21
LCV	Diesel	15
Bus/Truck	Diesel	4
Up to 3 Axle Vehicle	Diesel	4
4 to 6 Axle	Diesel	3
HCM / EME	Diesel	2
7 or more Axle	Diesel	2

Source: MM India desk research

Fuel prices for Petrol and Diesel on the Project highway are considered as INR 68.00 per litres and INR 50.83 per litre respectively.

On the basis of vehicle operation cost and toll payable on each alternative route between Guna and Bhopal, total travel cost for each vehicle class was assessed as presented in Table 7.10.

Table 7.10: TTC: Guna – Bhopal (INR)

Category	Route 1	Route 2	Route 3	Route 4
Car / Jeep/Van (Petrol)	1,305	1,087	1,211	979
Car / Jeep/Van (Diesel)	786	612	623	533
LCV	1,137	996	917	790
Bus /Truck	3,592	3,168	3,268	2,680
Upto 3 axle vehicle	3,672	3,308	3,308	2,730
4 to 6 axle	4,994	4,469	4,578	3,681
HCM/EME	6,798	6,121	6,620	5,231
7 or more axle	7,113	6,611	6,620	5,416

Source: MM India Analysis

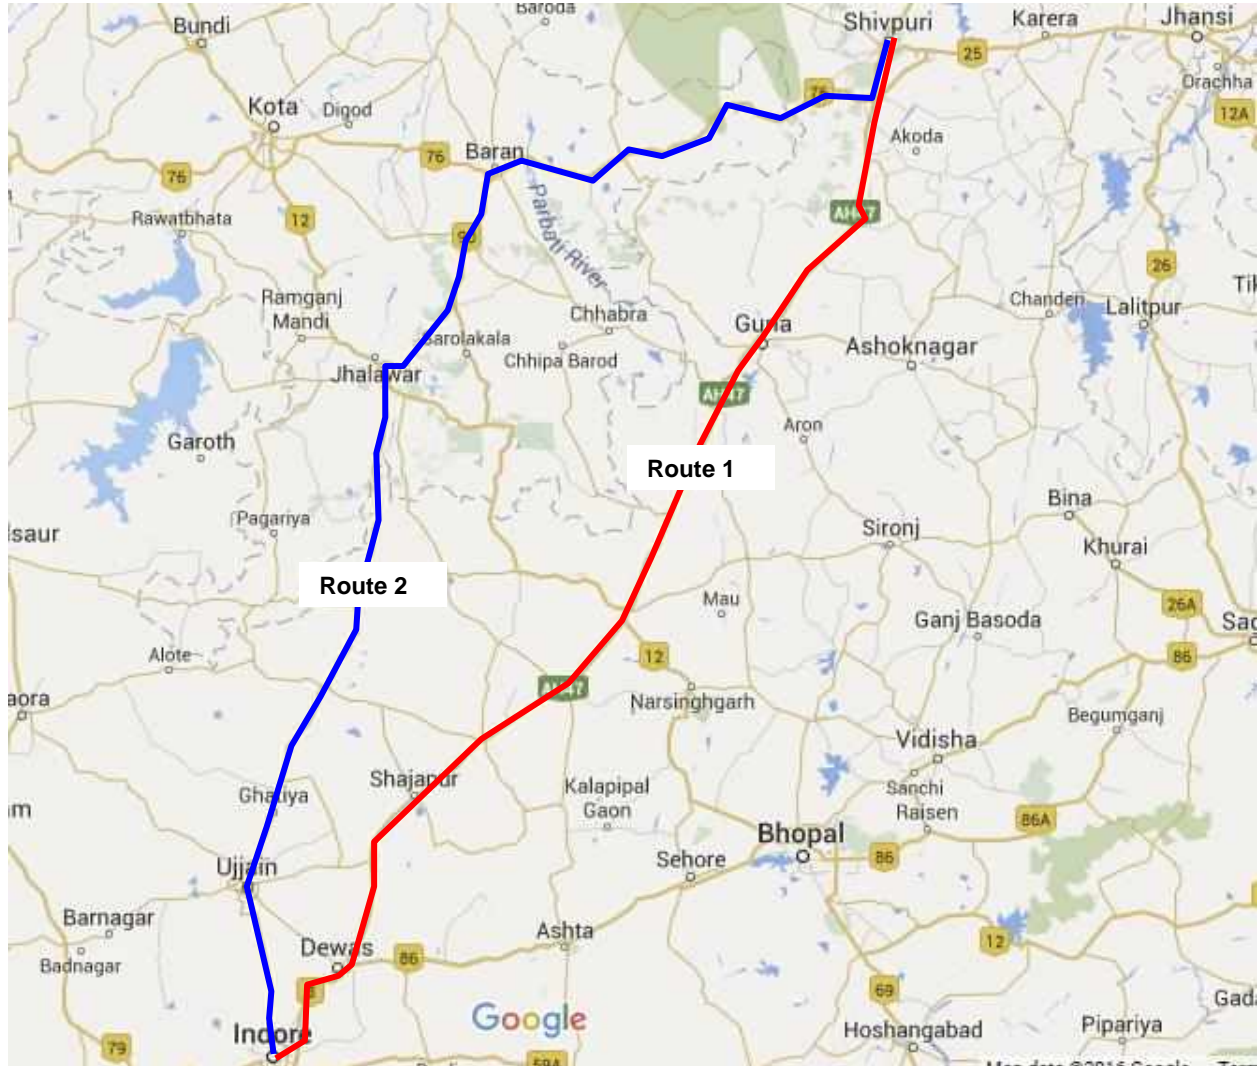

Key observations are as mentioned below:

- Route 2 and Route 3 are marginally cheaper by about 10% for commercial vehicles as compared to Route 1.
- Route 4 is having a two lane section in between Jajali and Berasia, hence it will be the least preferred route for commercial vehicles.
- In case of Route 2, Guna – Sironj is a two lane section followed by Sironj – Bhopal which is a four lane section. Hence, minor proportion of proposed traffic plying on Project highway may shift to Route 2. However, the shift will be marginal owing to higher travelling time and lower safety as Guna – Sironj section is of about 83 km is two lane.
- Minor traffic can also be shifted to Route 3 as it is cheaper but time required will be higher as distance is more by about 30 km and 50 km as compared to Route 1 and Route 3 respectively.

7.3 Alternate route: Indore – Shivpuri

Existing alternate route between Indore – Shivpuri is as presented in Map 8.1.

Map 7.3: Alternate Routes Indore – Shivpuri

Source: Google Map and MM Analysis

Route wise distance details as depicted in Table 7.11.

Table 7.11: Route details Indore – Shivpuri

Particulars	Details of routes	Description	Distance (km)
Route 1	NH 3	Indore - Biaora	191
		Biaora - Guna	94
		Guna - Shivpuri	104
		Indore – Shivpuri	389
Route 2	NH 76, SH 27	Indore - Jhalawar	232

Particulars	Details of routes	Description	Distance (km)
		Jhalawar - Baran	93
		Baran - Shivpuri	147
		Indore – Shivpuri	472

Source: MM analysis

Key observations for Indore – Shivpuri route:

- Route 1 between Indore and Shivpuri comprises of Project highway.
- As compared to the alternative Route 2, Route 1 is shorter by about 83 km.

7.3.1 Toll Cost Analysis

Details of toll collection plazas on all four alternate routes between Indore and Shivpuri are as mentioned in previous section are as summarized in Table 7.12.

Table 7.12: Toll plaza locations Indore – Shivpuri route

Sr. No.	Route 1	Route 2
1	Indore Dewas (Indore Bypass)	Fatehpur
2	Indore Dewas (Indore Side)	Mundiyar
3	Guna	Jhalawar – Baran*
4	Pakhriyapura*	
5	Ruthyai*	

* Proposed tolls

Source: NHTIS and MM India Analysis

Key information:

- Nos. of toll plaza on Route 1: 5
- Nos. of toll plaza on Route 2: 3

Total toll cost for each class of vehicles travelling between Indore– Shivpuri is mentioned in Table 7.13.

Table 7.13: Total toll cost Indore – Shivpuri

Category	Route 1	Route 2
Car / Jeep/Van	188	210
LCV	188	210
Bus /Truck	302	325

Category	Route 1	Route 2
Up to 3 axle vehicle	660	675
4 to 6 axle	858	960
HCM/EME	1,043	1,050
7 or more axle	1,043	1,050

Source: NHA toll information system and MM India analysis

Toll cost is almost same in case of both the routes, hence the decision shall be based on total travel cost in addition to width of road.

7.3.2 Total Travel Cost

Total Travel Cost analysis is arithmetic summation of toll cost and vehicle running cost on any particular route between Indore and Shivpuri.

$$TTC = TC + \left[\left\{ \frac{TD}{\text{Mileage}} \right\} \times FC \right]$$

Where,

TTC = Total Travel Cost

TC = Toll Cost, on particular route

TD = Total Distance, between Origin and Destination on selected route

Mileage = Fuel efficiency of vehicle in km / litre

FC = Fuel Cost, depending on vehicle type (Petrol or Diesel)

Toll cost analysis is as carried and presented in preceding section. While, in order to determine the vehicle running cost, mileage considered for different categories of vehicles are as depicted in Table 7.14.

Table 7.14: Mileage consideration for vehicles

Vehicle class	Fuel type	Mileage (km/Litre)
Car/Jeep/Van	Petrol	14
Car/Jeep/Van	Diesel	21
LCV	Diesel	15
Bus/Truck	Diesel	4
Up to 3 Axle Vehicle	Diesel	4
4 to 6 Axle	Diesel	3
HCM / EME	Diesel	2
7 or more Axle	Diesel	2

Source: MM India desk research

Fuel prices for Petrol and Diesel on the Project highway are considered as INR 68.00 per litres and INR 50.83 per litre respectively.

On the basis of vehicle operation cost and toll payable on each alternative route between Indore and Shivpuri, total travel cost for each vehicle class was assessed as presented in Table 7.15.

Table 7.15: TTC: Indore – Shivpuri (INR)

Category	Route 1	Route 2
Car / Jeep/Van (Petrol)	2,077	2,503
Car / Jeep/Van (Diesel)	1,130	1,352
LCV	1,620	1,924
Bus /Truck	5,603	6,673
Upto 3 axle vehicle	5,801	6,958
4 to 6 axle	7,634	9,047
HCM/EME	10,929	13,046
7 or more axle	11,129	13,296

Source: MM India Analysis

Key observations are as mentioned below:

- Even though the toll cost is almost similar on both the routes, total travel cost at Route 1 is cheaper by about 20% for all categories of vehicles due to lesser distance.
- Hence, in case of movement between Indore and Shivpuri – Route 1 comprising of Project Highway shall be preferred route.

7.4 Alternate mode analysis

Alternate mode of transport can significantly affect traffic on the Project highway in case of mode shift. Rail is only alternate mode of transport available along the Project highway.

7.4.1 Passenger traffic

Based on stakeholder consultation, the Consultant noted that there is no possibility of mode shift in present scenario. The Consultant noted train availability between Guna, Indore and Bhopal. Brief details about passenger rail connectivity are as depicted in Table 7.16.

Table 7.16: Passenger rail connectivity between Indore Guna and Bhopal

Category	Guna - Indore		Guna - Bhopal	
	No. of trains	Frequency	No. of trains	Frequency

	Guna - Indore		Guna - Bhopal	
Express	5	Daily / Weekly	-	-
Super-Fast	-	-	1	Weekly
Passenger	-	-	1	Daily

Source: MM India desk research

Due to availability of considerable number of travel options by rail, possibility of shift of passenger traffic from road to rail cannot be ruled out due to:

- Increased transportation cost through roadways
- Improved railway connectivity on this route

In future, equal proportion of traffic shall also be added on the Project highway due to increase in spending power (disposable income), Widening of the project stretch leading to increase of motor vehicle plying on the Project highway. Hence, the net effect will be compensated.

7.4.2 Goods traffic

In case of goods movement, no major possibility of mode shift from road to rail is envisaged on the Project highway as:

- Only three major rail loading / unloading point in vicinity
 - Guna Junction
 - Biaora Rajgarh
 - Pechora station
- GAIL and National Fertiliser Limited has own railway siding within plant.

Key observations pertaining to goods traffic movement via rail:

Guna Junction

- Guna junction is a main railway station near the Project highway. It serves as the distribution point for goods carried via rail in the region.
- Guna Junction has lines branching out in four directions, namely:
 - Towards Gwalior - New Delhi
 - Towards Kota - Rajasthan
 - Towards Sagar- Rourkella & Eastern part
 - Towards Indore – Maharashtra
- Major cargo handled at Guna :
 - *Cement, Fertilizers, DAP*
 - *Wheat, DOC*

- **Cement**
 - Arrives from Damor or Rajasthan
 - Material goes into market agencies or Godowns
- **Fertilizer**
 - Normally arrives from Kandla or Chambal
 - Transported using trucks to Biaora and in the local market
- **DOC**
 - DOC are Soya chunks from Ruchi Soya Factory located in Guna City
 - The chunks are transported via rail to various distant locations
- **Wheat**
 - 50-60 rakes of wheats normally gets loaded in case of good framing results else 10-15 rakes while poor monsoon

Biaora / Pechora Station

- **Fertilizers and Cement**
 - Unloading of about 4-5 rakes per month and goes in the catchment region
- **Wheat**
 - 4-5 rakes per month in post-harvesting season

8 Project Influence Area (PIA)

Project Influence Area comprises study pertaining to area of direct impacts and indirect impacts due to the Project highway. In case of any particular highway projects there are no area of direct impacts as in case of urban roads, but there are large numbers of areas of indirect impacts. Key areas of indirect impacts are namely tourism and industrial sector.

8.1 Extent of Influence

Extent of influence by a project can be defined into three categories as depicted in Figure 8.1.

Figure 8.1: Extent of Influence

Source: <http://www.bicusa.org/wp-content/uploads/2013/11/G-Morgan-Area-of-Influence-for-IP-meeting-April-18-2013.pdf>

Details of each spheres is as mentioned below:

- **Sphere of Control:** This depicts direct impact or control project has on its immediate environment
- **Sphere of Influence:** Project does not have any direct control but indirectly or directly influences the large surroundings of the Project
- **Sphere of Concern:** This depicts no direct or indirect influence just the potential of any type of impact on the environment

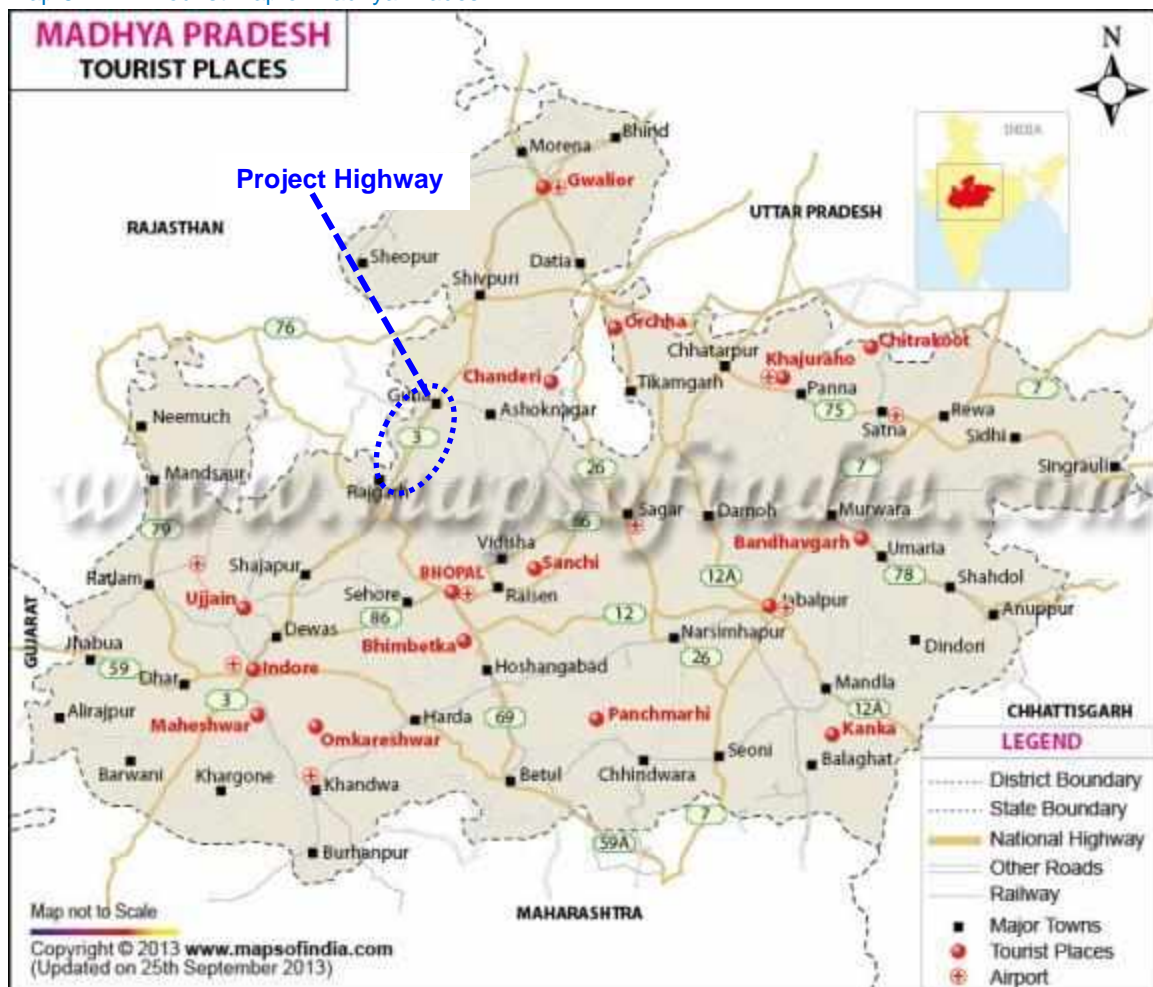

Any project has its limitation of influence based on these three extents.

8.2 Tourism sector

The Project Highway is an important linkage between Jhansi, Shivpuri and Agra in North with Bhopal as well as Indore in southern direction of Project highway. NH 3 is one of the important state highway connecting states of Madhya Pradesh and Uttar Pradesh.

Key tourist locations surrounding project stretch are as presented in Map 8.1.

Map 8.1: Tourist map of Madhya Pradesh

Source: <http://www.mapsofindia.com/maps/madhyapradesh/madhya-pradesh-tourist-map.jpg> & MM India Analysis

Key tourist locations as depicted in map are accessible through the Project Highway corridor, hence has an influencing effect on tourism

sector. Key characteristics related to the Project highways and associated tourism area is as discussed:

- **Tourist locations falling on the Project highway:** There are no particular tourist locations on the Project highway.
- **Tourist circuit / places of Madhya Pradesh and Uttar Pradesh:**
 - NH 3 provides an important connectivity for tourist movements for various locations in Madhya Pradesh as well as Uttar Pradesh.
 - Tourists places like Indore and nearby region (Ujjain, Maheshwar, Mandu, Omkareshwar etc.), Gwalior (city and Chanderi textile cluster), Shivpuri and Jhansi region (Sanctuary, Khajuraho and Orchha) can be accessed through NH 3.
 - An important tourist location like Agra can also be accessed through NH 3 for traffic moving to and from Madhya Pradesh.

For tourism sector NH 3 is convenient route, hence so these places falls under **Sphere of Influence**.

8.3 Industrial sector

Few industrial establishments located along the Project highway are as mentioned below:

- **National Fertilizers Limited (NFL):** Vijapur unit of NFL located on the Project Highway is one of the four units of NFL in Indian. The plant has a production capacity of about 3000 TPD of Ammonia streams, 5000 TPD of Urea streams and other related products.
- **GAIL Limited:** GAIL has a large complex having two phases is located at Ragahogarh junction.
- **Aggregate crusher plants:** Few crusher plants are located on the Project highway near Pakhriapura village and utilised in local market. Details of few crusher plants is as stated:
 - Jagdish Ishkon Crusher
 - Deepak Kumar Jha
 - Sunil Kumar Jha
 - Guddha Aggarwal
 - Sonia Stone Crusher

Hence, for the industrial development present on Guna – Biaora road, the Project highway is an important connecting link and falls under **Sphere of Control**.

Industrial development in the vicinity and adjacent states also has an influence on the Project due to road based movement of raw materials as well as finished products. Brief of industrial development surrounding project corridor is as mentioned below.

Major Industries around Guna

- **Ruchi Soya:** Ruchi Soya industries opened up edible oil refinery unit at Guna which sources raw materials from the farmlands surrounding the project stretch.
- **Krishak S.S.K Ltd:** Sugar Plant near Vijaipur railway station at Narayanpur (Guna), it sources sugar cane from areas surrounding project stretch.
- **Bharat Oman Refinery:** The Bharat Oman Refineries Limited owns and operates Bina Refinery, located at Bina in the Sagar district. Built as a joint venture between India's Bharat Petroleum Corporation Limited and Oman Oil Company, has capacity of 6 MTPA and was commissioned in May 2011.

Major Industries around Gwalior

- Gwalior enjoys strategic location advantage as being a main junction on Agra / New Delhi related traffic and on NH 3 and NH 75.
- Gwalior is surrounded by three Industrial areas - Sitholi, Banmore and Malanpur situated on NH 75, NH 3 and NH 92 respectively.
- Malanpur is the biggest industrial area in Gwalior region.
- Important industries in and around Gwalior are dairy, chemical, manufacturing, and textiles. Handicraft and small industries are also found such as Gwalior potteries. Some major companies are:
 - **Chand Engineering Industries:** Situated at Tansen Nagar is involved into manufacturing of engineering products like industrial gears, food processing equipment, railway sleeper, conveyors and transmission belts.
 - **Sujit Agro Industries:** Located at Morar company is engaged into production of tool and mechanical equipment for agriculture sector.
 - **Precision Industrial Systems:** Located at Birla Nagar and involved in steel casting, railway component manufacturing, railway track tools and precision industrial systems.

To and fro movement of goods from Gwalior may utilize NH 3 comprising of Project highway.

Major Industries around Bhopal

One of the most important industrial hubs of the country is located in this region. The major industries in Bhopal are engaged in producing cotton textile, jute and electrical products.

Few of the most important industries of Bhopal are given below:

- **Anant Spinning Mills:** It is a Vardhman Group company located in New Industrial Area of Bhopal the industry is engaged in producing yarns, acrylic fibre, sewing threads, etc. The unit is largest exporter of cotton in India. Apart from Anant Spinning Mills there are many other companies engaged in the producing cotton textiles in Bhopal.
- **Bharat Heavy Electricals Limited (BHEL):** The company is mainly engaged in producing industrial machines like transportation equipment, hydro turbines, hydro generators, heat exchangers, produce power transmission products like transformers, switchgears and large current rectifiers. Bhopal Switchgears Private Limited is among the other important suppliers of electrical goods in the city of Bhopal.
- Other important industries in Bhopal are related to the manufacturing of jute and steel products.
- Hence, the Project highway may facilitate movement of goods between Bhopal and northern regions.

Rajasthan

- **JSW Steel Plant:** A new JSW Steel Plant is getting constructed at Chhabra located near border of Rajasthan & Madhya Pradesh.
- **Chambal Fertilizers:** Chambal Fertilisers and Chemicals Limited is one of the largest private sector fertilizer producers in India; promoted by Zuari Industries Limited. Hi-tech nitrogenous fertiliser (urea) plants are located at Gadepan in Kota district of Rajasthan with production capacity of about 2 MMTPA of Urea.
- The Project highway may be utilized for transportation of goods between both the states.

Hence, in case of industrial development in surrounding areas and stated the Project highway falls under **Sphere of Influence**.

9 Tolling strategy

Tolling is an effective solution to deal with today's most pressing transportation issues. Toll facilities help to improve mobility and provide an additional source of funding for construction and maintenance of road projects. Tolling continues to evolve providing new opportunities to enhance mobility but with sound financing and operational strategies.

9.1 Provisions as per Concession Agreement

Relevant clauses as per Concession Agreement pertaining to tolling aspects are discussed in the subsequent sections.

9.1.1 Revision of fees

Fees levied on the road users will be revised every year on 1st April in accordance with the provisions of the Fee Rules; provided, however, that no revision shall be effected within a period of 6 (six) months from the date of the preceding revision of Fee.

9.1.2 Exemption for local users

A local user is identified as a person using a vehicle registered for non-commercial purposes and used as such for commuting on a section of the Project Highway, provided that

- a) such vehicle is owned by a person who resides within a distance of 20 km (twenty kilometres) from the nearest Toll Plaza
- b) its use of such section of the Project Highway does not extend beyond a Toll Plaza other than such nearest Toll Plaza
- c) such section of the Project Highway has no service road or alternative road; and shall include a vehicle that uses a section of the Project Highway but does not cross a Toll Plaza

In order to provide the incentives to such users, toll operators issue a pass for commuting on a section of the Project Highway. Monthly fee of INR 150 with reference to base year of FY 2007-08 shall be levied to the users, which shall be revised annually to reflect the variation in WPI, and then rounded off to the nearest 5 (five rupees). However, no passes are required or fee is collected from the vehicle that uses part of the project highway and does not cross a toll plaza.

9.1.3 Overloaded vehicles

Overloaded vehicles shall be treated in accordance with the Technical policy circular – 192/2015 of NHAI vide letter no. 11041/218/2007-Admn dated 31st December 2015 and Technical policy circular – 154/2014 of NHAI vide letter no. 11041/218/2007-Admn dated 2nd May 2014. Technical policy circulars are attached as Appendix E.

According to the circular, maximum gross weight of the vehicle is the total weight of the vehicle and load certified and registered by the registering authority as permissible for the vehicle.

As per Policy Circular – Technical (154/2014) – the driver or owner or a person in charge of the vehicle shall be liable to pay fee for entering the overloaded vehicle on the national highway to the toll collecting agency, equal to ten times of the fee applicable to such category of vehicle. Further the excess load shall be removed before utilizing the National Highway.

The overloaded vehicle shall be towed away, taken into possession and parked at the designated place at the risk and cost of the driver / owner. Additionally, safety and security of vehicle and goods shall solely vest with the owner / driver of the vehicle. The vehicle shall be handed over to the owner on receipt of the following:

- Application form the owner of the vehicle with evidence in support of ownership
- Undertaking for offloading and bringing the vehicle within maximum gross vehicle weight for further use of NH
- Proof of payment of 10 times applicable fee
- Proof of payment of towing charges (INR 1000) and parking charges (INR 50 per hour and part thereof)
- If the vehicle remain unclaimed for seven days, the same shall be handed over to the concerned police station.

9.2 Observations by MM India

Key observations based on visual observations are as enlisted below:

- Overloaded vehicles were observed to be plying on the Project highway. This fact can also be supported by results of axle load survey as discussed in section 4.3. This causes deterioration of the Project highway, thereby decreasing design life of pavement.

9.3 Suggestions for tolling

A few practical suggestions for tolling practices are discussed below, comprising of:

- Information, Communication and Education (ICE)
- Local vehicles
- Frequent users
- Overloaded vehicle
- Undue usage of exemption
- Monitoring

Strategies for each of the above are discussed in the subsequent sections.

9.3.1 Information, Communication and Education (ICE)

Information, Communication and Education (ICE) is the key action required. It combines strategies, approaches and methods that enable individuals, groups, organisations and communities to play active roles in achieving, protecting and sustaining their vision and goals.

One of the key tasks to be undertaken is to generate the awareness through dissemination of information leading to adequate literacy programme regarding entitlements and processes both for the beneficiaries as well as the implementer to ensure optimum results.

The vehicle drivers as well as owners should be educated regarding the various incentives that are provided to them, in addition to provision of information of toll process, its' advantages and procedures to procure availed benefits.

On the other hand, the toll operator should train the workforce focusing on user friendly behaviour with the vehicle drivers.

Training should be provided to enhance their working efficiency.

The safety aspects like providing Personal Protective Equipment (PPE) viz. safety shoes, helmets and high visibility jackets to toll booth operators and security staff should be implemented.

9.3.2 Local vehicles

Visual segregation of the local vehicle can be made from the normal traffic by provision of unique identification tag / sticker, to make it easier to manage the local traffic. This can enhance the efficiency and reduce the manpower requirements for tolling operations.

In addition to this, if feasible and subject to prior approval from NHA some concession can be provided in form of additional discount to incentivize the local users for purchasing the monthly pass. The discount can be waived off after a small time frame when local vehicle owners become used to monthly pass system.

9.3.3 Frequent users

The interoperable Radio Frequency Identification Device (RFID) technology based Electronic Tolling System should be installed on two lanes in each directions so as to enable collection of toll payments electronically allowing for near-nonstop toll collection and traffic monitoring.

In this system, a RFID chip-embedded sticker is put on the vehicles allowing deduction of money at toll plazas automatically. Currently, vehicles plying on Indian highways have to pay cash at all the toll plazas to pass through.

RFID tags are now provided as a standard component on purchase of a new car. These are placed at top left corner of windshield. In addition to this RFID tags should be made available at the Kiosks located at all the Toll Plazas on the project road and online platform. It would work as a pre-paid toll account and there will be automatic toll deduction when the vehicle crossed Toll Plazas.

This system is now already in initiated in India so it would be easy to establish and integrate with the network for toll collection and distribution. System has already been installed at 55 Toll Plazas and their integration with Central Clearing House operators has almost been completed on the Delhi-Mumbai route via Haryana, Rajasthan, Madhya Pradesh, Gujarat and Maharashtra. A pilot project for Interoperable Electronic tolling system of 10 toll plazas between Mumbai (Charoti) and Ahmedabad has already been tested and seamless electronic toll collection on this section is successfully in operation.

Figure 9.1: RFID tag on windshield

Source: MM India desk research

While, the vehicles having low frequency and unavailability of RFID tags should stop and pay the tolls as usual.

The process of ETC lane is as depicted in Appendix F.1.

9.3.4 Overloaded Vehicles

Overloaded commercial vehicles are a cause of concern as they damage the highway pavement. Hence, it should be administered strictly from time to time and penalty shall be levied in accordance with applicable norms of NHAI. This will enhance pavement life.

In order to ease the operations for detection of overloaded vehicles:

- High speed weigh-in-motion shall be installed at entry point of each toll lane. This shall detect overloading on preliminary level and aid decision making for toll operator.
- Adequate number of static weigh bridge shall be installed on both sides in order to determine exact extent overloading. This will not only ensure fair overloading penalty collection but also ease operations at toll plaza. Static weigh bridge shall be constructed little ahead of toll plaza and towards left so as not to obstruct traffic flow.
- The employees of the toll plaza can be incentivised by the way of revenue share of overloading penalty so as to encourage them to detect and penalize maximum overloading cases
- It has been observed that, most of the over weighted vehicle drivers are reluctant to pay the penalty amount. In such situation, strict action shall be administered in accordance with clauses mentioned in Technical policy circular – 192/2015.

Overall process flow is as explained in Appendix F.2.

9.3.5 Undue usage of exemption

- Vehicle classes not mentioned under exemption rules, passenger vehicles registered under Guna and Biaora district shall not be exempted.
- In addition to this tractor with trailer carrying goods for commercial purpose should not be exempted. A policy can be worked out in concurrence with NHAI or NHAI may make the necessary amendments as required.

9.3.6 Monitoring

Proper monitoring through CCTV cameras shall be administered for the toll plazas at toll office and client's headquarters.

Data analysis should be carried out by the Client at head office on daily basis to identify potential threats and take the remedial measures for the same.

10 Project Cost Review

The Consultant has reviewed the project cost estimates based on the cost estimates of JDTL and NHAI as provided by JDTL.

Schedule for the project has been provided by JDTL, which has been reviewed by the Consultant and group-wise block cost were examined vis-à-vis cost comparison is provided by JDTL to identify variation in cost estimated by NHAI and JDTL.

Cognisable variation was noticed in cost estimates by NHAI and JDTL for road works (non-bituminous / bituminous), structure works (major / minor bridges etc.) and project facilities. These same items were looked into by way of block estimates and cost comparison has been carried out.

MM India has reviewed the project cost on the basis of Executive Summary prepared by NHAI as on November 2014, rate analysis given by JDTL and Concession Agreement available to MM India.

MM India estimates are based on project site observations and experience of similar kind of projects.

10.1 Project Cost Summary

The Project cost is categorized in three sub-components viz.

- Road Works
- Structure Works
- Project Facilities

Summary of total estimated project cost as per NHAI, JDTL and MM India are highlighted in Table 10.1.

Table 10.1: Estimated Project cost summary: NHAI, JDTL and MM India

Sr. No.	Project Cost Component	Total Amount (INR Crores)		
		As per NHAI	As per JDTL	As per MM India
1	Road Works Cost	489.93	420.17	410.38
2	Structure Works Cost	223.47	211.26	212.81
3	Project Facilities Cost	53.16	84.01	103.70
	Total Project Cost	766.56	715.43	726.88

Source: MM India estimate

MM India analysed and presents the comparison of cost for project facilities development and project maintenance between NHAI, JDTL and MM India in the subsequent section.

10.2 Cost estimates by MM India

The Consultant's estimates are based on Schedule of Rates (SoR) published by Road & Bridge Works, Govt. of Madhya Pradesh, in-house database and ongoing similar highway projects. Prices of following commodities being volatile in nature and have been considered based on current market prices:

- Bitumen
- Aggregates

Estimated total project cost as derived by the Consultant is depicted head-wise in Table 10.2.

Table 10.2: Estimated total project cost: MM India

Sr. No.	Item Description	MM India cost estimates (INR Crores)
a	Road Works	
a.1	Site Clearance and Dismantling	9.06
a.2	Earthwork with Earthen & Hard Shoulder	93.56
a.3	Sub-bases, Bases (Non-Bituminous)	75.04
a.4	Bases and Surface Courses (Bituminous & Concrete)	191.61
a.5	Drainage, Paved Separator and Utility Corridor	21.08
a.6	Slip Road / Service Road	20.04
	Sub-total: Road Works	410.38
b	Structure Works	
b.1	Pipe Culverts	3.94
b.2.1	Box Culverts at Junctions	4.91
b.2.2	Box Culverts	7.56
b.3.1	Minor Bridge	29.21
b.3.2	Box Type Minor Bridge	29.25
b.4	Major Bridge	51.78
b.5	PUP / CUP	6.23
b.6	Extra Width - provided for Structure due to Acceleration Lane and Deceleration Lane, RC:SP:84-2014, Cl.2.13.1 & Cl.2.2	-
b.7	Flyover	11.47

Sr. No.	Item Description	MM India cost estimates (INR Crores)
b.8	Repairs and Rehabilitation	1.85
b.9.1	RE Wall in Approaches of VUP/FOB/RoB	48.01
b.9.2	Retaining Wall, Breast Wall & Gabion Wall	18.60
Sub-total: Structure Works		212.81
c	Project Facilities	
c.1	Road Safety and Appurtenances	5.20
c.2	W-Beam Crash Barrier	14.98
c.3	Miscellaneous Works	16.04
c.4	Major Junctions	2.65
c.5	Minor Junctions	2.63
c.6	Bus Laybys	6.12
c.7	Truck Laybys	0.69
c.8	Rest Area	7.84
c.9	Toll Plaza	15.77
c.10	Electrical Components	11.36
c.11	Road Studs and Sign Boards	9.14
c.12	Extra Project Facilities for Highway Users	11.26
Sub-total: Project Facilities		103.70
Total estimated project cost (a + b + c)		726.88

Source: MM India estimates

Estimated project cost of MM India is about 2% higher than JDTL and 5% lower than NHAI. Cost being lower than NHAI can be attributed to:

- Decrease in bitumen prices due to global price volatility of crude
- Cost of aggregates is lower as same shall be sourced from captive mines of the Developer

10.3 Project cost comparison

Item-wise project cost comparison between NHAI, JDTL and the Consultant is as stated in Table 10.3.

Table 10.3: Project cost comparison: NHAI, JDTL and MM India (INR Crores)

Sr. No.	Item Description	NHAI	JDTL	MM India
a	Road Works			
a.1	Site Clearance and Dismantling		2.28	9.06
a.2	Earthwork with Earthen & Hard Shoulder	468.64	84.95	93.56

Sr. No.	Item Description	NHAI	JDTL	MM India
a.3	Sub-bases, Bases (Non-Bituminous)		96.49	75.04
a.4	Bases and Surface Courses (Bituminous & Concrete)		193.42	191.61
a.5	Drainage, Paved Separator and Utility Corridor		20.86	21.08
a.6	Slip Road / Service Road	21.29	22.16	20.04
	Sub-total: Road Works	489.93	420.17	410.38
b	Structure Works

Sr. No.	Item Description	NHAI	JDTL	MM India
	Sub-total: Project Facilities	53.16	84.01	103.70
	Total estimated project cost (a + b + c)	766.56	715.43	726.88

Source: JDTL and MM India estimates

Detailed cost working for road works, structure works and project facilities according to JDTL and MM India is attached as a part of Appendix G.

In absence of detailed cost working report of NHAI, has not analysed the cost estimates of NHAI and has considered the estimated cost as indicated in the said Executive Summary published in November 2014.

10.3.1 Road works

- MM India estimated cost of Road Works to be INR 500.64 Crores which is INR 9.79 Crores less than that estimated by JDTL. Decrease of 2% i.e., INR 9.70 Crores in road works estimates of the Consultant is mainly due to consideration of current market price of bitumen and aggregate as shared by JDTL.
- The Consultant has estimated the Road Works cost based on the MP-SOR (R&B), reference from in-house database and experience from similar projects.
- However in case of bitumen and aggregates, current market rate have been considered.
- Road Works cost estimated by DBL is less by INR 69.76 Crores than that estimated by NHAI, while that estimated by MM India is less by INR 79.55 Crores.
- This considerable difference in price is mainly due to decrease in prices of bitumen at global level and consideration of actual price of procurement of aggregates for DBL.
- Change in bitumen prices is as explained:
 - The Consultant has studied past price trend of bitumen and National Highway Construction Cost Index (NHCCI) published in November 2015.
 - Market price of bitumen, bitumen index according to NHCCI and WPI (Bitumen) is as presented in Table 10.4.

Table 10.4: Bitumen price volatility

Time frame	Bitumen price (INR /MT)	NHCCI Bitumen Index	WPI (Bitumen)
April 2014	42,510	107.5	403.1
November 2014 [^]	42,215	107.3	381.3

Time frame	Bitumen price (INR /MT)	NHCCI Bitumen Index	WPI (Bitumen)
September 2015 [^]	30,440	99.4	277.5
January 2016	25,503	92.3*	224.9

[^]Period of publication of project cost by NHAI in form of Executive Summary

[^] Last period as per NHCCI publication

* Estimated value

Source: IOCL, NHCCI (September 2015) and Office of the Economic Adviser

Hence, from Table 10.4, it can be inferred in values from November 2014 to January 2016 is as stated below:

- Bitumen Price : 39.6%
- NHCCI Bitumen Index: 13.9%
- WPI (Bitumen) : 41.0%

Hence, taking into consideration actual and indexed decrease in bitumen prices, it can be considered that the overall variation of 16.3% between NHAI and MM India and 14.3% between NHAI and JDTL is acceptable.

10.3.2 Structure works

- Estimated cost of structure works by MM India is INR 212.82 Crores i.e., about more than 1% higher than estimate of JDTL.
- While, the cost of NHAI was higher by 5.5% and 4.8% than that of JDTL and MM India.
- Considerable variation in cost of minor bridge structure between NHAI and that of JDTL as well as MM India. Due to unavailability of DPR prepared by NHAI, the Consultant cannot estimate the quantum of work as determined by NHAI and hence cannot comment upon significantly higher cost estimated by NHAI.
- Cost estimate of JDTL and MM India is lower than NHAI primarily due to:
 - Decrease in prices of structural steel
 - Decrease in prices of aggregates owing to captive mines of JDTL or parent company

Hence, the cost of structure works as estimated by JDTL may be considered.

10.3.3 Project facilities

- Estimated cost of the Project facilities as estimated by MM India is INR 103.70 Crores i.e., 23% higher than cost estimated by JDTL. The said increase is mainly due to cost of W-beam crash barrier,

planting tree sampling by road side with fabricated tree guard and pavement markings.

- Project facilities cost as estimated by JDTL is INR 84.01 Crores i.e., 58% higher than cost estimate by NHAI of INR 53.16 Crores.
- In absence of detailed cost working of NHAI, the Consultant cannot comment upon the variation in cost of MM India and JDTL against that of NHAI.

Total project cost as estimate by MM India is INR 726.88 Crores i.e., about 5% lower than NHAI and 2% higher than JDTL. Considering the scale and complexity of the Project, variation of about 10% is acceptable. Hence, the project cost estimated by JDTL of INR 715.43 Crores may be considered for approval.

Policy Circular – Technical (192/ 2015)

[decision taken on the file of CO Division]

Sub.: Prevention of Overloading at Toll Plazas on NH Sections

– Amendment to Fee Rules dated 16.12.2013 of MoRTH [G.S.R.778 (E)] and Policy Circular dated 05.05.2014 of NHAI (Tech-154/2014)

– Strict implementation of removal of excess load to permit the vehicle for further use of NH or crossing Toll Plaza besides charging penalty (10 times applicable fee).

Vide Policy Circular dated 05.05.2014 (Tech-154/2014), instructions have been issued to comply with the amendment to Fee Rules dated 16.12.2013 [G.S.R.778(E)] interalia to charge 10 times applicable fee from the overloaded vehicles and to remove the excess load before the vehicle is allowed to cross the Toll Plaza.

2. Subsequently, Ministry has issued 2 more amendments to Fee Rules as under :

(a) Amendment dated 29.12.2014 [G.S.R.02(E)] (copy enclosed) prescribing that the provisions under Rule-10 shall be applicable on all Toll Plazas.

(b) Amendment dated 23.03.2015 [G.S.R.220(E)] (copy enclosed) clarifying that the maximum gross vehicle weight in respect of any vehicle means the total weight of the vehicle and load certified and registered by the registering authority, as permissible for that vehicle under the Motor Vehicles Act 1988(59 of 1988) and the rules made there under. The explanation under Rule-4, Sub-Rule-2 of different types of vehicles and permissible loads has also been deleted.

3. It has come to the notice that while the Concessionaires/ Toll Collection Contractors are charging penalty for overloading (10 times applicable fee), they are not ensuring removal of excess load to allow the vehicle to further use NH section/ cross the toll plaza, citing that the removal of the excess load at the Toll Plaza is not practical for safety/ security of goods and also non-availability of space at Toll Plaza to off-load.

4. In view of above and keeping in view the provisions under "The Control of National Highways (Land and Traffic) Act 2002" (Sections-32,35,36&37) and "The Highways Administration Rules 2004"(Rules-17,18,19,20&21), the following further instructions have been issued in continuation of Policy Circular dated 05.05.2014 for strict compliance :

(i) A Public Notice shall be issued before 01.01.2016 in each state by the Regional Officer in the local newspapers (one in english & one in hindi/ vernacular language) in the format enclosed at Annex-A. As per OM dated 23.03.2015 of MoRTH (copy enclosed), DAVP's rate is applicable to the publication of advertisements of NHAI in newspapers under Ministry's name.

(ii) Sign Boards (one in english & one in hindi/ vernacular language) shall be placed before 01.01.2016 at the Toll Plazas in the format enclosed at Annex-B.

(iii) the following procedure shall be strictly observed w.e.f. 01.01.2016 at all Toll Plazas of NHAI/ Concessionaires of NHAI,:

- The overloaded vehicle shall be towed away, taken into possession and parked at the designated place at the risk and cost of the driver/ owner (safety and security of vehicle and goods shall solely vest with the owner/ driver of the vehicle).
- The vehicle shall be handed over to the owner on receipt of the following:
 - ✓ Application from the owner of the vehicle with evidence in support of ownership
 - ✓ Undertaking for offloading and bringing the vehicle weight within maximum GVW for further use of NH
 - ✓ proof of payment of 10 times applicable fee
 - ✓ proof of payment of towing charges (Rs. 1000/-) and parking charges (@ Rs. 50/- per hour or part thereof)
- If a vehicle remains unclaimed for 7 days, the same shall be handed over to the concerned police station.

Copies of all relevant notifications/ rules shall be kept at the Toll Plaza for viewing.

GOVERNMENT OF INDIA

सडक परिवहन एवम् राजस्वार्थ मंत्रालय

MINISTRY OF ROAD TRANSPORT & HIGHWAYS

Transport Bhavan, 1, Parliament Street,
New Delhi, dated the 23rd February, 2015

OFFICE MEMORANDUM

Subject: Publication of NHAI's advertisement in newspapers under Ministry's name.

The National Highways Authority of India (NHAI) was constituted by an Act of Parliament, namely the National Highways Authority of India Act, 1988. It is responsible for development, maintenance and management of National Highways vested or entrusted to it by the Central Government and for matters connected or incidental thereto. The Authority became operational in February, 1995. NHAI is mandated to implement National Highways Development Project (NHDP) which is India's largest ever Highways Project.

2. NHAI, to carry out its activities on behalf of MoRT&H has to publish number of advertisements pertaining to inviting bids, user fee, recruitment etc.

3. In view of this it is requested to kindly open a separate account for NHAI under this Ministry for publishing advertisement/notifications at DAVP's rate.

No. 02(E) dated 29th December, 2014.

MINISTRY OF ROAD TRANSPORT AND HIGHWAYS

NOTIFICATION

New Delhi, the 16th December, 2013

G.S.R. 778(E).—In exercise of the powers conferred by Section 9 of the National Highways Act, 1956 (48 of 1956), the Central Government hereby makes the following rules further to amend the National Highways Fee (Determination of Rates and Collection) Rules, 2008, namely:—

1. Short title and commencement.—(1) These rules may be called the National Highways Fee (Determination of Rates and Collection) Amendment Rules, 2013.

(2) They shall come into force on the date of their publication in the Official Gazette.

2. In the National Highways Fee (Determination of Rates and Collection) Rules, 2008 (hereinafter referred to as the principal rules),—

(a) in rule 3, sub-rule (3) shall be omitted;

(b) in rule 4 of the principal rules,—

(i) sub-rules (3) and (4) shall be omitted;

(ii) in sub-rule (6), after the proviso, the following shall be inserted, namely:—

“Provided further that in case of a section of a four-lane highway which has been taken up for upgradation to six-laning, the increase in rate of fee shall be limited to seventy-five per cent of the fee as specified in sub-rule (2) and revised under rule 5 calculated on and from the date of commencement of the work relating to upgradation, till the date of completion of the project according to the agreement entered into with the concessionaire without any annual revision:

Provided also that no user fee shall be levied for the delayed period between the date of completion as per the agreement entered into with the concessionaire and the date of actual completion of the project.

Explanation.— For the purposes of this rule, any provisional completion of the project shall not be treated as completion of the project.” ;

(iii) after sub-rule (6), the following sub-rules shall be inserted, namely:—

“(7) The rate of fee for use of an expressway shall be 1.25 times the rate specified in sub-rule (2).

(8) In case of private investment projects, the rate of fee shall be as specified under sub-rule (2) or such lower rates as concessionaire may determine by giving public notice to the users, specifying in all or any category of vehicles.

(9) The rate of fee for a section of a four-lane highway shall on and from the commencement of the work relating to upgradation to six laning, be seventy-five per cent of the fee applicable on the date of commencement of the National Highways Fee (Determination of Rates and Collection) Amendment Rules, 2013, till the completion of the project without any annual revision:

Provided that no user fee shall be levied for the delayed period between the date of completion as per the agreement entered into with the concessionaire and the date of actual completion of the project.

Explanation.— For the purposes of this rule, any provisional completion of the project shall not be treated as completion of the project.

(10) The rate of fee for use of standalone structure shall be calculated by converting the cost of the structure into an equivalent length of highway/ expressway by dividing by an equalisation factor equal to average cost per km of highway/expressways on 1st April of that year.

Provided that for a permanent bridge or a tunnel in a linear highway/expressway project forming part of the highway/expressway, the rate of fee shall be calculated by converting the cost of the structure, excluding the length of the approaches to the structure, into an equivalent length of highway/expressway by dividing such cost by an equalisation factor equal to the cost per km. of such highway/expressway excluding the cost of structures.

Explanation.— For the purposes of this sub-rule, “stand-alone structure” shall mean an independent bridge or tunnel or flyover taken up as specific project to complement an existing facility or to create a new facility for users which brings about tangible benefits in terms of savings in time and vehicle operating costs and enhances the efficiency of the existing road network.

(11) The rate of fee for use of a section of a national highway, having two-lanes with paved shoulders and above but below four-lane on which substantial improvement has been made by widening carriageway by three meters or more shall be sixty per cent of the rate of fee specified under sub-rule (2).”.

(c) in rule 10 of the principal rules, for sub-rule (1), the following sub-rule shall be substituted, namely:—

“(1) Without prejudice to the liability of the driver or owner or a person in charge of a mechanical vehicle under any law for the time being in force, a mechanical vehicle which is loaded in excess of permissible load specified for its category under sub-rule (2) of rule 4, shall not be permitted to use the National Highway or crossing the toll plaza until the excess load has been removed from such mechanical vehicle.

maximum
from vehicle weight
in respect of such vehicle
(Amendment dt- 23.03.15)

(1A) The driver or owner or a person in charge of a mechanical vehicle shall be liable to pay fee, for entering the overloaded vehicle on the national highway to the toll collecting agency, equal to ten times of the fee applicable to such category of mechanical vehicles under sub-rule (2) of rule 4." .

Policy Circular - Technical (154/2014)

(decision taken on the file of HAM Division)

Sub. : Prevention of Overloading – Amendment to Fee Rules dated 16.12.2013.

The Fee Rules on overloading have been amended vide Amendment dated 16.12.2013 [G.S.R.778(E)]. The amended rules prescribe as under ;

10 (1) Without prejudice to the liability of the driver or owner or a person in charge of a mechanical vehicle under any law for the time being in force, a mechanical vehicle which is loaded in excess of permissible load specified for its category under sub-rule(2) of rule 4, shall not be permitted to use the National Highway or crossing the toll plaza until the excess load has been removed from such mechanical vehicle."

{1A) The driver or owner or a person in charge of a mechanical vehicle shall be liable to pay fee, for entering the overloaded vehicle on the national highway to the toll collecting agency, equal to ten times of the fee applicable to such category of mechanical vehicles under sub-rule(2) of rule 4.

{2) The weight of a mechanical vehicle, as recorded at a weighbridge installed at the toll plaza, shall be the basis for levying the fee for overloading under this rule:

Provided that where no weighbridge has been installed at the toll plaza, no fee for overloading shall be levied and collected under this rule and the driver, owner or person incharge of the mechanical vehicle shall be liable to pay fee applicable for such vehicle only.

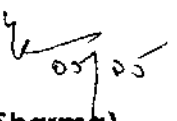

3. Ministry vide OM dated 13.03.2014 (copy enclosed) conveyed that the provisions of overloading as amended on 16.12.2013 shall have universal application on all the National Highways. **This means the above amended rules are applicable to all the Concession Agreements irrespective of their date of execution.** We are also taking up the matter with the Ministry to delete second para of sub-rule 10(2) mentioned above so as to make installation of weigh bridges at all the Toll Plazas mandatory.

4. The Concessionaires may be asked to install weigh-in-motion (WIM) systems in each toll lane and one static weigh bridge in each direction at their Toll Plazas, even if such provision does not exist in Schedule-D/ Concession Agreement and observe the above amended rules scrupulously. This cost may be met by the Concessionaires from the amount being collected as per above amendment from the overloaded vehicles. It is to be noted that not only 10 times applicable fee is to be collected, but also the excess load has to be removed before the vehicle is allowed to cross the Toll Plaza.

Contd..2

5. All Concessionaires may also be asked to display prominently the above Amended Rule-10 of Fee Rules at all the Toll Plazas (only Rule-10 is to be displayed, not the entire amended notification). In the interest of transparent implementation of above amendment, it is required to incorporate a provision in the Toll Systems Software for displaying/ charging 10 times the applicable fee in case any overloaded vehicle enters the toll booth. In order to properly account for the fee collected It is also required to add a category of overloaded vehicle after oversized vehicles In the formats prescribed for the reports in Schedule-M&N (Ref. Clause 27.10). Beginning from the month of May, 2014, the reports may not be accepted without addition of above information on overloaded vehicles in the reports. As a proof of compliance of above directions, the photographs at each Toll Plaza under your jurisdiction may please be furnished to CO Division, NHAI, HQ.

Appendix F. Tolling strategy

F.1 Process flow for ETC lane

Operation flow for ETC lane is as depicted in Figure F.1.

Figure F.1: Operation flow for ETC lane

Vehicle with valid tag:

When the vehicle approaches the dedicated ETC lane, the first trans receiver reads the tag and allows the vehicle to proceed

Vehicle without tag or invalid tag:

When the vehicle approaches the dedicated ETC lane, the first trans receiver detects the vehicle as non-tagged / invalid tag and bring down the barrier or does not open the barrier; blocking the entry to ETC lane. This will force the vehicle to eject from the ETC lane and do to adjacent cash lanes

Source: Appendix X, RFP – Bid document (Volume III: Schedules)

Figure F.2: Schematic representation of WIM

Source: Web resources

F.2 Process flow for overloaded vehicles

- The vehicle passes through Weigh-in-motion (WIM) located at the entry of each toll lane
- The measuring stage in WIM is mounted on load cells in the corners.
- These load cells associated with a Weigh-in-Motion Controller that measures the heaviness of each axle and transmits it to a WIM controller situated in the control room.
- The software on the WIM controller aggregates the weight data from dedicated WIM Station and stores it in the local database.
- Further, it has a Graphical User Interface that identifies the number of axle, individual axle weight, and gross weight of each vehicle as soon as it passes over the WIM platform.
- This information can then be associated with the above weight information for auto-transaction, displaying and reporting purposes.
- In case, vehicle is over weighted then the software will automatically impose penalty based on its number of axle vis-à-vis the overweight.
- Also, there will be a provision of static weighbridge which can be use when distrust exists, exact weighing is required and customer questions accuracy of WIM system.
- On the basis of vehicle configuration and extent of overloading the penalty shall be imposed on the vehicle

b.3.1.03	Providing, fabricating and setting out steel cutting edges for RCC well curbs including launching where necessary as per detailed drawings and directed.		MT	-	-	-	-	MT	-	-	-	-	-	-	-	-
b.3.1.04	Sinking of single circular wells of internal diameter upto 11.0 m and thickness as required for foundation to levels in all sorts of soils including murrum to levels as per drawing by dredging, dewatering, drop chiselling loading with necessary kentledge and other usual means as may be necessary, plant and machineries completed as directed.															
(i)	In ordinary soil, murrum, etc.		m	-	-	-	-	m	-	-	-	-	-	-	-	-
(ii)	Extra for sinking in soft rock		m	-	-	-	-	m	-	-	-	-	-	-	-	-
(iii)	Extra for sinking in hard rock		m	-	-	-	-	m	-	-	-	-	-	-	-	-
b.3.1.05	Carrying out empty boring for piles of diameter from 1000-1500 mm in all types of strata including all tools & plants, machinery, disposal of excavated material upto lead of 1000 m etc. complete and as directed by the engineer-in-charge.		m	3,175.00	-	-	-	m	-	-	-	-	-	-	-	-
b.3.1.06	Providing, fabricating and placing in position temporary MS liners for piles including all machinery, tools, labour etc. complete.		MT	63,500.00	-	-	-	MT	-	-	-	-	-	-	-	-
b.3.1.07	Chipping and dressing of piles upto 0.60 m / required level including cleaning reinforcement and removal of dismantled materials etc. for providing pile caps.		nos.	1,905.00	-	-	-	nos.	-	-	-	-	-	-	-	-
b.3.1.08	Providing and laying plain cement concrete in levelling course complete as per drawings and technical specifications as per sections 1500, 1700 and 2100. (M-15)	M-15	cu.m	3,811.00	1,187.000	4,523,657.00	0.45	cu.m	3,350.00	1,187.00	3,976,450.00	0.40	Ch.12-12.3	Considered as per market rate	0.05	-13.8%
b.3.1.09	Providing and laying in position cement concrete in bored cast in situ piles excluding cost of reinforcement as per drawing and technical specifications. (M-35)	M-35	cu.m	-	-	-	-	cu.m	-	-	-	-	-	-	-	-
b.3.1.10	Providing and laying in position cement concrete in well cap including necessary formwork, vibrating, curing, finishing, etc. complete as per drawing and technical specifications. (M-35)	M-35	cu.m	-	-	-	-	cu.m	-	-	-	-	-	-	-	-
b.3.1.11	Providing and laying in position cement concrete in pile caps as per drawing and technical specifications section 1100, 1500 and 1700. (M-35)	M-35	cu.m	-	-	-	-	cu.m	-	-	-	-	-	-	-	-
b.3.1.12	Providing and laying cement concrete for open foundation excluding cost of reinforcement as per drawing and technical specifications. (M-20)	M-20	cu.m	4,808.00	518.000	2,490,544.00	0.25	cu.m	3,753.00	518.00	1,944,054.00	0.19	Ch.12-12.8.C	Considered as per market rate	0.05	-28.1%
b.3.1.13	Providing and filling ordinary cement concrete as annular filling in excavated trenches upto rock level or foundation top complete. (M-10)	M-10	cu.m	2,908.00	462.000	1,343,496.00	0.13	cu.m	4,777.00	462.00	2,206,974.00	0.22	Ch.12-12.5	M-15 Lean Cement Concrete	0.09	39.1%
b.3.1.14	Providing and casting insitu controlled cement concrete for well curbs including necessary shuttering, laying, vibrating, and curing etc. complete as per drawing and technical specifications excluding cost of reinforcement. (M-30)	M-30	cu.m	-	-	-	-	cu.m	-	-	-	-	-	-	-	-
b.3.1.15	Providing and casting insitu controlled cement concrete for well steining including necessary shuttering, laying, vibrating, and curing etc. complete as per drawing and technical specifications excluding cost of reinforcement. (M-35)	M-35	cu.m	-	-	-	-	cu.m	-	-	-	-	-	-	-	-
b.3.1.16	Providing and casting insitu controlled cement concrete for bottom plug for well in dry condition including ramming & curing or under water by tremie or other suitable method complete. (M-20)	M-20	cu.m	-	-	-	-	cu.m	-	-	-	-	-	-	-	-
b.3.1.17	Providing and casting insitu controlled cement concrete for top plug for well including ramming, vibrating & curing complete. (M-20)	M-20	cu.m	-	-	-	-	cu.m	-	-	-	-	-	-	-	-
b.3.1.18	Providing and laying in position cement concrete in substructure like abutments, piers, wingwalls, returnwalls etc. as per drawing and technical specifications. (M-35)	M-35	cu.m	5,411.00	10,499.000	56,810,089.00	5.68	cu.m	4,645.00	10,499.00	48,767,855.00	4.88	Ch.13-13.6.H.(i)	Considered as per market rate	0.80	-16.5%
b.3.1.19	Providing and laying in position Reinforcement cement concrete in Footing & substructure like wingwalls, returnwalls etc. as per drawing and technical specifications. (M-25)	M-25	cu.m	5,157.00	4,473.000	23,067,261.00	2.31	cu.m	5,188.00	4,473.00	23,205,924.00	2.32	Ch.13-13.6.F.(i)	Considered as per market rate	0.01	0.6%
b.3.1.20	Providing and laying in position PCC in Footing & substructure like wingwalls, returnwalls etc. as per drawing and technical specifications. (M-25)	M-25	cu.m	-	-	-	-	cu.m	-	-	-	-	-	-	-	-
b.3.1.21	Providing and laying in position cement concrete in pier-caps, abt-caps, dirtwall, bracket, seismic stopper etc. as per drawing and technical specifications. (M-40)	M-40	cu.m	5,665.00	1,233.000	6,984,945.00	0.70	cu.m	7,627.00	1,233.00	9,404,091.00	0.94	Ch.14-14.1.E.(i).a		0.24	25.7%
b.3.1.22	Supplying, fitting and fixing in position true to line and level POT-PTFE bearings complete as per drawings and technical / manufacturer's specifications section 2000		MT	180.00	-	-	-	MT	-	-	-	-	-	-	-	-
b.3.1.23	Providing and fixing in position elastomeric bearings true to line and level as per drawing & technical / manufacturer's specifications sections 2000, IRC:83 (part II) and IRC:83 (part III) 2002.		cu.cm	1.00	2,826,895.000	2,826,895.00	0.28	cu.cm	0.86	2,826,895.00	2,431,129.70	0.24	Ch.13-13.13		0.04	-16.3%
b.3.1.24	Supplying and fixing of tar paper bearings complete as per drawings and technical specifications section 2000, IRC:83 (part II) and IRC:83 (part III) 2002.		sq.m	30.00	11.000	330.00	0.00	sq.m	48.00	11.00	528.00	0.00	Ch.13-13.16		0.00	37.5%
b.3.1.25	Neoprene Bearing		cu.cm	-	-	-	-	cu.cm	-	-	-	-	-	-	-	-
b.3.1.26	Providing and laying in position cement concrete in pedestals as per detailed drawings and specifications. (M-40)	M-40	cu.m	5,665.00	59.000	334,235.00	0.03	cu.m	7,627.00	59.00	449,993.00	0.04	Ch.14-14.1.E.(i).a		0.01	25.7%
b.3.1.27	Providing and fixing in position strip seal expansion joint for 40 mm movement as per drawing & technical / manufacturer's specifications section 2600.		m	7,500.00	543.000	4,072,500.00	0.41	m	11,590.00	543.00	6,293,370.00	0.63	Ch.14-14.21	max. horizontal movement upto 70mm	0.22	35.3%
b.3.1.28	Providing and laying of premoulded bitu. pad type exp. joint to provide for horizontal movement of 20 mm as per approved drawings and specifications.		m	670.00	158.500	106,195.00	0.01	m	153.00	158.50	24,250.50	0.00	Ch.14-14.17.(iii)		0.01	-337.9%
b.3.1.29	Providing and laying of Filler joint type (copper plate) exp. joint to provide for horizontal movement of 20 mm as per approved drawings and specifications.		m	-	-	-	-	m	-	-	-	-	-	-	-	-
b.3.1.30	Providing and laying of Modular exp. joint to provide for horizontal movement of upto 200 mm as per approved drawings and specifications.		m	-	-	-	-	m	-	-	-	-	-	-	-	-
b.3.1.31	Providing and laying in position precast prestressed concrete for PSC superstructure like PSC box girder, T-girder, X-girder, deckslab, etc. as per drawing and technical specifications section 1500, 1700 and 2200. (PSC M-45)	M-45	cu.m	9,513.00	606.000	5,764,878.00	0.58	cu.m	10,075.00	606.00	6,105,450.00	0.61	Ch.14-14.1.F.(iii).c		0.03	5.6%
b.3.1.32	Providing and laying in position cast in situ concrete for RCC superstructure like box girder, T-girder, X-girder as per drawing and technical specifications section 1500, 1700 and 2200. (RCC M-40)	M-40	cu.m	6,922.00	1,260.000	8,721,720.00	0.87	cu.m	9,733.00	1,260.00	12,263,580.00	1.23	Ch.14-14.1.E.(iii).c		0.35	28.9%
b.3.1.33	Providing and laying in position or precast concrete for RCC superstructure like deckslab, solidslab etc. as per drawing and technical specifications section 1500, 1700 and 2200. (RCC M-)			5,703.00	-	-	-		-	-	-	-	-	-	-	-
